The basic Standard used to investigate metal oxide surge arresters is IEEE C62.1-1989, Standard for Gapped Silicon-Carbide Surge Arresters for AC Power Circuits. All other types of surge arresters are investigated to IEEE C62.1-1989, Standard for Gapped Silicon-Carbide Surge Arresters for AC Power Circuits.

UL MARK

The Classification Marking of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Marking for these products includes the name and/or symbol of Underwriters Laboratories Inc. (as illustrated in the Introduction of this Directory) together with the word "CLASSIFIED," a control number and one of the following product names as appropriate: "Surge Arrester," "Secondary Surge Arrester," "Secondary MOV Surge Arrester," "Secondary Metal-Oxide Surge Arrester," "Secondary Valve Type Surge Arrester".

In the Classification Marking the words "Underwriters Laboratories Inc." may be abbreviated "Underwriters Lab. Inc." or "Und. Lab. Inc."

Included as part of the Classification Marking on the surge arrester is the statement: "For Catalog Numbers of Compatible Panelboards, refer to the installation instructions provided with the surge arrester".

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LIMITED COMBUSTIBLE CABLE (OWKZ)

255

LIMITED COMBUSTIBLE CABLE (OWKZ)

GENERAL

This category covers electrical and optical fiber cable that meets the limited combustible and smoke developed requirements for cable in ceiling cavity and raised floor plenums in accordance with ANSI/NFPA 90A, "Installation of Air Conditioning and Ventilating Systems." This cable also meets the requirements for cable used in ducts, plenums and other spaces used for environmental air in accordance with Articles 725, 760, 770, 800, 820 and 830 of ANSI/NFPA 70, "National Electrical Code."

This cable has a maximum Potential Heat value of 3500 Btu/lb when tested in accordance with NFPA 259, "Standard Test Method for Potential Heat of Building Materials." This cable has a maximum smoke developed index of 50 and a maximum flame spread index of 25 when tested in accordance with ANSI/UL 723 (NFPA 255), "Test for Surface Burning Characteristics of Building Materials," before and after exposure to elevated temperature and humidity. The cable also meets the requirements for plenum cable in one or more of the following product categories:

- Power-limited Circuit Cable (QPTZ) – Types CL2P or CL3P
- Communications Cable (DUZX) – Type CMP
- Power-limited Fire Alarm Cable (HNIR) – Type FPLP
- Nonpower-limited Fire Alarm Cable (HNHT) – Type NPLFP
- Optical Fiber Cable (QAYK) – Types OFNP or OFCP
- Community Antenna Television Cable (DVCS) – Type CATVP
- Network-powered Broadband Communications Cable (PWIP) – Type BLP

PRODUCT MARKINGS

This cable is identified by the marking "Limited Combustible FHC 25/50" on the surface of the jacket or on a marker tape under the jacket. This marking is immediately followed by one of the Type designations shown above. The cable also has the required markings including optional markings as indicated in the product categories referenced above. This cable may also be Verified for transmission performance if authorized in the product categories referenced above, and will bear the appropriate performance verification marking.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2424, "Outline of Investigation for Cable Marked 'Limited Combustible'."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Limited Combustible Cable."

Cable which is also Verified to the UL Data Transmission Performance Category Marking Program has the marking "Verified to UL Performance Category Program," or the UL Verification Mark along with the words "Performance Category Program" together with the Listing Mark information on the tag, the reel, or the smallest unit container. Cable which is also Verified to another transmission performance specification has the marking "Verified in Accordance with [Specification name and/or number]" or the UL Verification Mark along with the applicable Specification name and/or number together with the Listing Mark information on the tag, the reel, or the smallest unit container.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LINE ISOLATION MONITORS (OWLS)

GENERAL

This category covers line isolation monitors, with or without supplementary remote indicating units, designed to supervise the isolated power supply circuits in hospital inhalation anesthetizing locations.

The monitor and supplementary indicating units are intended to be installed in any of the following locations in conformity with the appli-

cable requirements of ANSI/NFPA 99, "Standard for Health Care Facilities," and ANSI/NFPA 70, "National Electrical Code":

- (a) Nonhazardous anesthetizing area
- (b) Above a hazardous area (5 ft or more above the floor)
- (c) Included as part of an isolated power supply center

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1022, "Line Isolation Monitors."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Line Isolation Monitor" or "Line Isolation Monitor Accessory."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOW-VOLTAGE AC POWER-SWITCHING DEVICES (PAPU)

GENERAL

This category covers devices such as low-voltage ac power circuit breakers, low-voltage dc power circuit breakers, low-voltage ac power circuit protectors, low-voltage ac integrally-fused power circuit breakers, and low-voltage power-switching device adapters.

Low-voltage power-switching devices have been investigated for continuous duty at 100% of their current ratings and are designed to provide service-entrance, feeder or branch-circuit protection. They may be manually and/or electrically operable.

These low-voltage power-switching devices, enclosures and adapters are for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such markings are independent of any marking on terminal connectors and are on a wiring diagram or other readily-visible location.

Stationary equipment is normally bus connected. However, terminal pads are provided which can accommodate field-installed pressure-wire connectors.

PRODUCT MARKINGS AND RATINGS

Unless the device is marked to indicate otherwise, the wiring space and current-carrying capacity are based on the use of 60°C wire in circuits rated 100 A or less, and on the use of 75°C wire for higher amp-rated circuits.

Low-voltage power-switching devices suitable for use with an accessory are marked to indicate the accessory(s), the electrical rating and proper connections (if not obvious).

Low-voltage power-switching devices without enclosures are intended for use only in Listed enclosures or as part of other Listed equipment which has been and are marked for use with a specific low-voltage power switching device.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ACCESSORIES, LOW-VOLTAGE POWER-SWITCHING DEVICES (PAQF)

GENERAL

This category covers accessories such as shunt trip devices, undervoltage trip devices, alarm switches and auxiliary switches intended for field installation for use only with specific low-voltage power-switching devices. Correct combinations of low-voltage power-switching devices and accessories are indicated by markings on or with the accessory and/or the low-voltage power-switching device.

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," ANSI/IEEE C37.13, "Standard for Low-Voltage AC Power Cir-

Accessories, Low-voltage Power-switching Devices (PAQF)—Continued

cuit Breakers Used in Enclosures," and ANSI/NEMA C37.50, "Switchgear – Low Voltage AC Power Circuit Breakers Used in Enclosures – Test Procedures."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low Voltage Power Breaker Accessory," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ADAPTERS, LOW-VOLTAGE AC POWER-SWITCHING DEVICES (PAQQ)

GENERAL

This category covers equipment designed to adapt low-voltage power-switching devices to receiving devices, such as individual enclosures, dead-front switchboards (switchgear), panelboards, etc. Field installation is intended only in those receiving devices which are specifically marked for their use.

These adapters have been investigated in conjunction with power-switching devices and have been found suitable to carry 100% of the current rating of the power-switching device, and to withstand the maximum fault-current levels specified on the power-switching device.

PRODUCT MARKINGS

The adapters are marked to indicate the power-switching device with which they may be used.

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," ANSI/NEMA C37.50, "Switchgear – Low Voltage AC Power Circuit Breakers Used in Enclosures – Test Procedures," and ANSI/IEEE C37.20.1, "Standard for Metal-Enclosed Low-Voltage Power Circuit Breaker Switchgear."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low Voltage Power Switching Device Adapter."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOW-VOLTAGE AC FUSE DRAW-OUTS (PAQT)

GENERAL

This category covers fuse draw-outs intended to be installed in switchgear and connected in series with Listed low-voltage ac power circuit breakers in order to extend the short-circuit current rating of the circuit breaker.

Fuse draw-outs consist of fuses or current limiters and an open fuse-trip device in a draw-out-type assembly. The open fuse-trip device will cause the associated circuit breaker to trip when any fuse or current limiter opens.

These devices have been investigated in combination with specific circuit breakers for use on circuits having an available fault current of 200,000 rms symmetrical amps, maximum, 3-phase.

PRODUCT MARKINGS

Fuse draw-outs are marked with maximum voltage, frequency, continuous current and short-circuit current ratings, and the type or catalog number designation of the circuit breaker with which it is intended to be used.

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

LOW-VOLTAGE AC POWER-SWITCHING DEVICES (PAPU)

Low-voltage AC Fuse Draw-outs (PAQT)—Continued

REQUIREMENTS

The basic standards used to investigate products in this category are UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," ANSI/NEMA C37.50, "Switchgear – Low Voltage AC Power Circuit Breakers Used in Enclosures – Test Procedures," and ANSI/IEEE C37.20.1, "Standard for Metal-Enclosed Low-Voltage Power Circuit Breaker Switchgear."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low Voltage AC Fuse Draw-Out."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOW-VOLTAGE AC POWER CIRCUIT BREAKERS (PAQX)

GENERAL

This category covers low-voltage power circuit breakers specifically designed to provide service-entrance, feeder or branch-circuit protection or serve as a disconnecting means. This category also covers power circuit breaker enclosures. They are covered by the classifications indicated by the label designation as follows:

Low-voltage ac power circuit breaker — Without enclosure, and with or without noninterchangeable trip devices.

Low-voltage ac power breaker frame — Frame only of power circuit breaker with provision for interchangeable trip devices. A Listed low-voltage power circuit breaker frame is Listed for use only with a Listed low-voltage ac power circuit breaker trip device.

Low-voltage ac power circuit breaker trip device — Trip device only of a power circuit breaker having provisions for interchangeable trip devices.

Low-voltage ac power-switching device enclosure — Enclosure only for individual 1-, 2- or 3-pole power circuit breaker.

The frame size determines the maximum continuous-current rating for all parts of a low-voltage ac power circuit breaker except the coils of the direct-acting trip device. The rating of the trip device determines the actual continuous-current rating.

The trip devices may contain ground-fault current, long-time-delay overcurrent, short-time-delay overcurrent and instantaneous overcurrent trip elements that may be adjustable. The tolerance of the marked position of the long-time-delay overcurrent trip setting is plus or minus 10%.

A ground-fault current trip element is one that functions at all values of current at or above a predetermined value of fault current to ground.

An instantaneous overcurrent trip element is one that functions with no purposely delayed action at all values of current at or above a predetermined value of overcurrent.

A long-time overcurrent trip element is one that functions with a purposely delayed action at all values of current between a predetermined value of overcurrent and the short-time or instantaneous pick-up settings of the circuit breaker.

A short-time-delay overcurrent trip element is one that functions with a purposely delayed action at all values of current between a predetermined value of overcurrent and the short-time current rating of the circuit breaker.

Circuit breakers without trip devices cannot of themselves respond to overcurrent, short-circuit or ground faults and are marked "No Over-Current Protection Provided" or "If Over-Current Protection is Required, Use With Type ____ Protective Relays." Circuit breakers without trip devices can respond to overcurrent when properly connected to protective relays.

PRODUCT MARKINGS

Low-voltage ac power circuit breakers are marked with maximum voltage, frequency, continuous current, short-time current, short-circuit current (interrupting rating) and control-voltage ratings. The short-time current rating is the designated limit of fault current that the low-voltage ac power circuit breaker can successfully carry for a short interval. Other rating information, such as the nominal design voltage and time-delay overcurrent trip setting, may be provided.

The short-circuit current rating of a low-voltage ac power circuit breaker may be extended by connecting a low-voltage ac fuse draw-out in series. When such connection is used, the circuit breaker is provided with means for tripping by way of a signal from an open fuse-trip device. The open fuse-trip device may be either on the fuse draw-out or on the circuit breaker. Circuit breakers are marked with the catalog or type designation of the fuse draw-out with which they are intended to be used.

ADDITIONAL INFORMATION

LOW-VOLTAGE AC POWER-SWITCHING DEVICES (PAPU)

257

Low-voltage AC Power Circuit Breakers (PAQX)—Continued

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," ANSI/IEEE C37.13, "Standard for Low-Voltage AC Power Circuit Breakers Used in Enclosures," and ANSI/NEMA C37.50, "Switchgear – Low Voltage AC Power Circuit Breakers Used in Enclosures – Test Procedures."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Low-Voltage AC Power Circuit Breaker," "Low Voltage AC Power Breaker Frame," "Low Voltage AC Power Circuit Breaker Trip Unit," "Low Voltage AC Power Switching Device Enclosure."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Secondary Network Protectors (PARZ)

USE

This category covers secondary network protectors for use in spot or grid networks rated 600 V or less. These protectors consist of a circuit breaker and its control equipment. They are used for automatically disconnecting a transformer from a secondary network in response to predetermined electrical conditions on the primary feeder or transformer. They are also used for connecting a transformer to a secondary network either through manual control or automatic control responsive to predetermined electrical conditions on the feeder and the secondary network.

PRODUCT MARKINGS

Each secondary network protector is marked with the company name, model number and its electrical ratings, which includes the maximum short circuit rating of the device.

ADDITIONAL INFORMATION

For additional information, see Low Voltage AC Power Circuit Breakers (PAQX), Low Voltage AC Power Switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is IEEE C57.12.44, "IEEE Standard Requirements for Secondary Network Protectors."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Secondary Network Protector."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOW-VOLTAGE AC INTEGRALLY-FUSED POWER CIRCUIT BREAKERS (PASQ)

GENERAL

This category covers low-voltage ac integrally-fused power circuit breakers rated 600 V maximum. Low-voltage ac integrally-fused power circuit breakers include all the mechanical features of low-voltage ac power circuit breakers and, in addition, have current limiters or current-limiting fuses that function to increase the fault-current interrupting rating of the low-voltage ac integrally-fused power circuit breakers.

These devices have been investigated for use on circuits having available fault currents of 200,000 rms symmetrical amps, maximum, three-phase.

In addition to overcurrent trip elements of the low-voltage ac power circuit breakers, these are provided with anti-single-phase tripping device that automatically opens the circuit breaker contacts in response to circuit interruption by the current limiter or the current-limiting fuse.

258 LOW-VOLTAGE AC POWER-SWITCHING DEVICES (PAPU)**Low-voltage AC Integrally-fused Power Circuit Breakers (PASQ)—Continued****PRODUCT MARKINGS**

Low-voltage ac integrally-fused circuit breakers are marked with maximum voltage, frequency, continuous current, short-circuit current (interrupting rating) and control voltage ratings. Other rating information, such as the nominal design voltage and time-delay overcurrent tripping setting, may be provided.

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," ANSI/IEEE C37.13, "Standard for Low-Voltage AC Power Circuit Breakers Used in Enclosures," and ANSI/NEMA C37.50, "Switchgear — Low Voltage AC Power Circuit Breakers Used in Enclosures — Test Procedures."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low Voltage AC Power Circuit Breaker."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOW-VOLTAGE AC POWER CIRCUIT PROTECTORS (PATT)**GENERAL**

This category covers low-voltage ac power circuit protectors rated 240 V or 480 V, investigated for use on circuits having available fault currents of 200,000 rms symmetrical amps maximum, three-phase.

Low-voltage ac power circuit protectors consist of a low-voltage ac power circuit breaker that has been modified to omit the direct-acting tripping device and to include a Class L current-limiting fuse in series with the load terminals of each pole.

PRODUCT MARKINGS

The low-voltage ac power circuit protectors are marked with maximum voltage, frequency, continuous current, short-circuit current and control voltage(s) ratings. Other rating information, such as switching current rating, may be provided.

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/IEEE C37.29, "IEEE Standard for Low-Voltage AC Power Circuit Protectors Used in Enclosures," and ANSI/NEMA C37.52, "Test Procedures for Low Voltage AC Power Circuit Protectors Used in Enclosures."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low Voltage AC Power Circuit Protector."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LOW-VOLTAGE DC POWER CIRCUIT BREAKERS (PAXW)**USE**

This category covers low-voltage dc power circuit breakers specifically designed to provide service-entrance, feeder or branch-circuit protection. Low-voltage dc power circuit breakers are separated into three types: general purpose, high speed and semi-high speed.

These products are intended for use in Listed enclosures or switchboards with Recognized or Listed adapters.

LOW-VOLTAGE AC POWER-SWITCHING DEVICES (PAPU)**Low-voltage DC Power Circuit Breakers (PAXW)—Continued****PRODUCT MARKINGS**

These products are marked with rated maximum voltage, rated continuous current, rated momentary current (when applicable), rated peak current (when applicable), rated short-time current, rated short-circuit current and rated control voltage.

ADDITIONAL INFORMATION

For additional information, see Low Voltage AC Power Switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," and ANSI/IEEE C37.14, "IEEE Standard for Low-Voltage DC Power Circuit Breakers Used in Enclosures."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low Voltage DC Power Circuit Breaker."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRIP DEVICES CLASSIFIED FOR USE IN LOW-VOLTAGE AC POWER CIRCUIT BREAKERS (PAYK)**USE**

This category covers trip devices suitable for use in place of the original trip device of a low-voltage ac power circuit breaker. Classification covers only the trip device in its ability to sense and respond to overcurrent and fault-current conditions.

This category does not cover the circuit breaker on which the trip device is mounted.

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/IEEE C37.59-1996, "IEEE Standard Requirements for Conversion of Power Switchgear Equipment," which references ANSI/IEEE C37.13-1990, "IEEE Standard for Low-Voltage AC Power Circuit Breakers Used in Enclosures," ANSI/IEEE C37.17-1997, "Trip Devices for AC and General Purpose DC Low Voltage Power Circuit Breakers," ANSI/NEMA C37.50-1989, "Switchgear Low Voltage AC Power Circuit Breakers Used in Enclosures," and ANSI/UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

TRIP DEVICE
IN ACCORDANCE WITH IEEE C37.59-[date]
Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MAGNETIC RESONANCE IMAGING EQUIPMENT (PAZB)

This category covers equipment which, unless otherwise noted, is designed for professional use by personnel in hospitals, nursing homes, medical care centers, medical and dental offices, and similar health care facilities. Unless otherwise noted they have not been evaluated for mobile use. The nature of MRI equipment is such that it involves features of installation and use not ordinarily presented in utilization equipment. Such fea-

MAGNETIC RESONANCE IMAGING EQUIPMENT (PAZB)

tures are covered in the manufacturer's installation manual. The equipment is intended to be operated in accordance with the accompanying documents provided with the equipment.

This equipment has been investigated from the standpoint of electric shock, fire, and mechanical hazards. Other hazards, including those which may result from the use of this equipment in the presence of flammable anesthetics have not been investigated. The effect on a patient of simultaneous use of this equipment with other electrical apparatus and the physiological effects, beneficial or otherwise, which may be produced by this equipment, have not been investigated.

Some Magnetic Resonance Imaging (MRI) Equipment generates large magnetic fields as part of its function. For this equipment, precautions must be taken to protect against the magnetic effects on materials in the vicinity which might be attracted or repulsed by the magnetic field.

The basic standards used to investigate products in this category are UL 187, X-Ray Equipment, UL 1012, Power Supplies, and UL 1950, Information Technology Equipment Including Business Equipment, depending on the individual equipment's use and function.

MRI equipment may also or alternatively be covered in this directory under MEDICAL ELECTRICAL EQUIPMENT (PIDF).

The Classification Marking of Underwriters Laboratories Inc. on the product is the only method provided by Underwriters Laboratories Inc. to identify products under its Classification and Follow-up Service. The Classification Marking includes "CLASSIFIED BY UNDERWRITERS LABORATORIES AS TO ELECTRIC SHOCK, FIRE, AND MECHANICAL HAZARDS ONLY", or equivalent statement as indicated in the individual Classifications, and a control number.

For products also classified under Medical Electrical Equipment (PIDF), the Marking includes the appropriate Classification Marking and "Also Classified IN ACCORDANCE WITH UL 2601-1 " .

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MANAGEMENT EQUIPMENT, ENERGY (PAZX)

USE

This category covers energy management equipment that energizes or de-energizes electrical loads to achieve the desired use of electrical power. This equipment normally controls electrical loads by responding to sensors or transducers monitoring power consumption, by sequencing, by cycling the loads through the use of preprogrammed data logic circuits, or any combination thereof. Devices responding to signals from a utility company may receive the signals over the power lines or as radio signals.

Typical loads controlled are space heating, air conditioning, lighting and other similar loads.

UNEVALUATED FACTORS

The effects of the controls on the performance ratings of the connected loads have not been evaluated.

PRODUCT MARKINGS

"Energy Management Equipment Enclosure," "Energy Management Equipment Enclosure Part," "Energy Management Equipment Subassembly" and "Energy Management Equipment Accessory" require modular labeling. The marking on the individual subassembly, or smallest container, will make reference to 1) a wiring diagram for interconnection of a system, and 2) the various combinations of subassemblies that may be employed to comprise the system unit.

RELATED PRODUCTS

Signal system units incorporating energy management systems are covered under Signal System Units (UDTZ) in the Electrical Appliance and Utilization Equipment Directory.

Switching devices operated by a clock mechanism and other similar type products used to energize or de-energize loads are covered under Switches, Clock-operated (WGZR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 916, "Energy Management Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names, as appropriate: "Open Energy Management Equipment-

MANAGEMENT EQUIPMENT, ENERGY (PAZX)

259

"Enclosed Energy Management Equipment," "Energy Management Equipment Enclosure," "Energy Management Equipment Enclosure Part," "Energy Management Equipment Subassembly" or "Energy Management Equipment Accessory."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MANUFACTURED HOME KITCHEN CABINETRY AND BATHTUB AND SHOWER UNITS (PDLT)

GENERAL

This category covers finished units, components, and/or materials have been Classified in accordance with the flammability requirements of the Federal Manufactured Home Construction and Safety Standards; Section 3280.203(b)(5) for kitchen cabinet doors, counter tops, back splashes, exposed bottoms, and end panels or Section 3280.203(b)(6) for plastic bathtubs, shower units, and tub or shower doors.

The insulating, acoustical, structural, toxicity of products of combustion and other properties have not been investigated. The Classification pertains to the finished units, components, and/or materials themselves, and not to the structures in which they are installed.

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM).

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**MANUFACTURED HOME KITCHEN CABINETRY
IN ACCORDANCE WITH FEDERAL MANUFACTURED HOME
CONSTRUCTION AND SAFETY STANDARDS SECTION 3280.203(b)(5)
WITH RESPECT TO FLAMMABILITY ONLY**

Control No.

or

**MANUFACTURED HOME BATHTUB AND SHOWER UNIT
IN ACCORDANCE WITH FEDERAL MANUFACTURED HOME
CONSTRUCTION AND SAFETY STANDARDS SECTION 3280.203(b)(6)
WITH RESPECT TO FLAMMABILITY ONLY**

Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MANUFACTURED HOMES (PD0V)

GENERAL

This category covers manufactured homes, which are structures, transportable in one or more sections, built on a permanent chassis and designed to be used with or without a permanent foundation.

All manufactured homes include provisions for attachment to anchoring and tie-down devices and suitable piers and footings at the installation site.

Manufactured homes are intended for installation subject to approval by the Authority Having Jurisdiction.

RELATED PRODUCTS

Prefabricated modular buildings are covered under Prefabricated Units (QRHQ), Commercial and Industrial Buildings (QRNZ), Composite Panels (QRSY) and Residential Buildings (QTDY).

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM).

REQUIREMENTS

Manufactured homes intended for use as dwelling units have been classified in accordance with the Federal Department of Housing and Urban Development Manufactured Home Construction and Safety Standards, Title 24CFR, Part 3280, December 18, 1975.

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured

under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**MANUFACTURED HOME
SEE HUD LABEL
No.**

One Classification Mark is applied near the data plate (single-wide) or near the data plate and at eye level in the largest bedroom closet of each additional transportable section (double- and triple-wide) of each manufactured home intended for use as a dwelling unit. In addition, information concerning the equipment and appliances factory furnished as part of the manufactured home is included on a data plate posted within the building.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MARINA AND BOATYARD CABLE (PDYQ)

USE

This category covers cable intended for use as flexible branch circuit and feeder wiring in marinas and boatyards in accordance with Article 555 of ANSI/NFPA 70, "National Electrical Code."

The cable is rated 600 V, 75°C and is suitable for exposure to sunlight, fresh water, salt water, gasoline, diesel fuel and lubricating oil.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Marine Products (AAMP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 83, "Thermoplastic Insulated Wire."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Marina and Boatyard Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MARKING AND CODING EQUIPMENT, ELECTRONIC (PGBE)

USE AND INSTALLATION

This category covers electronic marking and coding equipment rated 600 V or less. Included in this category are ink jet printers or similar systems for production line labeling and/or coding. Units covered under this category normally are located in commercial or industrial environments. This equipment may be cord connected or have provision for field wiring. The units are marked with the type or types of ink for which they have been investigated.

RELATED PRODUCTS

Printing equipment intended for use in other applications is covered under Information Technology Equipment Including Electrical Business Equipment (NWGQ) or Graphic Arts Equipment (KCQT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1950, "Safety of Information Technology Equipment, Including Electrical Business Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the follow-

ing product names, as appropriate: "Marking and Coding Equipment," "Ink Jet Coding Machine," "Ink Jet Marking Machine," "Laser Coding Machine" or "Laser Marking Machine."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MATTRESSES AND PADS, ELECTRICALLY CONDUCTIVE, RELATING TO HAZARDOUS LOCATIONS (PHLV)

USE

This category covers mattresses and pads provided with a sheet covering made of cotton material coated with an electrically conductive natural or synthetic rubber, and intended for use in flammable anesthetizing locations where it is necessary for safety to avoid the accumulation of static electricity.

Tests indicate that the electrical resistance conforms to ANSI/NFPA 99, "Standard for Health Care Facilities," and that the mattresses and pads, when in contact with grounded objects, will prevent accumulation of dangerous amounts of static electrical charges.

As oil is injurious to rubber compounds and impairs the electrical conductive properties of these materials, contact with oil should be avoided.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1067, "Electrically Conductive Equipment and Materials for Use in Flammable Anesthetizing Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electrically Conductive Mattress Relating to Hazardous Locations" or "Electrically Conductive Pad Relating to Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MEASURING, TESTING AND SIGNAL GENERATION EQUIPMENT (PICQ)

GENERAL

This category covers equipment that generates electrical signals (transducers, waveform generators, and the like) or that measures, indicates and/or records electrical or nonelectrical signals, quantities, or other parameters generated by other equipment.

This equipment may incorporate circuits used to visually and audibly indicate various wiring conditions in 15 or 20 A branch circuits along with markings or instructions to identify the probable wiring conditions which cannot be determined by the tester.

The devices may include provisions for checking the functions of a ground-fault circuit interrupter (GFCI) connected to the branch circuit, or for indicating that a branch circuit is connected to an arc-fault circuit interrupter (AFCI).

AFCI indicators operate by producing a waveform similar to an arc fault. Since these devices cannot produce an actual arc fault, an AFCI indicator may not trip every AFCI. AFCI indicators are provided with markings or instructions that state the following or equivalent: "CAUTION: AFCIs recognize characteristics unique to arcing, and AFCI indicators produce characteristics that mimic some forms of arcing. Therefore the indicator may provide a false indication that the AFCI is not functioning properly. If this occurs, recheck the operation of the AFCI using the test and reset buttons. The AFCI button test function will demonstrate proper operation."

Equipment intended to be installed only in process control panels is so identified.

**MEASURING, TESTING AND SIGNAL GENERATION
EQUIPMENT (PICQ)**

Equipment may be shipped completely assembled or in modular form. Modular assemblies are intended to be field assembled to form a complete system in accordance with the provided installation instructions.

Open-type measuring, testing and signal generation equipment is not provided with a complete enclosure and is intended to be placed in an industrial control panel or similar type of enclosure.

UNEVALUATED FACTORS

These products have been investigated with respect to risk of fire, shock and injury to persons. Where such equipment is included in systems that involve other pieces of equipment or mechanical operations, the investigation of the risk of fire, electric shock and personal injury has included only the equipment specifically Listed in the individual Listings. The accuracy of measured, analyzed or prepared quantities has not been investigated.

RELATED PRODUCTS

This category does not cover medical and dental or process control metering and testing equipment. Listings of equipment which measures the functional performance (nonelectrical or nonelectronic) of other equipment, the physical or chemical properties of materials or qualitative or quantitative constituent analysis of materials and preparation of materials for further analysis or measurement are covered under Laboratory Use Electrical Equipment (OGTK).

Additional Listings are covered under Electrical and Electronic Measuring and Testing Equipment (FHCW).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 61010B-1, "Electrical Measuring and Test Equipment – Part 1: General Requirements," or ANSI/UL 61010-1, "Electrical Equipment for Measurement, Control and Laboratory Use – Part 1: General Requirements," and IEC 61010-2-032, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-032: Particular Requirements for Hand-Held and Hand-Manipulated Current Sensors for Electrical Test and Measurement," as applicable.

Equipment incorporating circuits to indicate wiring conditions in branch circuits, GFCI functions, or to indicate that a branch circuit is connected to an AFCI is additionally investigated to UL 1436, "Outlet Circuit Testers and Similar Indicating Devices."

ADJUNCT SERVICES

Underwriters Laboratories Inc. (UL) provides a service for the Verification of measuring, testing and signal generation equipment that not only meets the appropriate requirements of UL but also has been investigated to Levels I, II, III and/or IV of Annexes A and B of Performance Specification TSB-155, "Transmission Performance Specifications for Field Testing of Unshielded Twisted-Pair Cabling Systems."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Measuring and Testing Equipment," "Measuring Equipment," "Testing Equipment," "Signal Generation Equipment," or the name of the specific type of product as shown in the individual Listings, or combinations of the preceding identities. The product name may be preceded by the words "Open-type."

Combination Listing/Verification Mark — A Listing Mark combined with a Verification Mark is provided on products that have additionally been investigated to Levels I, II, III and/or IV of Annexes A and B of Performance Specification TSB-155. The combined Listing/Verification Mark consists of the Listing Mark elements detailed above and the statement "ALSO VERIFIED IN ACCORDANCE WITH LEVEL(S) * OF TSB-155."

* I, II, III and/or IV

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MEASUREMENT EQUIPMENT
CLASSIFIED FOR USE IN
HAZARDOUS LOCATIONS (PICX)****GENERAL**

This category covers equipment intended for measuring physical properties, such as thickness and density, on a production line.

This equipment has been investigated for risk of explosion, fire and electric shock only.

**MEASUREMENT EQUIPMENT CLASSIFIED FOR USE IN
HAZARDOUS LOCATIONS (PICX)**

261

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**MEASUREMENT EQUIPMENT FOR USE IN HAZARDOUS
LOCATIONS****AS TO FIRE, ELECTRICAL SHOCK AND EXPLOSION HAZARDS
ONLY****Control No.**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MEDICAL EQUIPMENT (PIDF)**USE AND INSTALLATION**

This category covers equipment intended to diagnose, treat, or monitor a patient under medical supervision, and which makes physical or electrical contact with the patient and/or transfers energy to or from the patient and/or detects such energy transfer to or from the patient.

This category also covers those accessories defined by the manufacturer as necessary for the normal use of the equipment.

Unless otherwise noted, this equipment is designed for professional use by qualified personnel in hospitals, nursing homes, medical care centers, medical and dental offices, and similar health care facilities, and in remote areas under the direction of qualified personnel, in accordance with the instructions specified by the manufacturer.

This equipment has been Classified with respect to electric shock, fire, mechanical and other specified hazards incident to its use in unclassified (ordinary) locations. The other specified hazards are those that are included in UL 60601-1 (formerly UL 2601-1) and the Particular and/or Collateral Standards to which the equipment has been investigated.

The wiring methods for installation of these products are covered by Article 517 of ANSI/NFPA 70, "National Electrical Code" (NEC). The individual units of a system may be designed to be interconnected by means of one or more of the wiring methods outlined in the NEC.

The nature of some of this equipment, such as X-ray, nuclear imaging, and magnetic resonance equipment, is such that it involves features of installation and use not ordinarily presented in utilization equipment. Such features are covered in the manufacturer's installation instructions. Installation must, if possible, be made in a room or compartment in which provision is made to prevent fire or injury to persons and, in all cases, be in accordance with the manufacturer's installation instructions furnished with the equipment and the requirements of the Authorities Having Jurisdiction.

X-radiation safety and performance requirements are regulated under Public Law 90-602 and are enforced by the U.S. Department of Health and Human Services. These criteria are outlined in Code of Federal Regulations, Title 21, Parts 1000 to 1999. Compliance with the applicable regulations under the conditions of normal and abnormal operation has not been investigated by UL.

Some of the Medical Equipment Classifications are predicated on the provision of one of two alternate attachment plugs specifically referred to in Attachment Plugs, Fuseless (AXUT). One is a locking type identified by the marking "Hospital Only" and the other is a nonlocking type ANSI Standard configuration grounding type identified by the marking "Hospital Grade" and a green dot on the body. The identification is visible after installation on the flexible cord.

Baby incubators and similar equipment for use with oxygen-enriched atmospheres have been investigated with respect to the increased hazard resulting from the presence of oxygen and electrical parts within the equipment. Motor-operated beds are marked if they are suitable for use with oxygen.

Oil bath sterilizers and similar equipment have been investigated with respect to their use with oils such as are recommended by the sterilizer manufacturer.

Products covered under this category include equipment intended to be field installed, in accordance with the instructions provided, to Classified equipment of the same manufacturer. The field-installed equipment is appropriately marked as noted below.

Individual components of the end products in this category have been investigated to applicable UL component requirements. Also, investigation of components to applicable international component requirements has been performed by UL or other appropriate certifying agency (as determined by UL). UL Follow-Up Service at the end-product manufacturing facility also determines that such components continue to bear the appropriate designated certifying agency's mark.

REBUILT PRODUCTS

This category also covers medical equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt medical equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt medical equipment is subject to the same requirements as new medical equipment.

UNEVALUATED FACTORS

The physiological effects, beneficial or otherwise, which may be produced by this equipment have not been investigated.

RELATED PRODUCTS

Medical equipment that includes refrigerated components, such as refrigeration therapy equipment, is covered under Refrigerated Medical Equipment (SOPT).

Equipment investigated to determine its suitability for use in hazardous (classified) locations as defined in the NEC is covered under Medical Equipment for Use in Hazardous Locations (PINR).

For household health care equipment, see Personal Hygiene and Health Care Appliances (QGRZ). For heating pads, see Heating Pads, Electric (MNUV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 60601-1 (formerly UL 2601-1), "Safety of Medical Electrical Equipment, Part 1: General Requirements." Note that although redesignated as UL 60601-1, UL 2601-1 is identical to UL 60601-1 except for formatting. Therefore, products identified as investigated to either standard are subject to identical technical requirements.

Particular Standards — UL 60601-1 contains requirements for safety which are generally applicable to all medical equipment. For certain types of equipment, these requirements are supplemented or modified by the special requirements of a Particular Standard (IEC 60601-2-XX). However, unless otherwise indicated in the deviations, the requirements of a Particular Standard do not modify the deviations. Where Particular Requirements exist, the General Standard is not used alone.

Collateral Standards — When the equipment falls within the scope of one or more Collateral Standards (IEC 60601-1-XX) such standard(s) may, optionally, also be used. Unless otherwise indicated in the deviations, the requirements of a Collateral Standard do not modify the deviations.

Product Marking (with respect to applicable standards) — As part of the Classification Mark, reference to UL 60601-1 and/or UL 2601-1 is included. For products that have been investigated to the applicable Particular (IEC 60601-2-XX) and/or Collateral (IEC 60601-1-XX) Standards, reference to these standards is made on the product or in the accompanying documents.

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**MEDICAL EQUIPMENT+
WITH RESPECT TO ELECTRICAL SHOCK, FIRE AND MECHANICAL
HAZARDS ONLY
IN ACCORDANCE WITH [standard*]
Control No.**

+ or other appropriate product name as shown in the individual Classifications

For rebuilt or remanufactured products the word "Rebuilt," "Remanufactured," "Refurbished" or "Reconditioned" precedes the product name.

For field-installed products the words "Field Installed" precedes the product name.

Alternate Marking Options

1. The Classification Mark includes the UL symbol, the word "CLASSIFIED" above the UL symbol, the product name as described above, the phrase "SEE ACCOMPANYING DOCUMENTS," or the symbol of a triangle containing the exclamation point (IEC 348, Symbol 14 - Δ), the standard number* and a control number. As a minimum, the standard number* always includes UL 60601-1, UL 2601-1 or both. In addition,

tion, the product's accompanying documents will contain the complete Classification Mark.

2. For products with limited space for markings, the Classification Mark includes the UL symbol, the word "CLASSIFIED" above the UL symbol, the symbol of a triangle containing the exclamation point (IEC 348,

Symbol 14 - Δ), and a control number. In addition, the product's accompanying documents will contain the complete Classification Mark.

3. For products (such as implantable devices) where the Classification Mark is not feasible, the complete Classification Mark will appear on the carton or smallest unit container in which the product is packaged. The product's accompanying documents may also contain the complete Classification Mark.

* Based on the certification coverage of the product, the standard may be UL 60601-1, UL 2601-1 or both, applicable Particular (IEC 60601-2-XX) and/or related Collateral (IEC 60601-1-XX) Standards for which the product has been found to comply by UL.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MEDICAL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (PINR)

GENERAL

This category covers portable suction, pressure and anesthesia units, portable baby incubators, surgical devices and similar equipment designed for professional use by attendants in hospitals. This equipment has been investigated solely from the standpoint of electrical, fire, explosion, and accident hazards. Other hazards, such as physiological effects, have not been investigated.

Except for low-voltage battery-powered devices, connections to supply lines require the use of receptacles with plugs or receptacles with plugs interlocked with snap switches, or their equivalent. Listed for the specified hazardous locations. The flexible cord connected to the units should be frequently inspected and replaced when necessary. Terminal connections should be properly made and maintained.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these portable devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

These devices are intended for use in accordance with ANSI/NFPA 99, "Standard for Health Care Facilities."

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Medical Equipment for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MEDIUM-VOLTAGE POWER CABLE (PITY)

GENERAL

This category covers medium-voltage cable rated 2400 to 35,000 V intended for use and installation in accordance with Article 328 of ANSI/NFPA 70, "National Electrical Code" (NEC).

The cable is single or multiconductor, aluminum or copper, with solid extruded dielectric insulation and may have an extruded jacket, metallic covering or combination of both over the single conductors or over the assembled conductors in a multiconductor power cable.

MEDIUM-VOLTAGE POWER CABLE (PITY)

All insulated conductors rated higher than 2400 V have electrostatic shielding. Cable rated 2400 V is nonshielded.

Nonshielded cable is intended for use where conditions of maintenance and supervision ensure that only competent individuals service and have access to the installation.

PRODUCT MARKINGS

Shielded cable is marked "MV-90" or "MV-105" and is suitable for use in wet or dry locations at 90 or 105°C.

Nonshielded cable is marked either "MV-90" indicating suitability for use in wet or dry locations at 90°C maximum, or "MV-90 Dry Locations Only" indicating suitability for use only in dry locations at 90°C maximum.

Cable marked "Oil Resistant I" or "Oil Resistant II" is suitable for exposure to mineral oil at 60°C or 75°C, respectively.

Cable marked "Sunlight Resistant" may be exposed to the direct rays of the sun.

Cable intended for installation in cable trays in accordance with Article 392 of the NEC is marked "For Use in Cable Trays" (or "For CT Use").

Cable with aluminum conductors is marked with the word "Aluminum" (or "AL").

The cable is marked with the conductor size, voltage rating and insulation level (100% or 133%).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1072, "Medium-Voltage Power Cables."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Medium-Voltage Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MEDIUM-VOLTAGE CABLE CLASSIFIED IN ACCORDANCE WITH UL 1072, WITH METRIC CONDUCTOR SIZES (PIVW)

GENERAL

This category covers medium-voltage cable rated 2001 to 35,000 V and in conductor sizes 10 through 500 sq mm.

The cable complies with all requirements specified in UL 1072, "Medium-Voltage Power Cables," except that metric conductor sizes are used instead of AWG sizes. The cable is for use in jurisdictions where metric conductor sizes are required or permitted.

The cable is single or multi-conductor, aluminum or copper, with solid extruded dielectric insulation. An extruded jacket, metallic covering, or combination of both may be provided over single conductors or over the assembled conductors in a multi-conductor power cable.

All insulated conductors rated 8001 V and higher have electrostatic shielding. Cable rated 2001 to 8000 V may be shielded or nonshielded.

Nonshielded cable is intended for use where conditions of maintenance and supervision ensure that only competent individuals service and have access to the installation.

PRODUCT MARKINGS

Shielded cable is marked "MV-90" or "MV-105" and is suitable for use in wet or dry locations at 90°C or 105°C.

Nonshielded cable is marked either "MV-90" indicating suitability for use in wet or dry locations at 90°C maximum, or "MV-90 Dry Locations Only."

Cable marked "oil resistant I" or "oil resistant II" is suitable for exposure to mineral oil at 60°C or 75°C, respectively.

Cable marked "sunlight resistant" may be exposed to the direct rays of the sun.

Cable intended for installation in cable trays is marked "For CT Use" or "For Use In Cable Trays."

Cable with aluminum conductors is marked with the word "Aluminum" or the letters "AL."

Cable is marked with conductor size in sq mm, voltage rating and insulation level (100 percent or 133 percent).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

**MEDIUM-VOLTAGE CABLE CLASSIFIED IN ACCORDANCE
WITH UL 1072, WITH METRIC CONDUCTOR SIZES (PIVW)**

263

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1072, "Medium-Voltage Power Cables."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product, the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products shall only be as illustrated below:

**MEDIUM VOLTAGE CABLE
CLASSIFIED BY UNDERWRITERS LABORATORIES INC®
IN ACCORDANCE WITH UL 1072, WITH METRIC
CONDUCTOR SIZES**

No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METAL-CLAD CABLE (PJAZ)

GENERAL

This category covers Type MC metal-clad cable. The cable is rated for use up to 2000 V, and Listed in sizes 18 AWG through 2000 kcmil for copper, 12 AWG through 2000 kcmil for aluminum or copper-clad aluminum, and employs thermoset or thermoplastic insulated conductors. It is intended for installation in accordance with Article 330 of ANSI/NFPA 70, "National Electrical Code" (NEC).

The cable consists of one or more insulated circuit conductors, a grounding path (grounding conductor, metal sheath, or combination thereof) as described below, one or more optional optical fiber members, and an overall metal sheath. The metal sheath is an interlocked metal tape, a corrugated metal tube, or a smooth metal tube. The metal sheath of single-conductor cable is nonferrous. A nonmetallic jacket may be provided under and/or over the metal sheath. Cable with metal armor, rated 2400 to 35,000 V is covered under Medium-voltage Power Cable (PITY) and is marked "Type MV or MC."

Cable with interlocked armor that has been determined to be suitable for use as a grounding means has interlocked aluminum armor in direct contact with a single, full-sized, bare aluminum grounding/bonding conductor. This cable is marked to indicate that the armor/grounding conductor combination is suitable for ground. The equipment grounding conductor required within all other cable with interlocked armor may be insulated or bare, may be sectioned, and is located in the cable core but not in contact with the armor. Any additional grounding conductors of either design have green insulation. One insulated grounding conductor may be unmarked, one other may have only a yellow stripe and the balance have surface markings that indicate they are additional equipment grounding conductors or isolated grounding conductors.

The sheath of the smooth or corrugated tube Type MC cable or a combination of the sheath and a supplemental bare or unstriped green insulated conductor is suitable for use as the ground path required for equipment grounding. The supplemental grounding conductor may be sectioned. When sectioned, all sections are identical. Each additional green insulated grounding conductor has either a yellow stripe or a surface marking or both to indicate that it is an additional equipment or isolated grounding conductor. Additional grounding conductors, however marked, are not smaller than the required grounding conductor.

PRODUCT MARKINGS

Information regarding temperature rating, voltage rating, cable and conductor Type and AWG size is shown either on a marker tape under the armor or on the surface of a nonmetallic jacket, if used.

Copper-clad aluminum conductors are surface printed "AL (CU-CLAD)" or "Cu-clad AL." Aluminum conductors are surface printed "AL."

Cable employing compact-stranded copper conductors is so identified directly following the conductor size, wherever it appears (surface, tag, carton or reel), by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors."

For termination information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

Cable suitable for use in cable trays, direct sunlight or direct burial application is so marked. Cable marked for direct burial is also considered acceptable for encasement in concrete.

