

# 2011 NABCEP Exam Preparation Homestudy Package

---

If you are looking to take an upcoming NABCEP exam and have met all of the requirements to sit for this exam then this study program is perfect for you. This 4-part program includes materials written from some of the top authorities on Solar and the National Electrical Code:

- 1. Understanding NEC Requirements for Solar Photovoltaic Systems textbook and 2 DVDs** by leading National Electrical Code Expert, Mike Holt. Mike addresses NEC requirements, tips on proper electrical installations and warnings of dangers related to improper electrical installations. He can't eliminate confusing, conflicting, or controversial Code requirements, but he puts them into sharper focus to help you understand their intended purpose. In addition to covering Article 690 of the 2011 NEC, Mike reviews related NEC Articles, including Article 705 which deals with the installation of electric power production sources operating in parallel with a primary source (s) of electricity. You'll also learn how to cross reference the code requirements to understand how they relate to one another.
- 2. Solar Photovoltaic Systems Textbook 3rd Edition w/ CD Rom** by leading Solar Authority Jim Dunlop. This is a comprehensive guide to the fundamentals and principles involved in the planning, design and installation of solar photovoltaic (PV) systems. It covers the key steps in project development and specific requirements for installations and code compliance. The content is strongly tied to the task analysis used by the North American Board of Certified Energy Practitioners (NABCEP) PV installer certification program, and is becoming the industry standard for training and a useful reference for a diversity of industry professionals.
- 3. Solar Construction Safety PDF** written by OSEIA
- 4. Field Inspection Guidelines PDF** developed for IREC by Solar Engineering Consultant Bill Brooks

---

Note: The NEC portion of this package is based on the 2011 National Electrical Code.