Cable marked "Oil Resistant I" (or "Oil Res I") is suitable for exposure to mineral oil at 60°C. Cable suitable for exposure to mineral oil at 75°C is marked "Oil Resistant II" (or "Oil Res II").

Cable containing one or more optical fiber members is marked "MC-OE." Cable with a nonmetallic outer jacket that complies with the Limited Smoke Test requirements specified in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," and all unjacketed metal-clad cable may be marked with the suffix "-LS."

Cable with an interlocked armor that is intended as a ground path is marked "armor is grounding path component," and is provided with installation instructions.

Cable intended for use in hazardous (classified) locations, Class I, Division 1, Groups A, B, C and D; Class II, Division 1, Groups E, F and G; Class I, Zone 1, Groups IIA, IIB and IIC in accordance with the NEC, is marked "MC-HL."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1569, "Metal-Clad Cables."

Cable marked "MC-HL" has been additionally investigated to ANSI/UL 2225, "Cables and Cable Fittings for Use in Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Metal-clad cable that contains copper or copper-clad aluminum conductors has the product name "Metal-clad Cable"; metal-clad cable that contains aluminum conductors has the product name "Metal-clad Aluminum Cable."

See Cable for Use in Hazardous Locations (PJPP) for Listing Mark requirements for cable marked "MC-HL."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METAL-CLAD CABLE CLASSIFIED IN ACCORDANCE WITH IEC PUBLICATIONS (PJHY)

This category covers Listed products that have also been investigated in accordance with IEC 332-3, Tests on Electric Cables Under Fire Conditions; IEC 502, Extruded Solid Dielectric Insulated Power Cables for Rated Voltages from 1 kV up to 30 kV; and IEC 540, Test Methods for Insulations and Sheaths of Electric Cables and Cords (Elastomeric and Thermoplastic Compounds). These products are provided with the Listing Mark for Metal-Clad Cable (PJAZ).

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The Classification Marking of Underwriters Laboratories Inc. on the product is the only method provided by Underwriters Laboratories Inc. to identify products manufactured under its Classification and Follow-Up Service.

The Classification Marking for these products includes the appropriate Listing Mark and the statement: "Also Classified by Underwriters Laboratories Inc. in accordance with IEC Publications 332-3, 502 and 540."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METAL-CLAD CABLE CONNECTORS, TYPE MC (PJOX)

GENERAL

This category covers fittings for use with metal-clad cable, Type MC, employing (a) interlocking aluminum or steel tape, (b) metal-clad interlocking armor ground cable, (c) smooth aluminum tube, or (c) corrugated aluminum or copper tube. This product is intended for installation and use in accordance with the following information and the limitations specified in Metal-clad Cable (PJAZ).

Connector Selection — Connectors are intended to be selected in accordance with the size and type of cable for which they are designated. Bronze connectors are intended for use only with cable employing corrugated copper tube. Aluminum connectors are intended for use only with cable employing corrugated aluminum, interlocking aluminum or smooth aluminum tube, unless marked otherwise on the carton (see **PRODUCT MARKINGS** below).

Use in Concrete — Fittings made of aluminum are not considered suitable for use in concrete or cinder fill unless protected with asphalt paint or the equivalent. Fittings suitable for use in concrete are identified by a marking on the carton.

Grounding — Metal-clad cable connectors for use with metal-clad interlocking armor ground cable, corrugated aluminum or copper tube, or smooth aluminum tube, are considered suitable for grounding for use in circuits over and under 250 V and where installed in accordance with ANSI/NFPA 70, "National Electrical Code."

Dry and Wet Locations — Nonmetallic parts, such as glands or seals, are suitable for use at a temperature of 90°C in dry and wet locations. The fittings are suitable for use in dry or wet locations unless marked otherwise (see **PRODUCT MARKINGS** below).

Use with Armored Cable — Metal-clad cable connectors also suitable for use with armored cable, Type AC, are so marked on the device or carton. Listed armored cable, Type AC, is covered under Armored Cable Connectors, Type AC (AWSX).

PRODUCT MARKINGS

Metal-clad cable fittings or the smallest unit shipping cartons are marked with (1) the range of cable diameters and the type of cable sheath (corrugated, interlocking or smooth), (2) the material of the sheath (aluminum, copper or steel) for which they have been investigated, (3) "Concrete-tight" if suitable for use in poured concrete, and (4) "For Type AC Cable" (or equivalent wording) if suitable for that use. See the following table for additional carton markings. Metal-clad cable fittings suitable for use only in dry locations are marked "Dry Locations" on the device and smallest unit carton.

Type of Metal-clad Cable	Abbreviation
Metal-clad interlocking armor cable	MCI
Metal-clad interlocking armor ground cable	MCI-A
Metal-clad continuous smooth sheath armor cable	MCS
Metal-clad continuous corrugated sheath armor cable	MCC
Metal-clad continuous corrugated sheath armor cable, flat	FLAT

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Metal-clad (Type MC) Cable Connector."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METAL-CLAD CABLE CLASSIFIED IN ACCORDANCE WITH UL 1569, WITH METRIC CONDUCTOR SIZES (PJPJ)

GENERAL

This category covers Type MC metal-clad cable. It is rated for use up to 2000 V, and Classified in sizes 1.5 through 35 sq mm copper, 4.0 through 35 sq mm aluminum or copper-clad aluminum and employs thermoset or thermoplastic insulated conductors.

The cable complies with all the requirements specified in UL 1569, "Metal-Clad Cables," except that metric conductor sizes are used instead of AWG/kcmil sizes. This cable is for use in jurisdictions where metric conductor sizes are required or permitted.

Type MC cable is of three designs (a) interlocked metal tape, (b) corrugated tube and (c) smooth tube, and all are intended for aboveground use except when marked for direct burial.

The armor of the interlocked metal tape type may or may not be used for grounding. Interlocked armor constructions that may be used as a ground

**METAL-CLAD CABLE CLASSIFIED IN ACCORDANCE WITH
UL 1569, WITH METRIC CONDUCTOR SIZES (PJPJ)**

path have a grounding/bonding conductor outside the cable core and in direct contact with the armor. Interlocked armor constructions that are not intended as a ground path have a grounding conductor inside the cable core and not in contact with the armor. The tube of corrugated or smooth tube Type MC Cable in combination with the equipment grounding conductor, when provided, is suitable for grounding; otherwise the tube by itself is suitable for grounding.

PRODUCT MARKINGS

Information regarding temperature rating, voltage rating, cable and conductor Type and sq mm size is shown either on a marker tape under the armor or on the surface of a nonmetallic jacket, if used.

Copper-clad aluminum conductors are surface printed "AL (CU-CLAD)" or "Cu-Clad Al." Aluminum conductors are surface printed "AL."

Cable employing compact-stranded copper conductors is so identified directly following the conductor size, wherever it appears (surface, tag, carton or reel), by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors."

Cable suitable for use in cable trays, direct sunlight or direct burial application is so marked.

Cable marked "Oil Resistant I" (or "Oil Res I") is suitable for exposure to mineral oil at 60°C. Cable suitable for exposure to mineral oil at 75°C is marked "Oil Resistant II" (or "Oil Res II").

Cable with an interlocked armor that is intended as a ground path is marked "armor is grounding path component," and is provided with installation instructions.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1569, "Metal-Clad Cable."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product, the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products shall only be as illustrated below using the appropriate product name: Metal-clad cable that contains copper or copper-clad aluminum conductors has the product name "Metal-Clad Cable"; metal-clad cable that contains aluminum conductors has the product name "Metal-Clad Aluminum Cable."

[PRODUCT NAME]

No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**CABLE FOR USE IN HAZARDOUS
LOCATIONS (PJPP)****GENERAL**

This category covers Type MC-HL metal-clad cable and Type ITC-HL instrumentation tray cable for use in Class I and II hazardous (classified) locations.

Type MC-HL cable is rated up to 35,000 V, and Listed in sizes 18 AWG through 2000 kcmil for copper, 12 AWG through 2000 kcmil for aluminum, or copper-clad aluminum, and employs thermoset- or thermoplastic-insulated conductors. It is intended for installation in accordance with Articles 330, 501 502 and 505 of ANSI/NFPA 70, "National Electrical Code" (NEC). Cable containing conductors rated 2 kV may be used in circuits operating at 2 kV, nominal or less, in accordance with Articles 600 and 490 of the NEC. Cable containing conductors rated 5,000 to 35,000 V is intended for installation and use in accordance with Articles 328, 501, 502 and 505 of the NEC.

Type MC-HL cable consists of two or more insulated conductors, one or more grounding conductors, and an overall gas/vapor tight continuous corrugated metallic sheath. A nonmetallic jacket is provided over the metal sheath.

The equipment grounding conductor required within Type MC-HL cable may be insulated or bare and may be sectioned. Any additional grounding conductors have green insulation.

Type ITC-HL cable is rated for use on circuits up to 150 V and 5 A. The conductors are size 22 AWG through 12 AWG copper or thermocouple alloy

CABLE FOR USE IN HAZARDOUS LOCATIONS (PJPP)

265

with thermoset or thermoplastic insulation. The cable is intended for installation in accordance with Articles, 501, 502, 505 and 727 of the NEC.

Type ITC-HL cable consists of two or more insulated conductors, with an overall gas-/vapor-tight continuous corrugated metallic sheath and with nonmetallic jackets both under and over the metal sheath. An equipment-grounding conductor may be provided within a Type ITC-HL cable and may be insulated or bare.

PRODUCT MARKINGS

Information regarding temperature rating, voltage rating, cable and conductor Type and AWG size is shown on the surface of a nonmetallic jacket. The cable is marked as described in Metal-clad Cable (PJAZ) or Instrumentation Tray Cable (NYTT), except the suffix "-HL" follows "MC" or "ITC."

RELATED PRODUCTS

See Cable Fittings for Use in Hazardous Locations (CYMX) and Cable Fittings for Use in Class I, Zone Classified Hazardous Locations (CYMJ).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1569, "Metal-Clad Cables," ANSI/UL 2250, "Instrumentation Tray Cable," and UL 2225, "Metal-Clad Cables and Cable-Sealing Fittings for Use in Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Metal-clad cable that contains copper or copper-clad aluminum conductors has the product name "Metal-clad Cable for Use in Hazardous Locations"; metal-clad cable that contains aluminum conductors has the product name "Metal-clad Aluminum Cable for Use in Hazardous Locations" or "Instrumentation Tray Cable for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**METER MOUNTING EQUIPMENT
(PJSR)**

This category covers meter mounting equipment, which consists of an enclosure, wiring terminals and provision for fastening the meter to the equipment. Meter mounting equipment does not include a meter, over-current devices, instrument transformers, arcing or switching parts, or the like. A meter socket may include provisions for installation of current transformers within the meter socket enclosure.

Meter mounting equipment is marked with a continuous amp rating and may, in addition, have a maximum use (intermittent) amp rating of not more than 125% of the continuous amp rating. Meter mounting equipment accommodating two or more meters is marked with a continuous current line bus rating (may also be referred to as an overall assembly rating) and may, in addition, have an overall maximum use (intermittent) line bus rating (or overall assembly rating) of not more than 125% of the continuous line bus rating.

This equipment is intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is on a wiring diagram or other readily visible location and is independent of any marking on a terminal connector unless the terminal connector is an integral, nonremovable part of the meter socket jaw.

Wire connectors in Listed meter mounting equipment are intended to accommodate one conductor only unless use with more than one conductor is clearly indicated on the wiring diagram or other readily visible location.

Unless the equipment is marked to indicate otherwise, the termination provisions are based on the use of 75°C ampacities for wire as specified in Table 310.16 of ANSI/NFPA 70, "National Electrical Code" (NEC). However, 3-wire, single-phase service entrance or feeder conductors for dwelling units may be as covered in Section 310.15(B)(6) of the NEC. Termination provisions are determined based on values provided in Table 310.16 or Section 310.15(B)(6), with no adjustment made for correction factors.

Meter mounting equipment is marked with the enclosure type described in Electrical Equipment for Use in Ordinary Locations (AALZ).

A post-mounted meter socket, having an open bottom for the entry of underground conductors, is provided with:

- A marking showing the final grade level, which should be no less than 2 ft (0.6 m) above the lower end of the enclosure for a self-supported post and 18 in. (457 mm) for a separately supported post, and
- Instructions for setting the post in concrete or for securing to other mounting support.

A pedestal-mounted meter socket is intended to be mounted on a concrete base through which the underground conductors enter the enclosure by means of conduit. Mounting pedestals constructed of a coated aluminum base are provided with recommended installation procedures to avoid damage to the pedestal.

Meter mounting equipment with a mounting post or pedestal either has ventilation to inhibit condensation or is provided with instructions for the use of sealing facilities.

Unless marked otherwise, meter mounting equipment with a post or pedestal is not intended to serve as the sole support of a mast for overhead wiring.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METER FITTINGS (PJVV)

GENERAL

This category covers meter fittings, which are designed to accommodate bolt-in type watt-hour meters and similar meters.

Ratings of Listed meter fittings are limited to 600 V ac maximum and 400 A maximum.

Meter fittings are marked with their short-circuit current rating in rms symmetrical amps. For short-circuit ratings exceeding 10 kA rms symmetrical, the marking includes the type and rating of overcurrent protection to be used with the meter fitting.

ADDITIONAL INFORMATION

For additional information, see Meter Mounting Equipment (PJSR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 414, "Meter Sockets."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Meter Fitting."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METER SOCKET BASES (PJWT)

GENERAL

This category covers meter socket bases, which are bases intended to accommodate plug-in type watt-hour and similar meters rated for use with current transformers. They are designed to be installed, with the meter, inside enclosures to allow for connection in accordance with ANSI/NFPA 70, "National Electrical Code."

Meter socket bases are rated 600 V ac maximum. Meter socket bases rated over 30 A are marked with their short-circuit current rating in rms symmetrical amps. For short-circuit current ratings exceeding 10 kA, the marking includes the type and rating of overcurrent protection to be used with the meter socket.

Meter socket bases are marked with a continuous amp rating and may, in addition, have a maximum use (intermittent) rating of not more than 125% of the continuous amp rating.

RELATED PRODUCTS

Meter sockets with meters protruding through the enclosure are covered under Meter Sockets (PJYZ).

ADDITIONAL INFORMATION

For additional information, see Meter Mounting Equipment (PJSR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 414, "Meter Sockets."

Meter Socket Bases (PJWT)—Continued

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Unenclosed Meter Socket."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METERING TRANSFORMER CABINETS (PJXS)

GENERAL

This category covers metering transformer cabinets, which consist of an enclosure and provisions for accommodating current transformers. They do not include the current transformers. They may have provision for the mounting of plug-in type watt-hour meters. They may also include wiring terminals and buses to accommodate bus-type current transformers.

Metering transformer cabinet interiors are intended for field installation into enclosures. Unless marked for use in a specific enclosure, wiring space has not been investigated.

Ratings of Listed metering transformer cabinets and interiors are limited to 600 V ac maximum and 6000 A maximum.

Metering transformer cabinets intended for use with specific metering transformer cabinet interiors and the interiors themselves are marked with their short-circuit current rating in rms symmetrical amps.

ADDITIONAL INFORMATION

For additional information, see Meter Mounting Equipment (PJSR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 414, "Meter Sockets."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Metering Transformer Cabinet" or "Metering Transformer Cabinet Interior."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METER SOCKETS (PJYZ)

GENERAL

This category covers meter sockets, which are complete enclosures accommodating plug-in type watt-hour and similar meters. They provide terminating means for conductors of wiring systems recognized by ANSI/NFPA 70, "National Electrical Code."

The tightening torque required for terminal screws is specified by a marking.

Terminal wire connectors may be omitted and, if omitted a marking specifies which connectors are intended to be used. Instructions for the field installation of connectors are provided with the connectors.

Meter sockets are suitable for supply wiring to enter the enclosure from either the top or the bottom, unless the meter socket is marked "Overhead Feed Only" or "Underground Feed Only," or the equivalent. The marking "Top Feed" is considered equivalent to "Overhead Feed," and "Bottom Feed" is considered equivalent to "Underground Feed."

The ratings of these meter sockets are limited to 600 V ac maximum and to 400 A maximum through any one meter.

Meter sockets rated over 30 A are marked with their short-circuit current rating in rms symmetrical amps. For short-circuit current ratings exceeding 10 kA, the marking includes the type and rating of overcurrent protection to be used with the meter socket.

Meter sockets are marked with a continuous amp rating and may in addition have a maximum use (intermittent) amp rating of not more than 125% of the continuous amp rating.

ADDITIONAL INFORMATION

For additional information, see Meter Mounting Equipment (PJSR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

METER SOCKET ACCESSORIES (PKAX)**GENERAL**

The category covers accessories intended for use with meter sockets, such as jumper covers, meter socket extenders or other equipment.

Ratings of Listed meter socket accessories are limited to 600 V ac and 400 A maximum.

Meter socket accessories are only considered suitable for use in meter sockets with a short-circuit current rating not exceeding 10 kA rms symmetrical, unless the accessory is otherwise marked.

RELATED PRODUCTS

See Meter Sockets (PJYZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Meter Socket Accessory," "Temporary Jumper Cover Accessory" or "Meter Socket Extender," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MICROWAVE AND CABLE COMMUNICATION EQUIPMENT (POFV)

This category covers microwave communication equipment, cable communication equipment, communication antennas and antenna positioning equipment intended for household or commercial use.

This equipment has been investigated with respect to risk of fire, electric shock and personal injury. Where such equipment is included in systems that involve other pieces of equipment or mechanical operations, the investigation of the risk of fire, electric shock and personal injury have included only the equipment specifically noted in the individual Listings.

Video tape recorders, video cameras and related accessories are covered under Audio/Video Apparatus (AZSQ) and Audio and Video Equipment (AZUJ).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMUNICATION ANTENNAS (POQQ)

This Listing covers satellite or microwave receiving and transmitting antennas and accessories intended for household or commercial use, such

Communication Antennas (POQQ)—Continued

as: satellite antenna dishes, microwave antenna horns or waveguides, receiving and transmitting antennas, antenna mounting/support hardware (tripods, masts, polar mounts) and similar products.

Products of the above types may also be Listed under the categories Audio/Video Apparatus (AZSQ) and Audio/Video Equipment (AZUJ).

For additional information, see Microwave, and Cable Communication Equipment (POFV) and Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic standards used to investigate products in this category are UL 1409, Low-Voltage Video Products Without Cathode-Ray-Tube Displays. (Field wiring is investigated to the applicable portions of UL 1950, Information Technology Equipment including Electrical Business Equipment, and UL 873, Electrical Temperature-Indicating and -Regulating Equipment).

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Microwave and Cable Communication Equipment", "Satellite Antenna Equipment", "Microwave Antenna Equipment", "Antenna Equipment", or "...Product", or appropriate product name, as shown in the individual Listing.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MICROWAVE COMMUNICATION EQUIPMENT CLASSIFIED FOR USE IN SPECIFIED EQUIPMENT (POVJ)

These products are retrofit kits consisting of parts intended for field installation in microwave communication equipment. These products have been evaluated by UL to determine that when installed in accordance with the manufacturer's instructions they do not adversely affect the operation of the Specified Equipment. The installation instructions provided with each kit provide the information identifying the specific equipment into which the kit may be installed.

For additional information, see Microwave and Cable Communication Equipment (POFV) and Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic Standard used to investigate these retrofit kits is UL 1409, Low-Voltage Video Products Without Cathode Ray Tube Displays.

LOOK FOR CLASSIFICATION MARK ON PRODUCT

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MINERAL-INSULATED METAL-
SHEATHED CABLE (PPKV)****GENERAL**

This category covers Type MI mineral insulated metal-sheathed cable which consists of one or more solid copper conductors insulated with highly compressed magnesium oxide and enclosed in a continuous copper or alloy steel sheath, with or without a nonmetallic jacket. It is intended for use in accordance with Article 332 of NFPA 70, "National Electrical Code." Cable rated 600 V is labeled in sizes 16 AWG to 500 kcmil single conductor, 16 to 4 AWG two and three conductor, 16 to 6 AWG four conductor, and 16 to 10 AWG seven conductor constructions. Cable rated 300 V is labeled in two, three, four and seven conductor, sizes 18 to 16 AWG, for use on signaling circuits.

The copper sheath is suitable as an equipment grounding conductor. For cable with alloy steel outer sheath one of the conductors is to be used for equipment grounding.

Nonmetallic jackets or coatings have not been investigated for resistance to corrosion.

MINERAL-INSULATED METAL-SHEATHED CABLE (PPKV)**PRODUCT MARKINGS**

Information regarding voltage rating, cable Type, and conductor size is shown either on a tag affixed to the reel or carton, or on the surface of the metal sheath. If a nonmetallic jacket is used, the information is printed on the surface of the jacket.

Cable with nonmetallic jackets has the following marking on a tag affixed to the reel or carton: "Not suitable for use in Ducts, Plenums or Other Spaces used for environmental air."

Cable with nonmetallic jackets marked "Not suitable for use on or in buildings" has not been investigated for fire retardance but are sunlight resistant.

Cable with nonmetallic jackets that has been investigated for use in cable trays is surface marked "CT Use" or "Cable Tray Use" and may additionally be marked "sunlight Resistant" if applicable.

RELATED PRODUCTS

Terminations especially investigated for use with this cable are covered under Mineral Insulated Cable Fittings (PPYT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. affixed to the reel supporting the cable or tag attached to the cable is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mineral Insulated Metal-Sheathed Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MINERAL-INSULATED CABLE FITTINGS
(PPYT)****GENERAL**

This category covers fittings intended for use with mineral-insulated cable (Type MI) and small-diameter mineral-insulated cable. These fittings are suitable for use at a maximum operating temperature of 90°C in dry locations and 60°C in wet locations. A complete box connector consists of a connector body and a screw-on potting fitting. These fittings are intended for installation and use in accordance with the following information and the limitations specified in Mineral-insulated Metal-sheathed Cable (PPKV).

Screw-on Potting Fitting — The screw-on potting fitting to be used with the connector may be used separately as an end fitting for change to open wiring. The screw-on potting fitting is intended to be assembled with a special tool and consists of a screw-on pot, insulating cap, insulating sleeving, anchoring bead, and sealing compound.

Grounding — These fittings are considered suitable for grounding for use in circuits over and under 250 V and where installed in accordance with ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Mineral-insulated Metal-sheathed Cable (PPKV) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mineral Insulated Cable Fitting," "Connector" or "Box Connector," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTOR-GENERATOR SETS (PQYW)

USE

MOTOR-GENERATOR SETS (PQYW)

This category covers indoor use motor generator sets and frequency converters intended for use in accordance with ANSI/NFPA 70, "National Electrical Code."

RELATED PRODUCTS

This category does not cover electrical generating equipment driven by gasoline, LP-gas, or diesel fueled internal combustion engines. These products are covered under Engine Generators (FTSR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 508, "Industrial Control Equipment," UL 1004, "Electric Motors," and UL 1248, "Engine-Generator Assemblies for Use in Recreational Vehicles."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Motor-Generator Set" or "Flywheel Energy Storage System," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTORS (PRGY)**USE**

This category covers motors intended for use in unclassified locations.

PRODUCT MARKINGS/INSTALLATION INSTRUCTIONS

An enclosed type motor has the enclosure type designation marked on the motor for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ). The motor may also be marked "Raintight" or "Rain-proof."

An enclosed type motor is not intended to be installed in an enclosure unless a marking on the motor, the installation instructions or a stuffer sheet provided with the motor states that the motor may be enclosed. Specifications for the enclosure are included with the instructions or marking.

An open type motor is intended to be installed in an enclosure suitable for the end use. The minimum size of the enclosure is marked on the motor, provided in the installation instructions or as a stuffer sheet provided with the motor.

A motor that has running heating and locked-rotor protection is marked "Thermally Protected" or if rated less than 1/8 hp (100 watts), "T.P." A motor that has locked-rotor protection only is marked "Thermally Protected L" or "Impedance Protected" or, if rated less than 1/8 hp (100 watts), "T.P.L." or "Z.P."

All motors are intended for use in a 40°C (104°F) ambient unless marked for a different ambient.

All motors are provided with installation information which indicate the proper methods to secure the motor and electrically connect the motor to the power source. The instructions will also provide information concerning the type of load the motor can operate and, if needed, what type of protection.

FIELD PROVISIONS

If a motor does not have thermal or impedance protection as described above, protection should be provided in the end-use application. The motor has a marking indicating that the motor is not provided with protection.

Motors are provided with a means to electrically connect the motor with the electrical system in the field.

Suitability of guards for the shaft or other moving parts should be determined in the end-use application.

RELATED PRODUCTS

Motors intended for use in hazardous (classified) locations are covered under Motors for Use in Hazardous Locations (PTDR), Motors, Specialty for Use in Hazardous Locations (PUCJ), or Motors, Division 2 for Use in Hazardous Locations (PTHE).

Motors incomplete in construction and intended for ordinary use are covered under Motors (PRGY2).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in Subject 1004B, "Outline of Investigation for Electric Motors and Generators."

UL MARK**MOTORS (PRGY)**

269

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Motor."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MOTORS AND GENERATORS FOR
USE IN ZONE CLASSIFIED
HAZARDOUS LOCATIONS (PRSN)****MOTORS FOR USE IN ZONE CLASSIFIED
HAZARDOUS LOCATIONS (PRZA)****USE**

This category covers motors.

The Listing Mark on a motor applies to the motor, but not to any equipment driving or driven by the motor. In the case of a motor generator set provided with a common base, the motor and generator each will bear its respective Listing Mark.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard use to investigate products in this category is UL 1004, "Electric Motors."

The hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Motor for Use in Class I, Zone 0, 1 and 2 Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MOTORS, SPECIALTY FOR USE IN ZONE
CLASSIFIED HAZARDOUS LOCATIONS
(PRZM)****USE AND INSTALLATION**

This category covers specialty motors.

These motors are intended for installation and operation in accordance with the instructions provided for each motor by the manufacturer. These motors may require any or all of the following for proper operation: (1) special controllers, (2) special control circuitry, (3) atypical input voltage waveform, (4) atypical input current waveform. Refer to the operating instructions. These motors are not intended for across-the-line operation.

Unless otherwise marked, these motors are intended for use in ambient temperatures within the range of -20°C (-4°F) to +40°C (+104°F).

The Listing Mark on a specialty motor applies to the motor, but not any equipment driving or driven by the motor.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 1004, "Electric Motors."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured

Locations (PRZM)—Continued**

under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Specialty Motor for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MOTORS AND GENERATORS FOR
USE IN HAZARDOUS LOCATIONS
(PSBV)****GENERATORS FOR USE IN HAZARDOUS
LOCATIONS (PSPT)****GENERAL**

This category covers generators for use in Class I, Groups C and D; Class II, Groups E, F and G hazardous locations.

Unless otherwise marked, generators for use in Class I and Class II hazardous locations are intended for use in ambient temperature within the range of -25°C (-13°F) to +40°C (+104°F).

The Listing Mark on a generator applies to the generator, but not to any equipment driving or driven by the generator. In the case of a motor generator set provided with a common base, the motor and generator will each bear its respective Listing Mark.

RELATED PRODUCTS

For rebuilt generators see Motors and Generators, Rebuilt for Use in Hazardous Locations (PTKQ).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 674, "Electric Motors and Generators for Use in Division 1 Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Generator for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MOTORS FOR USE IN HAZARDOUS
LOCATIONS (PTDR)****GENERAL**

This category covers motors for use in Class I, Groups B, C and D; Class II, Groups E, F and G hazardous locations.

Unless otherwise marked, motors for use in Class I and Class II hazardous locations are intended for use in ambient temperatures within the range of -25°C (-13°F) to +40°C (+104°F).

The Listing Mark on a motor applies to the motor, but not to any equipment driving or driven by the motor. In the case of a motor generator set provided with a common base, the motor and generator each will bear its respective Listing Mark.

Some motors are provided with Recognized inherent overheating protective devices.

RELATED PRODUCTS

For rebuilt motors, see Motors and Generators, Rebuilt for Use in Hazardous Locations (PTKQ).

Products Verified for energy efficiency are covered under Electric Motors for Use in Hazardous Locations Verified for Energy Efficiency (ZWKL).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

**MOTORS AND GENERATORS FOR USE IN HAZARDOUS
LOCATIONS (PSBV)****Motors for Use in Hazardous Locations (PTDR)—Continued****REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 674, "Electric Motors and Generators for Use in Division 1 Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Motor for Hazardous Locations."

UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**MOTORS, DIVISION 2 FOR USE IN
HAZARDOUS LOCATIONS (PTHE)****GENERAL**

This category covers electric motors for use in Class I, Division 2, Groups A, B, C and D, and Class II, Division 2, Groups F and G hazardous (classified) locations.

For Class I, Division 2 locations, the enclosure may be of the open or totally enclosed type. The Group designation is marked unless the motor is acceptable for Groups A, B, C and D. The motor is also marked with the operating-temperature code designating the maximum internal or external surface temperature determined at rated full-load steady-state conditions, if the temperature is greater than 100°C. If the enclosure incorporates one or more arcing or sparking parts, the part is housed in a Class I, Division 1 enclosure or the part is within a hermetically sealed enclosure, constructed with current interrupting contacts immersed in oil, located in a nonincendive circuit, or located in a purged and pressurized enclosure. If the motor is provided with an internal space heater, the space heater is intended to be wired in the control circuit such that the space heater is energized when the motor is de-energized, and vice versa. The maximum surface temperature of the space heater is marked on the motor, if the temperature exceeds 80% of the operating temperature of the motor.

For Class II, Division 2 locations, the enclosure is of the totally enclosed type. The motor is marked with the operating temperature or operating-temperature code designating the maximum full-load external temperature determined at rated full-load steady-state conditions when operating in free air (not dust blanketed), if the external temperature is greater than 100°C.

RELATED PRODUCTS

For Division 1 motors, see Motors for Use in Hazardous Locations (PTDR).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1836, "Outline of Investigation for Electric Motors and Generators for Use in Class I, Division 2 and Class II, Division 2 Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Motor for Division 2 Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOUNTING POSTS AND PEDESTALS FOR DISTRIBUTION EQUIPMENT (PUPR)**GENERAL**

This category covers mounting posts and pedestals rated 600 V ac or less. They are intended to serve as a raceway for underground wiring that is being brought above grade to feed an outdoor electrical distribution device, such as a power outlet, panelboard, meter socket, circuit breaker enclosure or the like. They are intended to support the distribution device, which is installed either in the factory or in the field. They may contain electrical termination points for underground wiring and for wiring to the distribution device.

USE AND INSTALLATION**MOUNTING POSTS AND PEDESTALS FOR DISTRIBUTION EQUIPMENT (PUPR)**

271

A mounting post is intended to be mounted in concrete at grade level or below, or is intended to be secured to some other mounting support.

A mounting pedestal is intended to be mounted to a concrete slab.

A mounting post or pedestal either has ventilation to inhibit condensation or is provided with instructions indicating the correct mounting procedure.

Unless marked otherwise, a mounting post or pedestal is intended to be self-supporting and is not intended to serve as the support of a mast for overhead wiring.

Investigation of posts and pedestals include a test designed to simulate exposure to beating rain to determine that such exposure will not result in the entrance of water.

PRODUCT MARKINGS

Mounting posts and pedestals are marked to indicate the electrical distribution unit(s) with which they are intended to be used.

A mounting post is marked with a grade level line to which the post is intended to be encased.

Posts and pedestals are for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and shall be on a wiring diagram or other readily visible location.

Unless the equipment is marked with both the size and temperature rating of wire to be used, the termination provisions on equipment are based on the use of 60°C wire ampacities for wire sizes 14-1 AWG, and 75°C wire ampacities for wire sizes 1/0 AWG and larger.

RELATED PRODUCTS

Termination boxes are covered under Termination Boxes (XCKT).

Equipment connected only by busbars to both input and output circuits and equipment known as "end cable tap boxes" are covered under Busways and Associated Fittings (CWFT).

Equipment containing switching devices, relays or overcurrent devices is covered under the appropriate category; see Switchboards, Dead-front (WEVZ), Industrial Control Panels (NITW) or Panelboards (QEUU).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1773, "Termination Boxes."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mounting Post and Pedestal."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MULTIOUTLET ASSEMBLIES (PVGT)**USE AND INSTALLATION**

This category covers metal raceways and power-pole assemblies with factory-installed conductors and attachment plug receptacles without provision for field installation of additional conductors, except where the product is marked to indicate the number, type and size of additional conductors that may be field installed.

This category also covers nonmetallic raceways with factory-installed conductors and attachment plug receptacles either factory installed or separately Listed as Multioutlet Assembly Fittings (PVUR) for field installation.

Separation of communication, signal and data circuits from branch-circuit wiring is provided in the assembly where the conductors are installed at the factory. Separate channels are provided in assemblies intended to be field wired with circuits requiring separation.

Multioutlet assemblies are intended for installation in accordance with Article 380 of ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 5, "Surface Metal Raceways and Fittings," and ANSI/UL 5A, "Nonmetallic Surface Raceways and Fittings."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these prod-

ucts includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Multi-Outlet Assembly."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MULTIOUTLET ASSEMBLY FITTINGS (PVUR)

USE AND INSTALLATION

This category covers multioutlet assembly fittings intended for use with multioutlet metal raceways and power-pole assemblies. Fittings may consist of flexible metal conduit or armored cable to be connected to multioutlet assemblies by means of nonstandard wired plug-in devices or prefabricated component parts, such as preformed corners and the like.

Multioutlet assembly fittings are intended for installation in accordance with Article 380 of ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Multioutlet Assemblies (PVGT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 5, "Surface Metal Raceways and Fittings," and ANSI/UL 5A, "Nonmetallic Surface Raceways and Fittings."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Multi-Outlet Assembly Fitting," "Elbow" or "End Fitting," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MULTI-POINT INTERCONNECTION POWER CABLE ASSEMBLIES FOR INDUSTRIAL MACHINERY (PVVA)

GENERAL

This category covers multi-point interconnection power cable assemblies intended for use in an industrial environment to distribute power to branch circuits, including motor branch circuits, of industrial machinery. The assemblies may consist of power cable assemblies, male and female power cable fittings, panel-mounted power cable/conductor fittings and feeder-tap power cable fittings used with industrial machinery in accordance with ANSI/NFPA 79, "Electrical Standard for Industrial Machinery."

This category does not cover male-to-male cable assemblies or multi-outlet fittings.

Product Types

The following products are covered under this category:

Power Cable Assemblies — These assemblies consist of a length of flexible cord or cable with a molded-on or assembled-on male or female power cable fitting on at least one end of the cable.

Male and Female Power Cable Fittings — These fittings are intended to be field-wired onto flexible cord or cable with either a male or female insert. The diameter and the wire size of the flexible cord or cable to which the fitting is intended to be assembled is marked on the individual fitting or on the smallest unit shipping container.

Panel-mounted Power Cable/Conductor Fittings — These fittings consist of a panel-mounted assembly with either a male or female insert. Each assembly is provided with a means to secure to an enclosure of the industrial machinery.

Feeder-tap Power Cable Fittings — These fittings are intended for feed-through termination to tray cable or other appropriate cable, together with either a female interconnection device to terminate to a cable assembly or to connect to flexible cord or cable suitable for hard use, that is the same size and ampacity as the feeder cable.

SPECIAL CONSIDERATIONS

The power cable assemblies and mating fittings are not intended to be used as a substitute for the fixed wiring of the building structure. The

MULTI-POINT INTERCONNECTION POWER CABLE ASSEMBLIES FOR INDUSTRIAL MACHINERY (PVVA)

power cable assemblies and mating fittings may be connected to the fixed wiring of the building structure, using a feeder-tap fitting or male/female cable fittings.

These devices are intended for use only with the Listee's same line of products covered under this category.

Power cable assemblies and fittings covered under this category are not intended to make or interrupt current under load conditions.

These devices are intended for indoor use only, unless otherwise so identified.

RATINGS

These power cable assemblies are rated 600 V or less. Each power cable assembly and fitting is rated in volts and amperes. The electrical ratings are marked on each device or on a flag label affixed to each individual power cable assembly.

These power cable assemblies and fittings have been investigated for their marked short-circuit current rating. Power cable assemblies and fittings may specify a maximum ampere rating, type of overcurrent protective device, or both. Unless otherwise marked, the power cable assemblies and fittings are intended to be supplied from an overcurrent protective device of the maximum ampere rating permitted by Table 7.2.10.1 of ANSI/NFPA 79.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2237, "Multi-Point Interconnection Power Cable Assemblies for Industrial Machinery."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Multi-point Interconnection Assembly," "Power Cable Assembly for Industrial Machinery" or "Power Cable Fitting for Industrial Machinery."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MUSICAL INSTRUMENTS (PWHZ)

USE

This category covers electrical devices that produce music under the direct control of the player. This category also covers accessories for use with musical instruments, such as rhythm generators, tone cabinets, music tuners, and the like.

RELATED PRODUCTS

Devices that reproduce music from records, magnetic tape or other recording media are covered under Commercial Audio and Radio Equipment, Systems and Accessories (AZJX) and Commercial Phonographs, Tape-playing and Recording Appliances and Accessories (AZQW).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 469, "Musical Instruments and Accessories," UL 6500, "Audio/Video and Musical Instrument Apparatus for Household, Commercial, and Similar General Use," or ANSI/UL 60065, "Audio, Video, and Similar Electronic Apparatus — Safety Requirements."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Musical Instrument," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NEON TRANSFORMERS AND POWER SUPPLIES (PWIK)

USE

This category covers indoor and outdoor use neon transformers and power supplies intended for use with display signs, outline lighting and luminaires employing gas-filled glass tubing identified as neon or electric discharge tubing.

These transformers and power supplies have been investigated for the secondary-circuit ground-fault protection requirements in ANSI/NFPA 70, "National Electrical Code" (NEC).

This category also covers neon transformer and power supply accessories intended for use with specific neon transformers and power supplies.

PRODUCT MARKINGS

Transformers and power supplies covered under this category are marked "Indoors," "Outdoors," or "Weatherproof" or "WP." Products marked "Indoors" are only suitable for use indoors, and products marked "Outdoors" are suitable for use indoors or outdoors sheltered from rain, snow and the like by being located within a sign body, enclosure and the like. Products marked "Weatherproof" or "WP" do not need to be additionally sheltered from rain, snow and the like.

Transformers and power supplies covered under this category are marked with a Type number from 2 to 8 in association with the location designation "Indoors," "Outdoors," "Weatherproof" or "WP." These Type numbers identify particular construction features associated with a particular transformer or power supply as identified below:

- **Type 2** – Neon supply with input and output terminals or leads that should be enclosed in accordance with the NEC.
- **Type 3** – Neon supply with input terminals or leads enclosed and intended for connection to a permanent wiring system, and with output terminals or leads that should be enclosed in accordance with the NEC.
- **Type 4** – Neon supply with input and output terminals or leads enclosed and intended for connection to a permanent wiring system.
- **Type 5** – Neon supply with input terminals or leads enclosed and intended for connection to a permanent wiring system and provided with integral receptacles for output connection.
- **Type 6** – Cord-connected neon supply provided with integral receptacles for output connection.
- **Type 7** – Cord-connected neon supply with output terminals or leads that should be enclosed in accordance with the NEC.
- **Type 8** – Cord-connected neon supply with enclosed output terminals or leads.

These Type designations do not relate in any way to general enclosure designations as noted in Electrical Equipment for Use in Ordinary Locations (AALZ).

Transformers and power supplies are also marked with a model designation and may be marked with an optional designation 2161HX, 2161KX, 2161MH or 2161WX. The optional designations provide information on the construction of the transformer and power supply for sign manufacturers and installers to use for ordering and replacement purposes.

Transformers and power supplies marked "For Moving Vehicle Use Only" are intended for use only in moving vehicles and not for use in a freestanding sign, or building-mounted sign or outline lighting product.

Neon transformer and power supply accessories are marked "For Use With XXX Neon Transformer" or "For Use With XXX Neon Power Supply," where "XXX" indicates the model number, catalog number, part number, or other specific identifier of the neon transformer or neon power supply.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 2161, "Neon Transformers and Power Supplies."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Neon Transformer," "Neon Power Supply," "Neon Transformer Accessory" or "Neon Power Supply Accessory."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NETWORK-POWERED BROADBAND COMMUNICATIONS CABLE (PWIP)

USE

This category covers network-powered broadband communications cable, which is a jacketed single-conductor coaxial cable or a multiple-conductor jacketed cable, consisting of a combination of coaxial members, insulated conductors and/or optic fiber members. The cable is intended for use in low-power and medium-power circuits in accordance with Article 830 of ANSI/NFPA 70, "National Electrical Code" (NEC). All Types, with the exception of Types BLU and BMU, have been investigated for use where exposed to the direct rays of the sun.

PRODUCT MARKINGS

Network-powered broadband communications cable is identified by markings on the surface of the jacket or on a marker tape under the jacket. This marking includes one of the following Type designations:

BMU — Indicates medium-power cable intended for outdoor underground use in accordance with Section 830.151(C) of the NEC.

BM — Indicates medium-power cable intended for general use within buildings in accordance with Section 830.151(C) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test described in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," or as an alternative, the damage height of this cable does not exceed 4 ft 11 in. when tested in accordance with the CSA FT4 Vertical-Tray Flame Test also described in UL 1685.

BMR — Indicates medium-power cable intended for use within buildings in vertical shafts in accordance with Section 830.151(B) of the NEC. The flame propagation height of this cable is less than 12 ft when tested in accordance with ANSI/UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

BLP — Indicates low-power cable intended for use in ducts or plenums or other spaces used for environmental air in accordance with Section 830.154(B) of the NEC. This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame-propagation distance of 5 ft, when tested in accordance with ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

BLR — Indicates low-power cable intended for use within buildings in vertical shafts in accordance with Section 830.154(C) of the NEC. The flame propagation height of this cable is less than 12 ft. when tested in accordance with UL 1666.

BL — Indicates low-power cable intended for general use within buildings in accordance with Section 830.154(D) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test described in UL 1685, or as an alternative, the damage height of this cable does not exceed 4 ft 11 in. when tested in accordance with the CSA FT4 Vertical-Tray Flame Test also described in UL 1685.

BLU — Indicates low-power cable intended for outdoor underground use in accordance with Section 830.154(D)(3) of the NEC.

BLX — Indicates low-power cable intended for limited use within buildings in accordance with Sections 830.154(D)(2), (4) and (5) of the NEC. This cable complies with the VW-1 Flame Test requirements in ANSI/UL 1581, "Reference Standard for Electrical Wires, Cables, and Flexible Cords."

Cable that contains one or more optical-fiber members has the suffix "OF" added to the above.

Cable that complies with the Limited Smoke Requirements specified in UL 1685 is surface marked with the suffix "LS."

Cable marked "-30C," "-40C," "-50C," "-60C" or "-70C" complies with a cold bend test conducted at that temperature.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2261, "Outline of Investigation for Cables for Network-Powered Broadband Communications Systems."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Network-powered Broadband Communications Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential dam-

NETWORK-POWERED BROADBAND COMMUNICATIONS CABLE (PWIP)

274

ages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NONMETALLIC-SHEATHED CABLE (PWVX)

USE

This category covers Types NM-B and NMC-B nonmetallic-sheathed cable, rated 600 V, intended for use in accordance with Article 334 of ANSI/NFPA 70, "National Electrical Code" (NEC), and Listed in copper sizes 14 to 2 AWG inclusive and aluminum or copper-clad aluminum sizes 12 to 2 AWG inclusive.

This cable contains conductors rated 90°C; however, the ampacities of the cable are those of 60°C conductors as specified in Article 334 and Table 310.16 of the NEC.

PRODUCT MARKINGS

Cable with copper-clad aluminum conductors is surface marked "AL (CU-CLAD)" or "Cu-clad AL," and cable with aluminum conductors is surface marked "AL."

Wire and cable employing compact-stranded copper conductors is so identified directly following the conductor size, wherever it appears (surface, tag, carton or reel), by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors."

Cable suitable for use in cable trays is appropriately marked. Cable marked for cable tray use may also have a supplementary sunlight resistant marking.

Cable that complies with the Limited Smoke Test requirements specified in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," is surface marked "ST1."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 719, "Nonmetallic-Sheathed Cables."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Nonmetallic-sheathed cable that contains copper or copper-clad aluminum conductors has the product name "Nonmetallic-sheathed Cable"; nonmetallic-sheathed cable that contains aluminum conductors has the product name "Nonmetallic-sheathed Aluminum Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NONMETALLIC-SHEATHED CABLE CONNECTORS (PXJV)

GENERAL

This category covers connectors intended for use with nonmetallic-sheathed cable. These connectors are also suitable for use with multiconductor underground feeder and branch-circuit cable where used in dry locations unless otherwise indicated on the carton. These connectors are intended for installation and use in accordance with the following information and the limitations specified in Nonmetallic-sheathed Cable (PWVX).

Single Cable — If single conductor Type UF cable is terminated with a fitting not specifically recognized for use with single conductor cable, special care should be taken to ensure it is properly secured and not subject to change.

The individual Listings may have details about the size and number of the nonmetallic-sheathed cable each connector will secure.

MARKINGS

Connectors which are also suitable for use with service-entrance cable, flexible nonmetallic tubing or flexible cord are so indicated on the device or carton.

Except for duplex connectors or when otherwise marked on the carton to indicate connecting of more than one cable or cord, the connectors covered under this category have been investigated for connecting one cable or cord only.

NONMETALLIC-SHEATHED CABLE (PWVX)

Nonmetallic-sheathed Cable Connectors (PXJV)—Continued

RELATED PRODUCTS

Connectors covered under Armored Cable Connectors (AWSX), Conduit Fittings (DWTT) and Power and Control Tray Cable Connectors (QPOZ) are also suitable for use with nonmetallic-sheathed cable when specifically indicated on the device or carton.

Connectors suitable for flexible cord only are covered under Outlet Bushings and Fittings (QCRV).

ADDITIONAL INFORMATION

For additional information, see Nonmetallic-sheathed Cable (PWVX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonmetallic Sheathed Cable Connector" (or "N.M. Cable Connector"), or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NONMETALLIC EXTENSIONS (PXXT)

NONMETALLIC EXTENSION FITTINGS (PYYZ)

USE

This category covers attachment plug caps, receptacles for attachment plugs, and end caps for nonmetallic surface extensions, and wiring compartments, entrance bushings, bonding connectors, hangers, terminal fittings, support fittings, receptacles and lampholders for aerial cable.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 5A, "Nonmetallic Surface Raceways and Fittings," UL 183, "Manufactured Wiring Systems," and UL 498, "Attachment Plugs and Receptacles."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonmetallic Extension Fitting" (or "NM Extension Ftg.") or "End Cap," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NONMETALLIC SURFACE EXTENSIONS (PZMX)

USE AND INSTALLATION

This category covers assemblies of two insulated circuit conductors with or without a grounding conductor within a nonmetallic jacket or extruded thermoplastic covering, intended for installation in accordance with Article 382 of ANSI/NFPA 70, "National Electrical Code." Assemblies without a grounding conductor are marked "Intended for replacement use only."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 5A, "Nonmetallic Surface Raceways and Fittings," ANSI/UL 183, "Manufactured Wiring Systems," and ANSI/UL 498, "Attachment Plugs and Receptacles."

NONMETALLIC EXTENSIONS (PXXT)

Nonmetallic Surface Extensions (PZMX)—Continued

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonmetallic Surface Extension."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NONMETALLIC-SHEATHED CABLE INTERCONNECTORS (QAAV)

GENERAL

This category covers self-contained interconnectors employing pressure cable connectors, insulation displacement or insulation piercing connectors for splicing or tapping nonmetallic (NM) sheathed cable. These interconnectors are intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code."

These devices have been investigated for equivalency to Type NM cable in insulation and temperature rise, and for capability to withstand fault currents, vibration and mechanical shock that may occur during transport of the units in which they are used.

PRODUCT MARKINGS

The devices are marked with the Listee's name or identification, the catalog number or equivalent, and complete electrical ratings.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in Subject 2256, "Outline of Investigation for Nonmetallic Sheathed Cable Interconnectors."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged or on the product when size or shape permits is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonmetallic Sheathed Cable Interconnector" (or "N.M. Cable Interconnector"), or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL SEATING SYSTEMS (QAHU)

GENERAL

This category covers single- or multiple-seating systems that may be provided with an integral table and contain electrical accessories, such as an electrical distribution system, and may also be provided with channels for routing communication wiring. The seating is intended to be permanently mounted to the building structure.

This category covers only the electrical hazards associated with the product.

RELATED PRODUCTS

Electrical accessories designed for field installation, such as receptacles, electrical distribution systems, power distribution elements, etc., are covered under Office Furnishings (QAWZ) and are marked to identify the specific seating system with which they have been investigated for use.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1286, "Office Furnishings."

COMMERCIAL SEATING SYSTEMS (QAHU)

275

Where indicated in the individual Classifications, commercial seating systems have also been investigated in accordance with one or more of the following standards:

1. State of California Department of Consumer Affairs Bureau of Home Furnishings and Thermal Insulation, Technical Bulletin 117, "The Test Procedure and Apparatus for Testing the Flame Retardance of Resilient Filling Materials Used in Upholstered Furniture" (2000)
2. For flammability in accordance with State of California Department of Consumer Affairs Bureau of Home Furnishings and Thermal Insulation, Technical Bulletin 133, "The Flammability Test Procedure for Seating Furniture for Use in Public Occupancies" (1991)
3. For strength and durability in accordance with ANSI/BIFMA No. X5.4, "The Standard for Office Furnishing Lounge Seating" (1997)

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

POWERED SEATING SYSTEM* FOR ELECTRICAL HAZARD ONLY Control No.

* or other appropriate product name as shown in the individual Classifications

Where indicated in the individual Classifications, the Classification Mark will also include one or more of the following statements:

ALSO CLASSIFIED IN ACCORDANCE WITH
THE STATE OF CALIFORNIA DEPARTMENT OF CONSUMER
AFFAIRS
BUREAU OF HOME FURNISHINGS AND THERMAL INSULATION
TECHNICAL BULLETIN 117 (2000)
and/or

THE STANDARD FOR OFFICE FURNITURE LOUNGE SEATING
ANSI/BIFMA No. X5.4-1997

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OFFICE APPLIANCES AND BUSINESS EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (QAVS)

GENERAL

This category covers equipment and appliances normally used in business establishments classified as hazardous locations. The equipment and appliances may be electromechanical and/or electronic.

Intrinsically safe equipment is so marked on the product.

To maintain the intrinsically safe features of battery-operated appliances, only batteries of the type and size indicated on the product should be used.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Office Appliance for Use in Hazardous Locations" or "Business Equipment for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party.

276 OFFICE APPLIANCES AND BUSINESS EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (QAVS)

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OFFICE FURNISHINGS (QAWZ)

The office furnishings covered by this listing are portable and consist of panels, study carrels, work stations and pedestal-style systems that may be mechanically interconnected to form an office furnishing system to be installed in accordance with Article 605 of the National Electrical Code. These may be provided with an electrical distribution system, including switches, and receptacles. They may contain channels for routing communication cables within the system components separate from power circuit raceways. The systems may include filing cabinets, desks, work surfaces, shelves, storage units and the like that have a particular electrical or mechanical function unique to an office furnishing system.

Partitions that extend to the ceiling or that are used to support the building structure are not Listed as office furnishings. They may be Listed as Prefabricated Sections and Units or Classified as Composite Panels with respect to one or more model Building Codes, Plumbing Codes, National Electrical Code, a State Building Code and/or an applicable local building code.

The surface burning characteristics of building materials employed in these assemblies is judged to be no greater than that of ordinary lumber used in on site construction. Finish surfaces are of materials having a flame spread rating of 200 or less and, unless otherwise marked, a smoke developed rating of 450 or less.

Products specifically designed and arranged for field installation in individual designs of office furnishings such as lighting units, receptacles, clocks, power distribution elements, work surfaces, shelves, etc., are covered as accessories under the individual listing and are marked to identify the specific office furnishing with which they have been investigated. Lighting units for use with office furnishings are Listed under Office Furnishing Lights, QAXB.

Office furnishings are marked with the designation of one of the following three types:

Type I - A system that includes all parts and contains pre-wired modular raceways and accessories necessitating only quick-connect type of electrical interconnections. A Type I system may be shipped with the accessories installed in the panel, or field installed where marked for use in the system. Means for permanent wiring connections to the branch circuit supply are provided.

Type II - A system that provides raceways and devices for routing and termination of wiring. All wiring is installed in the field.

Type III - A system that is not intended to be wired and has no provision for routing and termination of wiring.

This category also covers office furnishings and office furnishing accessories which are rebuilt.

Rebuilt office furnishings and rebuilt office furnishing accessories are factory rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned component parts. Rebuilt office furnishings and rebuilt office furnishing accessories are subject to the same requirements as new office furnishings and office furnishing accessories.

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic standard used to investigate products in this category is UL 1286, "Office Furnishings".

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the name and/or symbol of Underwriters Laboratories Inc. (as illustrated in the Introduction of this Directory) together with the word "LISTED", a control number and "Office Furnishing", "Office Furnishing Accessory", "Rebuilt Office Furnishing", or "Rebuilt Office Furnishing Accessory".

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OFFICE FURNISHING LIGHTS (QAXB)

GENERAL

This category covers lights intended for use with office furnishings when installed in accordance with Articles 410 and 605 of ANSI/NFPA 70, "National Electrical Code." This category covers both freestanding and mounted lights that may be electrically or mechanically connected to an office furnishing. Products specifically designed and arranged for use with an individual design of office furnishing are marked to identify the specific office furnishing with which they have been investigated.

OFFICE FURNISHINGS (QAWZ)

Office Furnishing Lights (QAXB)—Continued

Products that require electrical assembly in the field are covered as kits or light accessories under the individual Listing. Kits and light accessories are completely wired to the extent permitted by the intended field installation, with all splices and connections completed and with all electrical components mounted.

A kit forms a complete office furnishing light when assembled in accordance with the instructions provided.

A light accessory and the required office furnishing or a combination of light accessories form a complete office furnishing light when assembled in accordance with the instructions provided.

The following designations are used to specify the type(s) of product(s) covered under this category. Presence of the Roman numerals in an individual Listing indicates products of that type are covered. The "type" numerals denote the following:

II - Incandescent

III - Fluorescent

VI - Tungsten Halogen

XII - High Intensity Discharge (HID)

XVI - Kits

XVII - Light Accessories

Types I, IV, V, VII-XI, and XIII-XV are reserved.

REBUILT PRODUCTS

This category also covers office furnishing lights that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt office furnishing lights are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt office furnishing lights are subject to the same requirements as new office furnishing lights.

RELATED PRODUCTS

Office furnishing lights investigated to UL 153, "Portable Electric Luminaires," may also be covered under Luminaires, Portable (QOWZ).

Office furnishing light accessories investigated to UL 153 may also be covered under Portable Luminaire Kits and Subassemblies (QPAU).

Office furnishing light accessories investigated to ANSI/UL 1598, "Luminaires," may also be covered under Luminaire Fittings (IFFX).

ADDITIONAL INFORMATION

For additional information, see Office Furnishings (QAWZ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 153, "Portable Electric Luminaires," ANSI/UL 1598, "Luminaires," and UL 1286, "Office Furnishings."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Office Furnishing Light," "Office Furnishing Light Kit," "Office Furnishing Light Accessory" or "Rebuilt Office Furnishing Light."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OFFICE FURNISHING ACCESSORIES CLASSIFIED FOR USE WITH SPECIFIED EQUIPMENT (QAXE)

USE AND INSTALLATION

This category covers office furnishing accessories, such as work surfaces and shelves, intended for field installation in specific combinations that have been investigated for use with the specific office furnishing systems.

These accessories have been investigated for use with other manufacturers' Listed office furnishings, as indicated in the Classification Mark or the referenced compatibility list.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1286, "Office Furnishings."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured

OFFICE FURNISHING ACCESSORIES CLASSIFIED FOR USE WITH SPECIFIED EQUIPMENT (QAXE)

under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

FOR USE WITH SPECIFIED EQUIPMENT FOR USE WITH UL LISTED * OFFICE FURNISHING PANEL SYSTEM Control No.

* Manufacturer's name and model no(s).

FOR USE WITH SPECIFIED EQUIPMENT FOR CATALOG NUMBERS OF COMPATIBLE EQUIPMENT, REFER TO PUBLICATION NO. ____ PROVIDED WITH THIS PRODUCT. IF ADDITIONAL INFORMATION IS NECESSARY, CONTACT THE FACTORY. Control No.

The referenced publication is a compatibility list that tabulates the company names, catalog numbers and electrical ratings of the Classified accessories, and the company name(s) and catalog number(s) of the applicable UL Listed products with which the accessories have been investigated. One copy of the compatibility list and the installation instructions are provided with each accessory.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER CABLE (QAYK)

USE AND INSTALLATION

This category covers optical fiber cable which is a jacketed cable for use within buildings in accordance with Article 770 of ANSI/NFPA 70, "National Electrical Code" (NEC). Where optical fiber is installed in a laser system, the system shall comply with the ANSI Z136 laser system safety standards.

PRODUCT MARKINGS

Optical fiber cable is identified by a marking on the surface of the jacket or on a marker tape under the jacket. This marking includes one of the following Type designations:

OFC — Indicates cable containing noncurrent-carrying conductive members such as metallic strength members and metallic vapor barriers for use in accordance with Section 770.154(C) of the NEC. This cable does not spread fire to the top of the tray when tested as described under UL Flame Exposure (smoke measurements are not applicable) in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables."

OFN — This cable is the same as Type OFC except it contains no metallic members and no other electrical conductive materials.

OFCG — Indicates cable containing noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers, for use in accordance with Section 770.154(C) of the NEC. The damage height of this cable does not exceed 4 ft 11 in. when tested as described under FT4/IEEE 1202, "Type of Flame Exposure" (smoke measurements are not applicable) in UL 1685.

OFNG — This cable is the same as Type OFCG except it contains no metallic members and no other electrically conductive materials.

OFNR — Indicates cable containing noncurrent-carrying conductive members such as metallic strength members and metallic vapor barriers for use in vertical runs in a shaft in accordance with Section 770.154(B) of the NEC. The flame propagation height of this cable is less than 12 ft when tested per ANSI/UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

OFNP — This cable is the same as Type OFNR except it contains no metallic members and no other electrically conductive materials.

OFCP — Indicates cable containing noncurrent-carrying conductive members such as metallic strength members and metallic vapor barriers for use in ducts or plenums or other spaces used for environmental air in accordance with Section 770.154(A) of the NEC. This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 5 ft when tested per ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

OFNP — This cable is the same as Type OFCP except it contains no metallic members and no other electrically conductive materials.

Cable that complies with the requirements for "Limited Combustible" specified in ANSI/NFPA 90A, "Standard for the Installation of Air-Conditioning and Ventilating Systems," is surface marked "Limited Combustible."

Cable that complies with the Limited Smoke Requirements specified in UL 1685 is surface marked with the suffix "LS."

Cable marked "sunlight resistant" or "sun res" may be exposed to the direct rays of the sun.

OPTICAL FIBER CABLE (QAYK)

277

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1651, "Optical Fiber Cable".

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Optical Fiber Cable."

Cable also Verified to a performance specification under Optical Fiber Cable Verified in Accordance with National or International Specifications (QAZI) has the marking "Also Verified [Specification name and/or number]" together with the Listing Mark information on the tag, reel or smallest unit container.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER CABLE, FIELD ASSEMBLED (QAZD)

USE AND INSTALLATION

This category covers field-assembled optical fiber cable, which is an on-site assembly of one or more optical fiber units and an optical fiber jacket. Field-assembled optical fiber cable is intended for installation in buildings in accordance with Article 770 of ANSI/NFPA 70, "National Electrical Code" (NEC). The optical fiber jacket is installed in a manner similar to conduit or raceway. Once the jacket is installed, the optical fiber units are inserted into the jacket, completing the assembly.

Laser systems in which optical fiber is installed comply with the following Laser Institute of America safety standards:

ANSI/LIA Z136.1, "Safe Use of Lasers"

ANSI/LIA Z136.2, "Safe Use of Optical Fiber Communication Systems Utilizing Laser Diode and LED Sources"

ANSI/LIA Z136.3, "Safe Use of Lasers in Health Care Facilities"

ANSI/LIA Z136.4, "Recommended Practice for Laser Safety Measurements for Hazard Evaluation"

ANSI/LIA Z136.5, "Safe Use of Lasers in Educational Institutions"

ANSI/LIA Z136.6, "Safe Use of Lasers Outdoors"

PRODUCT MARKINGS

Optical fiber cable is identified by a marking on the surface of the jacket. This marking includes the Listee's name and catalog designation and one of the following Type designations:

OFC — Indicates cable containing noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers, for use in accordance with Section 770.154(C) of the NEC. This cable does not spread fire to the top of the tray when tested as described under UL Flame Exposure (smoke measurements are not applicable) in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables."

OFN — This cable is the same as Type OFC except it contains no metallic members and no other electrical conductive materials.

OFCG — Indicates cable containing noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers, for use in accordance with Section 770.154(C) of the NEC. The damage height of this cable does not exceed 4 ft 11 in. when tested as described under FT4/IEEE 1202, "Type of Flame Exposure" (smoke measurements are not applicable) in UL 1685.

OFNG — This cable is the same as Type OFCG except it contains no metallic members and no other electrically conductive materials.

OFNR — Indicates cable containing noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers, for use in vertical runs in a shaft in accordance with Section 770.154(B) of the NEC. The flame propagation height of this cable is less than 12 ft when tested per ANSI/UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

OFNP — This cable is the same as Type OFNR except it contains no metallic members and no other electrically conductive materials.

OFCP — Indicates cable containing noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers, for use in ducts or plenums or other spaces used for environmental air in accordance with Section 770.154(A) of the NEC. This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 5 ft when tested per

Optical Fiber Cable, Field Assembled (QAZD)—Continued

ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

OFNP — This cable is the same as Type OFCP except it contains no metallic members and no other electrically conductive materials.

Cable marked "Sunlight Resistant" (or "Sun Res") may be exposed to the direct rays of the sun.

The marking on the attached tag, coil, reel or smallest unit container in which the optical fiber jacket is packaged includes the following: "For Use Only with Optical Fiber Units, Cat. No.____, manufactured by [company name]."

The marking on the attached tag, coil, reel or smallest unit container in which the optical fiber units are packaged includes the following: "[Company name] Optical Fiber Unit, For Use Only With Optical Fiber Jacket Cat. No. ____ , manufactured by [company name]."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1651, "Optical Fiber Cable."

UL MARK

The UL symbol on the optical fiber jacket and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel or smallest unit container in which the optical fiber jacket is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Field Assembled Optical Fiber Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER CABLE VERIFIED IN ACCORDANCE WITH NATIONAL OR INTERNATIONAL SPECIFICATIONS (QAZI)

GENERAL

This category covers data transmission optical fiber cable whose signal transmission, environmental and/or mechanical performance characteristics have been investigated in accordance with one or more of the applicable US national standards, published international standards, regional standards, miscellaneous standards, or regulations of other organizations, as indicated in the individual Verifications. This cable is not necessarily investigated for use in accordance with ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The performance specifications used to investigate products in this category are contained in Telcordia GR-20-CORE (Issue 2 July 1998), "Generic Requirements for Optical Fiber and Optical Fiber Cable." Other performance specifications, applicable to optical fiber cable, may also be used by UL in Verification investigations.

UL MARK

The UL symbol with the word "VERIFIED" on the product and the Verification Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Verification and Follow-Up Service. The Verification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "VERIFIED," a control number, the product name "Optical Fiber Cable," the Specification name(s) and/or number(s), and the date of the Specification(s).

For optical fiber cable which is also Listed under Optical Fiber Cable (QAYK), the marking includes the appropriate Listing Mark and the text "Also Verified [Specification name(s) and/or number(s), date of Specification(s)]."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss,

OPTICAL FIBER CABLE VERIFIED IN ACCORDANCE WITH NATIONAL OR INTERNATIONAL SPECIFICATIONS (QAZI)

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER CABLE VERIFIED IN ACCORDANCE WITH NEW YORK CITY TRANSIT SPECIFICATION TO (QAZK)

GENERAL

This category covers data transmission optical fiber cable whose signal transmission, environmental and/or mechanical performance characteristics have been determined by Underwriters Laboratories Inc. to be in accordance with New York City Transit Specification TO. This cable is not necessarily evaluated for use in accordance with the specifications of NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

UL MARK

The UL symbol with the word "VERIFIED" on the product and the Verification Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Verification and Follow-Up Service. The Verification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "VERIFIED," a control number, and the product name "Optical Fiber Cable NYC Transit Specification TO."

For optical fiber cable which is also Listed under Optical Fiber Cable (QAYK), the marking includes the appropriate Listing Mark along with either the Verification Mark and "NYC Transit Specification TO" or the text "Also Verified to NYC Transit Specification TO."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER/COMMUNICATIONS/SIGNALING/ COAXIAL CABLE RACEWAY (QAZM)

USE AND INSTALLATION

This category covers raceway and fittings for installation of nonconductive optical fiber cable, communications cable, signaling cable and coaxial cable in accordance with Sections 770.154(A) and 800.154(A) of ANSI/NFPA 70, "National Electrical Code" (NEC). This raceway is intended for installation and use in accordance with the following information. The raceway is only suitable for the installation of the optical fiber, communications cable, signaling cable and coaxial cable noted in the following information. Individual raceway systems differ in their construction and, therefore, their components are not interchangeable with other raceway or fittings of other systems. This category includes pliable lengths, rigid straight sections, elbows, bends and fittings such as expansion joints, female and male adapters, and couplings.

A raceway marked "Plenum" is suitable for use in ducts, plenums or other spaces used for environmental air in accordance with the NEC when used to enclose optical fiber cable marked "OFNP" or "OFCP", communications cable marked "CMP" or "CMP-OF," signaling cable marked "CL2P" or "CL3P," and coaxial cable marked "CATVP". This raceway exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 5 ft when tested in accordance with the Test for Flame Propagation and Smoke-Density Values (Plenum) in ANSI/UL 2024, "Optical Fiber Cable Raceway." This raceway is identified by a marking on the surface of the raceway or on a marker tape indicating "Plenum." A raceway marked "Plenum" is also suitable for installation in risers when used to enclose optical fiber cable marked "OFNP" or "OFNR," communications cable marked "CMP," "CMP-OF," "CMR" or "CMR-OF," signaling cable marked "CL2P," "CL3P," "CL2R" or "CL3R," and coaxial cable marked "CATVP" or "CATVR," and general purpose use when used to enclose optical fiber cable marked "OFNP," "OFCP," "OFNR," "OFCR," "OFNG" or "OFN," communications cable marked "CMP," "CMP-OF," "CMR," "CMR-OF," "CMG," "CMG-OF," "CM" or "CM-OF," signaling cable marked "CL2P," "CL3P," "CL2R," "CL3R," "CL2," "CL3," "CL2X" or "CL3X," and coaxial cable marked "CATVP," "CATVR," "CATV" or "CATVX."

A raceway marked "Riser" is suitable for installation in risers in accordance with the NEC when used to enclose optical fiber cable marked

OPTICAL FIBER/COMMUNICATIONS/SIGNALING/ COAXIAL CABLE RACEWAY (QAZM)

"OFNP," "OFCP," "OFNR" or "OFCR," communications cable marked "CMP," "CMP-OF," "CMR" or "CMR-OF," signaling cable marked "CL2P," "CL3P," "CL2R" or "CL3R," and coaxial cable marked "CATVP" or "CATVR." This raceway has fire resistant characteristics capable of preventing the carrying of fire from floor to floor. This raceway meets the test requirements of the Test for Flame Propagation (Riser) in ANSI/UL 2024. This raceway is identified by a marking on the surface of the raceway or on a marker tape indicating "Riser." A raceway marked "Riser" is also suitable for general purpose use when used to enclose optical fiber cable marked "OFNP," "OFNR," "OFNG" or "OFN," communications cable marked "CMP," "CMP-OF," "CMR," "CMR-OF," "CMG," "CMG-OF," "CM" or "CM-OF," signaling cable marked "CL2P," "CL3P," "CL2R," "CL3R," "CL2," "CL3," "CL2X" or "CL3X," and coaxial cable marked "CATVP," "CATVR," "CATV" or "CATVX."

A raceway with neither the marking "Plenum" nor "Riser" is suitable for general purpose use, with the exception of risers, plenums, and other spaces used for environmental air when used to enclose optical fiber cable marked "OFNP," "OFCP," "OFNR," "OFCR," "OFNG," "OFCG," "OFC" or "OFN," communications cable marked "CMG," "CMG-OF," "CM," "CM-OF," "CMR," "CMR-OF," "CMP" or "CMP-OF," signaling cable marked "CL2P," "CL3P," "CL2R," "CL3R," "CL2," "CL3," "CL2X" or "CL3X," and coaxial cable marked "CATVP," "CATVR," "CATV" or "CATVX." This raceway is resistant to the spread of fire when tested in accordance with the Vertical-Tray Flame Test (General Use) in ANSI/UL 2024.

Pliable raceway is a raceway that can be bent by hand without the use of tools. The smallest radius of the curve of the inner edge of any bend to which the raceway may be bent without cracking either on the outer surface or internally is not less than 2-1/2 times the outside diameter of the raceway.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2024, "Optical Fiber Cable Raceway."

UL MARK

The UL symbol and the product name "Optical Fiber Raceway," "Communications Cable Raceway," "Signaling Cable Raceway," "Coaxial Cable Raceway" or "Optical Fiber/Communications/Signaling/Coaxial Cable Raceway" on the raceway, and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the appropriate product names as indicated above.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER RACEWAY ASSEMBLIES (QAZQ)

GENERAL

This category covers raceway assemblies intended for the installation of optical fiber cable in accordance with ANSI/NFPA 70, "National Electrical Code." These raceway assemblies are intended for installation and use in accordance with the following information. The raceway may be provided with multiple inner ducts that are assembled before shipment. Raceway systems differ in their inside and outside diameters and, therefore, are not interchangeable with other conduit or raceway systems. This category includes straight sections, elbows, bends, and fittings intended to be secured together by cement.

The raceway assemblies are designed for use under the following conditions, as indicated in the Listing Mark: (1) direct burial with or without being encased in concrete, (2) aboveground, or both (1) and (2).

The transition from an optical fiber raceway system to another conduit or raceway system has not been investigated.

The raceway system components have not been investigated for their ability to withstand exposure to reagents, unless specifically marked.

Aboveground raceway assemblies are suitable for exposed work where not subjected to physical damage and where expansion fittings are not necessary.

ADDITIONAL INFORMATION

For additional information, see Optical Fiber/Communications Cable Raceway (QAZM) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

OPTICAL FIBER/COMMUNICATIONS/SIGNALING/COAXIAL CABLE RACEWAY (QAZM)

279

Optical Fiber Raceway Assemblies (QAZQ)—Continued

The basic standards used to investigate products in this category are ANSI/UL 2024, "Optical Fiber and Communications Cable Raceway," and ANSI/UL 651, "Schedule 40 and 80 Rigid PVC Conduit and Fittings."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Optical Fiber Raceway Assemblies, Underground," "Optical Fiber Raceway Assemblies, Underground for Concrete Encasement Only," "Optical Fiber Raceway Assemblies, Underground Direct Burial and Concrete Encasement" or "Optical Fiber Raceway Assemblies, Aboveground, Underground Direct Burial and Concrete Encasement."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER/COMMUNICATIONS/SIGNALING/ COAXIAL CABLE OUTLET BOXES (QAZR)

USE AND INSTALLATION

This category covers outlet boxes and other device-mounting products intended to support outlets for use with or without raceways and fittings that contain nonconductive optical fiber cable, communications cable, signaling cable, and coaxial cable. These products are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code." The products and raceways are only suitable for the installation of the optical fiber, communications cable, signaling cable, and coaxial cable. Individual raceway systems differ in their construction and, therefore, their components are not interchangeable with other raceways or fittings of other systems.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2269, "Outline of Investigation for Optical Fiber/Communications/Signaling/Coaxial Cable Outlet Boxes."

UL MARK

The Listing Mark on the product, or the UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Optical Fiber Outlet Box," "Communications Cable Outlet Box" or "Optical Fiber/Communications/Signaling/Coaxial Cable Outlet Box," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OUTLET BOX ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS (QAZV)

GENERAL

This category covers conduit box bodies, flat and domed covers, fixture hanger covers, threaded extensions, sealing hub covers, and similar sub-assemblies of outlet boxes, fixture fittings and conduit fittings. They are intended to be assembled at the factory or in the field by the user to form a complete explosion-proof or dust-ignition-proof enclosure. Information on restrictions in the use and assembly of these devices is marked on each part.

OUTLET BOX ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS (QAZV)

RELATED PRODUCTS

See Outlet Boxes for Use in Hazardous Locations (QBCR), Conduit Fittings for Use in Hazardous Locations (EBNV) and Luminaire Fittings for Use in Hazardous Locations (IGIV).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged with the UL symbol on the product the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Outlet Box Accessory for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER/COMMUNICATIONS CABLE ROUTING ASSEMBLIES FOR USE IN TELECOMMUNICATION INSTALLATIONS (QBAA)

USE AND INSTALLATION

This category covers routing assemblies for installation of nonconductive optical fiber cable and communications cable. The routing assemblies are only suitable for the installation of optical fiber and communications cable noted in the following information. Individual routing assembly systems differ in their construction and, therefore, their components are not interchangeable with other routing assemblies or fittings of other systems. This category includes pliable lengths, rigid straight sections, elbows, bends and fittings such as expansion joints, female and male adapters, and couplings.

These products are intended for installation in telecommunications facilities. These products may or may not incorporate end fixtures or covers.

Optical fiber and communications cable raceway is Listed in accordance with Sections 770.154(A) and 800.154(A) of ANSI/NFPA 70, "National Electrical Code" under Optical Fiber/Communications Cable Raceway (QAZM).

A routing assembly marked "Plenum" is suitable for use in ducts, plenums or other spaces used for environmental air when used to enclose optical fiber cable marked "OFNP" or "OFNR," or communications cable marked "CMP" or "CMP-OF." This routing assembly exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 5 ft when tested in accordance with UL Subject 2024A, "Outline of Investigation for Optical Fiber Cable Routing Assemblies." This routing assembly is identified by a marking on the surface of the routing assembly or on a marker tape indicating "Plenum." A routing assembly marked "Plenum" is also suitable for installation in risers when used to enclose optical fiber cable marked "OFNP" or "OFNR," or communications cable marked "CMP," "CMP-OF," "CMR" or "CMR-OF," and general purpose use when used to enclose optical fiber cable marked "OFNP," "OFCP," "OFNR," "OFCR," "OFNG" or "OFN," or communications cable marked "CMP," "CMP-OF," "CMR," "CMR-OF," "CMG," "CMG-OF," "CM" or "CM-OF."

A routing assembly marked "Riser" is suitable for installation in riser installations when used to enclose optical fiber cable marked "OFNP," "OFCP," "OFNR" or "OFCR," or communications cable marked "CMP," "CMP-OF," "CMR" or "CMR-OF." This routing assembly has fire-resistant characteristics capable of preventing the carrying of fire from floor to floor. This routing assembly meets the test requirements of UL Subject 2024A. This routing assembly is identified by a marking on the surface of the routing assembly or on a marker tape indicating "Riser." A routing assembly marked "Riser" is also suitable for general purpose use when used to enclose optical fiber cable marked "OFNP," "OFNR," "OFNG" or "OFN," or communications cable marked "CMP," "CMP-OF," "CMR," "CMR-OF," "CMG," "CMG-OF," "CM" and "CM-OF."

A routing assembly with neither the marking "Plenum" nor "Riser" is suitable for general-purpose use, with the exception of risers, plenums, and other spaces used for environmental air when used to enclose optical fiber cable marked "OFNP," "OFCP," "OFNR," "OFCR," "OFNG," "OFCG,"

OPTICAL FIBER/COMMUNICATIONS CABLE ROUTING ASSEMBLIES FOR USE IN TELECOMMUNICATION INSTALLATIONS (QBAA)

"OFC" or "OFN," or communications cable marked "CMG," "CMG-OF," "CM," "CM-OF," "CMR," "CMR-OF," "CMP" or "CMP-OF." This routing assembly is resistant to the spread of fire when tested in accordance with the Vertical-Tray Flame Test (General Use) in UL Subject 2024A.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2024A, "Outline of Investigation for Optical Fiber Cable Routing Assemblies."

UL MARK

The UL symbol on the product or the complete Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Optical Fiber Routing Assembly," "Communications Cable Routing Assembly" or "Optical Fiber/Communications Cable Routing Assembly."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OUTLET BOXES FOR USE IN HAZARDOUS LOCATIONS (QBCR)

GENERAL

This category covers conduit boxes for use in threaded rigid conduit or steel intermediate metal conduit wire raceways. They provide for splicing of conductors, but conductors should not be sealed in conduit boxes. The boxes are marked to indicate when accessories such as unions and sealing fittings are furnished with the box.

Boxes marked "rain tight" have been subjected to tests designed to simulate exposure to beating rain to determine that such exposure will not result in entrance of water.

Cast-aluminum alloy outlet boxes are not considered acceptable for installation in concrete or cinder fill unless protected with asphalt base paint or the equivalent.

RELATED PRODUCTS

See Conduit Fittings for Use in Hazardous Locations (EBNV).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Outlet Box for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER BRANCHING DEVICES (QBEA)

GENERAL

This category covers optical fiber branching devices intended for residential and/or commercial applications as part of an optical fiber wiring system.

Optical fiber branching devices include optical flexible circuits, fan-out devices, wavelength division multiplexers (WDM and DWDM) and other similar passive devices.

OPTICAL FIBER BRANCHING DEVICES (QBEA)

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 746C, "Polymeric Materials – Use in Electrical Equipment Evaluations." Additionally, branching devices employing optical fiber connectors have been investigated to TIA-455-6-B, "FOTP-6 – Cable Retention Test Procedure for Fiber Optic Cable Interconnecting Devices."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag or the smallest unit container in which the product is packaged or on the product when size or shape permits is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Optical Fiber Branching Device."

For optical fiber branching devices which are also Verified to a performance specification under Optical Fiber Branching Devices Verified in Accordance with National or International Specifications (QBEN), the marking includes the appropriate Listing Mark and either the text "Also Verified [Specification name and/or number]" or the UL Verification Mark along with [Specification name and/or number].

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER BRANCHING DEVICES VERIFIED IN ACCORDANCE WITH NATIONAL OR INTERNATIONAL SPECIFICATIONS (QBEN)

GENERAL

This category covers optical fiber branching devices whose signal transmission, environmental and/or mechanical performance characteristics have been investigated in accordance with one or more of the applicable U.S. national standards, published international standards, regional standards, miscellaneous standards, or regulations of other organizations, as indicated in the individual Verifications.

Optical fiber branching devices include optical flexible circuits, fan-out devices, wavelength division multiplexers (WDM and DWDM) and other similar passive devices. These devices are intended for residential and/or commercial applications as part of an optical fiber wiring system.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The performance specifications used to investigate products in this category are contained in Telcordia GR-2866-CORE (Issue 1 June 1995), "Generic Requirements for Optical Fiber Ribbon Fanouts." Other performance specifications applicable to optical fiber cable assemblies and connector products may also be used by UL in Verification investigations.

UL MARK

The Verification Mark of Underwriters Laboratories Inc. on the product or on the attached tag or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Verification and Follow-Up Service. The Verification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "VERIFIED," a control number, the product name "Optical Fiber Branching Device," the Specification name(s) and/or number(s), and the date of the Specification(s).

For optical fiber branching devices which are also Listed under Optical Fiber Branching Devices (QBEA), the marking includes the appropriate Listing Mark and either the text "Also Verified [Specification name(s) and/or number(s)]," or the UL Verification Mark together with the Specification name(s) and/or number(s) and the date of the Specification(s).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER CABLE ASSEMBLIES AND CONNECTORS (QBFA)

281

OPTICAL FIBER CABLE ASSEMBLIES AND CONNECTORS (QBFA)

GENERAL

This category covers factory-assembled optical fiber cable assemblies and connector products intended for residential and/or commercial applications as part of an optical fiber wiring system.

Optical fiber cable assemblies consist of Listed optical fiber cable and optical fiber cable connectors and are intended for use in accordance with Article 770 of ANSI/NFPA 70, "National Electrical Code" (NEC). According to Article 770, the restrictions that apply to the cable used in these assemblies also apply to the complete cable assemblies.

These assemblies have not been investigated for use in environmental air spaces in accordance with Sections 300.22(B) and (C) of the NEC unless specifically marked for the application.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate optical fiber connectors is ANSI/UL 746C, "Polymeric Materials – Use in Electrical Equipment Evaluations."

The basic standards used to investigate optical fiber cable assemblies are ANSI/UL 746C and TIA-455-6-B, "FOTP-6 – Cable Retention Test Procedure for Fiber Optic Cable Interconnecting Devices."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the attached tag or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Optical Fiber Cable Assembly" or "Optical Fiber Connector."

For optical fiber cable assemblies and optical fiber connectors which are also Verified to a performance specification under Optical Fiber Cable Assemblies and Connectors Verified in Accordance with National or International Specifications (QBFN), the marking includes the appropriate Listing Mark and either the text "Also Verified [Specification name and/or number]," or the UL Verification Mark together with the Specification name and/or number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OPTICAL FIBER CABLE ASSEMBLIES AND CONNECTORS VERIFIED IN ACCORDANCE WITH NATIONAL OR INTERNATIONAL SPECIFICATIONS (QBFN)

GENERAL

This category covers optical fiber cable assemblies and connector products whose signal transmission, environmental and/or mechanical performance characteristics have been investigated in accordance with one or more of the applicable U.S. national standards, published international standards, regional standards, miscellaneous standards, or regulations of other organizations, as indicated in the individual Verifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The performance specifications used to investigate products in this category are contained in Telcordia GR-326-CORE (Issue 3 September 1999), "Generic Requirements for Singlemode Optical Connectors and Jumper Assemblies." Other performance specifications, applicable to optical fiber cable assemblies and connector products, may also be used by UL in Verification investigations.

UL MARK

The Verification Mark of Underwriters Laboratories Inc. on the product or on the attached tag or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Verification and Follow-Up Service. The Verifica-

**OPTICAL FIBER CABLE ASSEMBLIES AND CONNECTORS
VERIFIED IN ACCORDANCE WITH NATIONAL OR
INTERNATIONAL SPECIFICATIONS (QBFN)**

282

tion Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "VERIFIED," a control number, the product name "Optical Cable Assembly" or "Optical Fiber Connector," the Specification name(s) and/or number(s), and the date of the Specification(s).

For optical fiber cable assemblies and optical fiber connectors which are also Listed under Optical Fiber Cable Assemblies and Connectors (QBFA), the marking includes the appropriate Listing Mark and either the text "Also Verified [Specification name(s) and/or number(s)]," or the UL Verification Mark together with the Specification name(s) and/or number(s) and the date of the Specification(s).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OUTLET BOXES AND FITTINGS (QBPZ)

ILLUMINATED COVER PLATES FOR FLUSH-MOUNTED WIRING DEVICES (QBSA)

GENERAL

This category covers illuminated cover plates for flush-mounted wiring devices. The cover plates have integral nonreplaceable light sources, such as neon, light-emitting diode (LED) or electroluminescent panel, and are intended for installation in accordance with Article 314 of ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514D, "Cover Plates for Flush-Mounted Wiring Devices."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Illuminated Cover Plate for Flush-mounted Wiring Devices."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OUTLET BOXES AND FITTINGS CLASSIFIED FOR FIRE RESISTANCE (QBWY)

GENERAL

This category covers special purpose boxes for installation in floors and nonmetallic outlet boxes for installation in walls and partitions and ceilings in accordance with the provisions of NFPA 70, "National Electrical Code" (NEC). They have shown a degree of fire resistance when installed in the particular floor(s) or wall(s) described for each Classified company. Boxes of the type Listed in UL's Electrical Construction Materials Directory have been investigated and found to comply with established electrical requirements and are so Listed.

This category includes Classifications for nonmetallic outlet and switch boxes for use in fire resistive rated wall or partition assemblies. The information provided for each Classification includes the model numbers for the Classified products, a description of the rated assemblies, the spacing limitations for the boxes and the installation details. Nonmetallic boxes should not be installed on opposite sides of walls or partitions of staggered stud construction unless Classified for use in such constructions.

Where indicated in the individual Classifications, products have also been investigated for heat and smoke release characteristics in accordance with UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces." Such products may be installed in air-handling spaces in accordance with Sec. 300.22(C) of the NEC. Authorities Having Jurisdiction should be consulted before installation.

OUTLET BOXES AND FITTINGS (QBPZ)

Outlet Boxes and Fittings Classified for Fire Resistance (QBWY)—Continued

FLOOR BOXES

Boxes for use with floors have been investigated for use with electrical receptacles fabricated of melamine, phenolic or urea materials, unless specified otherwise in the installation instructions and Classification information. Floor boxes and fittings are intended to be installed in accordance with installation instructions provided with the product.

Boxes with integral connectors for electric metallic tubing or for unthreaded rigid metallic conduit are provided with a marking on the carton to indicate the specific type or types of wiring system for which the box has been tested.

Floor boxes designated for floor installation as covered in the NEC are provided with covers and gaskets to exclude surface water and sweeping compounds that might be present in floor cleaning operations. Those boxes, intended for installation in concrete floors, are frequently provided with leveling screws, threaded hubs, or both and are provided with a marking on the carton to identify boxes of this type such as "Floor Box" or "Floor Box, Concrete Tight" as appropriate.

WALL AND PARTITION AND CEILING BOXES

Nonmetallic outlet boxes evaluated for installation in fire resistive assemblies are provided with the appropriate Listing Mark for electrical products and other markings as described in Nonmetallic Outlet Boxes (QCMZ). Nonmetallic outlet boxes Classified for use in fire resistive designs may have the following marking in the base of the box:

Class * hr, F, W and/or C

where * indicates hourly rating such as 1 hr or 2 hr and F = Floor, W = Wall and C = Ceiling.

The boxes are Classified for use in certain fire resistive designs when installed in accordance with the details described for each Classified company. Any Listed metallic or nonmetallic cover is suitable for use with these nonmetallic boxes.

For information on the installation of Listed metallic outlet and switch boxes in fire resistive rated wall or partition assemblies, see Metallic Outlet Boxes (QCIT).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 263, "Fire Tests of Building Construction and Materials".

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product or on each UL Classified Steel Floor and Form Unit with factory-installed floor boxes or the UL symbol on the product and the Classification Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

OUTLET BOXES AND FITTINGS CLASSIFIED FOR FIRE RESISTANCE DESIGN NOS. _____

SEE PRODUCT CATEGORY IN UL FIRE RESISTANCE DIRECTORY Control No. _____

Where indicated in the individual Classifications, products may be marked "Suitable for use in air-handling spaces in accordance with Sec. 300.22(C) of the National Electrical Code" when investigated to determine suitability for such use.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

METALLIC OUTLET BOXES (QCIT)

GENERAL

This category covers metallic flush device boxes, conduit bodies, boxes, floor boxes, outlet boxes, special-purpose boxes, extension rings, covers, and cover plates for flush-mounted wiring devices, intended for instal-

OUTLET BOXES AND FITTINGS (QBPZ)

Metallic Outlet Boxes (QCIT)—Continued

lation in accordance with Article 314 of ANSI/NFPA 70, "National Electrical Code." These products are also intended for installation and use in accordance with the following information.

EXTENSION RINGS

Extension rings are suitable for extending properly secured flush- or surface-mounted boxes. One or more extensions may be used. An extension ring is intended to increase the box depth, volume, or both.

USE IN FIRE-RATED ASSEMBLIES

Listed single- and double-gang metallic outlet and switch boxes with metallic or nonmetallic cover plates may be used in bearing and nonbearing wood stud and steel stud walls with ratings not exceeding 2 h. These walls have gypsum wallboard facings similar to those shown in Design Nos. U301, U411 and U425, as covered under Fire Resistance Ratings – ANSI/UL 263 (BXUV). The boxes are intended to be fastened to the studs with the openings in the wallboard facing cut so that the clearance between the boxes and the wallboard does not exceed 1/8 in. The boxes are intended to be installed so that the surface area of individual boxes does not exceed 16 sq in, and the aggregate surface area of the boxes does not exceed 100 sq in per 100 sq ft of wall surface.

Boxes located on opposite sides of walls or partitions are intended to be separated by a minimum horizontal distance of 24 in. This minimum separation distance between the boxes may be reduced when Wall Opening Protective Materials (QCSN) are installed according to the requirements of their Classification.

The boxes are not intended to be installed on opposite sides of walls or partitions of staggered stud construction unless Wall Opening Protective Materials (QCSN) are installed with the boxes in accordance with Classification requirements for the protective materials.

Listed metallic outlet and switch boxes with metallic or nonmetallic cover plates may be used in floor-ceiling and roof-ceiling assemblies with ratings not exceeding 2 h when these assemblies have gypsum wallboard membranes. The boxes are intended to be fastened to the joists with the openings in the wallboard facing cut so that the clearance between the boxes and the gypsum wallboard does not exceed 1/8 in. The boxes are intended to be installed so that the surface area of individual boxes does not exceed 16 sq in, and the aggregate surface area of the boxes does not exceed 100 sq in per 100 sq ft of ceiling surface.

CONDUIT BODIES

Conduit bodies that are provided with a volume marking can enclose splices, taps or devices. Conduit bodies that are not provided with a volume marking are covered under Conduit Fittings (DWTT). Conduit bodies Classified for use with specific conduit body covers and conduit body covers Classified for use with specific conduit bodies are covered under Conduit Bodies and Covers Classified for Use with Specified Equipment (QCKW).

CONCENTRIC OR ECCENTRIC KNOCKOUTS

All boxes with concentric or eccentric knockouts have been investigated for bonding and are suitable for bonding without any additional bonding means around concentric (or eccentric) knockouts where used in circuits above or below 250 V, and may be marked as such.

CLAMPS

Boxes may or may not be provided with clamps. When clamps are provided, the carton is marked to indicate the type of wiring system or combination of systems for which they have been tested. The clamps are marked with the following letters or combinations thereof to indicate that they are suitable for use with armored cable ("A"); flexible metal conduit – "F"; nonmetallic-sheathed cable – "N," or flexible tubing (loom) – "T." Clamps suitable for Type MC metal-clad cable are marked "MCI" for metal-clad interlocking armored cable, "MCI-A" for metal-clad interlocking armor ground cable, "MCS" for metal-clad continuous smooth-sheath cable, and "MCC" for metal-clad continuous corrugated-sheath cable. If suitable for all seven types, the clamp is marked "ALL." Clamps suitable for nonmetallic-sheathed cable are also suitable for multiconductor underground feeder and branch circuit cable where used in dry locations.

Clamps have been tested for securing only one cable per clamp, except multiple section clamps are considered suitable for securing one cable under each section of the clamp, each cable entering a separate knockout.

GROUNDING

Clamps for armored cable, flexible metal conduit, metal-clad interlocking armor ground cable, metal-clad continuous smooth-sheath cable, or metal-clad continuous corrugated-sheath cable are considered suitable for grounding where installed in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

FIXTURE SUPPORT

A box, with or without a bracket or bar hanger, intended for support of a fixture weighing 50 lbs or less is marked "FOR FIXTURE SUPPORT" on the carton to indicate that the box is intended for fixture support. A box, with or without a bracket or bar hanger, intended for support of a fixture weighing more than 50 lbs is marked with the weight of the fixture to be supported. Metallic device boxes and device plaster rings have not been investigated for support of a ceiling fixture unless marked for use in ceilings, walls, and with the weight of the product to be supported. Metallic device

OUTLET BOXES AND FITTINGS (QBPZ)

283

Metallic Outlet Boxes (QCIT)—Continued

boxes or metallic device boxes intended to be installed in an existing structure have been investigated for the support of fixtures, smoke detectors and carbon monoxide detectors weighing not more than 6 lbs.

INTEGRAL CONNECTORS

Boxes with integral connectors for electrical metallic tubing or for unthreaded rigid metallic conduit are provided with a marking on the carton to indicate the specific type or types of wiring system for which the boxes have been tested.

CEILING-SUSPENDED FAN SUPPORT

A box, or a box with a bracket or bar hanger intended for support of a ceiling-suspended (paddle) fan weighing 35 lbs or less is marked "ACCEPTABLE FOR FAN SUPPORT" on the product. A box, or a box with a bracket or bar hanger intended for support of a ceiling-suspended (paddle) fan weighing more than 35 lbs but not more than 70 lbs is marked "ACCEPTABLE FOR FAN SUPPORT OF 70 LBS OR LESS" on the product. A box, or a box with a bracket or bar hanger intended for support of a ceiling-suspended (paddle) fan is acceptable for use with a fixture when provided with the above fixture-support markings.

CONCRETE TIGHT

All metal boxes, except aluminum alloy boxes, are provided with corrosion protection suitable for installation in concrete. Aluminum alloy boxes covered under this category are not considered acceptable for installation in concrete or cinder fill unless protected by asphalt paint or the equivalent. Boxes designated as "concrete tight" may have no means of support other than the concrete and often accommodate covers at top and bottom.

FLOOR BOXES

Floor boxes designed for floor installation as covered in the NEC are provided with covers and gaskets to exclude surface water and sweeping compounds that might be present in floor cleaning operations. Covers with gaskets may be shipped separately from the boxes. Both products are provided with installation instructions. Those boxes intended for installation in concrete floors are frequently provided with leveling screws, threaded hubs or both, and are provided with a marking on the carton to identify boxes of this type such as "Floor Box Cover," "Floor Box" or "Floor Box, Concrete Tight" as appropriate.

WET AND DAMP LOCATIONS

Boxes and covers intended for use in wet locations as defined by the NEC are marked "Wet Location." Damp location boxes and covers are intended to be so located or equipped as to prevent water from entering or accumulating in the box and are marked "Damp Location." Boxes with threaded conduit hubs will normally prevent water from entering except for condensation within the box or connected conduit.

Box and device cover combinations, and flush device covers that provide protection from the weather only when the cover is closed, are marked "Wet Location Only When Cover Closed" and may be marked "Damp Location."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 514A, "Metallic Outlet Boxes," and ANSI/UL 514D, "Cover Plates for Flush-Mounted Wiring Devices."

UL MARK

The Listing Mark on the product or the UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Outlet Box," "Outlet Box and Cover," "Extension Ring," "Flush Device Box," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Conduit Bodies and Covers Classified for Use with Specified Equipment (QCKW)**GENERAL**

This category covers Listed conduit body covers Classified for use with specified Listed conduit bodies, and Listed conduit bodies Classified for use with specified Listed conduit body covers, in accordance with the details described under **UL MARK**.

These products have been investigated for use in wet locations.

RELATED PRODUCTS

Conduit Bodies and Covers Classified for Use with Specified Equipment (QCKW)—Continued

Products Classified under this category are also Listed under Metallic Outlet Boxes (QCIT).

ADDITIONAL INFORMATION

For additional information, see Metallic Outlet Boxes (QCIT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514A, "Metallic Outlet Boxes."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the complete Listing Mark for Metallic Outlet Boxes (QCIT) and the following additional information:

**ALSO CLASSIFIED BY UNDERWRITERS LABORATORIES INC.
FOR USE WITH UL LISTED [CONDUIT BODY] [CONDUIT BODY
COVER]**

CATALOG NO. ____ [LISTEE'S NAME]

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NONMETALLIC OUTLET BOXES (QCMZ)

GENERAL

This category covers nonmetallic flush device boxes, conduit bodies, conduit boxes, outlet boxes, special-purpose boxes, extension rings, covers, and cover plates for flush-mounted wiring devices, intended for installation in accordance with Article 314 of ANSI/NFPA 70, "National Electrical Code." These products are also intended for installation and use in accordance with the following information.

BOX EXTENDERS

Box extenders are components installed in or on a box that is mounted in a finished structure intended to extend the electrical enclosure up to the new finished surface. The box extender rests on the edge of the existing box (fixed depth) or extends into the box (adjustable depth). The flange of the box extender, if provided, rests on the finished surface.

EXTENSION RINGS

Extension rings are suitable for extending properly secured flush- or surface-mounted boxes. One or more extensions may be used. An extension ring is intended to increase the box depth, volume, or both.

CONDUIT BODIES

Conduit bodies that are provided with a volume marking can enclose splices, taps or devices. Conduit bodies that are not provided with a volume marking are covered under Conduit Fittings (DWTT). Conduit bodies Classified for use with specific conduit body covers and conduit body covers Classified for use with specific conduit bodies are covered under Conduit Bodies and Covers Classified for Use with Specified Equipment (QCKW).

CLAMPS

Boxes may or may not be provided with clamps. When clamps are provided, the carton is marked to indicate the type of wiring system or combination of systems for which they have been tested. The clamps are marked with the following letters or combinations thereof to indicate that they are suitable for use with nonmetallic sheathed cable "N" or flexible tubing (loom) "T." Clamps suitable for nonmetallic sheathed cable are also suitable for multiconductor underground feeder and branch circuit cable where used in dry locations unless the box or smallest unit carton is marked "Nonmetallic Sheathed Cable Only." Clamps have been tested for securing only one cable per clamp, except multiple section clamps are considered suitable for securing one cable under each section of the clamp, each cable entering a separate knockout. All clamps are removed before the volume of the box is to be determined.

Boxes intended for use with nonmetallic sheathed cable or open wiring are suitable for use with cable or wire rated 90°C or less, unless marked for a higher rated wire in degrees centigrade.

SINGLE-GANG BOX

A box nominally 2-1/4 by 4 in. or smaller is intended for one or more nonmetallic sheathed cables to enter through a single or multiple stage knockout opening.

FOR USE WITH RIGID NONMETALLIC CONDUIT

Nonmetallic boxes suitable for use with rigid nonmetallic conduit are provided with a marking on the carton to indicate the intended use, such as "For [Specific Type] Conduit." Such boxes, when so marked on the box or carton and provided with installation instructions, are intended for support by the specified conduit. Such boxes are inherently resistant to atmosphere containing common industrial corrosive agents and will withstand vapors or

Nonmetallic Outlet Boxes (QCMZ)—Continued

mists of caustic pickling acids, plating baths, and hydrofluoric and chromic acids. Nonmetallic boxes for use with rigid PVC conduit are suitable for use with wire rated 90°C or less.

Nonmetallic boxes suitable for use with rigid nonmetallic conduit are not intended to support equipment or to accommodate heat producing equipment.

FIXTURE SUPPORT

A nonmetallic box, with or without a bracket or bar hanger, intended for support of a fixture weighing 50 lbs or less is marked "FOR FIXTURE SUPPORT" on the carton. A nonmetallic box, with or without a bracket or bar hanger, intended for support of a fixture weighing more than 50 lbs. is marked with the weight of the fixture to be supported. Nonmetallic boxes and device plaster rings have not been investigated for support of a ceiling fixture unless marked for use in ceilings, walls, and with the weight of the product to be supported. Nonmetallic device boxes or nonmetallic device boxes intended to be installed in an existing structure have been investigated for the support of fixtures, smoke detectors and carbon monoxide detectors weighing not more than 6 lbs.

CEILING-SUSPENDED FAN SUPPORT

A box, or a box with a bracket or bar hanger intended for support of a ceiling-suspended (paddle) fan weighing 35 lbs or less is marked "ACCEPTABLE FOR FAN SUPPORT" on the product. A box, or a box with a bracket or bar hanger intended for support of a ceiling-suspended (paddle) fan weighing more than 35 lbs. but not more than 70 lbs. is marked "ACCEPTABLE FOR FAN SUPPORT OF 70 lbs OR LESS" on the product. A box, or a box with a bracket or bar hanger intended for support of a ceiling-suspended (paddle) fan is acceptable for use with a fixture when provided with the above fixture support markings.

CONCRETE TIGHT

Boxes designated as "concrete tight" may have no means of support other than the concrete and often accommodate covers at top and bottom.

FLOOR BOXES

Floor boxes designed for floor installation as covered in ANSI/NFPA 70, "National Electrical Code" (NEC), are provided with covers and gaskets to exclude surface water and sweeping compounds that might be present in floor cleaning operations. Covers with gaskets may be shipped separately from the boxes. Both products are provided with installation instructions. Those boxes intended for installation in concrete floors are frequently provided with leveling screws, threaded hubs, or both and are provided with a marking on the carton to identify boxes of this type such as, "Floor Box Cover" or "Floor Box, Concrete Tight" as appropriate.

WET AND DAMP LOCATIONS

Boxes and covers intended for use in wet locations as defined by the NEC are marked "Wet Location." Damp location boxes and covers are intended to be so located or equipped as to prevent water from entering or accumulating in the box and are marked "Damp Location." Boxes with threaded conduit hubs will normally prevent water from entering except for condensation within the box or connected conduit.

Box and device cover combinations, and flush device covers that provide protection from the weather only when the cover is closed, are marked "Wet Location Only When Cover Closed" and may be marked "Damp Location."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 514C, "Nonmetallic Outlet Boxes, Flush-Device Boxes, and Covers," and ANSI/UL 514D, "Cover Plates for Flush-Mounted Wiring Devices."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Outlet Box," "Outlet Box and Cover," "Extension Ring," "Flush Device Box," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OUTLET BUSHINGS AND FITTINGS (QCRV)

GENERAL

This category covers supports for outlet and flush device boxes; bushings for use in metal studs; fittings for use in or on outlet and flush device

OUTLET BOXES AND FITTINGS (QBPZ)

Outlet Bushings and Fittings (QCRV)—Continued

boxes, such as knockout reducers, seals and insulating inserts, and cord grip attachments; insulating gaskets used behind cover plates for flush-mounted wiring devices to stop drafts; pulling grips, strain-relief grips and support grips; locknuts for conduit; sealing gaskets (washers), service-entrance heads for rigid conduit or electrical metallic tubing; cable riser supports; and bushings for use on the ends of rigid or flexible conduit, or electrical metallic tubing, where a change to open wiring is made.

Service-entrance heads or hoods are intended to be used on rigid conduit or electrical metallic tubing that is mounted with the conductor openings facing toward the ground.

Armored Cable Bushings — These bushings are used on armored cable between the conductors and the outer armor. They are a readily distinguishable bright color such as red, orange or yellow.

Bushings — These bushings are suitable for temperatures of 150°C if they are black or brown in color, 90°C if they are any other color unless specifically marked for a higher temperature. Other bushings are covered under Insulating Bushings (NZMT) and Conduit Fittings (DWTT). Service entrance heads for use with service entrance cable are covered under Service Entrance Cable Fittings (TYZX). Temporary wiring, such as round flexible cables or cords may be secured by the use of a connector suitable for use with flexible cord.

Floor Outlet Fittings — Floor outlet fittings are for use in concrete floors for coupling short lengths of exposed conduit to concealed systems when so installed that floor couplings do not come below surface of floor in which they are embedded and subject to the following restrictions: Elbow to be used only where conduit wires pass through fitting without splice, joint, or tap within fitting, and only where no more than one elbow is used in any conduit run. Tees to be used only where conductors are not drawn in until after main conduit installation is complete. If splices, joints, or taps are used in tees, conductors are intended to be looped that upon removing exposed conduit at floor coupling, splices, joints, or taps can readily be disconnected without interfering with other wiring within fitting.

Sealing Gaskets (Washers) — Sealing gaskets are intended for use with threaded rigid metal conduit and intermediate metal conduit with one sealing gasket on the outside and an ordinary locknut or sealing locknut on the opposite side of the enclosure for wet locations or liquid-tight applications. Sealing gaskets may also be used with Listed wet location or liquid-tight fittings where so marked on the fitting carton.

GROUNDING

Metal reducing washers are considered suitable for grounding for use in circuits over and under 250 V and where installed in accordance with ANSI/NFPA 70, "National Electrical Code." Reducing washers are intended for use with metal enclosures having a minimum thickness of 0.053 in. for non-service conductors only. Reducing washers may be installed in enclosures provided with concentric or eccentric knockouts, only after all of the concentric and eccentric rings have been removed. However, those enclosures containing concentric and eccentric knockouts that have been Listed for bonding purposes may be used with reducing washers without all knockouts being removed.

CARTON MARKINGS

Fittings for use with flexible cords and marked "Liquid-Tight" on the carton indicates suitability for the use where directly exposed to oil spray or to rain.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 514A, "Metallic Outlet Boxes," ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings," ANSI/UL 514D, "Cover Plates for Flush-Mounted Wiring Devices," and ANSI/UL 651, "Schedule 40 and 80 Rigid PVC Conduit and Fittings."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Outlet Bushing," "Outlet Fitting," "Offset Adapter," "Bar Hanger," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OUTLET BOXES AND FITTINGS (QBPZ)

285

WALL OPENING PROTECTIVE MATERIALS (QCSN)

USE AND INSTALLATION

This category covers proprietary compositions that are used to maintain the hourly ratings of fire-resistive walls and partitions containing flush-mounted devices, such as outlet boxes, electrical cabinets, and mechanical cabinets. The individual Classifications indicate the specific applications and the method of installation for which the materials have been investigated.

Electrical devices are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 263, "Fire Tests of Building Construction and Materials."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

WALL OPENING PROTECTIVE MATERIAL
FIRE RESISTANCE CLASSIFICATION
SEE PRODUCT CATEGORY
IN UL FIRE RESISTANCE DIRECTORY
Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OUTLET CIRCUIT TESTERS (QCYU)

GENERAL

This category covers portable devices with fixed attachment plug blades, or probes attached to flexible leads, used to indicate various wiring conditions in 15 or 20 A branch circuits by a pattern of lights or other similar means along with markings or instructions to identify the probable wiring conditions which cannot be determined by the tester.

The devices may include provisions for checking the functions of a ground-fault circuit interrupter (GFCI) connected to the branch circuit, or for indicating that a branch circuit is connected to an arc-fault circuit interrupter (AFCI).

AFCI indicators operate by producing a waveform similar to an arc fault. Since these devices cannot produce an actual arc fault, an AFCI indicator may not trip every AFCI. AFCI indicators are provided with markings or instructions that state the following or equivalent: "CAUTION: AFCIs recognize characteristics unique to arcing, and AFCI indicators produce characteristics that mimic some forms of arcing. Therefore the indicator may provide a false indication that the AFCI is not functioning properly. If this occurs, recheck the operation of the AFCI using the test and reset buttons. The AFCI button test function will demonstrate proper operation."

These devices are not intended for use as comprehensive diagnostic instruments.

RELATED PRODUCTS

Ground-continuity-indicating devices constructed integral with cord-connector bodies for use on construction sites are covered under Attachment Plugs, Fuseless (AXUT) as "cord-connector bodies."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1436, "Outlet Circuit Testers."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Circuit Tester."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party.

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PACKAGED PUMPING SYSTEMS (QCZJ)

GENERAL

This category covers fluid handling systems consisting of pumps, electric motors, frequency drives, control valves, gauges and piping mounted on a structural steel base. They are used for plumbing boosters, heat transfer, hot water heating, HVAC chilled and hot water packages, irrigation, boiler feed and condensate packages, and similar applications.

RATINGS

Packaged pumping systems are rated 600 V or less. The supply input is rated in full load amperes, voltage, number of phases, frequency, and the rating of the largest motor load.

The system and components of the system are intended to be used within the rated working pressure and with the appropriate liquids in accordance with system markings.

SPECIAL CONSIDERATIONS

These pumping systems have not been investigated for the handling of hazardous materials or for use in hazardous (classified) locations as defined in ANSI/NFPA 70, "National Electrical Code."

RELATED PRODUCTS

Systems intended for contact with drinking water are covered under Drinking Water System Components (FDNP).

Systems investigated together with air conditioning and refrigeration equipment are covered under Heating and Cooling Equipment (LZFE) or Specialty Refrigeration Equipment (SROT).

Prefabricated walk-in or climb-in buildings or structures that may include packaged pumping systems or other equipment are covered under Commercial and Industrial Buildings (QRNZ).

Pumping equipment intended for fire service is covered under Fire Pump Motors (QXZF).

Pumps intended for use with combustible or flammable liquids, corrosive liquids, or aqueous solutions containing corrosive materials are covered under Power-operated Pumps (RBOG), or Pumps, Power Operated, Flammable Liquid (RCRX).

Prepackaged combinations of components, such as pumps, filters, heaters, blowers, lights and controls, intended for use with field-supplied hot tubs or spas are covered under Hot Tub and Spa Equipment Assemblies (WBQ).

Pumps investigated for use with or in proximity to swimming pools or spas are covered under Pumps (WCSX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 508, "Industrial Control Equipment," ANSI/UL 778, "Motor-Operated Water Pumps," and UL 508A, "Industrial Control Panels."

The basic standard used to investigate packaged pumping systems for heating and cooling equipment in this category is ANSI/UL 1995, "Heating and Cooling Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Packaged Pumping System."

The Listing Mark covers only the equipment mounted to the common structural frame.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PAINTING EQUIPMENT, AIR COMPRESSORS AND VACUUM PUMPS (QDFT)

This category covers painting equipment, air compressors and vacuum pumps intended for use on nominal system voltages of 600 V and less,

PAINTING EQUIPMENT, AIR COMPRESSORS AND VACUUM PUMPS (QDFT)

except that where the appliances are driven by universal type motors or electromagnetic mechanisms the scope is limited to appliances rated for use on nominal system voltages of 250 V or less. These appliances are cord-connected or provided with means for field wiring connections.

This equipment is intended for household, commercial or industrial use as defined by ANSI/NFPA 70, "National Electrical Code" (NEC).

Paint sprayers present certain inherent hazards when flammable paint or liquid are sprayed, which cannot be guarded against by specific design features. The instructions and warnings supplied with and applicable to each piece of equipment should be carefully observed.

Appliances specified as double insulated are constructed with a special insulating system in lieu of grounding to comply with the provisions of the NEC. Such appliances are distinctively marked "Double-Insulated" or "Double Insulation."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMPRESSORS, VACUUM PUMPS AND PNEUMATIC PAINT SPRAYERS (QDGS)

USE AND INSTALLATION

This category covers air compressors and vacuum pumps, including pneumatic-type paint sprayers.

Tank-type compressors of 3 hp or less or 30 gallons and less may employ tanks that are not certified by the American Society of Mechanical Engineers (ASME) and are not marked with "U" or "UM," but have been investigated by UL for the application.

Products can be cord-connected or provided with means for permanent connection in the field. Permanently connected products are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

REBUILT PRODUCTS

This category also covers compressors, vacuum pumps and pneumatic paint sprayers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt compressors, vacuum pumps and pneumatic paint sprayers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt compressors, vacuum pumps and pneumatic paint sprayers are subject to the same requirements as new compressors, vacuum pumps and pneumatic paint sprayers.

UNEVALUATED FACTORS

This equipment has not been investigated for use as medical and dental equipment, or heating, air conditioning or refrigeration equipment.

RELATED PRODUCTS

High-pressure paint sprayers, paint mixers and paint pigment dispensers are covered under Painting Equipment (QDIQ).

ADDITIONAL INFORMATION

For additional information, see Painting Equipment, Air Compressors and Vacuum Pumps (QDFT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1450, "Motor-Operated Air Compressors, Vacuum Pumps, and Painting Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Painting Equipment," or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PAINTING EQUIPMENT (QDIQ)

USE

This category covers motor-operated equipment used for the preparation or application of paint, such as paint mixers, paint pigment dispensers, paint rollers and high-pressure airless paint sprayers.

Products can be cord-connected or provided with means for permanent connection in the field. Permanently connected products are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

PAINTING EQUIPMENT, AIR COMPRESSORS AND VACUUM PUMPS (QDFT)*Painting Equipment (QDIQ)—Continued***REBUILT PRODUCTS**

This category also covers painting equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt painting equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt painting equipment is subject to the same requirements as new painting equipment.

RELATED PRODUCTS

For paint heaters, see Heaters, Industrial and Laboratory (KQLR). For pneumatic or electrostatic paint sprayers, see Compressors, Vacuum Pumps and Pneumatic Paint Sprayers (QDGS).

ADDITIONAL INFORMATION

For additional information, see Painting Equipment, Air Compressors and Vacuum Pumps (QDFT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1450, "Motor-Operated Air Compressors, Vacuum Pumps, and Painting Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Painting Equipment" or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PAINT SPRAY AND FINISHING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (QEEA)

PAINT SPRAY BOOTHS WITHOUT FIRE PROTECTION SYSTEMS FOR USE IN HAZARDOUS LOCATIONS (QEFA)

USE

This category covers paint spray booths for liquid and powder coating finishing processes as defined in Article 516 of NFPA 70, "National Electrical Code" (NEC) and in NFPA 33, "Spray Application Using Flammable and Combustible Materials." Some of the booths may alternatively be used for drying, and may utilize electric heating, gas, gas-oil, or an oil-fired heating system. The type of heating employed is indicated in the individual Listings.

These paint spray booths are intended for field erection indoors in accordance with instructions furnished by the manufacturer and the information marked on the equipment. They are intended to be installed and used in accordance with applicable requirements in NFPA 33 and Article 516 of the NEC. Paint spray booths located within a commercial garage are to be installed as defined in Article 511 of the NEC.

FIRE PROTECTION

Paint spray booths in this category are not provided with a factory installed automatic fire protection system. A UL Listed fire protection system is intended to be provided by the installer and approved by the Authority Having Jurisdiction prior to operation of the booth.

COATING MATERIALS

These paint spray booths are intended for spray operations using a single type of coating material. Due to the possibility of spontaneous ignition, different types of coating materials should not be alternately used unless all deposits of the first used material are removed from the booth and ducts, and all paint contaminated filters are replaced or cleaned prior to spraying with the second type of coating material.

The toxicity of coating materials that may be used and the ability of the spray booth to provide protection for the painter and/or booth operator from coating material fumes have not been evaluated. Proper precautions as recommended by the paint manufacturer should be followed.

PRODUCT MARKINGS

The main product nameplate for products in this category includes the statement: "A UL Listed Automatic Sprinkler System or other Listed Auto-

PAINT SPRAY AND FINISHING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (QEEA)

287

Paint Spray Booths Without Fire Protection Systems for Use in Hazardous Locations (QEFA)—Continued

matic Extinguishing System shall be provided by the installer and approved by the Authority Having Jurisdiction."

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in NFPA 33, "Spray Application Using Flammable and Combustible Materials."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names and information, as appropriate: (A) "Paint Spray Booth Without Fire Protection System for Automobile Refinishing," (B) "Paint Spray Booth Without Fire Protection System" or (C) "Paint Spray Booth Without Fire Protection System for Use Only with (Company Name) Labeled (Gas) (Gas-Oil) (Oil) Burner Model(s). Maximum Input (BTU Per Hour) (Gals Per Hour). Refer to Burner Nameplate for Control and Fuel Specifications."

A paint spray booth that includes a burner as part of the factory-furnished assembly bears a Listing Mark with the product name and information as outlined in (A) or (B).

A paint spray booth assembly intended for installation of the burner in the field bears a Listing Mark with the product name and information similar to the text in (C). The burner bears a separate Listing Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PAINT SPRAY BOOTHS WITH FIRE PROTECTION SYSTEMS FOR USE IN HAZARDOUS LOCATIONS (QEFY)

USE

This category covers paint spray booths for liquid and powder coating finishing processes as defined in Article 516 of NFPA 70, "National Electrical Code" (NEC) and in NFPA 33, "Spray Application Using Flammable and Combustible Materials." Some of the booths may alternatively be used for drying, and may utilize electric heating, gas, gas-oil, or an oil-fired heating system. The type of heating employed is indicated in the individual Listings.

These paint spray booths are intended for field erection indoors in accordance with instructions furnished by the manufacturer and the information marked on the equipment. They are intended to be installed and used in accordance with applicable requirements in NFPA 33 and Article 516 of the NEC. Paint spray booths located within a commercial garage are to be installed as defined in Article 511 of the NEC.

FIRE PROTECTION

Paint spray booths are provided with either (1) an integral engineered fire extinguishing system that must be regularly inspected and/or recharged or (2) with automatic sprinklers that are connected to a separate water supply in accordance with NFPA 13, "Installation of Sprinkler Systems."

COATING MATERIALS

These paint spray booths are intended for spray operations using a single type of coating material. Due to the possibility of spontaneous ignition, different types of coating materials should not be alternately used unless all deposits of the first used material are removed from the booth and ducts, and all paint contaminated filters are replaced or cleaned prior to spraying with the second type of coating material.

The toxicity of coating materials that may be used and the ability of the spray booth to provide protection for the painter and/or booth operator from coating material fumes have not been evaluated. Proper precautions as recommended by the paint manufacturer should be followed.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in NFPA 33, "Spray Application Using Flammable and Combustible Materials."

PAINT SPRAY BOOTHS WITH FIRE PROTECTION SYSTEMS FOR USE IN HAZARDOUS LOCATIONS (QEFY)

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names and information, as appropriate: (A) "Paint Spray Booth for Automobile Refinishing," (B) "Paint Spray Booth" or (C) "Paint Spray Booth for Use Only with (Company Name) Labeled (Gas) (Gas-Oil) (Oil) Burner Model(s). A paint spray booth that includes the burner as part of the factory-furnished assembly bears a Listing Mark with the product name and information as outlined in (A) or (B).

A paint spray booth assembly intended for installation of the burner in the field bears a Listing Mark with the product name and information similar to the text in (C). The burner bears a separate Listing Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PANELBOARDS (QEUY)

USE, INSTALLATION AND MARKINGS

This category covers lighting and power panelboards rated 600 V or less. Panelboards are intended for mounting in cabinets, cutout boxes or enclosures designed for the purpose. The enclosure may be provided with the panel or provided separately. Only panelboards marked to indicate that they are for use in specific enclosures (identified by either catalog number or specific dimensional information) and panelboards labeled as "Enclosed Panelboards" have been investigated to determine that wiring space is adequate, or have been investigated for short-circuit-current ratings greater than 10,000 A rms symmetrical..

Enclosed panelboards identified with an Enclosure Type designation are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

Some enclosed panelboards have one or more openings for plug-in watt-hour or similar meters. Such panelboards, when marked for outdoor use have, except for the joint between the plug-in meter and opening, been investigated for rain tightness.

Some panelboards are suitable for use as service equipment and may be so marked. Such marking is part of the Listing Mark as noted below or is an integral part of other required markings. Panelboards marked to indicate that they are suitable for use as service equipment and which can be removed from the enclosure are marked to identify the specific enclosure in which they are intended to be installed. If the acceptability of such a panelboard for use as service equipment depends upon the condition of installation or use, the panelboard is marked to indicate those conditions.

Some panelboards incorporate neutrals factory bonded to the frame or enclosure. Such units are marked "Suitable Only for Use as Service Equipment."

Panelboards marked for use at services may also be used to provide the main control and means of cutoff for a separately derived system.

Panelboards are marked with their short-circuit-current rating in rms symmetrical amps. The marking states that short-circuit ratings are limited to the lowest interrupting rating of (1) any device installed or intended to be installed therein, and/or (2) any combination series-connected device. However, for combination series-connected devices, the short-circuit-current rating marked on the panelboard may be higher than the interrupting rating of a specific circuit breaker installed or intended to be installed in the panelboard. This higher rating is valid only if the specific overcurrent devices identified in the marking are used within or ahead of the panelboard in accordance with the marked instructions.

Panelboards to which units (circuit breakers, switches, etc.) may be added in the field are marked with the name or trademark of the manufacturer and the catalog number or equivalent of those units that are intended to be installed in the field. Molded-case circuit breakers (see DIXF) may also be Classified and marked as being suitable for use in certain panelboards in place of or along with specific units marked on the panelboard.

Where in normal operation the load will continue for three hours or more, molded-case circuit breakers and fused switches, other than fused power circuit devices, should not be loaded to exceed 80% of their current rating unless the device is otherwise marked. Low-voltage ac power switching devices (see PAPU) and fused power circuit devices (see IYSR) used in panelboards are suitable for continuous use at 100% of their rating.

Some panelboards may be provided with ground-fault protection for services or major feeders. The circuit(s) so protected are identified by a marking, such as on a wiring diagram.

These panelboards are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum con-

PANELBOARDS (QEUY)

ductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location. If all terminals are suitable for use with aluminum conductors as well as copper conductors, the panelboard is marked "Use Copper or Aluminum Wire." A panelboard employing terminals or main or branch circuits units, individually marked "CU-AL," is marked as noted above or "Use Copper Wire Only." The latter statement indicates that wiring space or other factors make the panelboard unsuitable for aluminum conductors.

Unless the panelboard is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14–1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Table 310.16 of ANSI/NFPA 70, "National Electrical Code" (NEC). However, 3-wire, single-phase service entrance or feeder conductors for dwelling units may be as covered in Section 310.15(B)(6) of the NEC. Termination provisions are determined based on values provided in Table 310.16 or Section 310.15(B)(6), with no adjustment made for correction factors.

Some panelboards, constructed with interlocked main switching and overcurrent protective devices, have been investigated for use in optional standby systems in accordance with Article 702 of the NEC and are marked "Suitable for use in accordance with Article 702 of the National Electrical Code ANSI/NFPA 70," or, if provided within kit form, "Suitable for use in accordance with Article 702 of the National Electrical Code ANSI/NFPA 70 when provided with interlock kit Cat No. ____."

CLASS CTL PANELBOARDS

Circuit-limiting panelboards (known as "Class CTL" panelboards) are identified by the words "Class CTL" on the UL Listing Mark.

Class CTL panelboards incorporate physical features which, in conjunction with the physical size, configuration, or other means provided in Class CTL circuit breakers, fuseholders or fusible switches, are designed to prevent the installation of more overcurrent protective poles than that number for which the device is designed and rated.

MARINE PANELBOARDS

Some Listed enclosed panelboards in this category have been investigated for use aboard marine vessels over 65 ft in length in accordance with the Electrical Engineering Regulations of the United States Coast Guard Subchapter J CG-259 (46CFR Parts 110-113). Such enclosed panelboards are identified by a Listing Mark for marine vessels over 65 ft in length.

The Electrical Engineering Regulations of the United States Coast Guard classify marine enclosed panelboards as "Non-watertight," "Drip-proof" or "Watertight."

A "Drip-proof" marine enclosed panelboard is so constructed that falling moisture or dirt does not interfere with the successful operation of the equipment.

A "Watertight" marine enclosed panelboard is so constructed that water does not enter the enclosure when subjected to a stream of water.

External means are provided for the operation of switches or circuit breakers in "Watertight" marine enclosed panelboards.

Marine enclosed panelboards classed "Drip-proof" or "Watertight" are marked to indicate this fact.

A marine enclosed panelboard for use in corrosive locations is marked "Suitable for Use in Corrosive Locations."

RECREATIONAL VEHICLE (RV) PANELBOARDS

Some Listed enclosed panelboards in this category have been investigated for RV use only. These panelboards generally consist of a line voltage branch circuit section that complies with ANSI/UL 67, "Panelboards." The low-voltage compartment, including the overall enclosure for that compartment, complies with ANSI/UL 458, "Power Converters/Inverters and Power Converter/Inverter Systems for Land Vehicles and Marine Crafts," and is intended to be installed in accordance with Article 551 of the NEC. Such enclosed panelboards are identified by a Listing Mark for RVs. RV panelboards do not have integral converter or inverter functions. Devices having combination panelboard-inverter/converter capability are covered under Power Converters/Inverters and Power Converter/Inverter Systems (QPPY).

RELATED PRODUCTS

Large single panels, frames, or assemblies of panels on which are mounted on the face, back, or both, switches, overcurrent and other protective devices, buses, and usually instruments; accessible from the rear as well as from the front and not intended to be installed in cabinets are covered under Switchboards, Dead-front (WEVZ).

Distribution equipment, the sole function of which is the automatic or nonautomatic transferring of one or more load conductor connections from one power source to another, is covered under Transfer Switches (WPTZ).

Factory-wired assemblies of industrial control equipment intended to control industrial processes are covered under Industrial Control Panels (NITW).

Distribution equipment containing only one circuit subdivision, unless also provided with a meter socket, is covered under Circuit Breakers, Molded-case and Circuit Breaker Enclosures (DIVQ).

Distribution equipment intended to serve as a means for distributing power required to operate mobile or temporarily installed equipment is covered under Power Outlets and Power Outlet Fittings (QPYV).

PANELBOARDS (QEUY)

Factory-wired assemblies of controllers, timers, temperature-regulating equipment and the like, intended for control of equipment for use with swimming pools, hot tubs and/or spas are covered under Controls (WAWU).

Factory-wired assemblies intended for the control of architectural and floating fountains are covered under Architectural and Floating Fountains (AWEG).

Portable power distribution equipment is covered under Power Distribution Equipment, Portable (QPRW).

Devices having combination panelboard/inverter capability are covered under Power Converters/Inverters and Power Converter/Inverter Systems (QPPY).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 67, "Panelboards."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Panelboard," "Enclosed Panelboard," "Marine, Enclosed Panelboard for Use on Vessels Over 65 Feet," "Enclosed RV Panelboard." The product name may include the wording "Class CTL" or "Suitable for Use as Service Equipment," where appropriate. The product name "Enclosed Panelboard" covers both the panel and the enclosure with which it is provided.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TEMPORARY PANELBOARD INGRESS BARRIERS (QEWI)

USE

This category covers polymeric temporary panelboard ingress barriers intended to be field installed over the electrical access opening of indoor enclosed panelboards. These barriers are intended for temporary use only, for the period of a work shift (or consecutive work shifts), during which wiring of the internal components of the aforementioned devices is being performed by qualified users. These barriers provide protection against inadvertent contact with live parts only. These barriers are not intended for temporary electrical power and lighting installations as covered in Article 590 of ANSI/NFPA 70, "National Electrical Code."

ENVIRONMENTAL CONSIDERATIONS

The barriers covered by these requirements are intended for use in indoor locations, where temperatures are not expected to exceed 50°C and not expected to be below 0°C. Barriers may additionally be investigated and marked for use in locations where temperatures exceed 50°C (122°F). These barriers are not intended to be subjected to direct sunlight, rain, snow, or the like.

PRODUCT MARKINGS

Temporary panelboard ingress barriers include markings to indicate (1) the manufacturer's name, trademark, or other descriptive marking by which the organization responsible for the product may be identified, and (2) the size of the enclosure to which the barrier is intended to be attached. In addition to these markings, barriers include cautionary markings related to the use of the product.

LIMITATIONS OF USE

Ingress barriers are intended to be used in locations accessible only to qualified persons and under conditions deemed acceptable by the local enforcement personnel responsible for workplace safety. Ingress barriers are intended to be used as part of an established workplace safety program that defines the limitations of the use of these devices. Ingress barriers have not been investigated for the ability to provide protection from arc flash or other hazards associated with working on electrical equipment. The use of proper personal protective equipment (PPE) and the additional use of a barrier is the responsibility of the user/user's employer. Qualified users should be properly trained in accordance with all applicable OSHA and NFPA Standards as determined by the end user's employer.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products (AAME).

REQUIREMENTS

TEMPORARY PANELBOARD INGRESS BARRIERS (QEWI)

289

The basic requirements used to investigate products in this category are contained in UL Subject 2428, "Outline of Investigation for Temporary Panelboard Ingress Barriers."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

TEMPORARY PANELBOARD INGRESS BARRIER

FOR USE WITH UL LISTED ENCLOSED PANELBOARD OF [specified size]

Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PANELBOARDS FOR USE IN HAZARDOUS LOCATIONS (QFIW)

USE

This category covers enclosed panelboards under Class I and Class II groups of the manually operable, air-break type, employing circuit breakers having automatic overload protection.

These enclosed panelboards are intended for lighting and low-capacity power distribution.

These panelboards are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Each marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Enclosed Panelboard for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PANELBOARDS, LIGHT AND POWER FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (QFKR)

USE

This category covers enclosed panelboards of the manually operable, air-break type, employing circuit breakers having automatic overload protection, and intended for lighting and low-capacity power distribution.

These panelboards are for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Each marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured

PANELBOARDS, LIGHT AND POWER FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (QFKR)

under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Enclosed Panelboard for Hazardous Locations" or "Enclosed Panelboard for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PANELBOARDS, MODULAR (QFOF)

GENERAL

This category covers modular panelboards rated 600 V or less. A modular panelboard includes the following types of modules: an enclosed panelboard or a column type panelboard and one or more accessory modules, such as termination boxes, enclosed switches, circuit breaker enclosures, and the like. Each module has one or more openings in one or more sides of the enclosure for busbar connections or terminals for field wiring connections to other related modules. The modules are specifically designed for use with each other and, typically, they can be assembled in any sequence to meet various applications.

Each module of the system is marked for use with the other system modules, or each module is marked with a series designation common to all modules of a particular modular panelboard system.

Panelboard modules used in these modular panelboard systems are labeled "Panelboard Module" and all other system modules are labeled "Panelboard Accessory Module."

RELATED PRODUCTS

See Panelboards (QEUY).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 67, "Panelboards." In addition, each accessory module is investigated to its applicable UL Standard.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Panelboard Module" or "Panelboard Accessory Module."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PERSONAL GROOMING APPLIANCES (QGRQ)

This category covers cosmetic and grooming appliances and related equipment for use in beauty salons, barber shops, and residences. Appliances include barber chairs, curling irons, hair conditioning machines, hair dryers, manicure sets, permanent wave machines, shampoo machines, styling dryers, and untanglers (detanglers). These units are identified as to household or commercial use in the individual listings. Also see "Hair Clipping and Shaving Appliances." Heated caps, facial masks and mitts are covered under the requirements for "Heating Pads."

The physiological effects of the medicaments or cosmetic materials which may be employed in association with these appliances have not been investigated.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PERSONAL GROOMING APPLIANCES, COMMERCIAL (QGRT)

GENERAL

PERSONAL GROOMING APPLIANCES (QGRQ)

Personal Grooming Appliances, Commercial (QGRT)—Continued

This category covers cosmetic and grooming appliances intended for commercial use in beauty salons, barber shops, nail care centers, and cosmetic studios. Appliances include hair dryers, barber chairs, wig and brush dryers, facial therapy units, hair spray systems, permanent wave machines, manicure sets, curling irons, cosmetology equipment, and hair conditioning machines.

UNEVALUATED FACTORS

The physiological effects of the medicaments or cosmetic materials which may be employed in association with these appliances have not been investigated.

RELATED PRODUCTS

Hair clipping and shaving appliances are covered under Hair Clipping and Shaving Appliances (KEFX).

Heated caps, facial masks and mitts are covered under Heating Pads, Electric (MNUV).

Personal grooming appliances for household use are covered under Personal Grooming Appliances, Household (QGRW).

Hydromassage chairs and pedicure spas are covered under Plumbing Accessories (QMTX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1727, "Commercial Electric Personal Grooming Appliances."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PERSONAL GROOMING APPLIANCES, HOUSEHOLD (QGRW)

GENERAL

This category covers cosmetic and grooming appliances and related equipment intended for household use. Appliances include curling irons, hair dryers, manicure sets, curler heaters, hair setters, tweezers, facial steamers, styling dryers, and untanglers (detanglers).

UNEVALUATED FACTORS

The physiological effects of the medicaments or cosmetic materials which may be employed in association with these appliances have not been investigated.

RELATED PRODUCTS

Hair clipping and shaving appliances are covered under Hair Clipping and Shaving Appliances (KEFX).

Heated caps, facial masks and mitts are covered under Heating Pads, Electric (MNUV).

Personal grooming appliances for household use are covered under Personal Grooming Appliances, Household (QGRW).

Hydromassage chairs and pedicure spas are covered under Plumbing Accessories (QMTX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 859, "Household Electric Personal Grooming Appliances."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PERSONAL GROOMING APPLIANCES (QGRQ)

PERSONAL SUN AND HEAT EQUIPMENT (QGRX)**GENERAL**

This category covers personal sun and heat equipment of the household and commercial variety, including tanning beds and booths for use in commercial tanning salons, intended for the production of ultraviolet (sun) radiation, infrared (heat) radiation, or both.

This category also covers sun equipment provided with UV-A and UV-B fluorescent and/or high-intensity discharge (HID) lamps.

UNEVALUATED FACTORS

The physiological effects, beneficial or otherwise, that may be produced by these lamps have not been investigated.

RELATED PRODUCTS

Sun and heat equipment intended for therapeutic use is covered under Medical Equipment (PIDF).

Sun and heat equipment of the household variety intended for portable use is covered under Sun and Heat Lamps (QPDY).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 482, "Portable Sun/Heat Lamps." The limit for ultraviolet irradiation specified in ANSI/UL 482 is in agreement with the federal regulations specified in 21CFR1040.20, "Sun Lamp Products and Ultraviolet Lamps Intended for Use in Sun Lamp Products."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sun Bed," "Tanning Booth" or "Heat Unit," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PERSONAL HYGIENE AND HEALTH CARE APPLIANCES (QGRZ)**USE**

This category covers appliances, primarily cord connected, intended for use in households or similar locations, not necessarily under professional supervision, such as toothbrushes, oral irrigation appliances, denture cleaners, hydromassage units, etc.

UNEVALUATED FACTORS

The physiological effects of the use of these appliances, beneficial or otherwise, has not been investigated.

RELATED PRODUCTS

Medical and dental equipment intended for professional use is covered under Medical and Dental Equipment, Professional (KFBQ) and Medical Equipment (PIDF).

Other household-related equipment is covered under Personal Grooming Appliances (QGRQ), Heating Pads, Electric (MNUV), Massage and Exercise Machines (PGXX) and Personal Sun and Heat Equipment (QGRX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 1431, "Personal Hygiene and Health Care Appliances," UL 1097, "Double Insulation Systems for Use in Electrical Equipment," and ANSI/UL 746C, "Polymeric Materials – Use in Electrical Equipment Evaluations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Personal Hygiene Appliance" or "Health Care Appliance," or the name of the specific product as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss,

PERSONAL HYGIENE AND HEALTH CARE APPLIANCES (QGRZ)

291

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PERSONAL PROTECTIVE EQUIPMENT (QGSY)**INDUSTRIAL WORKERS' PROTECTIVE APPAREL (QGVW)****Protective Clothing for Electrical Workers (QGVZ)****USE**

This category covers protective clothing intended to provide minimal protection to electrical workers exposed to momentary electric arc and related thermal hazards. This wearing apparel includes design characteristics that relate to its utility and that relate specifically to protection from exposure to momentary electric arc.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products (AAME).

REQUIREMENTS

The basic standard used to investigate products in this category is ASTM F1506, "Standard Performance Specification for Textile Materials for Wearing Apparel for Use by Electrical Workers Exposed to Momentary Arc and Related Thermal Hazards."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following information:

**PROTECTIVE *
IN ACCORDANCE WITH THE
AMERICAN SOCIETY FOR TESTING AND MATERIALS
STANDARD PERFORMANCE SPECIFICATION FOR
TEXTILE MATERIALS FOR WEARING APPAREL FOR
USE BY ELECTRICAL WORKERS EXPOSED TO
MOMENTARY ARC AND RELATED THERMAL HAZARDS
ASTM F1506, [latest revision date]**

Control No.

The Classification Mark may be abbreviated as follows:

**PROTECTIVE *
IN ACCORDANCE WITH
ASTM F1506, [latest revision date]
Control No.**

*** COAT, JACKET, OVERALLS, COVERALLS, SHIRT, PANTS or HOOD**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DISTRIBUTED GENERATION POWER SYSTEMS EQUIPMENT (QHWJ)**AC MODULES (QHYZ)****USE AND INSTALLATION**

This category covers AC modules that provide single-phase power at 50/60 Hz when exposed to sunlight. An AC module consists of a photovoltaic module and an integral static inverter that changes dc power to ac power. AC modules may be connected in parallel and are intended for operation interactive with an electric utility supply. They have been evaluated to deenergize their output upon loss of utility power.

These modules are rated up to 600 V dc input; 10 kW, 120/240 V ac or less, single-phase output.

These modules and panels are intended for mounting on buildings or on ground supported frames. Roof mounted modules or panels are evaluated for one of three mounting methods: (1) integral to the roof of a building, (2) directly on a building's roof, or (3) on a rack with a space above the roof surface.

DISTRIBUTED GENERATION POWER SYSTEMS EQUIPMENT (QHWJ)

292

AC Modules (QHYZ)—Continued

When mounted integral to a building's roof, the module serves as the waterproof membrane. Direct mounted panels are placed upon the building's waterproof membrane (shingles or the like). Rack mounted styles are spaced away from the building's roof member. Rack mounted styles may also be installed separate from buildings.

Installation of modules on or integral to a building's roof system may adversely affect the roof covering materials' resistance to external fire exposure if the module has a lesser or no fire resistance rating. Roof covering materials will not be adversely affected when the modules have an equal or greater fire resistance rating than the roof covering material.

AC modules are marked with the maximum size of dedicated branch circuit on which they may be installed and the maximum number of modules which may be connected in parallel.

Installation of the modules, including connection between the modules and the branch circuit disconnecting means is to be in accordance with the provisions of NFPA 70, "National Electrical Code," (NEC) including Article 690. Authorities Having Jurisdiction should be consulted as to the conformance with applicable building codes including the class of roof covering.

AC modules provided with integral ground-fault detection and interruption means required by Sec. 690-5 of the NEC are identified by a marking on the product.

CLASSES

When applicable, modules or panels are identified as Class A, B or C to denote their Classification for resistance to external fire exposure. Modules or panels that have not been identified with respect to their resistance to external fire exposure are marked "Not Fire Rated." For significance of external fire exposure classes, see UL's Roofing Materials and Systems Directory.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 1741, "Inverters, Converters, and Controllers for Use in Independent Power Systems" and UL 1703, "Flat-Plate Photovoltaic Modules and Panels."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Utility Interactive AC Module" or "Utility Interactive Inverter Module."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BUILDING-INTEGRATED PHOTOVOLTAIC MODULES AND PANELS (QHZZ)

USE AND INSTALLATION

This category covers flat-plate building-integrated photovoltaic (BIPV) modules and panels intended for mounting integrally to the structural or protective surfaces of a building. BIPV modules and panels are investigated for one of three primary installation methods: (1) intended to serve as the roof, or as a majority component of the roofing system of a building, (2) intended to serve as part of a structural component of a building, such as a curtain-wall, facade, atrium, skylight, etc., or (3) intended to serve as part of a nonstructural component of a building, such as a curtain-wall, facade, atrium, skylight, etc., which is applied extant to the primary building structure.

When intended to serve as the roof, or as a majority component of the roofing system of a building, the BIPV module serves as a primary component of the building's fire resistance and waterproofing membrane. These functions have been investigated as appropriate to the extent of those functions served. Standards used in roofing system investigations have been employed as appropriate to the nature of construction and use of the system. Roofing-type BIPV products have been investigated to those roofing standards, as appropriate to their construction and use.

When intended to serve as part of a structural component of a building, such as a curtain-wall, facade, atrium, skylight, etc., the BIPV module is assumed to serve as a primary component of the building's exterior surface and is accessible from the interior space of the building. Mechanical control and protection of the system wiring should be provided as required by ANSI/NFPA 70, "National Electrical Code" (NEC), either applied to the interior of the system or integral to the support structure. BIPV modules intended to be mounted or retained within a metallic support structure have been investigated to ANSI/UL 790, "Standard Test Methods for Fire Tests of Roof Coverings," for fire-resistance classification appropriate to the installa-

DISTRIBUTED GENERATION POWER SYSTEMS EQUIPMENT (QHWJ)

Building-integrated Photovoltaic Modules and Panels (QHZZ)—Continued

tion requirements (typically Class A). The combination of BIPV modules and the intended support structure should act as structurally reliable building components in terms of both loading and fire resistance.

When intended to serve as part of a nonstructural component of a building, such as a curtain-wall, facade, atrium, skylight, etc., the BIPV module is assumed not to serve as a primary component of the building's exterior surface and is not accessible from the interior space of the building. Mechanical control and protection of the system wiring should be provided as required for structural BIPV systems, and the intended support structure should act as structurally reliable control of the module system alone, as required in ANSI/UL 1703. BIPV modules have been investigated to ANSI/UL 790 for fire resistance.

In either the structural or nonstructural curtain-wall, facade, atrium, skylight, etc. installation mode, the BIPV panel may be identified to be suitable for use with specific UL Classified BIPV mounting systems covered under Building-integrated Photovoltaic Mounting Systems (QHZZ).

The modules and panels are marked with manufacturer and model identification. The wiring system indicates the proper terminal polarity. The installation instructions supplied provides all required electrical data, such as voltages, currents, power ratings, maximum series overcurrent device rating, and minimum acceptable diode bypassing (if needed) and appropriate means of connection between the modules and between the module array and the load, in accordance with the NEC.

Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes including the fire-resistance classification required.

CLASSES

BIPV modules or panels intended for installation as a roofing system are identified as Class A, B or C to denote their classification for resistance to external fire exposure. Modules or panels that are not installed as roofing systems are identified with respect to their fundamental resistance to external fire exposure, or are marked "Not Fire Rated." For significance of external fire exposure classes, see Prepared Roof Covering Materials, Formed or Molded Metal, Fiber-Cement, Plastic or Fire Retardant-treated Wood (TFXX) and Roofing Systems (TGFX).

RELATED PRODUCTS

Framed PV modules or panels that include a mounting means as part of the product and are not intended to be installed into or as part of the building surface or structure are covered under Photovoltaic Modules and Panels (QIGU).

AC modules are covered under AC Modules (QHYZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ), Building Materials (AABM) and Roofing Materials and Systems (AARM).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1703, "Flat-Plate Photovoltaic Modules and Panels."

BIPV modules and mounting systems integral to or in addition to a building's roof system are additionally investigated to ANSI/UL 790, "Standard Test Methods for Fire Tests of Roof Coverings," and/or UL 997, "Wind Resistance of Prepared Roof Covering Materials," as appropriate.

ADJUNCT SERVICES

Underwriters Laboratories Inc. (UL) provides a service for the Classification of photovoltaic modules and panels that not only meet the appropriate requirements of UL but also have been investigated in accordance with one or more of the following design qualification standards:

IEC 61215:(issue date), "Crystalline Silicon Terrestrial Photovoltaic (PV) Modules – Design Qualification and Type Approval"

IEC 61646:(issue date), "Thin-Film Terrestrial Photovoltaic (PV) Modules – Design Qualification and Type Approval"

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "BIPV Module," "BIPV Photovoltaic Panel," "BIPV Roofing Product," "BIPV Module for Use with Classified Structural Support Systems," or other appropriate product name as shown in the individual Listings.

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated in accordance with IEC design qualification standards. The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and the following marking: "ALSO CLASSIFIED IN ACCORDANCE WITH *," where "*" is one or both of the following:

IEC 61215:(issue date)

IEC 61646:(issue date)

Building-integrated Photovoltaic Modules and Panels
(QHZZK)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**BUILDING-INTEGRATED PHOTOVOLTAIC
MOUNTING SYSTEMS (QHZZK)****USE AND INSTALLATION**

This category covers building-integrated photovoltaic (BIPV) mounting systems intended for use with specific Listed BIPV modules and panels (see Building-integrated Photovoltaic Modules and Panels [QHZZK]) that have been investigated for mounting integral to the structure of a building. The systems have been investigated for electric shock and fire hazards only.

Installation of BIPV modules and mounting systems integral to or in addition to a building's roof system may adversely affect the roof-covering materials' resistance to external fire exposure if the module and mounting system combination has a lesser or no fire-resistance rating. Roof-covering materials will not be adversely affected when the modules and mounting system have an equal or greater fire-resistance rating than the roof-covering material.

The installation of these BIPV mounting systems and related modules or panels is intended to be in accordance with ANSI/NFPA 70, "National Electrical Code," in addition to any applicable building codes.

Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes.

CLASSES

BIPV modules and mounting systems intended for installation as part of a roof are identified as Class A, B or C to denote their classification for resistance to external fire exposure. Modules, panels and mounting systems that have not been identified with respect to their resistance to external fire exposure are marked "Not Fire Rated." For significance of external fire exposure classes, see Prepared Roof Covering Materials, Formed or Molded Metal, Fiber-Cement, Plastic or Fire Retardant-treated Wood (TFXX) and Roofing Systems (TGFU).

RELATED PRODUCTS

Rack-mounted PV modules or panels that include an integral mounting means not intended to be installed into or as part of the building structure or facade are covered under Photovoltaic Modules and Panels (QIGU).

AC modules are covered under AC Modules (QHYZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ), Building Materials (AABM) and Roofing Materials (AARM).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1703, "Flat-Plate Photovoltaic Modules and Panels."

BIPV modules and mounting systems integral to or in addition to a building's roof system are additionally investigated to ANSI/UL 790, "Standard Test Methods for Fire Tests of Roof Coverings," and UL 997, "Wind Resistance of Prepared Roof Covering Materials," as appropriate to the nature of construction and installation.

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT NAME]*

AS TO RISK OF ELECTRIC SHOCK AND FIRE HAZARDS ONLY

CLASS +

Control No.

* BUILDING-INTEGRATED PHOTOVOLTAIC MOUNTING SYSTEM (or BIPV MOUNTING SYSTEM) or other appropriate product name as shown in the individual Classifications

+ A, B or C

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PHOTOVOLTAIC CHARGE CONTROLLERS
(QIBP)**

This category covers permanently connected photovoltaic charge controllers that control the state of charge of storage batteries used in photovoltaic power systems.

Photovoltaic charge controllers covered by this Listing are rated 600 V dc or less and are intended to be installed in accordance with the National Electric Code, including Article 690.

Products covered by this category include photovoltaic charge controller subassemblies for field installation in a specific terminal compartment in accordance with the instructions supplied with the subassembly. The markings identify the modules in which the subassemblies may be installed or the electrical rating parameters (i.e. Voc and Isc) of the modules to which it is to be used with. The terminal compartments, modules and subassemblies are products of the same manufacturer.

Controllers having an enclosure that is identified with an enclosure type designation or as "Rain tight" or "Rainproof" are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic standard used to investigate products in this category is UL 1741, the proposed standard for "Static Inverters and Charge Controllers for Use in Photovoltaic Power Systems".

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the name and/or symbol of Underwriters Laboratories Inc. together with the word "LISTED", a control number and one of the following product names: "Photovoltaic Charge Controller", "Photovoltaic Charge Controller Subassembly" or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PHOTOVOLTAIC MODULES AND PANELS
(QIGU)****USE AND INSTALLATION**

This category covers flat-plate photovoltaic modules and panels intended for mounting on buildings or on ground-supported frames. Roof-mounted modules or panels are investigated for one of three mounting methods: (1) integral to the roof of a building, (2) directly on a building's roof, or (3) on a rack with a space above the roof surface.

When mounted integral to a building's roof the module serves as the waterproof membrane. Direct-mounted panels are placed upon the building's waterproof membrane (shingles or the like). Rack-mounted styles are spaced away from the building's roof member. Rack-mounted styles may also be installed separate from buildings.

Installation of modules on or integral to a building's roof system may or may not adversely affect the roof-covering materials' resistance to external fire exposure if the module has a lesser or no fire-resistance rating. Roof-covering materials will not be adversely affected when the modules have an equal or greater fire-resistance rating than the roof-covering material.

Photovoltaic modules and panels are intended to be connected to electrical loads, controllers, or to static inverters that convert the dc power the modules or panels generate to other types of power compatible with the intended loads. This category does not include AC modules; see AC Modules (QHYZ) for additional details. In addition to their voltage, current and power ratings, modules and panels are marked to indicate terminal polarity, maximum series overcurrent device rating, and minimum acceptable diode bypassing (if needed). Installation of the modules and panels, including connection between the modules and the panels and the load, static inverters or controller is intended to be in accordance with the provisions of ANSI/NFPA 70, "National Electrical Code." Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes including the class of roof covering.

CLASSES

When applicable, modules or panels are identified as Class A, B or C to denote their Classification for resistance to external fire exposure. Modules or panels that have not been identified with respect to their resistance to external fire exposure are marked "Not Fire Rated." For significance of external fire exposure classes, see Roof-covering Materials (TEVT) and Roofing Systems (TGFU).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

**DISTRIBUTED GENERATION POWER SYSTEMS
EQUIPMENT (QHWJ)**

294

Photovoltaic Modules and Panels (QIGU)—Continued

The basic standard used to investigate products in this category is ANSI/UL 1703, "Flat-Plate Photovoltaic Modules and Panels."

ADJUNCT SERVICES

Underwriters Laboratories Inc. (UL) provides a service for the Classification of photovoltaic modules and panels that not only meet the appropriate requirements of UL but also have been investigated in accordance with one or more of the following design qualification standards:

1. IEEE 1262-(issue date), "IEEE Recommended practice for qualification of photovoltaic (PV) modules"
2. IEC 61215:(issue date), "Crystalline silicon terrestrial photovoltaic modules - Design qualification and type approval"
3. IEC 61646:(issue date), "Thin-film terrestrial photovoltaic modules - Design qualification and approval"

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Photovoltaic Module" or "Photovoltaic Panel."

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated in accordance with IEC or IEEE design qualification standards. The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and the following marking: "ALSO CLASSIFIED IN ACCORDANCE WITH *,/" where "*" is one or more of the following:

1. IEEE 1262-(issue date)
2. IEC 61215:(issue date)
3. IEC 61646:(issue date)

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**PHOTOVOLTAIC MODULES AND PANELS,
REMANUFACTURED (QIGZ)**
USE AND INSTALLATION

This category covers remanufactured flat-plate photovoltaic modules and panels intended for mounting on buildings or on ground-supported frames. Remanufactured flat-plate photovoltaic modules and panels are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Remanufactured flat-plate photovoltaic modules and panels are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Remanufactured flat-plate photovoltaic modules and panels are subject to the same requirements as new remanufactured flat-plate photovoltaic modules and panels.

Roof-mounted modules or panels are investigated for one of three mounting methods: (1) integral to the roof of a building, (2) directly on a building's roof, or (3) on a rack with a space above the roof surface.

When mounted integral to a building's roof, the module serves as the waterproof membrane. Direct-mounted panels are placed upon the building's waterproof membrane (shingles or the like). Rack-mounted styles are spaced away from the building's roof member. Rack-mounted styles may also be installed separate from buildings.

Installation of modules on or integral to a building's roof system may adversely affect the roof covering materials' resistance to external fire exposure if the module has a lesser or no fire-resistance rating. Roof-covering materials will not be adversely affected when the modules have an equal or greater fire-resistance rating than the roof-covering material.

Remanufactured photovoltaic modules and panels are intended to be connected to electrical loads, controllers, or to static inverters that convert the dc power the modules or panels generate to other types of power compatible with the intended loads. This category does not cover AC modules; see AC Modules (QHYZ) for additional details. In addition to their voltage, current and power ratings, modules and panels are marked to indicate terminal polarity, maximum series overcurrent device rating, and minimum acceptable diode bypassing (if needed). Installation of the modules and panels, including connection between the modules and the panels and the load, static inverters or controller is intended to be in accordance with ANSI/NFPA 70, "National Electrical Code." Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes including the class of roof covering.

CLASSES

When applicable, modules or panels are identified as Class A, B or C to denote their Classification for resistance to external fire exposure. Modules or panels that have not been identified with respect to their resistance to

**DISTRIBUTED GENERATION POWER SYSTEMS EQUIPMENT
(QHWJ)**
**Photovoltaic Modules and Panels, Remanufactured
(QIGZ)—Continued**

external fire exposure are marked "Not Fire Rated." For significance of external fire exposure classes, see Roofing Systems (TGFU).

RELATED PRODUCTS

Additional Listings of flat-plate photovoltaic modules and panels are covered under Photovoltaic Modules and Panels (QIGU).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1703, "Flat-Plate Photovoltaic Modules and Panels."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Remanufactured Photovoltaic Module" or "Remanufactured Photovoltaic Panel."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**DISTRIBUTED GENERATION POWER
SYSTEMS ACCESSORY EQUIPMENT (QIIO)**
GENERAL

This category covers actuators, blocking diodes, conduit boxes, connectors, controllers (control boxes), communication modules, disconnects, distribution panels and transition boxes.

This accessory equipment is rated 600 V or less and is intended to be installed in accordance with NFPA 70, "National Electrical Code," including Articles 690 and 692.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1741, "Inverters, Converters, and Controllers for Use in Independent Power Systems."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Distributed Generation Utility Interconnection Controller," "Photovoltaic System Ground Fault Detector Interrupter," "Photovoltaic System Transition Box," "Photovoltaic Disconnect," "Photovoltaic System Control Box," "Photovoltaic System Connector," "Distributed Generation System Distribution Panel," "Distributed Generation Interface Module," "Distributed Generation Communications Module," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**DISTRIBUTED RESOURCE POWER
SYSTEMS (QIJL)**
GENERAL

This category covers permanently-connected distributed resource power systems, which may include combinations of components or products including, but not limited to, photovoltaic modules, fuel cells, synchronous generators, induction generators, batteries, energy storage devices, inverters, converters, charge controllers, utility interconnection systems equipment and protection relays. This combination of equipment is intended to combine, convert, transform or relay energy from one or more ac or dc sources for use in stand-alone (not grid-connected to the Area EPS) and/or utility-interactive (grid-connected to the Area EPS) power systems to provide power to load/utilization equipment. Utility-interactive inverters and converters are intended to be installed in conjunction with an electric supply system Area EPS or an electric utility to supply energy to common loads.

**DISTRIBUTED GENERATION POWER SYSTEMS
EQUIPMENT (QHWJ)**
Distributed Resource Power Systems (QIJL)—Continued

Distributed resource power systems are factory- or field-wired assemblies in which the combination has been investigated for operation as a system assembly when installed in accordance with the manufacturer's installation instructions.

These systems are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

Photovoltaic modules and panels are investigated to ANSI/UL 1703, "Flat-Plate Photovoltaic Modules and Panels," and are covered under Photovoltaic Modules and Panels (QIGU).

Equipment intended to provide a primary, secondary, or primary and secondary power source to specified or unspecified loads in parallel or separate from the utility is investigated to UL 1741, "Inverters, Converters, and Controllers for Use in Independent Power Systems," and is covered under Static Inverters and Converters for Use in Independent Power Systems (QIKH). Examples of this equipment are utility interactive, stand-alone, multimode inverters or converters, interconnection system equipment and photovoltaic charge controllers.

Internal-combustion-engine-driven electrical generating equipment that consumes fuels such as gasoline, natural gas, LP-gas, diesel etc., is covered under Engine Generators (FTSR). The basic standard used to investigate the engine generator or microturbine equipment used within these systems is UL 2200, "Stationary Generator Engine Assemblies."

These products may contain features or functions for combined heat and power production (CHP). CHP products that produce heat or perform a heat transfer function, in addition to electric power conversion, comply with the applicable requirements of ANSI/UL 1995, "Heating and Cooling Equipment," ANSI/UL 834, "Heating, Water Supply, and Power Boilers – Electric," UL 795, "Commercial-Industrial Gas Heating Equipment," and/or UL 1279, "Solar Collectors."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Distributed Resource Power System" or "Photovoltaic Power System," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**STATIC INVERTERS AND CONVERTERS
FOR USE IN INDEPENDENT POWER
SYSTEMS (QIKH)**
USE AND INSTALLATION

This category covers permanently connected inverters and converters for use in electric power systems. Inverters are devices that change DC power to AC power. Converters are devices that accept AC or DC power input and convert it to another form of AC or DC power for direct utilization by a load or accumulation in an energy storage system (batteries, capacitors, etc.). Electric power systems are defined as facilities that deliver electric power to a load. Devices covered in this category are classed as Utility Interactive, Stand-alone or Multimode. Utility Interactive devices operate in parallel with the utility grid. Stand-alone devices are intended to operate independent of the utility grid. Multimode devices can operate as both or either Stand-alone (utility independent) or Utility Interactive devices.

These products may contain energy storage devices and associated charge controllers.

These devices are intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code."

The devices may be connected to different types and combinations of distributed generation (DG) sources: generator sets, photovoltaic cells, fuel cells, wind and microturbines or other sources as specified in the manufacturer's installation instructions.

Some devices in this category must be installed and operated with an external transformer. Such devices are provided with markings and instructions to indicate the type of transformer required.

These products may require external output overcurrent protection, which will be specified in product markings and installation instructions. The products require external overcurrent protection to be sized at 125% of the product output current rating unless otherwise specified.

**DISTRIBUTED GENERATION POWER SYSTEMS EQUIPMENT
(QHWJ)**

295

**Static Inverters and Converters for Use in Independent Power
Systems (QIKH)—Continued**

These products may require that overcurrent protection be provided in the source circuits. These protection ratings will be specified in the product installation instructions.

Devices containing charge controllers are provided with instructions to indicate the type of battery for which they are intended.

SURGE TESTING

At the manufacturer's request some devices in this category are subjected to Ring Wave and Combination Wave Surge Tests in IEEE C62.41-1991, "Recommended Practice for Surge Voltages in Low-Voltage AC Power Circuits." These particular surge waveforms that are applied to the DG equipment are based upon distance between the DG equipment and the service entrance equipment. These location categories have associated peak values of voltage and current for the standard surge-testing waveforms as noted below.

STANDARD WAVEFORM PEAK VALUES

Location Category	Ring Wave	Combination Wave
A1	2 kV/0.07 kA	N/A
A2	4 kV/0.13 kA	N/A
A3	6 kV/0.20 kA	N/A
B1	2 kV/0.17 kA	2 kV/1 kA
B2	4 kV/0.33 kA	4 kV/2 kA
B3	6 kV/0.50 kA	6 kV/3 kA
C1	N/A	6 kV/3 kA
C2	N/A	10 kV/5 kA
C3	N/A	20 kV/10 kA

The standard surge-testing waveforms are as follows:

- "Standard 1.2/50 us – 8/20 us Combination Wave"
- "Standard 0.5 us – 100 kHz Ring Wave"

Refer to IEEE C62.41-1991 for additional details on standard wave parameters and tolerances.

FIRMWARE VERSION AND CHECKSUM

Version Number – Identification number of the software elements that specifies the investigated software version and current release.

Checksum or Unique Identifier – A unique identifier stored in nonvolatile memory computed as a function of the critical and supervisory sections of the software.

RELATED PRODUCTS

Power converters and inverters intended for use in recreational or land vehicles and the like are covered under Power Converters/Inverters and Power Converter/Inverter Systems (QPPY).

Power converters and inverters intended for use in marine craft are covered under Power Converters/Inverters and Power Converter/Inverter Systems, Marine (QPQL).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1741, "Inverters, Converters, Controllers and Interconnection System Equipment for Use with Distributed Energy Resources." UL 1741 provides a direct reference to IEEE 1547, "IEEE Standard for Interconnecting Distributed Resources with Electric Power Systems," and IEEE 1547.1, "IEEE Standard Conformance Test Procedures for Equipment Interconnecting Distributed Resources with Electric Power Systems," for the investigation of utility interconnection protection features and functions.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name. The product name is the combination of the specific DG source and the type of inverter or converter product. Acceptable product designations include:

"Wind Turbine Utility Interactive Inverter"
 "Wind Turbine Stand-alone Inverter"
 "Wind Turbine Multimode Inverter"
 "Fuel Cell Utility Interactive Inverter"
 "Fuel Cell Stand-alone Inverter"
 "Fuel Cell Multimode Inverter"
 "Microturbine Utility Interactive Inverter"

**DISTRIBUTED GENERATION POWER SYSTEMS EQUIPMENT

Systems (QIKH)—Continued**

"Microturbine Stand-alone Inverter"
 "Microturbine Multimode Inverter"
 "Photovoltaic Utility Interactive Inverter"
 "Photovoltaic Stand-alone Inverter"
 "Photovoltaic Multimode Inverter"
 (or equivalent)

If the source type does not appear in the product designation it must be indicated on the product as a separate marking.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHOTOGRAPHIC EQUIPMENT (QINT)
GENERAL

This category covers the following photographic equipment and accessories:

Motion picture projectors for use with 8mm, 16mm, 35mm and larger motion picture film, including associated equipment suitable for use in projection booths. Users should consult with Authorities Having Jurisdiction for requirements on installation and use. 8mm and 16mm projectors are commonly of the portable type intended for nonprofessional use with slow-burning film only. Projectors for use with 35mm or larger film are intended for professional use and may employ flammable (nitro-cellulose) or slow-burning (cellulose acetate or equivalent) films. Projectors for use with flammable films should be installed and used only in fire resistance booths as recommended by NFPA 40, "Standard for the Storage and Handling of Cellulose Nitrate Motion Picture Film." These projectors can be divided into two general classes of construction: (1) Complete assemblies, usually of the portable type, having all parts needed for projection of motion picture film, with or without facilities for reproduction of sound recorded on films; and (2) Pedestal types which are intended for use with other Listed components to form a complete machine, usually composed of a base, projection head and magazines with fire rollers.

Still-picture projectors for use with slides, pictures, drawings or similar stationary graphic material of a slow-burning classification, including opaque and overhead projectors and combination slide projectors or film strip projectors with phonograph or audio tape players.

Accessories intended for installation on projectors or employed in conjunction with viewing, editing or handling of films used with picture projectors.

Equipment intended for use in taking photographs, processing and handling of photographic film or photographic prints and accessory equipment including film dryers, cutters, sorters, rewinders and silver recovery units.

Equipment intended to take photographs from video display units.

REBUILT PRODUCTS

This category also covers photographic equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt photographic equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt photographic equipment is subject to the same requirements as new photographic equipment.

RELATED PRODUCTS

For portable toy machines for use with slow-burning films, see Toys (XNIZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 122, "Photographic Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Photographic Equipment" or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Refurbished" or "Remanufactured" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss,

PHOTOGRAPHIC EQUIPMENT (QINT)

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MOTION PICTURE PROJECTORS (QJOZ)**GENERAL**

This category covers motion picture projectors employing 8, 16, 35 mm and larger motion picture film.

8 and 16 mm projectors are commonly of the portable type intended for nonprofessional use and only with slow-burning film.

Projectors employing 35 mm and larger width films are ordinarily intended for professional use as defined in Article 540 of ANSI/NFPA 70, "National Electrical Code," and may employ flammable (nitro-cellulose) film or slow-burning (cellulose acetate or equivalent) film. Projectors employing flammable (nitro-cellulose) film should be installed and used only in fire-resistant booths as recommended by ANSI/NFPA 40, "Standard for the Storage and Handling of Cellulose Nitrate Film." These projectors are divided into two general classes of construction: (1) Complete assemblies, usually of the portable type, having all parts needed for projection of motion picture film, with or without facilities for reproduction of sound recorded on the film, and (2) pedestal types, which are intended for use with other Listed components to form a complete machine, usually composed of a base, projection head and magazines with fire rollers.

Authorities Having Jurisdiction should be consulted for requirements on installation and use.

RELATED PRODUCTS

For associated equipment suitable for use in projection booths, see Accessories, Picture Projector (QJBR2).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 122, "Photographic Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Motion Picture Projector" or "16 mm Projector," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PIN-AND-SLEEVE TYPE PLUGS, RECEPTACLES AND CABLE CONNECTORS (QLGD)**RATINGS**

Pin-and-sleeve type plugs, receptacles and cable connectors are rated in 600 V or less, ac or dc, and in amps. Devices intended for use with motor loads are identified by a horsepower rating. Devices not intended for current interruption are marked "Do Not Disconnect Under Load," or with an equivalent statement.

Devices rated 250 V are tested on circuits involving a nominal potential to ground of 125 V. Devices having other voltage ratings are tested on circuits involving full-rated potential to ground, except for multiphase-rated devices, which are tested on circuits consistent with their voltage ratings, i.e., a 120/208 V, 3-phase device is tested on a circuit involving a potential to ground of 120 V.

Devices identified as "switch-rated plugs and receptacles suitable as motor circuit disconnect switches" incorporate a "switch" mechanism that has been additionally investigated for making and breaking a motor load. They have provision to open the electrical circuit without uncoupling the mated plug and receptacle housings (device enclosures). Such devices are investigated at six times the full load motor continuous current at rated voltage and are also identified by a horsepower rating. These devices have also been investigated for a minimum 10,000 A short-circuit make and withstand rating.

Devices identified as "switch-rated plugs and receptacles suitable as branch circuit disconnect switches" incorporate an integrally formed "switch" suitable for use in branch circuit switching applications. They have provision to open the electrical circuit without uncoupling the mated plug and receptacle housings. These devices have also been investigated for a minimum 10,000 A short-circuit make and withstand rating.

PIN-AND-SLEEVE TYPE PLUGS, RECEPTACLES AND CABLE CONNECTORS (QLGD)

297

GROUNDING

Devices having a terminal identified by a green-colored finish or by the word "green" are grounding types. The pin or contact member connected to this terminal is for equipment grounding only.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ATTACHMENT PLUGS, PIN-AND-SLEEVE TYPE (QLHN)**GENERAL**

This category covers pin-and-sleeve type attachment plug bodies, attachment plugs with and without fuses, cord connectors and adapters. These devices are intended for use with the same line of products covered under Receptacles, Pin-and-Sleeve Type (QLIW). Devices for use in specific combinations with other manufacturers' products are covered under Receptacle-Plug Combinations, Pin-and-Sleeve Type, Classified for Use in Specific Combinations (QLKH).

The termination provisions of these devices are based on the use of flexible cord or cable having copper conductors, in accordance with Article 400 of ANSI/NFPA 70, "National Electrical Code" (NEC). The ampacity of the flexible cord and cable is based on Section 400.5 and Tables 400.5(A) and 400.5(B) of the NEC. The conductors are sized as specified on the product or in the manufacturer's instructions provided with the device. Unless the product is marked with both the size and temperature rating of the flexible cord or cable to be used, the termination provisions are based on the use of 60°C flexible cord or cable.

This category does not cover devices to be molded on flexible cord or cable and unassembled devices to be factory assembled to flexible cord or cable.

ADDITIONAL INFORMATION

For additional information, see Pin-and-Sleeve Type Plugs, Receptacles and Cable Connectors (QLGD) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1682, "Plugs, Receptacles, and Cable Connectors of the Pin and Sleeve Type."

Devices identified as switch-rated plugs/receptacles are additionally investigated to UL Subject 2682, "Outline of Investigation for Switch-Rated Plugs and Receptacles."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pin-and-Sleeve Attachment Plug," "Plug" or "Connector," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLES, PIN-AND-SLEEVE TYPE (QLIW)**GENERAL**

This category covers pin-and-sleeve type receptacles and other outlet devices intended for direct connection to wiring systems recognized by ANSI/NFPA 70, "National Electrical Code" (NEC). It also covers other pin-and-sleeve type receptacles, outlet devices and power inlets intended for use in appliances and other equipment.

These devices are intended for use with the same line of products covered under Attachment Plugs, Pin-and-Sleeve Type (QLHN). Devices for use in specific combinations with other manufacturers' products are covered under Receptacle-Plug Combinations, Pin-and-Sleeve Type, Classified for Use in Specific Combinations (QLKH).

The terminations of these devices are intended for use with copper conductors and are marked to indicate the conductor size and temperature rating of all field-installed conductors. Such markings are located where readily visible on the device or in a wiring diagram provided with the device. If no marking is provided, the termination provisions are based on the use of 60°C insulated conductors in circuits rated 100 A or less, and the use of 75°C insulated conductors in circuits rated more than 100 A as specified in Table 310.16 of the NEC.

PIN-AND-SLEEVE TYPE PLUGS, RECEPTACLES AND CABLE CONNECTORS (QLGD)

Receptacles, Pin-and-Sleeve Type (QLIW)—Continued

Conductors having a temperature rating higher than specified may be used, though not required, if the size of the conductors is determined on the basis of the 60°C ampacity (devices rated 100 A or less) or 75°C ampacity (devices rated over 100 A).

ADDITIONAL INFORMATION

For additional information, see Pin-and-Sleeve Type Plugs, Receptacles and Cable Connectors (QLGD) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1682, "Plugs, Receptacles, and Cable Connectors of the Pin and Sleeve Type."

Devices identified as switch-rated plugs/receptacles are additionally investigated to UL Subject 2682, "Outline of Investigation for Switch-Rated Plugs and Receptacles."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Pin-and-Sleeve Receptacle," "Receptacle," "Switch Receptacle," "Power Inlet," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLE-PLUG COMBINATIONS, PIN-AND-SLEEVE TYPE, CLASSIFIED FOR USE IN SPECIFIC COMBINATIONS (QLKH)

USE

This category covers combinations of pin-and-sleeve-type plugs, receptacles, power inlets and connectors that have been investigated for use in specific combinations as indicated in the individual Classifications.

These combination devices have been investigated for use with other manufacturers' Listed plugs, receptacles, connectors or power inlets. Basic Listings are covered under Attachment Plugs, Pin-and-Sleeve Type (QLHN) and Receptacles, Pin-and-Sleeve Type (QLIW), with additional Listings under Attachment Plugs, Fuseless (AXUT) and Receptacles for Plugs and Attachment Plugs (RTRT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1682, "Plugs, Receptacles, and Cable Connectors of the Pin and Sleeve Type."

Devices identified as switch-rated plugs/receptacles are additionally investigated to UL Subject 2682, "Outline of Investigation for Switch-Rated Plugs and Receptacles."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the appropriate Listing Mark, the statement "Also Classified by Underwriters Laboratories Inc. for use in specific combinations," and one of the following statements as appropriate: "For use with UL Listed *, Catalog No. ____," or "For catalog numbers of compatible devices, refer to Publication No. ____ provided with this device. If additional information is necessary contact the factory."

* "Receptacle," "Plug" or "Connector"

The referenced publication is a compatibility list, which tabulates the company name, catalog number and electrical ratings of the Classified device and the company name and catalog number of the applicable UL Listed product with which it has been investigated. One copy of the compatibility list is provided with each device.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or

RECEPTACLE-PLUG COMBINATIONS, PIN-AND-SLEEVE TYPE, CLASSIFIED FOR USE IN SPECIFIC COMBINATIONS (QLKH)

any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PLASTICS USED IN SEMICONDUCTOR TOOL CONSTRUCTION (QMTW)

GENERAL

This category covers plastic materials used in the semiconductor tool construction industry. Plastic in the form of sheets, panels and strips has been investigated with respect to flammability characteristics only. The structural, washability, light reflectivity, durability, toxicity or environmental impact of the products of combustion and other properties have not been investigated. In addition, the suitability of the materials to be fabricated has not been investigated.

The following flammability and physical properties are investigated and published in the individual Classifications:

- Flame Propagation Index (FPI)
- Smoke Damage Index (SDI)
- Nominal Thickness (in.)
- Product Geometry
- Manufacturing Method

In addition to the above, the following data is available based on authorization of the test sponsor:

- Parallel Panel Test, Maximum Vertical Flame Propagation (ft.) [if required]
- Maximum Heat Release Rate (kW/m²)
- Maximum Smoke Release Rate (m²/sec)
- Critical Ignition Flux (kW/m²)
- Time Dependent Plot of Heat Release Rate
- Time Dependent Plot of Mass Loss Rate
- Time Dependent Plot of Smoke Obscuration
- Time Dependent Plot of CO Concentration
- Time to Ignition (sec)
- Flame Duration (sec)
- Total Smoke (m²)
- Mass Loss (%)
- Average Effective Heat of Combustion
- Average Specific Extinction Area

The materials are identified as "Non-Propagating – Class 1," "Limited Propagating – Class 2" or "Slow Propagating – Class 3." The individual Classifications are defined as follows:

Test	Description	Non-propagating, Class 1	Limited propagating, Class 2	Slow propagating, Class 3
Parallel Panel Test	Flame propagation	4 ft or less	8 ft or less	8 ft or less at 10 min
	Pooling of melted material	No	No	No
Heat and smoke release ^a	Fire propagation index (FPI)	6 or less	Parallel panel required	Parallel panel required
	Smoke damage index (SDI)	0.4 or less	0.4 or less	less than 1

^aASTM E1354-97 – Standard Test Method for Heat and Visible Smoke Release Rates for Materials and Products Using an Oxygen Consumption Calorimeter, American Society for Testing and Materials, Philadelphia, PA.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXRH).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 2360, "Test Methods for Determining the Combustibility Characteristics of Plastics Used in Semiconductor Tool Construction." The combustibility characteristics provide data with regard to the Flame Propagation Index (FPI) and the Smoke Damage Index (SDI).

UL MARK

The Classification Marking of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products produced under its Classification and Follow-Up Service. The Classification Marking includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as

PLASTICS USED IN SEMICONDUCTOR TOOL CONSTRUCTION (QMTW)

illustrated in the Introduction of this Directory), the product name "Plastic," the statement "For use in semiconductor tool construction" including the "propagating" statement "(Non-Propagating – Class 1," "Limited Propagating – Class 2," or "Slow Propagating – Class 3") applicable to the product, and a control number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PLUMBING ACCESSORIES (QMTX)

GENERAL

This category covers plumbing accessories connected to or used with plumbing in commercial locations or residential occupancies, including irrigation equipment, sprinkler controls, water controls located in kitchens and bathrooms, electric faucets, toilet-flushing systems, lawn sprinklers, plumbing controls, hydromassage chairs and pedicure spas.

Products suitable for outdoor use and those for use with heated liquids are so marked.

These products have not been investigated with respect to the effect of their use with corrosive liquids or aqueous solutions containing corrosive materials.

REBUILT PRODUCTS

This category also covers plumbing accessories that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt plumbing accessories are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt plumbing accessories are subject to the same requirements as new plumbing accessories.

RELATED PRODUCTS

Similar equipment intended for use in hospitals or medical offices in connection with patient treatment is covered under Medical and Dental Equipment, Professional (KFBQ).

Similar equipment for use with or in proximity to swimming pools or spas is covered under Swimming Pool and Spa Equipment (WABX).

Products and materials investigated for contact with drinking water are Classified to ANSI/NSF 61 and are covered under Drinking Water System Components (FDNP).

Plumbing fixture fittings investigated to ASME A112.18.1, ASSE 1014 and ASSE 1025 are covered under Plumbing Fixture Fittings (QNSQ).

Pumps are covered under Pumps, Electrically Operated, Liquid (REUZ). See also Pumping Equipment for Fire Service (QVUT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1951, "Electric Plumbing Accessories."

ADJUNCT SERVICES

Underwriters Laboratories Inc. (UL) also provides a service for the Classification of plumbing accessories that not only meet the appropriate requirements of UL but have also been investigated in accordance with the following standards:

1. ANSI/ASME A112.19.7M, "Requirements for Whirlpool Bathtub Appliances."
2. Water retention test requirement from ANSI/ASME A112.19.7M.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Faucet" or "Lawn Sprinkler Control," or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt" precedes the product name.

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated in accordance with standards or parts detailed below from standards of the American National Standards Institute (ANSI). The combined Listing/Classification Mark consists of the Listing Mark elements detailed above along with the following:

"ALSO CLASSIFIED IN ACCORDANCE WITH *," where "*" is one of the texts detailed below.

1. ANSI/ASME A112.19.7M+
 2. WATER RETENTION TEST REQUIREMENT FROM ANSI/ASME A112.19.7M+
- + Issue date of standard or latest addendum

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or

PLUMBING ACCESSORIES (QMTX)

299

any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PLUMBING ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS (QNHV)

GENERAL

This category covers pump assemblies and controls for use in pumping sewage. Assemblies exposed to sewage have constructions intended to reduce corrosion of enclosure parts and explosion-proof joints. They have not been investigated for use where severe corrosive conditions are likely to be present.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 674, "Electric Motors and Generators for Use in Division 1 Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Control Unit for Use in Hazardous Locations" or "Submersible Sump Pump for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POLYVINYL CHLORIDE SOLVENT CEMENT (QORV)

Polyvinyl chloride solvent cements are Classified in accordance with the materials and applicable performance requirements in the American Society For Testing and Materials Standard "Specification For Solvent Cements For Poly (Vinyl Chloride) (PVC) Plastic Pipe and Fittings," ASTM D2564.

The solvent cements are intended to be used in joining Listed Schedule 40 and Schedule 80 PVC Plastic Rigid Nonmetallic Conduit, Plastic Underground Rigid Nonmetallic Conduit, Electrical Nonmetallic Tubing, and Classified Sewer Pipe in non-pressurized systems.

LOOK FOR CLASSIFICATION MARK ON PRODUCT

The Classification Marking of Underwriters Laboratories Inc. (shown below) on the product is the only method provided by Underwriters Laboratories Inc. to identify Polyvinyl Chloride Solvent Cement produced under its Classification and Follow-Up Service.

**POLYVINYL CHLORIDE SOLVENT CEMENT [FOR
SCHEDULE 40 AND SCHEDULE 80 PVC PLASTIC RIGID
NONMETALLIC CONDUIT,
PLASTIC UNDERGROUND RIGID NONMETALLIC CONDUIT,

AND/OR SEWER PIPE]**

**CLASSIFIED BY
UNDERWRITERS LABORATORIES INC.
IN ACCORDANCE WITH ASTM D2564
WITH RESPECT TO MATERIALS AND
APPLICABLE PERFORMANCE REQUIREMENTS
FOR NON-PRESSURIZED SYSTEMS**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE ELECTRIC HAND LAMPS (QORX)

GENERAL

This category covers portable electric hand lamps of the incandescent, LED and fluorescent types, rated 125 V, 300 W or less. These products have a length of flexible cord and an attachment plug for connection to a source of supply, an insulating handle, a lamp guard if applicable, and provisions for temporary support. These products are not intended for outdoor use unless marked "Suitable for Wet Locations," or for use in hazardous (classified) locations or above hazardous locations as defined in ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 153, "Portable Luminaires."

Products employing LED light sources are additionally investigated to UL Subject 8750, "Outline of Investigation for Light Emitting Diode (LED) Light Sources for Use in Lighting Products."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Hand Lamp."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE LIGHTING PRODUCTS (QOTU)

GENERAL

This category covers lampshades, nightlights, light-emitting-diode (LED) nightlights, office furnishing lights, portable cabinet luminaires, portable cabinet LED luminaires, portable luminaire kits and subassemblies, portable luminaires, portable LED luminaires, portable work lights, and sun and heat lamps.

RELATED PRODUCTS

Portable lighting products and associated furnishings investigated for use together are covered under Furnishings, Household and Commercial (IYQX).

Portable lighting products used as hand lamps are covered under Portable Electric Hand Lamps (QORX) or Portable Hand Lamp Accessories (QOSV).

Portable lighting products intended for seasonal use are covered under Christmas Tree and Decorative Outfit Accessories (DGWU), Outfits, Decorative (DGXW) or Strings, Decorative Lighting (DGZZ).

Portable lighting products intended for use in hazardous (classified) locations are covered under Portable Lighting Units for Use in Hazardous Locations (QPKX).

Portable lighting products intended for temporary use (such as at construction sites or car sales lots) are covered under Temporary Lighting Strings (XBRT).

Portable lighting products intended for theatrical use are covered under Stage and Studio Luminaires and Connector Strips (IFDZ).

PORTABLE CABINET LIGHT-EMITTING-DIODE LUMINAIRES (QOVA)

USE AND INSTALLATION

This category covers surface- and recess-mounted portable cabinet light-emitting-diode (LED) luminaires intended for installation into open or enclosed portable cabinets, such as china hutches, bookcases, bars, consoles, bed headboards, and similar locations.

This category also covers low-voltage LED lighting systems intended for installation under a shelf, cabinet or similar structural surface, in accordance with Article 411 of ANSI/NFPA 70, "National Electrical Code" (NEC), where the power supply is of the attachment plug equipped, cord-connected type, or is a direct-plug-in type.

This category also covers portable cabinet LED luminaire accessories, such as interconnecting cord sets and dimmer and switch assemblies, intended for use with portable cabinet LED luminaires.

A surface-mounted portable cabinet LED luminaire is also suitable for installation under a shelf or kitchen cabinet when the line voltage power-supply cord is not concealed.

These products are not intended for installation in recessed walls or ceilings, or in permanently installed cabinets where the wiring is concealed or passed through openings in the structure.

Portable Cabinet Light-emitting-diode Luminaires (QOVA)—Continued

A portable cabinet LED luminaire connected to a Class 2 power supply that is suitable for installation inside a kitchen cabinet or other built-in furnishing is provided with instructions that advise:

1. the Class 2 power supply shall be located outside the cabinet and not concealed, and
2. the line voltage power-supply cord shall not be concealed or run through openings in the cabinets, walls, ceilings or floors.

Portable cabinet LED luminaires have been investigated for mounting in accordance with the clearances marked on the product. Portable cabinet luminaires not marked with clearances may be mounted as close to any surface as permitted by the housing, an integral mounting flange, bracket or spacer.

A restrictive marking is provided for portable cabinet luminaires intended for use only in open-top cabinets. Portable cabinet luminaires without the restrictive marking are investigated for a 1/2 in. (13 mm) minimum clearance from the top.

RELATED PRODUCTS

LED luminaires intended for installation in permanently installed cabinets, where the wiring is concealed or passed through openings in the structure, are covered under Light-emitting-diode Surface-mounted Luminaires (IFAM) for surface mounting, or Light-emitting-diode Recessed Luminaires (IFAO) for recessed mounting.

Low-voltage LED lighting systems intended for installation in accordance with Article 411 of the NEC in permanently installed cabinets, having a remote power source connected to a fixed wiring means, are covered under Low-voltage Lighting Systems, Power Units, Luminaires and Fittings (IFDR).

Portable cabinet LED luminaires investigated for use with specific cabinet or display designs are Listed along with the cabinet or display as Furnishings, Household and Commercial (IYQX).

ADDITIONAL INFORMATION

For additional information, see Portable Lighting Products (QOTU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 153, "Portable Electric Luminaires," in addition to the requirements contained in UL Subject 8750, "Outline of Investigation for Light Emitting Diode (LED) Light Sources for Use in Lighting Products."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Cabinet Light-emitting-diode Luminaire" (or "Portable Cabinet LED Luminaire") or "Portable Cabinet Light-emitting-diode Luminaire Accessory" (or "Portable Cabinet LED Luminaire Accessory").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE CABINET LUMINAIRES (QOVJ)

USE AND INSTALLATION

This category covers surface and recess-mounted portable cabinet luminaires intended for installation into open or enclosed portable cabinets such as china hutches, bookcases, bars, consoles, bed headboards, and similar locations.

This category also covers low-voltage lighting systems intended for installation under a shelf, cabinet, or similar structural surface, in accordance with Article 411 of ANSI/NFPA 70, "National Electrical Code" (NEC), where the power supply is of the attachment plug equipped, cord-connected type, or is a direct plug-in type.

This category also covers portable cabinet luminaire accessories, such as interconnecting cord sets and dimmer and switch assemblies intended for use with portable cabinet luminaires.

A surface-mounted portable cabinet luminaire is also suitable for installation under a shelf or kitchen cabinet when the line voltage power supply cord is not concealed.

These products are not intended for installation in recessed walls or ceilings, or in permanently installed cabinets where the wiring is concealed or passed through openings in the structure.

A portable cabinet luminaire connected to a Class 2 power supply that is suitable for installation inside a kitchen cabinet or other built-in furnishing is provided with instructions that advise:

1. the Class 2 power supply shall be located outside the cabinet and not concealed, and

PORTABLE LIGHTING PRODUCTS (QOTU)

Portable Cabinet Luminaires (QOVJ)—Continued

2. the line voltage power supply cord shall not be concealed or run through openings in the cabinets, walls, ceilings or floors.

Portable cabinet luminaires have been investigated for mounting in accordance with the clearances marked on the product. Portable cabinet luminaires not marked with clearances may be mounted as close to any surface as permitted by the housing, an integral mounting flange, bracket or spacer.

A restrictive marking is provided for portable cabinet luminaires intended for use only in open top cabinets. Portable cabinet luminaires without the restrictive marking are investigated for a 13 mm (1/2 in.) minimum clearance from the top.

Presence of the Roman numerals in an individual Listing indicates products of that type are covered. The "type" numerals denote the following:

- II — Incandescent
- III — Fluorescent
- IV — Portable Cabinet Luminaire Accessories
- VI — Tungsten Halogen
- XII — High Intensity Discharge

Types I, V, VII–XI and XIII–XV are reserved.

RELATED PRODUCTS

Incandescent or fluorescent luminaires intended for installation in permanently installed cabinets, where the wiring is concealed or passed through openings in the structure, are covered under Incandescent Surface-mounted Luminaires (IEZR) or Fluorescent Surface-mounted Luminaires (IEUZ) for surface mounting, or Incandescent Recessed Luminaires (IEZX) or Fluorescent Recessed Luminaires (IEVV) for recessed mounting.

Low-voltage lighting systems intended for installation in accordance with Article 411 of the NEC in permanently installed cabinets, having a remote power source connected to a fixed wiring means, are covered under Low-voltage Incandescent Luminaires and Fittings (IFDR).

Portable cabinet luminaires investigated for use with specific cabinet or display designs are Listed along with the cabinet or display as Furnishings, Household and Commercial (IYQX).

ADDITIONAL INFORMATION

For additional information, see Portable Lighting Products (QOTU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 153, "Portable Electric Luminaires."

Products employing LED light sources are additionally investigated to UL Subject 8750, "Outline of Investigation for Light Emitting Diode (LED) Light Sources for Use in Lighting Products."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Cabinet Luminaire," "Portable Cabinet Light" or "Portable Cabinet Luminaire Accessory."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LIGHT-EMITTING-DIODE LUMINAIRES, PORTABLE (QOVZ)

GENERAL

This category covers portable light-emitting-diode (LED) luminaires whose primary function is task or ambient illumination. These products are provided with a flexible cord and an attachment plug for connection to a nominal 120 V, 15 or 20 A branch circuit and intended for use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

This category also covers low-voltage LED lighting systems intended for installation under a shelf, cabinet, or similar structural surface, in accordance with Article 411 of the NEC, where the power supply is of the attachment plug equipped, cord-connected type, or is a direct-plug-in type.

The following designations are used to specify the types of products covered under this category. The presence of Roman numerals in the individual Listings indicates products of that type are covered. All companies in this category may produce products of type I even though this designation does not appear in the individual Listings. The "type" numerals denote the following:

- I — LED Units
- IV — Specific Features (with toy, motor, transformer, electronic circuits, etc.)
- VII — See Listings under Portable Luminaire Accessories, Kits and Subassemblies (QPAU)
- VIII — Convertible Units (Products Convertible to Luminaires)

PORTABLE LIGHTING PRODUCTS (QOTU)

301

Light-emitting-diode Luminaires, Portable (QOVZ)—Continued

IX — Interchangeable Units

X — Track-style Units

XIV — Wet Location Units

Types II, III, V, VI, XI, XII and XIII are reserved.

PRODUCT MARKINGS

Products investigated as Convertible Units (VIII) are marked to indicate acceptability as a LED luminaire when used with the appropriate conversion kit.

Products investigated for use in wet locations are marked, in combination with the UL Listing Mark, "SUITABLE FOR WET LOCATIONS."

RELATED PRODUCTS

Portable electric hand lamps are covered under Portable Electric Hand Lamps (QORX).

Nightlights are covered under Nightlights (QOYX).

Portable LED luminaires that comply with the requirements in UL 48, "Electric Signs," may also be Listed as Signs (UXYT).

Unassembled portable luminaires are covered under Portable Luminaire Accessories, Kits and Subassemblies (QPAU).

ADDITIONAL INFORMATION

For additional information, see Portable Lighting Products (QOTU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 153, "Portable Electric Luminaires," in addition to the requirements contained in UL Subject 8750, "Outline of Investigation for Light Emitting Diode (LED) Light Sources for Use in Lighting Products."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Light-emitting-diode Luminaire" (or "Portable LED Luminaire").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LUMINAIRES, PORTABLE (QOWZ)

GENERAL

This category covers portable luminaires (lamps) whose primary function is task or ambient illumination. These products are provided with a flexible cord and an attachment plug for connection to a nominal 120 V, 15 or 20 A branch circuit and intended for use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

This category also covers low-voltage lighting systems intended for installation under a shelf, cabinet, or similar structural surface, in accordance with Article 411 of the NEC, where the power supply is of the attachment plug equipped, cord-connected type, or is a direct-plug-in type.

The following designations are used to specify the type(s) of product(s) covered under this category. Presence of the Roman numerals in an individual Listing indicates products of that type are covered. All companies in this category may produce products of types II and III even though these designations do not appear in the individual Listings. The "type" numerals denote the following:

- II — Incandescent Units
- III — Fluorescent Units
- IV — Specific Features (with toy, motor, transformer, electronic circuits, etc.)
- VI — Tungsten Halogen Units
- VII — See Listings under Portable Luminaire Accessories, Kits and Subassemblies (QPAU)
- VIII — Convertible Units (Products Convertible to Luminaires)
- IX — Interchangeable Units
- X — Track-Style Units
- XII — HID Units
- XIII — Neon Units
- XIV — Wet Location Units

Types I, V and XI are reserved.

PRODUCT MARKINGS

Products investigated as Convertible Units (VIII) are marked to indicate acceptability as a luminaire when used with the appropriate conversion kit.

Products investigated for use in wet locations are marked, in combination with the UL Listing Mark, "Suitable for Wet Locations."

REBUILT PRODUCTS

Luminaires, Portable (QOWZ)—Continued

This category also covers portable luminaires that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt portable luminaires are factory rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt portable luminaires are subject to the same requirements as new portable luminaires.

RELATED PRODUCTS

Portable luminaires that comply with the requirements in UL 48, "Electric Signs," may also be Listed as Signs (UXYT).

Unassembled portable luminaires are covered under Portable Luminaire Accessories, Kits and Subassemblies (QPAU).

ADDITIONAL INFORMATION

For additional information, see Portable Lighting Products (QOTU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 153, "Portable Electric Luminaires."

Products employing LED light sources are additionally investigated to UL Subject 8750, "Outline of Investigation for Light Emitting Diode (LED) Light Sources for Use in Lighting Products."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Luminaire" or "Rebuilt Portable Luminaire."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NIGHTLIGHTS (QOYX)

USE

This category covers nightlights for direct-plug-in use in parallel-slot, general-purpose receptacles rated 15 or 20 A, 125 V.

RELATED PRODUCTS

Nightlights employing light-emitting-diode (LED) light sources may additionally be covered under Light-emitting-diode Nightlights (QOWC).

Lighting products intended for use as nightlights, but provided with a power-supply cord, are covered under Luminaires, Portable (QOWZ).

Parallel-blade-to-incandescent-lamp adapters are covered under Lampholders, Adapters (OLRX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1786, "Direct Plug-In Nightlights."

Products employing LED light sources are additionally investigated to UL Subject 8750, "Outline of Investigation for Light Emitting Diode (LED) Light Sources for Use in Lighting Products."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nightlight."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE LUMINAIRE ACCESSORIES, KITS AND SUBASSEMBLIES (QPAU)

USE AND INSTALLATION

This category covers portable luminaire accessories, kits and subassemblies of the following types:

Portable Luminaire Accessory — The portable luminaire accessory is intended to be used with a portable luminaire and consists of components such as interconnecting cord sets, dimmer and switch assemblies, and conversion kits to enable the portable luminaire to be converted to a fixed unit (luminaire) in accordance with ANSI/UL 1598, "Luminaires."

Portable Luminaire Accessories, Kits and Subassemblies (QPAU)—Continued

Portable Luminaire Kit — The portable luminaire kit is intended to be used for making a complete portable luminaire using ordinary tools to assemble and/or attach the parts to a support base in accordance with the instructions provided with the kit. All parts needed to assemble the product in accordance with the instructions are provided.

Portable Luminaire Subassembly — The portable luminaire subassembly is intended to be used for modernizing, or replacing parts on existing luminaires in accordance with the instructions provided with the subassembly. It may also be used for constructing a new portable luminaire in accordance with the instructions provided with the subassembly. All electrical components needed to assemble the product in accordance with the instructions are provided.

MARKINGS AND INSTRUCTIONS

Portable luminaire accessory conversion kits are provided with mounting and installation instructions and markings to indicate that they are capable of being used as fixed units (luminaires) when used with the appropriate portable luminaires. The portable luminaires are identified by catalog or model number.

ADDITIONAL INFORMATION

For additional information, see Portable Lighting Products (QOTU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 153, "Portable Electric Luminaires."

Portable luminaire accessory conversion kits and their associated portable luminaires are additionally investigated to ANSI/UL 1598, "Luminaires."

Products employing LED light sources are additionally investigated to UL Subject 8750, "Outline of Investigation for Light Emitting Diode (LED) Light Sources for Use in Lighting Products."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Portable Luminaire Accessory," "Portable Luminaire Kit," "Portable Lamp Subassembly" or "Portable Luminaire Subassembly."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE WORK LIGHTS (QPCJ)

USE AND INSTALLATION

This category covers cord-and-plug-connected work lights for illumination of work areas, such as construction sites, loading docks and machinery work stations. Work lights are not intended to be hand held during use. Work lights are not intended for use in hazardous (classified) locations as defined in ANSI/NFPA 70, "National Electrical Code."

This category also covers work light accessories intended for use with specific work lights.

Work lights may be freestanding, clamp-on, or similar portable mounting means, or be provided with a means for mounting to a tool, machine or a similar movable object.

Work lights may be placed on combustible floors. Special care must be employed to avoid overturning and to keep away from draperies, furniture, etc.

PRODUCT MARKINGS

A work light marked "Dry Location Use" is intended to be used only in a dry location.

A work light marked "Suitable for Wet Location Use" is intended for use in a wet or dry location.

A work light marked "Suitable for Outdoor Use Only" is suitable for use in a wet location and is intended to be used only in an outdoor location.

RELATED PRODUCTS

Portable outdoor flood lights for illumination or landscape, outdoor decorations, patios and play areas are covered under Luminaires, Portable (QOWZ).

For other portable lighting products, see Luminaires, Portable (QOWZ) and Portable Electric Hand Lamps (QORX).

ADDITIONAL INFORMATION

For additional information, see Portable Lighting Products (QOTU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 153, "Portable Electric Luminaires."

PORTABLE LIGHTING PRODUCTS (QOTU)

Portable Work Lights (QPCJ)—Continued

Products employing LED light sources are additionally investigated to UL Subject 8750, "Outline of Investigation for Light Emitting Diode (LED) Light Sources for Use in Lighting Products."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Work Light," "Portable Work Light" or "Work Light Accessory."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SUN AND HEAT LAMPS (QPDY)

USE

This category covers portable sun and heat lamps of the household variety intended for the production of ultraviolet (sun) radiation, infrared (heat) radiation, or both.

UNEVALUATED FACTORS

The physiological effects, beneficial or otherwise, which may be produced by these lamps have not been investigated.

RELATED PRODUCTS

Sun and heat lamps intended for professional use are covered under Medical Equipment (PIDE).

Sun and heat equipment for household and commercial use is covered under Personal Sun and Heat Equipment (QGRX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 482, "Portable Sun/Heat Lamps." The limit for ultraviolet irradiation specified in ANSI/UL 482 is in agreement with the federal regulations specified in 21CFR1040.20, "Sun Lamp Products and Ultraviolet Lamps Intended for Use in Sun Lamp Products."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Infrared Lamp," "Ultra-Violet Lamp," "Heat Lamp" or "Sun Lamp."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE LUMINAIRES FOR USE IN HAZARDOUS LOCATIONS (QPKX)

GENERAL

This category covers portable luminaires (lighting units). Portable luminaires have provision for connection of a three-conductor, flexible, extra-hard-usage cord having a grounding conductor, and are provided with a seal between the lamp compartment and the terminal enclosure.

Connections to the fixed portion of the supply require the use of receptacles with plugs or receptacles with plugs interlocked with snap switches, or their equivalent, Listed for the specified hazardous locations. The flexible cord connected to the units should be frequently examined and replaced when necessary. Terminal connections should be properly made and maintained.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these portable devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 844, "Luminaires for Use in Hazardous (Classified) Locations."

PORTABLE LUMINAIRES FOR USE IN HAZARDOUS LOCATIONS (QPKX)

303

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Lighting Unit for Hazardous Locations" or "Portable Luminaire for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE POWER CABLE (QPMU)

GENERAL

This category covers portable power cable constructed and Listed for use in accordance with Article 400 of ANSI/NFPA 70, "National Electrical Code" (NEC). Portable power cable consists of either a single insulated conductor or two or more insulated conductors, with or without grounding conductors, with an overall fiber reinforced jacket. The insulation and jacket are thermost on Types G, G-GC and W, and thermoplastic elastomer on Type PPE.

This cable is used to supply power to mobile equipment and machinery and is rated 2000 V, 90°C (194°F) dry, and 60°C (140°F) where exposed to oil. For cable so marked, ratings of 60°C (140°F), 75°C (167°F), or 90°C (194°F) "wet" are also assigned. The term "wet" indicates that the cable is acceptable for immersion in water. Cable that has been investigated for use where exposed to the direct rays of the sun is marked "Sunlight Resistant" or "Sun Res."

Portable power cable employs flexible stranded copper conductors in a size range of 12 AWG to 500 kcmil, except for single conductor Type W and single conductor Type PPE which employs flexible stranded copper conductors in sizes 12 AWG to 1000 kcmil. Ampacities for portable power cable can be found in Table 400.5(B) of the NEC.

Type G — Contains 2 – 6 circuit conductors and a grounding conductor. The grounding conductor is either bare or covered with a green-colored braid or tape, and may either be a single conductor or be sectioned into two or more parts.

Type G-GC — Same as Type G except that the cable also contains one, 12 AWG or larger, yellow insulated conductor which is used as a ground check.

Type W — Contains 1 – 6 circuit conductors and may or may not contain a grounding conductor. If included, the grounding conductor is fully insulated.

Type PPE — Contains 1 – 6 circuit conductors and may or may not contain a grounding conductor. If included, the grounding conductor is fully insulated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1650, "Outline of Investigation for Portable Power Cable."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Power Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER AND CONTROL TRAY CABLE (QPOR)

GENERAL

This category covers Type TC power and control tray cable intended for use in accordance with Article 336 of ANSI/NFPA 70, "National Electrical

Code" (NEC). The cable consists of one or more pairs of thermocouple extension wires or two or more insulated conductors, with or without one or more grounding conductors, with or without one or more optical fiber members and covered with a nonmetallic jacket. A single grounding conductor may be insulated or bare and may be sectioned. Any additional grounding conductor is fully insulated and has a distinctive surface marking. The cable is rated 600 or 2000 V.

The cable is Listed in conductor sizes 18 AWG to 1000 kcmil copper or 12 AWG to 1000 kcmil aluminum or copper-clad aluminum. Conductor sizes within a cable may be mixed. Thermocouple extension conductors are Listed in sizes 24 to 12 AWG.

PRODUCT MARKINGS

Cable with copper-clad aluminum conductors is surfaced printed "AL (CU-CLAD)" or "Cu-clad AL."

Cable with aluminum conductors is surface printed "AL."

Cable employing compact-stranded copper conductors is so identified directly following the conductor size, wherever it appears (surface, tag, carton or reel), by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors." For termination information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

If the type designation of the conductors is marked on the outside surface of the cable, the temperature rating of the cable corresponds to the rating of the individual conductors. When this marking does not appear, the temperature rating of the cable is 60°C unless otherwise marked on the surface of the cable.

Cable investigated for use where exposed to direct rays of the sun is marked "sunlight resistant."

Cable investigated for direct burial in the earth is so identified.

Cable suitable for use between cable trays and utilization equipment in accordance with NEC 336.10(7) is surface marked with the suffix "-ER."

Cable consisting of thermocouple extension wires is surface marked "THCPL EXTN," "For thermocouple extension use only" or "Thermocouple extension wire only."

Cable surface marked "Oil Resistant I" (or "Oil Res I") is suitable for exposure to mineral oil at 60°C. Cable suitable for exposure to mineral oil at 75°C is surface marked "Oil Resistant II" (or "Oil Res II").

Cable that complies with the Limited Smoke Test requirements specified in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," is surface marked with the suffix "-LS."

Cable containing optical fiber members is identified with the suffix "-OF."

Regarding cable seals outlined in Article 501 of the NEC, Type TC cable has a sheath which is considered to be gas/vapor tight but the cable has not been investigated for transmission of gases or vapors through its core.

RELATED PRODUCTS

Connectors and fittings for use with this cable are covered under Power and Control Tray Cable Connectors (QPOZ).

Some connectors and fittings covered under Outlet Bushings and Fittings (QCRV), Nonmetallic-sheathed Cable Connectors (PXJV) and Service Entrance Cable Fittings (TYZX) are also suitable for use with this cable when specifically marked on the device or carton.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1277, "Electrical Power and Control Tray Cables with Optional Optical-Fiber Members."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Power and control tray cable that contains copper or copper-clad aluminum conductors has the product name "Power and Control Tray Cable Type TC"; power and control tray cable that contains aluminum conductors has the product name "Aluminum Power and Control Tray Cable Type TC."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER AND CONTROL TRAY CABLE CONNECTORS (QPOZ)

USE

This category covers power and control tray cable connectors intended for use with Type TC cable. These connectors are intended for installation and use in accordance with the following information and the limitations specified in Power and Control Tray Cable (QPOR).

PRODUCT MARKINGS

The connector or smallest unit shipping carton for the connectors is marked with the smallest and largest cable diameters for which the connectors have been investigated. In addition, the connectors or cartons are marked "Dry Location," "Sunlight Resistant," "Oil Resistant I" or "Oil Resistant II." Cable connectors marked "Oil Resistant I" are suitable for exposure to mineral oil at 60°C. Cable connectors marked "Oil Resistant II" are suitable for exposure to mineral oil at 75°C.

Some connectors are also acceptable for use with armored cable, flexible metal conduit, nonmetallic-sheathed cable, cord or service-entrance cable when marked on the device or carton.

ADDITIONAL INFORMATION

For additional information, see Power and Control Tray Cable (QPOR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Tray Cable Connector."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER CABLE ASSEMBLIES (QPPL)

USE AND INSTALLATION

This category covers power cable assemblies and pendant power cable assemblies intended for installation between individual units of a communications or similar system where the cables are outside the equipment enclosure. These cable assemblies are intended for use on circuits rated 600 V or less, and only in areas where access is restricted to qualified persons. They are not intended to be disconnected under load and are so marked.

Power cable assemblies employ Listed multiconductor power and control tray cable and male or female connectors, wire connectors, or other means to connect the cable to appropriate terminations in the individual units of the system. These assemblies are intended to be installed in cable trays in accordance with Article 392 of ANSI/NFPA 70, "National Electrical Code" (NEC). Up to 7 ft of the cable assembly may be exposed between the cable tray and the equipment in locations where the cable assembly is protected from physical damage. These assemblies are intended to be connected on the load side of Listed overcurrent devices in accordance with Section 240.21(A) of the NEC. Power cable assemblies are rated in volts and amps denoting the maximum permissible load current through the assembly in free air at nominal 30°C (86°F). The ampacity of the cable may need to be derated in accordance with Section 392.11 of the NEC.

Pendant power cable assemblies employ Listed bus drop cable or Listed flexible cord or cable intended for hard usage. They employ female connectors, wire connectors, or other means to terminate the cord or cable to a mating male connector, busbar, or field wiring terminals. Mating connectors are identified on the assembly or accompanying instructions. These assemblies are intended to be connected on the load side of Listed overcurrent devices in accordance with Section 240.21(A) of the NEC. They are provided with a tension take-up device, strain relief, or other means of preventing tension from being transmitted to the wiring terminals to facilitate installation in accordance with Section 368.56(B) of the NEC. Pendant power cable assemblies are rated in volts and amps denoting the maximum permissible load current through the assembly in free air at nominal 30°C (86°F). The ampacity of the flexible cord or cable may need to be derated in accordance with Section 400.5 of the NEC.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2055, "Outline of Investigation for Power Cable Assemblies."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its

POWER CABLE ASSEMBLIES (QPPL)

Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Cable Assembly" or "Pendant Power Cable Assembly."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER CONVERTERS/INVERTERS AND POWER CONVERTER/INVERTER SYSTEMS (QPPY)

USE AND INSTALLATION

This category covers (1) fixed and stationary power converters, power inverters, power converter systems and power inverter systems for use in recreational vehicles in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC), (2) portable, stationary and fixed power converters, power inverters, power converter systems and power inverter systems for use in land vehicles, and (3) accessories for power converters and power inverters.

Power converters are primarily rectifying units intended for connection to a 120 V or 120/240 V, 15 or 20 A branch circuit supplied from the recreational vehicle panelboard and designed to provide low direct voltage for equipment in the recreational vehicle. A power converter may also include a battery charging feature.

Power inverters are intended for connection to a battery source within a land vehicle. They are designed to supply ac voltage for equipment in a land vehicle. A power inverter may be provided with an ac transfer option to supply the output from an ac distribution system when the inverter is connected to such a system. A power inverter may also include a battery charger feature.

Power converter systems consist of a power converter and not more than three integral line voltage branch circuit protective devices unless marked "Distribution Panelboard." Power inverter systems consist of a power inverter and not more than three integral line voltage branch circuit protective devices unless marked "Distribution Panelboard." A main disconnecting means is provided if more than two branch circuit protective devices are incorporated.

A power converter system or power inverter system may serve the function of a distribution panelboard in a land vehicle. They are intended to be connected directly to an ac distribution system by means of a power-supply cord.

DISTRIBUTION PANELBOARDS

Some Listed power converter systems or power inverter systems consist of a line voltage branch circuit section with more than three integral line voltage branch circuit protective devices. The line voltage compartment, including the overall enclosure for that compartment, complies with ANSI/UL 67, "Panelboards," and is intended to be installed in accordance with Article 551 of the NEC. Such power converter or inverter systems are identified as a "Distribution Panelboard" or the equivalent.

REBUILT PRODUCTS

This category also covers units that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt units are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt units are subject to the same requirements as new products.

RELATED PRODUCTS

Land vehicle main distribution centers without integral power converter/inverter functions are covered under Panelboards (QBUY).

Power converters, power inverters, power converter systems and power inverter systems for use on a marine craft are covered under Power Converters/Inverters and Power Converter/Inverter Systems, Marine (QPQL).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 458, "Power Converters/Inverters and Power Converter/Inverter Systems for Land Vehicles and Marine Crafts."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Power Converter," "Power Inverter," "Power Converter System," "Power Inverter System," or other appropriate product name as shown in the individual Listings.

POWER CONVERTERS/INVERTERS AND POWER CONVERTER/INVERTER SYSTEMS (QPPY)

305

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER DISTRIBUTION BLOCKS (QPQS)

USE

This category covers power distribution blocks rated 600 V or less and intended to be used on the load side of service equipment.

Power distribution blocks are used for splicing and tapping conductors in metallic wireways, auxiliary gutters, cabinets, cutout boxes, termination boxes, and the like, or enclosures designed for the purpose in order to distribute power to separate circuits or loads.

A power distribution block consists of one or more terminal wire connectors mounted on an insulating base. Each connector has provisions for one or more incoming run conductors and multiple tap conductors. A tap conductor is of the same or smaller size as the incoming run conductor. The connectors may be of the lay-in construction, which do not require the incoming run conductor to be terminated.

A power distribution block may be provided with an insulating cover.

INSTALLATION

Power distribution blocks are intended for use in installations covered by ANSI/NFPA 70, "National Electrical Code" (NEC), and installed using the manufacturer's installation instructions. Wiring space (75% cross-sectional fill), wire bending space, and final exposure of any uninsulated live parts are determined by the installer and Authority Having Jurisdiction at each installation in accordance with Section 376.56 of the NEC when the power distribution block is installed in the enclosure.

Power distribution blocks provided with an insulating cover have been investigated for nonexposure of uninsulated live parts in a wireway, whether or not the wireway cover is installed.

Installation instructions are provided for proper mounting and use.

PRODUCT MARKINGS AND RATINGS

Power distribution blocks are considered suitable for use on circuits having available fault current not greater than 10,000 rms symmetrical amps, unless marked with a larger value. Power distribution blocks are marked "Short-Circuit Current Rating" together with the value of the rating and the maximum voltage. A power distribution block may additionally be marked to identify an overcurrent protective device (fuse or circuit breaker) to be used ahead of the power distribution block.

Power distribution blocks are marked to indicate that they are for use in specific enclosures (identified by either catalog number or specific dimensional information).

Unless the power distribution block is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14-1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Table 310.16 of the (NEC). Termination provisions are determined based on values provided in Table 310.16 or Section 310.15(B)(6), with no adjustment made for correction factors.

Power distribution blocks are marked with the following:

- the letters "AL" to indicate use with aluminum conductors only;
- "CU" to indicate for use with copper conductors only; or "CU" and "AL" to indicate for use with either type of conductor
- a "7" or "9" in conjunction with the "AL" or "AL-CU" marking. This marking corresponds with the marking on the individual connector (e.g., AL7CU, AL9)
- the torque associated with each conductor tightening means
- an ampere rating that signifies the maximum current per pole
- a voltage rating
- the wire size (or range) for each connector

An insulating cover of a power distribution block is marked with the catalog number of the of the power distribution block for which it is intended.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1953, "Outline of Investigation for Power Distribution Blocks."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for

these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Distribution Block."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER DISTRIBUTION CENTERS FOR COMMUNICATIONS EQUIPMENT (QPQY)

GENERAL

This category covers power distribution centers for communications equipment rated 600 V or less.

Power distribution centers contain equipment such as circuit breakers, supplementary protectors, contactors, fuses, switches, including pullout types and related accessory equipment.

Some centers incorporate constructions designed to provide safety for the operator. These centers are dead-front but may be open at the back, bottom, top or sides. Other centers may employ special alarm indicating fuses that have exposed live parts extending through the front. The distribution centers that incorporate special alarm fuses or that are not provided with a complete enclosure are intended for installation in places accessible only to qualified persons and are so marked.

INSTALLATION

Some equipment has been investigated for installation in a restricted-access location, such as a dedicated equipment room or telecommunications equipment closet, where access is limited to trained service personnel. Such equipment is provided with a marking or installation instructions, stating "To be installed only in a Restricted Access Location," or similar wording. Equipment installed in a restricted-access location generally receives power from a centralized dc power source. If field-wiring terminals are not contained in an internal compartment, both protection of exposed wiring terminals and wiring methods used for such equipment are intended to be provided in accordance with (1) markings on or instructions with the equipment, and (2) the provisions of Sections 110.26 and 110.27 of ANSI/NFPA 70, "National Electrical Code" (NEC).

A Listed subassembly such as a fuse panel, circuit breaker panel or the like has been investigated for use in a power distribution center or cabinet and is suitable for field installation. The subassembly is installed in accordance with the manufacturer's installation instructions, and the catalog number or equivalent of the subassembly and power distribution center or cabinet is referenced in the instructions.

PRODUCT MARKINGS

Power distribution centers are marked with their short circuit current rating. This marking may be presented as a dc rating in amps, a description of the battery power supply, such as "Suitable For Use In Circuits Powered By Up To Five Banks Of 48 V, 200 A-Hr. Batteries," or a combination of both. A battery "bank" consists of a sufficient number of series-connected batteries to obtain the required system voltage. A number of "banks" are then wired in parallel to obtain the desired system A-Hr. capacity.

A distribution center having provision for the field installation of additional equipment such as circuit breakers, contactors, switches or the like is marked with the name or trademark of the manufacturer and the catalog number or equivalent of those devices that are intended to be installed in the field.

Power distribution centers are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless the equipment is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14 – 1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Table 310.16 of the NEC.

RELATED EQUIPMENT

Power supplies for information technology and telecommunications equipment are covered under Power Supplies, Information Technology Equipment Including Electrical Business Equipment (QQGQ) and Power Supplies, Telephone (QQJE).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 60950, "Safety of Information Technology Equipment," or ANSI/UL 60950-1, "Information Technology Equipment – Safety – Part 1:

General Requirements," in addition to the requirements contained in UL Subject 1801, "Outline of Investigation for Power Distribution Centers for Communications Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Distribution Center for Communications Equipment" or "Power Distribution Center for Communications Equipment Subassembly."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER DISTRIBUTION EQUIPMENT, PORTABLE (QPRW)

USE

This category covers portable power distribution units and devices, and portable power distribution panels intended for use in the following locations:

- Carnivals, circuses, fairs and similar locations in accordance with Article 525 of ANSI/NFPA 70, "National Electrical Code" (NEC)
- Exhibition halls or similar locations in accordance with Article 518 of the NEC
- Theaters, audience areas of motion picture and television studios and similar locations in accordance with Article 520 of the NEC
- Motion picture and television studios and similar locations in accordance with Article 530 of the NEC
- Temporary installations at construction sites in accordance with Article 590 of the NEC

RATINGS

This category covers units rated 600 V or less, single- or multi-phase. Units are rated maximum 1600 A.

Short-circuit Rating — Units are intended for connection to supplies with a maximum available fault current of 10,000 A.

PRODUCT MARKINGS

Accessibility — Units intended for use in areas not accessible by the general public are marked "For Use in Areas Not Readily Accessible by the General Public."

Conductors in Parallel — Units intended for paralleled conductors on a single circuit are marked "WARNING – Risk of Fire – Not for Multiple Circuits. Single Circuit with Parallel Conductors Only."

Duty Rating — Outputs are not suitable for continuous use unless marked otherwise.

Ground-fault Protection — Only those receptacles so marked are provided with ground-fault circuit protection for personnel.

Neutral Connection — Equipment rated for use on 3-phase, 4-wire with ground supplies and intended for use with electronic dimmers are marked "130 Percent Neutral – Suitable for Use with Electronic Dimmers." Equipment for use on both 208Y-/120-volt, 3-phase, 4-wire and 120-/240-volt, single-phase supplies at the full current rating on both systems are marked "200 Percent Neutral."

Qualified Personnel — Units intended for use by qualified personnel are marked "FOR USE BY QUALIFIED PERSONNEL ONLY" and "The routing of portable supply conductors, the making and breaking of supply connectors, and the energization and de-energization of supply services shall be performed by qualified personnel only."

Enclosure Type — Enclosures are marked with a Type designation indicating the external conditions for which they are intended. Intended uses for the various Type designations are indicated in Electrical Equipment for Use in Ordinary Locations (AALZ). Enclosures may additionally be marked with descriptive terms such as "Raintight," "Watertight," "Corrosion Resistant" and the like.

Receptacle Ratings — Equipment with receptacles that are not suitable to be disconnected under load are marked "Do Not Disconnect Under Load," or other similar marking to indicate the limitation of the receptacle.

Single-pole Inlets and Outlets — Equipment with separate, single-pole devices for input or output and without sequential interlocking provisions are marked "WARNING — Risk of Electric Shock. Plug connection should be in the following order:

- a) Equipment grounding conductor connectors,
 - b) Grounded circuit conductor connectors, and
 - c) Ungrounded conductor connectors.
- Disconnection should be in reverse order."

RELATED PRODUCTS

Units intended for use in theater or studio rigging immediately adjacent to stage luminaires are covered under Stage and Studio Luminaires and Connector Strips (IFDZ).

Portable cord-connected units rated 250 V ac or less, 20 A or less, intended for indoor use as multiple-outlet extensions of a branch circuit to a central location to supply laboratory equipment, a home workshop, home movie lighting control, etc., are covered under Relocatable Power Taps (XBYS).

Connector assemblies consisting of only factory-assembled plugs and cord connectors attached to extra-hard service cords or cables are covered under Cord Sets and Power-supply Cords (ELBZ).

Connector assemblies consisting of only factory-assembled plugs and cord connectors attached to extra-hard service cords or cables that are intended specifically and solely for undercarpet use at tradeshow are covered as undercarpet cord sets under Exhibition Display Units, Accessories (XNRU).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE POWER DISTRIBUTION UNITS AND DEVICES (QPSH)

GENERAL

This category covers portable power distribution equipment of standardized type or configuration. Each unit has a marked model, type or catalog number.

Portable power distribution units are assemblies of Listed products, Recognized components, or both, contained in complete electrical enclosures. They may incorporate disconnecting means, overcurrent devices, control components, receptacles for attachment plugs, stage and studio type inlets and connectors, and the like.

This category also covers cable-mounted busbar clamps for use with portable power distribution units as well as partially enclosed, plastic framed cable splicing blocks.

Busbar Clamps (Sister Lugs)

Busbar clamps are intended for use by qualified personnel only. Cable terminating to busbar clamps should be tied or otherwise supported so that flexing or strain on the conductors is not transmitted to the conductor termination at the busbar clamp. Solder lug-type units are not suitable to terminate an equipment grounding conductor. Busbar clamps are marked with their range of intended wire sizes and their maximum current rating.

Cable Splicing Blocks (Spiders)

Partially enclosed, plastic framed cable splicing blocks are suitable for outdoor use, damp locations. They are suitable to be exposed to rain or water spray when not energized. Following such an exposure they are intended to be dried and inspected prior to energization. They are intended for use by qualified personnel in areas not readily accessible by the general public. They are intended for installations covered by Articles 520 and 530 of ANSI/NFPA 70, "National Electrical Code."

Construction Site Units

Units identified as "Construction Site Portable Power Distribution Units" or with similar identifiers that are marked as providing ground-fault protection for personnel protect the output circuits in the presence of one or more of the following conditions:

1. Any two power supply conductors are reversed
2. There is an open circuit in either the grounded supply conductor or any of the ungrounded supply conductors

Protection is provided by exhibiting the performance characteristics of a Class A ground-fault circuit-interrupter or by de-energizing the protected output circuits.

ADDITIONAL INFORMATION

For additional information, see Power Distribution Equipment, Portable (QPRW) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1640, "Portable Power Distribution Units."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify portable power distribution units manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Power Distribution Unit" (or "Port Pwr Dist Unit") or "Construction Site Portable Power Distribution Unit" (or "Construction Site Port Pwr Dist Unit"). The word "Equipment" may be substituted for "Unit."

The Listing Mark for partially enclosed, plastic framed cable splicing blocks is the same as that specified above except the product name is "Open Frame Cable Splicing Block."

Portable Power Distribution Units and Devices (QPSH)—Continued

The Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which busbar clamps are packaged and additionally provided with the UL symbol on the busbar clamp is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Busbar Clamp."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PORTABLE POWER DISTRIBUTION PANELS (QPSM)

USE

This category covers portable power distribution panels built for specific applications.

These products are assemblies of Listed products, Recognized components, or both, contained in complete electrical enclosures. They may incorporate disconnecting means, overcurrent devices, receptacles for attachment plugs, stage and studio type inlets and connectors, and the like.

These panels are intended for use in applications specified for portable power distribution units in ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Power Distribution Equipment, Portable (QPRW) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1640, "Portable Power-Distribution Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Power Distribution Panel."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER-LIMITED CIRCUIT CABLE (QPTZ)

USE

This category covers power-limited circuit cable intended for use in Class 2 or Class 3 circuits as described in Article 725 of ANSI/NFPA 70, "National Electrical Code" (NEC).

PRODUCT MARKINGS

Cable with a nonmetallic jacket is identified by a marking on the surface of the jacket or on a marker tape under the jacket. Cable with an outer metal sheath is identified by a marker tape under the armor. This marking includes one of the following Type designations:

CL2P or CL3P — Indicates cable intended for use in Class 2 or Class 3 circuits within buildings in ducts or plenums or other spaces used for environmental air in accordance with Section 725.61(A) of the NEC. This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 5 ft when tested per ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

CL2R or CL3R — Indicates cable intended for use in Class 2 or Class 3 circuits within buildings in vertical shafts in accordance with Section 725.61(B) of the NEC. The flame propagation height of this cable is less than 12 ft when tested per ANSI/UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

CL2 or CL3 — Indicates cable intended for general use in Class 2 or Class 3 circuits within buildings in accordance with Section 725.61(E) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in ANSI/UL 1581, "Reference Standard for Electrical Wires, Cables, and Flexible Cords."

CL2X or CL3X — Indicates cable intended for use in Class 2 or Class 3 circuits within buildings (1) where the cable is enclosed in raceway or non-combustible tubing, or (2) in nonconcealed spaces where the exposed length of cable does not exceed 10 ft, or (3) in one- or two-family or multifamily dwellings when the cable diameter is less than 0.25 in., in accordance with Section 725.61(E) of the NEC. This cable complies with the VW-1 Flame Test requirements in ANSI/UL 1581.

PLTC — Indicates cable for use in Class 3 circuits within buildings that is suitable for use in cable trays, in accordance with Sections 725.61(C) and (D) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in ANSI/UL 1581.

Cable marked “direct burial,” “for direct burial” or “dir bur” has been investigated and found suitable for direct burial in the earth.

Cable marked “sunlight resistant” or “sun res” may be exposed to the direct rays of the sun.

Cable marked “wet” or “wet location” is suitable for use in wet locations.

Cable marked “-30C,” “-40C,” “-50C,” “-60C” or “-70C” complies with a cold bend test conducted at that temperature.

Cable that complies with the requirements for “Limited Combustible” specified in NFPA 90A, “Installation of Air Conditioning and Ventilating Systems,” are surface marked “Limited Combustible.”

Type PLTC cable permitted to be exposed between cable trays and utilization equipment in accordance with Section 725.61(D)(4) of the NEC is surface marked with the supplementary letters “-ER” (formerly marked “open wiring”).

Cable marked “-CI (max voltage ____)” is suitable for use as circuit integrity cable at the maximum voltage to ground indicated, in accordance with Section 725.82(F) of the NEC.

Listed cable which is additionally marked “In Accordance With [Specification name and/or number]” complies with the requirements of the transmission performance specification referenced and is manufactured under an acceptable quality assurance system.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 13, “Power-Limited Circuit Cables.”

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Power-limited Circuit Cable.”

Cable verified to another transmission performance specification has the Marking “Verified In Accordance With [Specification name and/or number]” together with the Listing Mark information on the tag, reel or smallest unit container.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER OUTLETS AND POWER OUTLET FITTINGS (QPYV)

GENERAL

This category covers power outlets and power outlet fittings.

Power outlets are enclosed assemblies that may include components such as receptacles, circuit breakers, fuseholders, fused switches, buses, and watt-hour meter-mounting means. Power outlets are permanently installed and, although not restricted to such use, are intended for use:

- At outdoor locations, such as on farms, at building sites, and the like, where power is required to operate portable, mobile, or temporarily installed equipment
- To supply power to a mobile home or a recreational vehicle
- To supply shore power to boats

Power outlet fittings may be panels or combination units incorporating receptacles, disconnecting means, overcurrent protection or other such devices. A separable mounting post or pedestal to which power outlets are to be mounted is also considered a fitting. Power outlet fittings are intended for factory or field assembly into or in conjunction with specific power outlets. Power outlets are marked to indicate those fittings with which they are intended to be used.

USE AND INSTALLATION

Power outlets are mounted using a post or pedestal, each detailed as follows:

Post type power outlets are intended to be mounted in concrete at or below grade level, or intended to be secured to some other mounting support. The mounting post contains markings indicating the proper grade level.

Pedestal type power outlets are intended for mounting on a concrete slab.

Unless marked otherwise, a mounting post, pedestal or fitting is not intended to serve as the sole support of a mast for overhead wiring.

Power outlets are not intended for use in recreational vehicle parks or in marinas unless so marked.

Where intended for use as service equipment for mobile homes, temporary sites, marinas and boatyards, or any combination of these, the appropriate wording appears in the marking “Suitable For Use As Service Equipment For ____.” Power outlets so marked for use as service equipment are provided with factory installed or field installable overcurrent protection and disconnecting means for service conductors, as well as means for grounding the service neutral conductor.

Power outlets not marked for a specific service use (as described in the previous paragraph) and not incorporating receptacles are suitable as service equipment if marked “Suitable For Use As Service Equipment,” or where the neutral is factory bonded to the enclosure, “Suitable For Use Only As Service Equipment.”

Power outlets containing overcurrent protection are marked with their short-circuit current ratings in rms symmetrical amps.

Where in normal operation the load will continue for three hours or more, molded-case circuit breakers and fuses should not be loaded to exceed 80% of their current rating.

Investigation of a power outlet includes a test designed to simulate exposure to beating rain to determine that such exposure will not interfere with successful operation of the apparatus within the enclosure nor result in wetting of the exposed faces of receptacles and associated attachment plugs.

Power outlets are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such markings are independent of any marking on terminal connectors and on a wiring diagram or other readily visible location.

Unless the equipment is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14–1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Table 310.16 of ANSI/NFPA 70, “National Electrical Code.” Termination provisions are determined based on values provided in Table 310.16, with no adjustment made for correction factors.

RELATED PRODUCTS

Portable power distribution equipment is covered under Portable Power Distribution Units and Devices (QPSH) and Portable Power Distribution Panels (QPSM).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 231, “Power Outlets.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Power Outlet” or “Power Outlet Fitting.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER SUPPLIES (QQAQ)

These categories cover the following types of power supplies intended for use in ordinary locations in accordance with the National Electrical Code.

General Purpose Power Supplies

Specialty Power Supplies

Telephone Power Supplies

Gas Tube Sign Power Supplies

Information Technology Equipment Power Supplies

The investigation of a device covered in these categories does not include the effects it may have on the system or equipment connected thereto.

Power supplies intended as components of fire protective signaling systems and burglary protective signaling systems equipment are covered under their respective categories.

Power supplies for use in health care facilities are covered under Power Supplies for use in Health Care Facilities, Guide KFCG.

POWER SUPPLIES (QQAQ)

Power supplies classified in accordance with IEC publications are covered under Power Supplies Classified In Accordance With IEC Publications, Guide QQKV.

Power supplies for use in recreational vehicles are listed in this directory under Power Converters and Power Converter Systems, Guide QPPY.

A power supply not covered under one of the above mentioned categories and for use with only a specific product may be covered under the category of the specific product.

The Listing Mark of Underwriters Laboratories Inc. on products covered under these categories does not extend to connected equipment.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER SUPPLIES, GENERAL PURPOSE (QQFU)

GENERAL

This category covers indoor and outdoor use power supplies having input ratings of not more than 600 V, direct and alternating current.

Power supplies identified with an enclosure type designation or as "Rain-tight" or "Rainproof" are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

Power supplies marked "Intended for Installation in a Protected Environment" or the equivalent are intended to be used in a temperature- and humidity-controlled indoor area that is relatively free of conductive contaminate.

REBUILT PRODUCTS

This category also covers power supplies that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt power supplies are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt power supplies are subject to the same requirements as new power supplies.

ADDITIONAL INFORMATION

For additional information, see Power Supplies (QQAQ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1012, "Power Units Other Than Class 2."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Supply."

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER SUPPLIES, INFORMATION TECHNOLOGY EQUIPMENT INCLUDING ELECTRICAL BUSINESS EQUIPMENT (QQGQ)

GENERAL

This category covers power supplies rated 600 V or less, intended for use with information technology equipment (ITE) including electrical business equipment. End-use products that employ these types of power supplies are covered under Information Technology Equipment Including Electrical Business Equipment (NWGQ).

These power supplies are stand-alone units that deliver power to ITE via external interconnecting means.

This category also covers modular accessory power supplies. Such power supplies are types that are intended for field installation within personal computers, similar ITE, including telephone equipment. These modular power supplies are also provided with installation instructions relative to safe installation.

All power-supply types covered under this category are marked with input and output ratings that include the voltage and intended maximum load rating in amperes.

POWER SUPPLIES (QQAQ)

309

Power Supplies, Information Technology Equipment Including Electrical Business Equipment (QQGQ)—Continued

When power supplies intended for use with a detachable power-supply cord are not provided with such a cord, a cord suitable for connection of the equipment to the branch circuit is to be separately provided.

The investigation of a product covered under this category does not include the effects it may have on the system or equipment to which it is connected.

REBUILT PRODUCTS

This category also covers power supplies that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt power supplies are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt power supplies are subject to the same requirements as new power supplies.

ADDITIONAL INFORMATION

For additional information, see Power Supplies (QQAQ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 60950-1, "Information Technology Equipment – Safety – Part 1: General Requirements."

All low-voltage outputs (maximum 42.4 V peak or 60 V dc) are safety extra-low-voltage (SELV) as defined in ANSI/UL 60950-1. An output marked "LPS" has been determined to have an output level at or below the limited power-source level specified in ANSI/UL 60950-1, as it relates to the requirements for equipment supplied by the output.

An output marked "Class 2" has additionally been investigated to ANSI/UL 1310, "Class 2 Power Units."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the category identifier "Information Technology Equipment Power Supply" (or "I.T.E. Power Supply") or "QQGQ Power Supply."

For accessories, the Listing Mark is applied to modular accessory power supplies on an external surface that will be enclosed within the end-use product. The category identifier for accessories includes the word "Accessory."

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER SUPPLIES, SPECIALTY (QQIJ)

USE

This category covers indoor and outdoor use power supplies having input ratings of not more than 600 V, direct and alternating current.

These power supplies are intended for, but not necessarily limited to, specific uses such as to supply some household appliances, electroplating equipment, school laboratory equipment, pipe organs, cathodic protection equipment, power supply-battery charger combinations, and industrial equipment, including inverters and converters.

This category also covers permanently connected Class 2 power units. Other types of Class 2 power units are covered under Transformers, Class 2, Class 3 (XOKV) or Direct-plug-in and Cord-connected Class 2 Power Units (EPBU).

Power supplies identified with an enclosure type designation or as "Rain tight" or "Rainproof" are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

PRODUCT MARKINGS

Power supplies marked "Intended for installation in a protected environment" or the equivalent are intended to be used in a temperature- and humidity-controlled indoor area that is relatively free of conductive contaminate.

REBUILT PRODUCTS

This category also covers power supplies that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt power supplies are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt power supplies are subject to the same requirements as new power supplies.

RELATED PRODUCTS

See Power Supplies, General Purpose (QQFU).

ADDITIONAL INFORMATION

Power Supplies, Specialty (QQIJ)—Continued

For additional information, see Power Supplies (QQAQ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1012, "Power Units Other Than Class 2." Products with a marked Class 2 output are also investigated to UL 1310, "Class 2 Power Units."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER SUPPLIES, TELEPHONE (QQJE)

This listing covers telephone power supplies having input ratings of not more than 600 volts, direct and alternating current, intended for use with telephone exchange equipment, telephone appliances, and telephone accessories.

This category also covers Listed power supplies which are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt power supplies are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt power supplies are subject to the same requirements as new products.

See Power Supplies, General Purpose Guide QQFU.

For additional information, see Power Supplies (QQAQ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic standard used to investigate products in this category is UL 1459, "Telephone Equipment".

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the name and/or symbol of Underwriters Laboratories Inc. (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the following product name: "Telephone Power Supply". The Listing Mark for rebuilt power supplies additionally includes the word "Rebuilt," "Remanufactured" or "Reconditioned" preceding the above product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

NONMETALLIC UNDERGROUND CONDUIT WITH CONDUCTORS (QQRK)**USE AND INSTALLATION**

This category covers cable, which is a factory assembly of one or more Listed insulated wires or cables, and may include one or more insulated or bare equipment grounding conductor(s), all enclosed in a high-density polyethylene conduit, intended for underground installation in accordance with Article 354 of ANSI/NFPA 70, "National Electrical Code" (NEC), or for highway lighting, utility company installations and similar uses not within the scope of the NEC. This product is intended for installation and use in accordance with the following information.

The range of trade sizes is from 1/2 in. to 4 (metric designators 16 to 103) inclusive.

The product is intended for embedment in concrete and/or for direct burial in the earth to a depth specified in the NEC, or by the Authority Having Jurisdiction.

The product is provided in a continuous length on a reel and intended to be installed without splices underground. The ends of cable runs are intended to be stubbed-up through concrete or directly from earth into equipment enclosures, cabinets or lighting pole bases.

NONMETALLIC UNDERGROUND CONDUIT WITH CONDUCTORS (QQRK)

Conductors in the cable are rated 600 V or higher and are suitable for use in wet and dry locations. The conductors fill the internal cross section of the tube in accordance with Chapter 9 of the NEC.

For cable rated 600 V through 35 kV, the voltage ratings of all conductors in a construction are the same. The ampacity of the conductors is to be determined on the basis of the AWG size, the temperature ratings of the conductors, and the number of current-carrying conductors in the cable, in accordance with the NEC.

The smallest radius to which the cable may be bent in the installation is:

Trade Size	Metric Designator	Min Bending Radius (in.)
1/2	16	10
3/4	21	12
1	27	14
1-1/4	35	18
1-1/2	41	20
2	53	26
2-1/2	63	36
3	78	48
4	103	60

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1990, "Nonmetallic Underground Conduit with Conductors."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Preassembled Cable in Nonmetallic Conduit" or "Nonmetallic Underground Conduit with Conductors," or other appropriate product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PREFABRICATED ASSEMBLIES (QQRX)**GENERAL**

This category covers prefabricated assemblies, which are factory-built assemblies incorporating pre-installed materials and equipment which, after installation, are usually concealed and may not be accessible for inspection at the installation site.

Materials, including the methods used for the installation of electrical, mechanical, heating and plumbing equipment incorporated in these assemblies by their manufacturer, have been judged under the requirements of UL, which are based on ANSI/NFPA 70, "National Electrical Code," and model fire, building, plumbing and mechanical codes.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

For factory-built buildings and rooms, see Commercial and Industrial Building (QRNZ) and Prefabricated Units (QRHQ), respectively.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MANUFACTURED WIRING SYSTEMS (QQVX)**USE AND INSTALLATION**

This category covers prefabricated wiring systems that may incorporate modular multipole connectors, AC cable, MC cable, flexible metal conduit, hard usage cord, outlet boxes, splitter assemblies, remote control switching assemblies and devices. The wiring systems cannot be field inspected by the Authority Having Jurisdiction (AHJ) without damage to the assembly.

Manufactured wiring systems suitable for patient care areas are intended for installation in accordance with Article 517 of ANSI/NFPA 70, "National Electrical Code" (NEC).

These prefabricated modules and assemblies are intended for installation rearrangement and inspection in accessible locations in accordance with Article 604 of the NEC. AHJs should be consulted before installation.

PREFABRICATED ASSEMBLIES (QQRX)

Manufactured Wiring Systems (QQVX)—Continued

This equipment is intended to be connected to supply circuits of up to 600 V ac and maximum rating of 40 A per circuit.

Materials, including the methods used for the installation of electrical, mechanical and heating equipment incorporated in these assemblies by their manufacturer, have been investigated to requirements of UL, which are based on the NEC, ANSI/NFPA 72, "National Fire Alarm Code," and model building and mechanical codes.

PRODUCT MARKINGS

Each bi-directional wiring assembly is marked "WARNING: Risk of Fire or Electric Shock," and the following or equivalent: "Do not electrically connect to more than one source of supply. Always determine that the wiring assembly is electrically connected to one and only one source of supply."

Manufactured wiring systems suitable for installation in patient care areas are marked "Suitable For Patient Care Areas of Health Care Facilities Other Than Anesthetizing Locations."

Manufactured wiring systems suitable for installation in ducts or plenums are marked "Acceptable for Use in Ducts or Plenums Used for Environmental Air."

Manufactured wiring systems suitable for installation in air-handling spaces other than ducts or plenums are marked "Acceptable for Use in Air-handling Spaces Other Than Ducts or Plenums."

Assemblies of manufactured wiring systems suitable for use in outdoor locations are marked "Outdoor."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 183, "Manufactured Wiring Systems."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Distribution Box" or "Tap Box," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SECTIONS AND UNITS (QQXX)

USE AND INSTALLATION

This category covers factory-built assemblies for use in, within, or as part of the structure of buildings for commercial, industrial and residential use. These assemblies may incorporate pre-installed materials and equipment which is usually concealed and may not be accessible for inspection at the installation site.

Materials, including the methods used for the installation of electrical, mechanical, heating and plumbing equipment incorporated in these assemblies by their manufacturer, have been investigated to requirements of UL, which are based on ANSI/NFPA 70, "National Electrical Code," ANSI/NFPA 72, "National Fire Alarm Code," and model building, plumbing and mechanical codes.

The fire hazard of building materials employed in the assemblies is judged to be no greater than that of ordinary lumber used in site-constructed buildings. Finished surfaces are made of materials having flame spread and smoke developed rating of 200 or less. Products with a rating less than 200, as indicated in the individual Listings, may be included as part of the product marking.

Structural requirements vary with type of building construction and occupancy, and stability is to a large measure dependent upon the attachment of the assemblies to field erected or existing structures.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in ANSI/NFPA 70, "National Electrical Code."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Prefabricated *."

PREFABRICATED ASSEMBLIES (QQRX)

311

Sections and Units (QQXX)—Continued

* The appropriate product name as shown in the individual Listings One Listing Mark is applied to each section or unit.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIRING ASSEMBLIES (QQYZ)

GENERAL

This category covers prefabricated wiring systems comprised of Listed electrical components that could be field assembled and inspected by an Authority Having Jurisdiction (AHJ), but are assembled in the factory prior to field installation.

Prefabricated wiring assemblies incorporate Listed conduit, tubing or cable, conductors and fittings intended for field installation in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC). They may be factory assembled to outlet or junction boxes, box-mounting brackets, and wiring devices.

Prefabricated wiring assemblies are marked with the conduit, tubing or cable type, and the conductor size and type to permit determination of their suitability for a specific application and ampacity in accordance with the NEC. A parts list is provided with each assembly to identify the extent of the product.

Materials, including the methods used for the installation of electrical, mechanical and heating equipment incorporated in these assemblies by their manufacturer, have been investigated to requirements of UL, which are based on the NEC, ANSI/NFPA 72, "National Fire Alarm Code," and model building and mechanical codes.

Wiring Assembly Kits

Wiring assembly kits for final assembly in the field consist of a package that contains some or all: length(s) of Listed conduit, tubing or cable, Listed fittings appropriate for the type of conduit, tubing or cable, outlet or junction boxes, conductors, or other devices.

The packaging for wiring assembly kits is marked with the conduit, tubing, or cable size and type, and the conductor size and type, if provided, to permit determination of their suitability for a specific application and ampacity in accordance with the NEC. Installation instructions and a parts list are provided on or in each package. Acceptability of the field assembly is to be determined by the AHJ.

Conduit Kits

Conduit kits for final assembly in the field consist of a package that contains some or all: length(s) of Listed conduit or tubing, Listed fittings appropriate for the type of conduit or tubing, outlet or junction boxes, or other devices.

The packaging for conduit kits is marked with the conduit or tubing size and type to permit determination of their suitability for a specific application in accordance with the NEC. Installation instructions and a parts list are provided on or in each package. Acceptability of the field assembly is to be determined by the AHJ.

Surface Raceway Kits

Surface raceway kits for final assembly in the field consist of a package that contains some or all: length(s) of Listed surface metal or nonmetallic surface raceway, Listed fittings appropriate for the surface raceway, or other devices.

The packaging for surface raceway kits is marked with the raceway size and the number, type and size of conductors that may be installed in the Listed raceway, to permit determination of its suitability for a specific application in accordance with the NEC. Installation instructions and a parts list are provided on or in each package. Acceptability of the field assembly is to be determined by the AHJ.

RELATED PRODUCTS

For products covered by Article 604 of the NEC, see Manufactured Wiring Systems (QQVX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in ANSI/NFPA 70, "National Electrical Code."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the factory-assembled wiring assembly or the packaging of a wiring assembly kit is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Wiring Assembly," "Wiring Assembly Kit," "Conduit Kit" or "Surface Raceway Kit."

Wiring Assemblies (QQYZ)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PREFABRICATED BUILDINGS (QRAR)

These are factory-built buildings, structures, and building assemblies incorporating pre-installed materials and equipment which, after installation, are usually concealed and may not be accessible for inspection at the installation site.

They are intended for installation subject to approval by the Authority Having Jurisdiction.

The buildings, structures, and building assemblies have been investigated in accordance with one or more Model Codes (such as Building, Fire, Plumbing, Mechanical, Gas, Energy) and the National Electrical Code and/or a State Code and/or an applicable Building Code of the local jurisdiction. As an alternate, the building, structure, and building assemblies have been investigated in accordance with one or more specific areas of a code such as electrical, plumbing, mechanical, structural, etc.

When the Building Code does not include specific requirements for such features as air cooling and heating systems, fuel supply systems, chimney and venting systems, etc., the applicable requirements of the National Fire Codes are used.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PREFABRICATED UNITS (QRHQ)

Prefabricated units are factory built assemblies for varying uses such as rooms within buildings or rooms within rooms of buildings for commercial, industrial or residential use, outdoor or exterior roofed structures, and canopies.

These prefabricated units are intended for installation subject to approval by the Authority Having Jurisdiction.

These units have been investigated in accordance with the applicable sections of one or more Model Codes (such as Building, Fire, Plumbing, Mechanical, Gas, Energy), the National Electrical Code, a State Code or an applicable Code of the local jurisdiction. As an alternate, the units may have been investigated in accordance with only one or more specific areas such as electrical, plumbing, mechanical, etc.

When the building Code does not include specific requirements for such features as air cooling and heating systems, fuel supply systems, chimney and venting systems, flame spread, etc., the applicable requirements of the National Fire Codes are used.

For additional information, see Prefabricated Buildings (QRAR) and Building Materials (AABM).

LOOK FOR CLASSIFICATION MARK ON PRODUCT

The Classification Marking of Underwriters Laboratories Inc. (shown below) on the product is the only method provided by UL to identify prefabricated units produced under its Classification and Follow-Up Service. The Classification Marking includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), "PREFABRICATED UNIT IN ACCORDANCE WITH" (Building Code, National Electrical Code, etc.).

The Classification Marking includes reference to the specific codes (including editions) to which the product was investigated. One Classification Marking is applied to each prefabricated unit at a location visible after the unit is erected. In addition, a manufacturer's data plate is applied adjacent to the UL Mark, where necessary to convey applicable information such as the equipment and appliances factory furnished as part of the classified unit, the structural design loads, and any site-completed items subject to review by the local regulatory authority. If the unit is shipped knocked down, the number and description of the sections required to complete the unit is included on the data plate.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL AND INDUSTRIAL BUILDINGS (QRNZ)

This category includes automotive service station buildings, food stands, toll booths, motel units, and similar prefabricated buildings.

Automotive service station buildings employ building materials having flame spread rating of 25 or less for interior and exterior surfaces.

These modular buildings have been classified in accordance with one or more model (Building) codes and the National Electrical Code and/or a State Building Code and/or an applicable Building Code of the local jurisdiction.

As an alternate, the building has been classified in accordance with one or more specified areas of a Building Code such as electrical, plumbing, mechanical, structural, etc.

When the Building Code does not include specific requirements for such features as air cooling and heating systems, fuel supply systems, chimney and venting systems, etc., the applicable requirements of the National Fire Codes are used for classification purposes.

Prefabricated commercial and industrial buildings are intended for installation subject to approval by the authority having jurisdiction.

For additional information, see Building Materials (AABM).

LOOK FOR CLASSIFICATION MARK ON PRODUCT

The Classification Marking of Underwriters' Laboratories, Inc. (shown below) on the product is the only method provided by Underwriters' Laboratories, Inc. to identify Commercial Buildings produced under its Classification and Follow-Up Service.

Commercial Building Classified by Underwriters' Laboratories, Inc. in accordance with (Building Code, National Electrical Code, Etc.)
No.

One Classification Marking is applied to each building at a location visible after the building is erected. In addition, information covering the equipment and appliances factory furnished as part of the classified building and, if the building is shipped knock down, the number and description of the sections required to complete the building is included on a data plate.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMPOSITE PANELS (QRSY)

Composite panels are factory-built assemblies for use in, within, or as part of the structure of buildings for commercial, industrial, and residential use.

These factory-built panels may incorporate pre-installed materials and equipment which after installation are concealed and which may not be accessible for inspection at the installation site.

These factory built panels are intended for installation subject to approval by the authority having jurisdiction.

These panels have been investigated in accordance with the applicable sections of one or more Model Building Code, Plumbing Code, the National Electrical Code, a State Building Code and/or an applicable Building Code of the local jurisdiction.

As an alternate the panels may have been investigated in accordance with only one or more specific areas of a code such as electrical, plumbing, mechanical, structural, etc.

Structural strength requirements vary with wind and snow conditions of each locality and stability is to a large measure dependent upon the attachment of the panels to field-erected foundations or structures. Local inspection authorities should be consulted with respect to their requirements for the methods to be employed to attach the panels.

When the Building Code does not include specific requirements for such features as air cooling and heating systems, fuel supply systems, chimney and venting systems, flame spread, etc. the applicable requirements of the National Fire Codes are used.

The flammability of building materials employed in panels is judged to be no greater than that of ordinary lumber used in site-constructed buildings or as shown on the Classified Marking.

For additional information, see Building Materials (AABM).

The Classified Marking of Underwriters Laboratories Inc. (shown below) on the product is the only method provided by Underwriters Laboratories Inc. to identify Composite Panels produced under its Classified and Follow-Up Service.

**COMPOSITE PANEL
IN ACCORDANCE WITH
(BUILDING CODE, NATIONAL ELECTRICAL CODE, ETC.)**
No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss,

PREFABRICATED BUILDINGS (QRAR)

Composite Panels (QRSY)—Continued

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RESIDENTIAL BUILDINGS (QTDI)

This category includes single- and multi-family prefabricated modular buildings and building additions.

These modular buildings and building additions have been Classified in accordance with one or more Model (Building) Codes and the National Electrical Code and/or a State Building Code and/or an applicable Building Code of the local jurisdiction.

As an alternate, the building or building addition has been Classified in accordance with one or more specific areas of a Building Code such as electrical, plumbing, mechanical, structural, etc.

When the Building Code does not include specific requirements for such features as air cooling and heating systems, fuel supply systems, chimney and venting systems, etc., the applicable requirements of the National Fire Codes are used for Classification purposes.

Residential buildings are intended for installation subject to approval by the authority having jurisdiction.

Residential building additions consisting of a group of wall, ceiling and floor panels and/or modules are intended to be site attached to an existing residence or Use Group R structure. The addition may contain or be designed to contain all or a portion of the minimum facilities (living, eating, sleeping etc.) of the applicable building codes for a residential occupancy. Attachment of the building to the existing structure and features of the final completed structure with addition such as minimum facilities, egress, area/height limitations, thermal envelope and others is subject to approval by the local authority having jurisdiction.

For additional information, see Building Materials (AABM).

LOOK FOR CLASSIFICATION MARK ON PRODUCT

The Classification Marking of Underwriters Laboratories Inc. (shown below) on the product is the only method provided by Underwriters Laboratories, Inc. to identify Residential Buildings produced under its Classification and Follow-Up Service.

* RESIDENTIAL BUILDING or RESIDENTIAL BUILDING ADDITION

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRESS AND OTHER POWER-OPERATED MACHINE CONTROLS AND SYSTEMS (QUEQ)

This category covers controls and systems intended for industrial or commercial application on power-operated machines intended for such uses as pressing, punching, shearing or breaking operations. They may be designed for use on particular types of equipment such as pneumatic- or hydraulic-powered devices or mechanically operated part or full revolution types of machines. The control or system is intended to reduce the risk of bodily injury resulting from machine operation. The intended use of the control is noted in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRESENCE-SENSING DEVICES (QUHP)

USE

This category covers presence-sensing devices intended for use in machine-control systems where they can be interconnected to the control system. Presence-sensing devices detect the presence of an object or body part and are used as a part of the machine safeguarding system to reduce the risk of bodily injury from moving machine parts.

Presence-sensing devices investigated for press initiation are noted in the individual Listings, and are intended to be in accordance with Section (11)(A) of 29CFR1910.217, "Mechanical Power Presses."

PRESS AND OTHER POWER-OPERATED MACHINE CONTROLS AND SYSTEMS (QUEQ)

313

Presence-sensing Devices (QUHP)—Continued

SPECIAL CONSIDERATIONS

These products are limited to use on part-revolution types of machines or machines where operation can be interrupted and motion stopped at any point in the machine operation cycle.

RELATED PRODUCTS

Presence-sensing devices employing active opto-electronic protective devices (AOPD) consisting of one or more light beams for the sensing function are covered under Active Opto-electronic Protective Devices (NIPF).

Presence-sensing devices employing active opto-electronic protective devices responsive to diffuse reflection (AOPDDR) consisting of one or more laser scanners for the sensing function are covered under Active Opto-electronic Protective Devices Responsive to Diffuse Reflection (NIPM).

ADDITIONAL INFORMATION

For additional information, see Press and Other Power-operated Machine Controls and Systems (QUEQ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 508, "Industrial Control Equipment," and UL 991, "Tests for Safety-Related Controls Employing Solid-State Devices."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Presence Sensing Device."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRESS CONTROLS (QUKQ)

USE

This category covers press controls intended for use in press control systems where they are interconnected with other components, such as pushbutton hand controls, valves, air cylinders, etc. When the press control or system is applied as intended, it is judged to be in accordance with Occupational Safety and Health Administration Standard Section 1910.217.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/NFPA 79, "Electrical Standard for Industrial Machinery," in addition to Article 670 of ANSI/NFPA 70, "National Electrical Code."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Press Control."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROCESS CONTROL EQUIPMENT, ELECTRICAL (QUYX)

GENERAL

This category covers process control equipment rated 600 V maximum, intended for use in accordance with ANSI/NFPA 70, "National Electrical Code." These products include instruments for measurement, recording and/or control of process variables (such as temperature, pressure, flow, etc.) and auxiliary devices used with these instruments, such as sensors, transducers and valve operations.

Equipment intended to be installed only in process control panels is so identified.

314 PROCESS CONTROL EQUIPMENT, ELECTRICAL (QUYX)

Process control equipment may be shipped completely assembled or in modular form. Modular assemblies are intended to be field assembled to form a complete system in accordance with the provided installation instructions.

Open-type process control equipment is not provided with a complete enclosure and is intended to be placed in an industrial control panel or similar type of enclosure.

RELATED PRODUCTS

Process control equipment intended for mounting in hazardous (classified) locations or with circuits that extend into hazardous (classified) locations is covered under Process Control Equipment for Use in Hazardous Locations (QUZW) and Process Control Equipment for Use in Class I, Zone Classified Hazardous Locations (QVAJ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 61010-1, "Electrical Equipment for Measurement, Control, and Laboratory Equipment – Part 1: General Requirements."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Process Control Equipment," "Open-Type Process Control Equipment," "Process Control Enclosures," "Process Control Enclosure Part," "Process Control Subassembly" or "Process Control Accessory."

When the size or shape of a subassembly makes it impractical to incorporate the product identification text, the product may be marked with the UL symbol, "QUYX" and the control number, provided that the complete Listing Mark text appears on the smallest shipping container.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROCESS CONTROL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (QUZW)

USE AND INSTALLATION

This category covers process control equipment consisting of instruments for measurement, recording and/or control of process variables, and auxiliary devices used with these instruments, such as sensors, transducers and valve operators.

Intrinsically safe systems have been investigated on the basis that all equipment connected to the system is Listed as part of the system unless otherwise indicated and is used as intended.

Equipment intended to be installed only in process control panels is so identified in the individual Listings. Such equipment is not intended for field installation.

Safety may be affected if the manufacturer's installation instructions are not followed.

RELATED PRODUCTS

Equipment investigated for use only in the hazardous (classified) locations of automotive and marine service stations is covered under Control, Monitoring and Auxiliary Equipment (EQXX).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/UL 61010-1, "Electrical Equipment for Measurement, Control, and Laboratory Use; Part 1: General Requirements."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Process Control Equipment for Hazardous Locations" (or "Proc. Cont. Eq. for Hazardous Locations"), "Process Control System for

PROCESS CONTROL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (QUZW)

Hazardous Locations," "Process Control Unit for Hazardous Locations," "Process Control Equipment (Associated Apparatus)," "Process Control Unit (Associated Apparatus)," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROCESS CONTROL EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (QVAJ)

USE AND INSTALLATION

This category covers process control equipment consisting of instruments for measurement, recording and/or control of process variables, and auxiliary devices used therewith such as sensors, transducers and valve operators.

Equipment intended to be installed only in process control panels is so identified in the individual Listings. Such equipment is not intended for field installation.

Intrinsically safe systems have been investigated on the basis that all equipment connected to the system is Listed as part of the system, unless otherwise indicated, and is used as intended.

Safety may be affected if the manufacturer's installation instructions are not followed.

RELATED PRODUCTS

Equipment investigated for use only in hazardous (classified) locations of automotive and marine service stations is covered under Control, Monitoring and Auxiliary Equipment (EQXX).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Process Control Equipment for Hazardous Locations," "Process Control System for Hazardous Locations," "Process Control Unit for Hazardous Locations," "Process Control Equipment (Associated Apparatus)," "Process Control Unit (Associated Apparatus)," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROTECTORS (QVGK)

This category covers devices intended for use with telephone, telegraph, fire alarm (other than municipal circuits) and similar signaling circuits to discharge high potential currents to ground. These protectors are divided into four separate categories:

- Primary Protectors for Communication Circuits (QVGV)
- Primary Protectors for Coaxial Communications Circuits (QVKC)
- Protectors for Antenna Lead-in Conductors (QVLA)
- Secondary Protectors for Communication Circuits (QVRG)
- Isolated Loop Circuit Protectors for Communication Circuits (QVGQ)

The primary protectors are intended to be installed, used and maintained by operating communications companies that own the outside plant facilities that provide service to the subscriber premise. They are intended for installation as defined in Article 800 of ANSI/NFPA 70, "National Electrical Code" (NEC). A primary protector may be housed in its own enclosure or secured within a Listed compatible network interface box.

Primary coaxial protectors are intended for use on coaxial communications circuits and network-powered broadband communications systems as

PROTECTORS (QVGK)

defined in Article 830 of the NEC. The protectors are typically installed by the public utility company that provides the service and are installed at the point of entry where the coaxial circuit enters the subscriber premises. The protector may be housed in its own enclosure or secured within a Listed compatible network interface box.

Protectors for antenna lead-in conductors are used to limit surges on the antenna lead-in cable that connects the antenna to the receiver/transmitter electronics. Typical applications include antenna installations for radio and television receiving equipment, amateur radio transmitting and receiving equipment, cellular telephone towers and WiMax or WiFi wireless networks.

A secondary protector may be installed, used and maintained by the customer, interconnecting company, or the operating company. A secondary protector must employ an overcurrent protection system, such as a line fuse.

The purpose of the isolated loop circuit protector is to suppress abnormal voltages caused by hazards such as lightning and other EMI transients. An isolated loop circuit protector is intended for use on data or communication lines that are not exposed to accidental contact with electric light or power conductors operating at over 300 V to ground.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRIMARY PROTECTORS FOR COMMUNICATIONS CIRCUITS (QVGV)

GENERAL

This category covers protectors intended for use on communication circuits as defined in Article 800 of ANSI/NFPA 70, "National Electrical Code" (NEC).

These protectors are intended to suppress abnormal voltage conditions that may exist on the circuit due to accidental contact with electric light or power conductors operating at or over 300 V to ground as defined in the NEC. These devices may also be used to protect against electrical transients from an electromagnetic disturbance or higher than normal voltages induced on the communication circuits due to close proximity of the protected circuit to electric light or power conductors.

This category includes both fuse and fuseless protectors. Requirements for the location and installation of primary protectors are contained in the NEC. The individual Listings provide the following information: Protector block number, catalog numbers of arresters that may be employed in a Listed block, types of arresters, design features, maximum fusing wire that is used in series with the block, and indoor or outdoor use.

The maximum size fusing wire is indicated by the following alphabetical designations:

- A – 24 AWG, copper wire with thermoplastic insulation
- B – 22 AWG, copper wire with thermoplastic insulation
- C – 20 AWG, 40 percent copper-clad wire
- D – 26 AWG, copper wire with thermoplastic insulation

Protector blocks suitable for outdoor use are also suitable for use indoors. Blocks marked for indoor use are suitable for installation only indoors.

This category also covers network interface devices, which are two-compartment enclosures that serve to provide a demarcation between the equipment of the private residence and the outside plant. The first compartment, located on the incoming side of the telephone line, may employ a Listed compatible telephone protector, where the compatibility is determined by UL. The second compartment employs terminals and standard telephone jacks for use by the resident. Indoor and outdoor Listing is subject to the same requirements used in the investigation of telephone protectors.

RELATED PRODUCTS

Separate network interface devices intended for use without a protector are covered under Communication Circuit Accessories (DUXR).

Protectors intended for use with municipal fire alarm circuits are covered under Miscellaneous Devices (UXKV).

Secondary protectors intended for telephone, telegraph, fire alarm and similar signaling circuits are covered under Secondary Protectors for Communications Circuits (QVRG).

ADDITIONAL INFORMATION

For additional information, see Protectors (QVGK) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 497, "Protectors for Paired-Conductor Communications Circuits."

Protectors that have been subjected to an 8/20, 10 kA surge have additionally been investigated to ANSI/NFPA 780, "Standard for the Installation of Lightning Protection Systems" (2004).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing

PROTECTORS (QVGK)

315

Primary Protectors for Communications Circuits (QVGV)—Continued

and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Signal Circuit Protector," "Telephone Protector," "Network Interface Device" or "Signal Circuit Protector Enclosure."

The product name for protectors that comply with the 8/20, 10 kA surge test as required by ANSI/NFPA 780 includes "10 kA."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PRIMARY PROTECTORS FOR COAXIAL COMMUNICATIONS CIRCUITS (QVKC)

GENERAL

This category covers primary coaxial protectors intended for use on coaxial communication circuits and network-powered broadband communications systems as defined in Article 830 of ANSI/NFPA 70, "National Electrical Code" (NEC). The protectors are typically installed by the public utility company that provides the service and are installed at the point of entry where the coaxial circuit enters the subscriber premises.

The primary coaxial protectors are intended to suppress abnormal voltage conditions that may exist on the circuit due to accidental contact with electric light or power conductors operating at over 300 V to ground as defined in Articles 800 and 830 of the NEC. These protectors may also be used to protect against electrical transients produced from electromagnetic disturbance on the communication circuits.

The primary coaxial protectors may also be used in low- and medium-network-powered sources as defined in the Limitations for Network-Powered Broadband Communications Systems Table of Article 830 of the NEC. The protectors are Listed for use with a current-limiting or extinguishing device, or current-limiting or extinguishing component specified in the individual Listings and installation instructions. The current-limiting or extinguishing device, or current-limiting or extinguishing component may be employed within the protector or may be a separate device or component coordinated externally with the protector.

Coaxial protectors may be used indoors or outdoors. Coaxial protectors marked for outdoor use are also suitable for use indoors. Protectors marked for indoor use are intended for indoor installation only. The coaxial protectors may be installed within a Listed enclosure or network interface device or may be installed as a stand-alone device.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 497C, "Protectors for Coaxial Communications Circuits."

Protectors that have been subjected to an 8/20, 10 kA surge have additionally been investigated to ANSI/NFPA 780, "Standard for the Installation of Lightning Protection Systems" (2004).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Primary Coaxial Protector."

The product name for protectors that comply with the 8/20, 10 kA surge test as required by ANSI/NFPA 780 includes "10 kA."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SECONDARY PROTECTORS FOR COMMUNICATIONS CIRCUITS (QVRG)

GENERAL

This category covers secondary protectors intended for use on communication circuits as defined in Article 800 of ANSI/NFPA 70, "National Electrical Code" (NEC).

Secondary Protectors for Communications Circuits (QVRG)—Continued

These protectors are intended to suppress abnormal voltage and/or current conditions that bypass the primary protector. These devices limit currents to less than the current-carrying capacity of Listed communication wire employed in the communication loop of the protected premise. Any overvoltage protection and/or grounding connection is intended to be electrically located on the equipment side of the protector's current-limiting means.

Secondary protectors covered in this category have been investigated for use only on the equipment side of a primary protector (QGV) and are intended to be installed only on the protected portion of a communication circuit. In those cases where a primary protector is not required, as defined in Article 800 of the NEC, the secondary protector may be installed or connected into the communication circuit without the use of a primary protector.

The current-limiting, fusing or extinguishing operation may be accomplished by a current-protection device located within the secondary protector, or the secondary protector may be used with a "sneak current protector." A sneak current protector serves to limit abnormal fault current that is generated due to contact of the telephone lines with AC power lines. The sneak current protector is a separate device or module that is intended for mounting on a Listed compatible base assembly. This current-protection system may employ a fuse, current-limiting circuitry or other similar means to limit the abnormal fault current condition.

RELATED PRODUCTS

Primary telephone protectors are covered under Primary Protectors for Communication Circuits (QGV).

Other telephone equipment is covered under Telephone Appliances and Equipment (WYQQ).

Wire and cable intended to be permanently installed in a building in accordance with Article 800 of the NEC are covered under the appropriate wire and cable categories.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 497A, "Secondary Protectors for Communications Circuits."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Secondary Protector," "Secondary Telephone Protector" or "Sneak Current Protector."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMPING EQUIPMENT FOR FIRE SERVICE (QVUT)

The following information and listings relate to fire pumps, drivers, controllers and accessory equipment used in supplying water for fire protection purposes.

A fire pump unit generally includes the separately Listed fire pump, driver, controller, and other accessory equipment. The individually Listed products are intended to be installed and tested for acceptable performance in accordance with the requirements of the Standard of the National Fire Protection Association for the Installation of Centrifugal Fire Pumps, NFPA 20.

Authorities having jurisdiction should be consulted before installation.

BATTERY CHARGERS FOR USE WITH INTERNAL COMBUSTION ENGINES DRIVING CENTRIFUGAL FIRE PUMPS (QWIR)

GENERAL

This category covers battery chargers intended for automatically controlling and maintaining the charge on batteries used to start internal combustion engines driving centrifugal fire pumps. The equipment consists of rectifying stacks, transformers, controlling relays, switches and meters.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment (AAFP).

Battery Chargers for Use with Internal Combustion Engines Driving Centrifugal Fire Pumps (QWIR)—Continued

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1236, "Battery Chargers for Charging Engine-Starter Batteries."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Battery Charger for Use with Fire Pumps."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIRE PUMP MOTORS (QXZF)

USE

This category covers motors intended for use in fire pump systems. These motors are used to drive centrifugal pumps used for fire service.

PRODUCT MARKINGS

This equipment is marked as follows:

1. Manufacturer's name or trademark
2. Factory identifier (if produced at more than one factory)
3. Model or catalog number
4. Rated voltage
5. Full-load input amperes or watts (or both)
6. Rated full-load speed
7. Rated temperature rise or the insulation system class
8. Rated ambient temperature
9. Time rating, or, if it is a continuous duty motor, then "Continuous" or "CONT"
10. Rated horsepower when 1/8 hp (93 W) or more
11. Code letter to indicate locked-rotor amperes in accordance with ANSI/NFPA 70, "National Electrical Code," for an alternating-current motor rated 1/2 hp (373 W output) or more
12. Secondary volts and full-load amperes, when product is a wound-rotor induction motor
13. Rated frequency expressed in one of the following terms: hertz (Hz), cycles per second (cps or c/s), ac-dc, (number of cycles)/dc (e.g., 60/dc), or ac only – or direct current; and, for a motor intended for use on a polyphase circuit, number of phases
14. Winding – straight shunt, stabilized shunt, compound, or series, for a direct-current motor;
15. Service factor (1.15 or less)
16. Amperes and horsepower at each speed, for a multi-speed motor other than a shaded-pole or a permanent-split-capacitor motor

ADDITIONAL INFORMATION

For additional information, see Pumping Equipment for Fire Service (QVUT) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 1004, "Electric Motors," and UL 1004A, "Fire Pump Motors."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Pump Motor."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMP CONTROLLERS, FIRE (QYZS)

GENERAL

This category covers fire pump controllers, circuit breakers for fire pump controllers, emergency manual operators and remote alarm panels.

Fire pump controllers are intended for starting and stopping centrifugal fire pumps and include nonautomatic and automatic types for electric-driven pumps and combined manual and automatic types for engine-driven pumps. Unless otherwise indicated in the individual Listings, these controllers are intended for use with spark-ignition (gasoline or natural gas) or die-

PUMPING EQUIPMENT FOR FIRE SERVICE (QVUT)

Pump Controllers, Fire (QYZS)—Continued

sel engines. Controllers suitable for use with spark-ignition internal combustion engines are intended for such engines installed prior to 1974.

These controllers are intended for installation and use in accordance with ANSI/NFPA 20, "Standard for the Installation of Stationary Pumps for Fire Protection."

Fire pump controllers intended for starting and stopping additive pump motors are marked "Additive Pump Controller" or "Limited Service Additive Pump Controller."

Controllers intended for electric-driven, standard-size centrifugal fire pumps are intended for use with squirrel-cage or wound-rotor motors rated 600 V or less.

Controllers intended for squirrel-cage motors may be for across-the-line starting or reduced-voltage starting as indicated in the individual Listings.

"Limited service controllers" are intended for across-the-line type squirrel-cage motors of 30 hp or less, 600 V or less. Authorities Having Jurisdiction should be consulted before installing controllers of these types.

Manually operable, open-type circuit breakers are intended for use within enclosures of fire pump controllers.

Emergency manual operators are intended for use with internal combustion engines.

Some controllers are suitable for use as service equipment and are so marked. Such marking is an integral part of other required markings.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 508, "Industrial Control Equipment," and ANSI/UL 218, "Fire Pump Controllers."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Fire Pump Controller," "Limited Service Controller," "Additive Pump Controller," "Limited Service Additive Pump Controller."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMP CONTROLLERS, FIRE, OVER 600 VOLTS (QZGR)**GENERAL**

This category covers fire pump controllers having ac voltage ratings in the range of 2.2 kV to 2.5 kV, 4.0 kV to 5.0 kV or 6.2 kV to 7.2 kV, intended for starting and stopping centrifugal fire pumps. These controllers are the automatic or nonautomatic type for electric-driven pumps.

These controllers are intended for installation and use in accordance with ANSI/NFPA 20, "Standard for the Installation of Stationary Pumps for Fire Protection."

These fire pump controllers are intended for use with squirrel-cage motors rated 7.2 kV or less.

These controllers have been investigated for use on three-phase circuits having available fault levels not exceeding the MVA rating appearing on the nameplate. The three-phase available symmetrical MVA is equal to the product of the available symmetrical rms short-circuit current, the line-to-line open-circuit voltage, and a phase factor of 1.73×10^6 .

These controllers are intended for across-the-line starting and for making and breaking the circuit when the motor is stalled; accordingly, they are tested at six times the continuous current rating of the controller at rated voltage.

Some fire pump controllers are provided with an integrally mounted surge arrester to meet the required impulse withstand.

Controllers suitable for use as service equipment are so marked. Such marking is an integral part of other required markings.

These controllers are so constructed that falling dirt or water dripping from the downward vertical does not interfere with the successful operation of the equipment.

Fire pump controllers are substantially complete when shipped from the factory and final acceptability for service does not depend upon assembly of parts in the field.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 218, "Fire Pump Controllers," ANSI/UL 347, "High Voltage

PUMPING EQUIPMENT FOR FIRE SERVICE (QVUT)

317

Pump Controllers, Fire, Over 600 Volts (QZGR)—Continued

Industrial Control Equipment," and ANSI/NFPA 20, "Standard for the Installation of Stationary Pumps for Fire Protection."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "High Voltage Fire Pump Controller" or "High Voltage Foam Pump Controller."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMP CONTROLLERS, FIRE, RESIDENTIAL (QZKE)**GENERAL**

This category covers fire pump controllers intended for starting, stopping and protecting centrifugal fire pumps in one- and two-family dwellings and manufactured homes. These controllers are the automatic or nonautomatic type for electric-driven pumps.

The equipment and systems employing these controllers are intended for installation and use in accordance with ANSI/NFPA 13D, "Standard for the Installation of Sprinkler Systems in One- and Two-Family Dwellings and Manufactured Homes."

Residential fire pump controllers are intended for use with squirrel-cage motors rated 250 V or less.

These controllers have been investigated for use on single-phase alternating-current circuits having available fault current levels not exceeding the short-circuit withstand rating appearing on the nameplate.

These controllers are intended for across-the-line starting and for making and breaking the circuit when the motor is stalled; accordingly, they are tested at six times the continuous current rating of the controller at rated voltage.

Controllers suitable for use as service equipment are so marked. Such marking is an integral part of other required markings.

These controllers are so constructed that falling dirt or water dripping from the downward vertical does not interfere with the successful operation of the equipment.

Residential pump controllers are substantially complete when shipped from the factory and final acceptability for service does not depend upon assembly of parts in the field.

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 218, "Fire Pump Controllers," ANSI/UL 508, "Industrial Control Equipment," and ANSI/NFPA 20, "Standard for the Installation of Stationary Pumps for Fire Protection," as applicable to limited-service fire pump controllers.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Residential Fire Pump Controller."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMPING EQUIPMENT FOR FIRE SERVICE FOR USE IN HAZARDOUS LOCATIONS (RAHW)

This category covers fire pumps, drivers, controllers and accessory equipment used in supplying water for fire protection purposes.

A fire pump unit generally includes the separately Listed fire pump, driver, controller, and other accessory equipment. The individually Listed products are intended to be installed and tested for acceptable perfor-

PUMPING EQUIPMENT FOR FIRE SERVICE FOR USE IN HAZARDOUS LOCATIONS (RAHW)

mance in accordance with ANSI/NFPA 20, "Standard for the Installation of Stationary Pumps for Fire Protection."

FIRE PUMP CONTROLLERS FOR USE IN HAZARDOUS LOCATIONS (RCYW) USE

This category covers fire pump controllers, circuit breakers for fire pump controllers, and emergency manual operators.

Fire pump controllers are intended for starting and stopping centrifugal fire pumps and include nonautomatic types and automatic types for electric-driven pumps and combined manual and automatic types for engine-driven pumps. Unless otherwise indicated, these controllers are intended for use with spark ignition (gasoline or natural gas) or diesel engines. Controllers suitable for use with spark ignition internal combustion engines are intended for such engines installed prior to 1974.

Controllers for electric-driven, standard-size centrifugal fire pumps are intended for use with squirrel-cage or wound-rotor motors rated 600 V or less.

Controllers for squirrel-cage motors may be used for across-the-line starting or reduced-voltage starting as indicated in the individual Listings.

Limited-service controllers are intended for across-the-line type squirrel-cage motors of 30 hp or less, 600 V or less. Authorities Having Jurisdiction should be consulted before installing controllers of these types.

Manually operable, open-type circuit breakers are intended for use within enclosures of fire pump controllers.

Emergency manual operators are intended for use with internal combustion engines.

Some controllers are suitable for use as service equipment and are so marked. Such marking is an integral part of other required marking.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standards used to investigate products in this category are ANSI/UL 508, "Industrial Control Equipment," and ANSI/UL 218, "Fire Pump Controllers."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Fire Pump Controller for Use in Hazardous Locations," "Limited Service Controller for Use in Hazardous Locations," "Foam Pump Controller for Use in Hazardous Locations," "Limited Service Foam Pump Controller for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMPS, ELECTRICALLY OPERATED, LIQUID (REUZ)

USE

This category covers submersible and nonsubmersible pumps intended for household, commercial or industrial use, including pumps for fountains, circulation, sewage, effluent, wells, irrigation, building sites (contractor type), sumps and general utility.

The liquids for which a pump has been investigated are marked on the unit or are included in the installation instructions provided with the unit, unless the pump is obviously intended for use with water only, such as an irrigation pump.

Pumps suitable for outdoor use and those for use with heated water are so marked.

REBUILT PRODUCTS

This category also covers submersible and nonsubmersible pumps that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt submersible and nonsubmersible pumps are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt submersible and nonsubmersible pumps are subject to the same requirements as new submersible and nonsubmersible pumps.

RELATED PRODUCTS

PUMPS, ELECTRICALLY OPERATED, LIQUID (REUZ)

Equipment covered under this category has not been investigated for use in hazardous (classified) locations as defined in ANSI/NFPA 70, "National Electrical Code." Reference to the Hazardous Locations Equipment Directory should be made for equipment that has been investigated for use in hazardous (classified) locations.

The products covered in this category have not been investigated with regard to the effect of their use with combustible or flammable liquids, corrosive liquids, or aqueous solutions containing corrosive materials. Such pumps are covered under Flammable Liquid Pumps (RBQR) and Power-operated Pumps (RBOG).

Similar equipment intended for use in hospital or medical offices in connection with patient treatment is covered under Medical and Dental Equipment, Professional (KFBQ).

These pumps have not been investigated for use with or in proximity to swimming pools or spas. Such pumps are covered under Swimming Pool and Spa Equipment, Pumps (WCSX).

Pumping equipment for fire service is covered under the category of the same title (QVUT).

Pumps covered in this category have not been investigated for contact with drinking water. Pumps that have been investigated only for contact with drinking water are Classified in accordance with the requirements of ANSI/NSF 61, "Drinking Water System Components - Health Effects" and are covered under Drinking Water System Components (FDNP).

For evaporative cooler pumps, see Evaporative Cooler Retrofit Pumps (AGIS).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 778, "Motor-Operated Water Pumps."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sump Pump," "Water Circulating Pump" or "Sewage Pump," or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PURGING AND PRESSURIZING CONTROLS AND ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS (RFPW)

GENERAL

This category covers purging and pressurizing controls and accessory parts intended to be connected to electrical equipment enclosures that are to be purged and pressurized with clean air or nonflammable gas in accordance with ANSI/NFPA 496, "Standard for Purged and Pressurized Enclosures for Electrical Equipment." This category does not cover the purged or pressurized electrical equipment. Purged or pressurized electrical equipment is covered under the individual product category for the particular type of equipment.

TYPES

ANSI/NFPA 496 specifies the following pressurization types:

Type X — Reduces the classification within an enclosure from Division 1 to unclassified

Type Y — Reduces the classification within an enclosure from Division 1 to Division 2

Type Z — Reduces the classification within an enclosure from Division 2 to unclassified

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured

PURGING AND PRESSURIZING CONTROLS AND ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS (RFPW)

under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY*] FOR USE IN HAZARDOUS LOCATIONS IN ACCORDANCE WITH THE NATIONAL FIRE PROTECTION ASSOCIATION STANDARD FOR PURGED AND PRESSURIZED ENCLOSURES FOR ELECTRICAL EQUIPMENT NFPA 496

* PURGE CONTROL or PURGE CONTROL ACCESSORY, or other appropriate product name as shown in the individual Classifications

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

QUICK-CONNECT TERMINALS (RFWV)

GENERAL

This category covers quick-connect tabs and quick-connect connectors constructed from plain or plated copper alloy or of nickel or nickel alloy, herein referred to as quick-connect terminals. They are additionally defined as follows:

Quick-connect Wiring Termination — An electrical connection consisting of a male tab and a female connector that can be readily engaged or disengaged without the use of a tool.

Terminal — An electrical connecting device consisting of either a connector or tab.

Tab — A terminal that is inserted in a connector, manufactured to specified tolerances, and intended to mate with a connector to establish a connection in an electrical circuit.

Connector — A terminal that is pushed onto a tab.

Quick-connect terminals are intended for use with one or two copper conductors, 22–10 AWG. Ampacity for a two-wire combination is limited to the current associated with the largest of the two conductors.

Quick-connect terminals are not intended for disconnecting under load.

PRODUCT MARKINGS

Cartons containing quick-connect terminals are marked to indicate whether the tab or connector is suitable for the internal wiring of appliances, for field termination of conductors to electrical equipment, or for both.

Cartons containing quick-connect terminals are marked to indicate their suitability for termination of copper wire only.

Cartons containing quick-connect terminals designed for the field termination of conductors to electrical equipment are marked to indicate that such electrical equipment is to be provided with strain relief and is to be marked with instructions for effecting the strain relief and also reference the specific mating part (tab or connector) to be used.

Cartons containing insulated quick-connect terminals are marked with a voltage rating and the maximum operating temperature for which they have been found acceptable. The marked voltage rating may be 300 V maximum; 600 V maximum; or 600 V maximum building wire, 1000 V maximum signs or luminaires. An insulated terminal is additionally marked with the maximum operating temperature.

Quick-connect terminals to be assembled to wire using a special tool are intended to be assembled using the tool specified by the manufacturer or in the shipping carton. Such tools are identified by an appropriate marking.

RELATED PRODUCTS

Quick-connect tabs or connectors constructed from plated steel, or unplated steel of a corrosion-resistant alloy are covered under Quick-connect Terminals (RFWV2).

The separate molded insulating portion of a quick-connect terminal that is applied after its assembly to the conductor is covered under Connector Housings (ECCT2). Integral insulators to the quick-connect terminal are covered under this category as part of the quick-connect terminal.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 310, "Electrical Quick-Connect Terminals."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and

QUICK-CONNECT TERMINALS (RFWV)

319

the product name "Quick-connect Tab" or "Quick-connect Connector," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RACEWAY (RGKT)

CELLULAR CONCRETE FLOOR RACEWAY (RGYR)

USE AND INSTALLATION

This category covers cellular concrete floor raceway designed for the installation of electrical conductors in accordance with Article 372 of ANSI/NFPA 70, "National Electrical Code." This raceway is intended for installation and use in accordance with the following information.

Listed cellular concrete floor raceway has fire-resistance ratings, as used in building construction, only when assembled in the manner described in the designs covered under Precast Concrete Units (CFTV). Where header ducts and junction boxes are involved, these items must be shown in the design drawing in order that the associated fire-resistance rating can be considered appropriate.

Installation instructions are supplied by the manufacturer for the use of the general contractor, erector, electrical contractor, inspector and others concerned with the installation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 263, "Fire Tests of Building Construction and Materials."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cellular Concrete Floor Raceway."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Cellular Concrete Floor Raceway Fittings (RHLZ)

USE AND INSTALLATION

This category covers cellular concrete floor raceway fittings designed for the installation of electrical conductors in accordance with the manufacturer's installation instructions. These fittings are also intended for installation and use in accordance with the following information and the limitations specified in Cellular Concrete Floor Raceway (RGYR).

Listed cellular concrete floor raceway fittings have fire-resistance ratings, as used in building construction, only when assembled in the manner described in the designs covered under Precast Concrete Units (CFTV). Where fittings are involved, these items must be shown in the design drawing in order that the associated fire-resistance rating can be considered appropriate.

Installation instructions are supplied by the manufacturer for the use of the general contractor, erector, electrical contractor, inspector and others concerned with the installation.

ADDITIONAL INFORMATION

For additional information, see Cellular Concrete Floor Raceway (RGYR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 263, "Fire Tests of Building Construction and Materials."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cellular Concrete Floor Raceway Fitting," "End Closure" or "Wall Elbow," or other appropriate product name as shown in the individual Listings.

Cellular Concrete Floor Raceway Fittings (RHLZ)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CELLULAR METAL FLOOR RACEWAY (RHZX)

USE AND INSTALLATION

This category covers cellular metal floor raceway designed for the installation of electrical conductors in accordance with Article 374 of ANSI/NFPA 70, "National Electrical Code." This raceway is intended for installation and use in accordance with the following information.

Raceway may be factory constructed or consist of field-assembled components. Each component of field-assembled raceway is marked to identify its relation to the other components of the raceway.

Listed cellular metal floor raceway has fire-resistance ratings, as used in building construction, only when assembled in the manner described in the Designs covered under Steel Floor and Form Units (CHWX). Where header ducts and junction boxes are involved, these items must be shown in the Design drawing in order that the associated fire-resistance rating can be considered appropriate.

Installation instructions are supplied by the manufacturer for the use of the general contractor, erector, electrical contractor, inspector, and others concerned with the installation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 209, "Cellular Metal Floor Raceways and Fittings."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cellular Metal Floor Raceway," "Cellular Metal Floor Raceway Bottom" or "Cellular Metal Floor Raceway Cover Plate for Use with Listed Raceway Bottom," or other appropriate product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Cellular Metal Floor Raceway Fittings (RINV)

USE AND INSTALLATION

This category covers cellular metal floor raceway fittings designed for the installation of electrical conductors in accordance with the manufacturer's installation instructions. These fittings are also intended for installation and use in accordance with the following information and the limitations specified in Cellular Metal Floor Raceway (RHZX).

Raceway fittings may be factory constructed or consist of field-assembled components. Each component of a field-assembled raceway is marked to identify its relation to the other components of the raceway.

Listed cellular metal floor raceway fittings have fire-resistance ratings, as used in building construction, only when assembled in the manner described in the designs covered under Steel Floor and Form Units (CHWX). Where fittings are involved, these items must be shown in the design drawing in order that the associated fire-resistance rating can be considered appropriate.

Installation instructions are supplied by the manufacturer for the use of the general contractor, erector, electrical contractor, inspector, and others concerned with the installation.

ADDITIONAL INFORMATION

For additional information, see Cellular Metal Floor Raceway (RHZX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 209, "Cellular Metal Floor Electrical Raceways and Fittings."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the

UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cellular Metal Floor Raceway Fitting," "End Closure" or "Grommet," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Cellular Metal Floor Raceway Fitting Cover Assemblies Classified for Use with Specified Equipment (RIOJ)

USE AND INSTALLATION

This category covers Listed cellular metal floor raceway fitting cover assemblies Classified for use with specified Listed cellular metal floor raceway fittings (see RINV), and Listed cellular metal floor raceway fittings Classified for use with specified Listed cellular metal floor raceway fitting cover assemblies, in accordance with the details described in the Classification Mark.

Cellular metal floor raceway fitting cover assemblies may be factory constructed or consist of field-assembled components. Each component of a field-assembled raceway cover assembly is marked to identify its relation to the other components of the raceway.

Listed cellular metal floor raceway fittings have fire-resistance ratings, as used in building construction, only when assembled in the manner described in the designs covered under Steel Floor and Form Units (CHWX). Where fittings are involved, these items must be shown in the design drawing in order that the associated fire-resistance rating can be considered appropriate.

Installation instructions are supplied by the manufacturer for the use of the general contractor, erector, electrical contractor, inspector, and others concerned with the installation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 209, "Cellular Metal Floor Raceway and Fittings."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the complete Listing Mark for Cellular Metal Floor Raceway Fittings (RINV) and the following additional information:

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

STRUT-TYPE CHANNEL RACEWAY (RIUU)

USE

This category covers strut-type channel raceway for installation in dry locations only in accordance with Article 384 of ANSI/NFPA 70, "National Electrical Code." This raceway is intended for installation and use in accordance with the following information.

PRODUCT MARKINGS

The number, type and size of conductors which may be installed in the Listed raceway is marked on the raceway, on the installation instruction sheet or on the package in which it is shipped.

Raceway for use with lighting fixtures and/or other devices is marked to this effect on the raceway or on the package in which it is shipped.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 5B, "Strut-Type Channel Raceways and Fittings."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Strut-Type Channel Raceway," "Strut-Type Channel Raceway Base" or "Strut-Type Channel Raceway Closure Strip."

The Listing Mark is applied to each length or package of complete raceway, raceway closure strip (cover) or raceway base.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Strut-type Channel Raceway Fittings (RIYG)

USE

This category covers fittings, such as adapters, boxes, elbows and tees, intended for use with the same manufacturer's strut-type channel raceway. These fittings are intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code" the manufacturer's installation instructions. These fittings are also intended for installation and use in accordance with the following information and the limitations specified in Strut-type Channel Raceway (RIYG).

PRODUCT MARKINGS

A fitting for supporting a fixture is marked "Suitable for a fixture not exceeding ____ kg (lb)." The specified fixture weight should not exceed 22.7 kg (50 lb). The marking is readily visible after the fitting has been mounted.

ADDITIONAL INFORMATION

For additional information, see Strut-type Channel Raceway (RIYG) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 5B, "Strut-Type Channel Raceways and Fittings."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Strut-Type Channel Raceway Fitting," "Elbow" or "Tee," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SURFACE METAL RACEWAY (RJBT)

USE

This category covers surface metal raceway intended for installation in accordance with Article 386 of ANSI/NFPA 70, "National Electrical Code" (NEC). This raceway is intended for installation and use in accordance with the following information.

GROUNDING

Surface metal raceway is considered suitable for grounding for use in circuits over and under 250 V and where installed in accordance with the NEC.

PRODUCT MARKINGS

The number, type and size of conductors which may be installed in the Listed raceway is marked on the raceway, on the installation instruction sheet or on the package in which it is shipped.

Raceway for use with lighting fixtures and/or other devices is marked to this effect on the raceway or on the package in which it is shipped.

RELATED PRODUCTS

Some luminaires covered under Fluorescent Surface-mounted Luminaires (IEUZ) are suitable for use as raceways.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 5, "Surface Metal Raceways and Fittings."

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surface Metal Raceways Fitting," "Hanger" or "Side Feed," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SURFACE NONMETALLIC RACEWAY (RJTX)

USE

This category covers surface nonmetallic raceway intended for installation in accordance with Article 388 of ANSI/NFPA 70, "National Electrical Code." This raceway is intended for installation and use in accordance with the following information.

PRODUCT MARKINGS

The number, type and size of conductors which may be installed in the Listed raceway is marked on the raceway, on the installation instruction sheet or on the package in which it is shipped.

RELATED PRODUCTS

Some luminaires covered under Fluorescent Surface Mounted Luminaires (IEUZ) are suitable for use as raceway.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 5A, "Nonmetallic Surface Raceways and Fittings."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured

Surface Nonmetallic Raceway (RJTX)—Continued

under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surface Nonmetallic Raceway," "Surface Nonmetallic Raceway Base for Use with Labeled Raceway Cover" or "Surface Nonmetallic Raceway Cover for Use with Labeled Raceway Base."

The Listing Mark is applied to each length or package of complete raceway, raceway cover or raceway base.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Surface Nonmetallic Raceway Fittings (RJYT)

USE

This category covers surface nonmetallic raceway fittings intended for installation in accordance with the manufacturer's installation instructions. These fittings are also intended for installation and use in accordance with the following information and the limitations specified in Surface Nonmetallic Raceway (RJTX).

PRODUCT MARKINGS

A fitting for supporting a fixture is marked "Suitable for a fixture not exceeding ____ kg (lb)." The specified fixture weight should not exceed 22.7 kg (lb). The marking is readily visible after the fitting has been mounted.

ADDITIONAL INFORMATION

For additional information, see Surface Nonmetallic Raceway (RJTX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 5A, "Nonmetallic Surface Raceways and Fittings."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surface Nonmetallic Raceway Fitting," "Butt Joint Cover" or "End Cap," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SURFACE RACEWAY TRANSITION FITTINGS
CLASSIFIED FOR USE WITH SPECIFIED
PRODUCTS (RKBA)

USE AND INSTALLATION

This category covers surface metal raceway transition fittings Classified for use with specific Listed surface metal raceway, in accordance with the product installation instructions provided with the product and the details described in the Classification Mark. Transition fittings are intended only for use in transitioning from (connecting together) the Classified company's Listed raceway to another company's Listed raceway.

Installation instructions are provided with the smallest unit container. These instructions indicate the method of mounting and securing the fitting to raceway sections, and include a scale drawing of the raceway, including identification of the raceway material, and provide instructions on the means by which the fitting is intended to be connected. The fitting, smallest unit container or installation instructions are marked with the maximum number, type and size of insulated conductors for which it is intended.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 5, "Surface Metal Raceways and Fittings."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product and on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these

Surface Raceway Transition Fittings Classified for Use with
Specified Products (RKBA)—Continued

products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNDERFLOOR RACEWAY (RKCZ)

USE

This category covers metal underfloor duct systems designed for use as raceway for the installation of wire and cable in accordance with Article 390 of ANSI/NFPA 70, "National Electrical Code," and the manufacturer's installation instructions. This raceway is intended for installation and use in accordance with the following information.

The raceway may consist of factory-constructed raceway or field-assembled components forming a raceway. Each component is provided with installation instructions to identify its relation to the other components of the raceway.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 884, "Underfloor Raceways and Fittings."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Underfloor Raceway."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Underfloor Raceway Fittings (RKQX)

USE

This category covers underfloor raceway fittings for installation in underfloor raceway systems in accordance with the manufacturer's installation instructions. These fittings are also intended for installation and use in accordance with the following information and the limitations specified in Underfloor Raceway (RKCZ).

Each component is provided with installation instructions to identify its relation to the other components of the raceway system.

ADDITIONAL INFORMATION

For additional information, see Underfloor Raceway (RKCZ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 884, "Underfloor Raceways and Fittings."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Underfloor Raceway Fitting," "Raceway Adapter" or "Saddle Support," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RADIO DEVICES FOR USE IN HAZARDOUS LOCATIONS (RMGR)

RADIO DEVICES FOR USE IN HAZARDOUS LOCATIONS (RMGR)

GENERAL

This category covers portable signal receivers, portable signal and voice receivers, and portable voice transceivers.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Radio Device for Use in Hazardous Locations" (or "RAD DEV for Use in Hazardous Locations" or "RAD DEV for Use in HAZ LOC").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RADIO DEVICES, REBUILT FOR USE IN HAZARDOUS LOCATIONS (RMGZ)

USE

This category covers rebuilt portable signal receivers, portable signal and voice receivers and portable voice transceivers. These products are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt products are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt products are subject to the same requirements as new products.

PRODUCT MARKINGS

These products are marked with the following:

The month and year that the product was repaired or rebuilt.

The standard number and edition to which the product was rebuilt, as referenced under **REQUIREMENTS**.

RELATED PRODUCTS

See Radio Devices for Use in Hazardous Locations (RMGR).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II, and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standards used to investigate products in this category are one of the following as appropriate:

ANSI/UL 913, "Intrinsically Safe Apparatus and Associated Apparatus for Use in Class I, II, and III, Division 1, Hazardous (Classified) Locations" (Fifth Edition)

ANSI/UL 913, "Intrinsically Safe Apparatus and Associated Apparatus for Use in Class I, II, and III, Division 1, Hazardous (Classified) Locations" (Sixth Edition)

ANSI/UL 913, "Intrinsically Safe Apparatus and Associated Apparatus for Use in Class I, II, and III, Division 1, Hazardous (Classified) Locations" (Seventh Edition)

UL 1604, "Electrical Equipment for Use in Class I and II, Division 2, and Class III Hazardous (Classified) Locations" (Third Edition)

ANSI/ISA-S12.12.01, "Nonincendive Electrical Equipment for Use in Class I and II, Division 2 and Class III, Divisions 1 and 2 Hazardous (Classified) Locations" (2000)

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Rebuilt Radio Device for Use in Hazardous Locations" (or "Rebuilt RAD DEV for Use in Hazardous Locations" or "Rebuilt RAD DEV for HAZ LOC") or "Repaired Radio Device for Use in Hazardous Locations" (or "Repaired RAD DEV for Use in Hazardous Locations" or "Repaired RAD DEV for HAZ LOC").

RADIO DEVICES, REBUILT FOR USE IN HAZARDOUS LOCATIONS (RMGZ)

323

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RADIO DEVICES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (RMJA)

GENERAL

This category covers portable signal receivers, portable signal and voice receivers, and portable voice transceivers.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Radio Device for Use in Hazardous Locations" (or "RAD DEV for Use in Hazardous Locations" or "RAD DEV for Use in HAZ LOC").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RAISED-FLOOR WIREWAY (RQFW)

USE AND INSTALLATION

This category covers raised-floor wireway, which is an integral part of the raised floor used in computer rooms. This wireway is intended for installation in accordance with Articles 376 and 645 of ANSI/NFPA 70, "National Electrical Code" (NEC), and the manufacturer's installation instructions.

Raised-floor wireway is of such size that shipment fully assembled is impractical. To supplement the general requirements given in the applicable articles of the NEC, installation instructions describing or illustrating the proper assembly, mounting, and connection of the parts are required to be provided by the manufacturer. The acceptability of the assembled parts in the field is determined by the Authority Having Jurisdiction.

Raised-floor wireway installed in accordance with the product markings and manufacturer's instructions is suitable for use as equipment grounding conductors.

PRODUCT MARKINGS

Markings are provided to clearly indicate the parts that combine to form the complete assembly.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 870, "Wireways, Auxiliary Gutters and Associated Fittings," and ANSI/NFPA 75-1981, "Standard for the Protection of Information Technology Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Raised Floor Wireway."

The Listing Mark is applied to the cover of the line-voltage wireway.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLE CLOSURES (RQYF)

GENERAL

This category covers receptacle closures for use with receptacles of ANSI/NEMA WD6-1997 configurations 1-15R and 5-15R. Receptacle closures are products molded of insulating material that are intended to be used with a receptacle to cover the outlet slots a) to reduce drafts through a receptacle on an outside wall of a dwelling or b) to restrict a child's access to energized contacts.

Receptacle closures that are intended to reduce drafts through a receptacle on an outside wall of a dwelling and that are not intended to restrict a child's access to energized contacts are packaged together with an insulating gasket to be fitted behind the receptacle cover plate. The packaging of such closures are marked to indicate their intended use.

Receptacle closures that are intended to restrict a child's access to energized contacts are not a substitute for adult supervision. The packaging of such closures contains a cautionary marking to this effect.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 2255, "Receptacle Closures."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product when shape or size permits or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Closure" or "Receptacle Closure" or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLE-PLUG COMBINATIONS FOR USE IN HAZARDOUS LOCATIONS (RRAT)

RECEPTACLE-ENCLOSURE COMBINATIONS WITH PLUGS FOR USE IN HAZARDOUS LOCATIONS (RREG)

GENERAL

This category covers receptacle-enclosure combinations with plugs, which are intended for use in one or more of the following hazardous (classified) locations, as indicated on the product, in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC): Class I, Groups A, B, C and D; Class II, Groups E, F and G.

These products are (1) completely assembled at the factory, or (2) intended for final assembly in the field using components specified in the product Classification. Assembly of the receptacle-enclosure combinations with plugs in the field is intended to be in accordance with the instructions provided with the product by the manufacturer.

The enclosures covered under this category are for threaded rigid conduit connection, and the conductors between the receptacle and the enclosure are factory sealed. The plugs are for use with extra-hard-usage flexible cord having a grounding conductor.

The flexible cord connecting to the plugs should be frequently inspected and replaced when necessary. Terminal connection to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at the current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where insulation may be impaired by moisture, dirt or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to the conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

Receptacle-enclosure combinations with plugs Classified for Class II, Group F locations are intended for use only in atmospheres containing electrically-nonconductive dusts, as defined in Article 500 of the NEC.

RECEPTACLE-PLUG COMBINATIONS FOR USE IN HAZARDOUS LOCATIONS (RRAT)

Receptacle-Enclosure Combinations with Plugs for Use in Hazardous Locations (RREG)—Continued

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

RECEPTACLE-ENCLOSURE COMBINATION WITH PLUG FOR USE IN HAZARDOUS LOCATIONS AS TO EXPLOSION AND FIRE HAZARD ONLY CLASS __, GROUP __ Control No. _____

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLE-PLUG COMBINATION ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS (RRHS)

GENERAL

This category covers receptacles Classified for use only with Listed plugs, and plugs Classified for use only with Listed receptacles, as specified in the instructions provided with the product. The plugs are for use with extra-hard-usage flexible cord having a grounding conductor.

The flexible cord should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which plugs and receptacles will be permitted for use. It is recognized that portable equipment should be used only where necessary.

Receptacles and plugs Listed for use in Class II, Group F locations are for use only in atmospheres containing electrically-nonconductive dusts as defined in Article 500 of ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY*] FOR USE WITH LISTED * SPECIFIED IN THE INSTRUCTIONS PROVIDED WITH THE PRODUCT Control No. _____

* RECEPTACLE or PLUG

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLES WITH PLUGS FOR USE IN HAZARDOUS LOCATIONS (RROR)

GENERAL

This category covers receptacles with plugs for use as follows:

**RECEPTACLE-PLUG COMBINATIONS FOR USE IN
HAZARDOUS LOCATIONS (RRAT)**
**Receptacles with Plugs for Use in Hazardous Locations
(RROR)—Continued**

Receptacles with plugs Listed under Class I and Class II groups for Division 1 locations are provided with receptacle conduit boxes for threaded rigid conduit connection, and the conductors between receptacles and conduit boxes are factory sealed. The plugs are for use with extra-hard-usage flexible cord having a grounding conductor. Receptacles Listed for Class I, Division 2 locations only are intended for use with general purpose enclosures for supply connections. The supply conductors are factory sealed in the receptacles. The plugs for use with such receptacles are suitable for Class I, Division 1 locations.

Receptacles with plugs for groups under Class I hazardous locations have been subjected to endurance tests and overload operation tests in the presence of the specific flammable vapor-air atmospheres.

Receptacles with plugs for any of the groups under Class II hazardous locations have dust-tight terminal boxes and have been subjected to endurance tests and overload operation tests while heavily blanketed with combustible dust. Receptacles with plugs Listed for Class II, Group F locations are intended for use only in atmospheres containing electrically-nonconductive dusts as defined in Article 500 of ANSI/NFPA 70, "National Electrical Code."

The flexible cord should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt or other foreign material.

Some receptacles and plugs are Listed for "Reverse Service" applications on marine vessels, for conformity to the installation and use provisions of the United States Coast Guard (USCG) Electrical Engineering Regulations 46CFR110, "General Provisions," 46CFR111, "Electric Systems – General Requirements," 46CFR112, "Emergency Lighting and Power Systems," and 46CFR113, "Communication and Alarm Systems and Equipment," as identified in the individual Listings and marked on the product. Reverse service plugs and receptacles are not suitable for applications other than those governed by the above USCG regulations.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Plug for Hazardous Locations," "Receptacle Assembly for Hazardous Locations," "Reverse Service Plug for Hazardous Locations" or "Reverse Service Receptacle for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RECEPTACLES WITH PLUGS INTERLOCKED
WITH CIRCUIT BREAKERS FOR USE IN
HAZARDOUS LOCATIONS (RSBZ)**
GENERAL

This category covers receptacles with plugs interlocked with circuit breakers as follows:

Receptacles with plugs interlocked with circuit breakers Listed under Class I and Class II groups are constructed with an interlocked circuit breaker and plug so that the plug cannot be withdrawn or inserted when the circuit breaker is closed. These devices have provision for connection of threaded rigid conduit to the circuit breaker compartments and the plugs are for use with extra-hard-usage flexible cord having a grounding conductor.

Receptacles with plugs interlocked with circuit breakers Listed for Class II, Group F locations are intended for use only in atmospheres containing electrically nonconductive dusts as defined in Article 500 of ANSI/NFPA 70, "National Electrical Code."

**RECEPTACLE-PLUG COMBINATIONS FOR USE IN
HAZARDOUS LOCATIONS (RRAT)**

325

**Receptacles with Plugs Interlocked with Circuit Breakers for
Use in Hazardous Locations (RSBZ)—Continued**

The flexible cord connecting to these devices should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plugs and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Receptacle Interlocked with Circuit Breaker for Hazardous Locations" or "Plug for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RECEPTACLES WITH PLUGS
INTERLOCKED WITH SWITCHES FOR USE
IN HAZARDOUS LOCATIONS (RSPX)**
GENERAL

This category covers receptacles that are (1) completely assembled at the factory or (2) intended for final assembly in the field using components specified in the individual Listings. Final assembly of receptacles in the field is intended to be done in accordance with instructions provided with the product by the manufacturer.

Receptacles with plugs interlocked with switches Listed under Class I and Class II groups are constructed with an interlocked switch and plug so that the plug cannot be withdrawn or inserted when the switch is closed. These devices have provision for connection of threaded rigid metal conduit to the switch compartments. The plugs are for use with extra-hard-usage flexible cord having a grounding conductor.

Receptacles with plugs interlocked with switches Listed for Class II, Group F locations are intended for use only in atmospheres containing electrically nonconductive dusts as defined in Article 500 of ANSI/NFPA 70, "National Electrical Code."

Devices that are provided with a factory seal of conductors between the switch and the conduit box are so identified on the individual products.

The flexible cord connecting to these devices should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

Receptacles with Plugs Interlocked with Switches for Use in Hazardous Locations (RSPX)—Continued

“Receptacle Cover Assembly Interlocked with Switch for Hazardous Locations” or “Body Assembly for Hazardous Locations.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLE-PLUG COMBINATIONS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (RSUN)

RECEPTACLES WITH PLUGS INTERLOCKED WITH SWITCHES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (RSZD)

USE

This category covers receptacles that are (1) completely assembled at the factory, or (2) intended for final assembly in the field using components specified in the individual Listings. Final assembly of receptacles in the field is intended to be done in accordance with instructions provided with the product by the manufacturer. Care should be taken to ensure that minimum IP ratings are maintained for field-assembled increased safety enclosures.

Receptacles with plugs interlocked with switches are constructed with an interlocked switch and plug so that the plug cannot be withdrawn or inserted when the switch is closed. These devices have provision for connection of threaded rigid metal conduit or other suitable wiring method to the switch compartments. The plugs are for use with Type S, SO, ST or STO flexible cord having a grounding conductor.

The flexible cord connecting to these devices should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should not be used where the insulation may be impaired by moisture, dirt or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices are permitted for use. Portable equipment should be used only where necessary.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 1682, “Plugs, Receptacles, and Cable Connectors of the Pin and Sleeve Type.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Receptacle Interlocked with Switch for Hazardous Locations,” “Plug for Hazardous Locations,” “Receptacle Cover Assembly Interlocked with Switch for Hazardous Locations,” “Body Assembly for Hazardous Locations,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLES (RTDV)

GENERAL

This category covers the following attachment plug products: 1) receptacles for plugs and attachment plugs, 2) stage-type receptacles, 3) combination receptacles with switches, and 4) utility service receptacles.

RECEPTACLES (RTDV)

The above products include the following:

Appliance, Equipment or Fixture Outlet — A female contact device for mounting on utilization equipment.

Receptacle — A female contact device intended to be installed on a wiring system to supply current to utilization equipment.

This category may also cover the following types of products of a non-standard configuration blade or slot configuration type, which are part of a manufacturer's line of wiring devices, including receptacles. Other similar devices are covered under Attachment Plugs, Fuseless (AXUT), Attachment Plugs with Switches (AYIR) and Attachment Plugs with Overload Protection (AYVZ).

Attachment Plug — A male contact device for the temporary connection of a flexible cord or cable to a receptacle, cord connector, or other female outlet device.

Cord Connector — A female contact device intended to be wired on flexible cord for use as an extension from an outlet to make a detachable electrical connection to an attachment plug or, as an appliance coupler, to a male inlet.

Male Inlet (Equipment Inlet, Motor Attachment Plug) — A male contact device intended to be mounted on utilization equipment to provide a detachable electrical connection to an appliance coupler or cord connector.

This category does not cover devices intended to be molded on flexible cord or wire, or unassembled devices intended to be factory assembled on flexible cord or wire. Such devices are complete only after installation of the flexible cord or wire and are investigated as part of a complete assembly.

RATINGS

These devices are rated 600 V or less, ac or dc; and 200 A or less. They may also be rated in horsepower as noted in the individual product categories.

Devices rated 250 V are tested on circuits involving a nominal potential to ground of 125 V. Devices having other voltage ratings are tested on circuits involving full rated potential to ground, except for multiphase rated devices, which are tested on circuits consistent with their voltage ratings (e.g., a 120/208 V, 3-phase device is tested on a circuit involving 120 V to ground).

Devices marked “Not for Current Interruption” are not intended to be disconnected while under load. They are intended to be installed in series with switches or other appropriate disconnecting means.

TERMINALS

The terminations of devices intended to be wired to flexible cord are based on the use of flexible cord or cable having copper conductors, in accordance with Article 400 of ANSI/NFPA 70, “National Electrical Code” (NEC). The ampacity of the flexible cord and cable is based on Section 400.5, Tables 400.5(A) and 400.5(B). The conductors are sized as specified on the product or in the manufacturer's instructions provided with the device. The terminations are based on the use of 60°C flexible cord or cable.

Unless stated otherwise in the individual product categories, the termination provisions of all other devices are based upon the use of 60°C insulated conductors in circuits rated 100 A or less, and the use of 75°C insulated conductors in circuits rated more than 100 A, as specified in Table 310.16 of the NEC.

GROUNDING

Devices having a terminal identified by a green-colored finish, the words “Green” or “Ground” (or the letters “G” or “GR”), or the symbol with or without the circle are grounding types. The blade, pin or contact member

connected to this terminal is for equipment grounding only.

ENCLOSURES

In general, devices having integral enclosures or installed as intended have been investigated for use indoors, in dry locations. All such Listed products provide a degree of protection against ordinary corrosion, accidental contact with live parts, and a limited amount of falling dirt. Some devices have been investigated for use in other operating environments when unmated and when mated with other devices in the same manufacturer's line of products. They are marked with one of the type designations 2 through 6, 12 and 13 indicated in Electrical Equipment for Use in Ordinary Locations (AALZ). All outdoor types provide a degree of protection against rain, snow and sleet. Outdoor types are also suitable for use indoors if they meet the environmental conditions present. A device that complies with the requirements for more than one type of enclosure may be marked with multiple designations. Complete use and mating information is provided in the installation instructions provided with each device.

RECEPTACLES (RTDV)

WET AND DAMP LOCATIONS

Receptacles provided with integral outlet box covers or cover plates for flush-mounted wiring devices may be identified for use in damp or wet locations as defined in the Nec. If the cover provides protection only when it is closed, the combination is marked "Wet Location When Cover Closed" and may be marked "Damp Location."

RELATED PRODUCTS

This category does not cover pin-and-sleeve-type devices; see Attachment Plugs, Pin-and-Sleeve Type (QLHN) and Receptacles, Pin-and-Sleeve Type (QLIW).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLES FOR PLUGS AND ATTACHMENT PLUGS (RTRT)

GENERAL

This category covers general use receptacles for use in wiring systems recognized by ANSI/NFPA 70, "National Electrical Code" (NEC), and outlets for use in appliances and fixtures. It also covers some attachment plugs, male inlets, and cord connectors with nonstandard slot or blade configurations which are part of a line of wiring devices including receptacles. Other similar attachment plug devices are covered under Attachment Plugs (AXGV).

PRODUCT TYPES

Flush Receptacles — Flush receptacles are intended for mounting in or on an outlet box, an outlet box cover or a cover plate for flush-mounted wiring devices for fixed installation on a branch circuit. They are not intended to be field mounted on outlet box covers solely by the center cover plate screw. They may be employed in damp and wet locations when installed in an appropriate enclosure. See Metallic Outlet Boxes (QCIT) and Nonmetallic Outlet Boxes (QCMZ) for information on outlet boxes and covers suitable for use in damp and wet locations.

Self-grounding Receptacles — Self-grounding receptacles have special integral means for establishing the grounding circuit between device yokes and (1) the grounded metallic flush-type boxes, or (2) the grounded nonmetallic flush device boxes employing a grounding strap and terminal; without the use of bonding jumpers as permitted by Section 250.146(B) (formerly Exception No. 2 to Section 250-74) of the NEC. These devices are identified by the statement: "This receptacle is Listed by Underwriters Laboratories Inc. and has a special pressure spring clip to establish the grounding circuit between device yokes and (1) the grounded metallic flush-type boxes, or (2) the grounded nonmetallic flush device boxes employing a grounding strap and terminal; without the use of bonding jumpers as permitted by Section 250.146(B) of the National Electrical Code" (or equivalent wording) which may appear on the device or shipping carton.

Isolated Ground Receptacles — Grounding-type receptacles in which the grounding terminals are purposely insulated from the mounting means of receptacles and associated metal cover plates as permitted by Section 250.146(D) (formerly Exception No. 4 to Section 250-74) of the NEC are so identified by an orange triangle marked on the face of the receptacle.

Receptacles for Use in Hospitals — Receptacles for hospital use in other than hazardous (classified) locations in accordance with Article 517 of the NEC are identified (1) by the marking "Hospital Only" (used to identify a specific grounding locking configuration rated 20 A, 125 V used for the connection of mobile x-ray and similar equipment) or (2) by the marking "Hospital Grade" and a green dot on the face of the receptacle. The identification is visible during installation on the wiring system or, in the case of the appliance outlet, after installation on the utilization equipment.

Tamper-resistant Receptacles — Receptacles for use in dwelling units in accordance with the NEC, specifically, Section 406.11, or pediatric patient care areas in accordance with Article 517 of the NEC. Tamper-resistant receptacles are identified by the words "Tamper Resistant" or the letters "TR" where they will be visible after installation with the cover plate removed. Tamper-resistant receptacles may be of the general grade, hospital grade or isolated ground type.

Self-contained Receptacles — Self-contained receptacles include an enclosure and mounting means intended for flush mounting without the use of a separate flush device or other outlet box. They are intended for use with Types NM and NMC cable in accordance with the NEC, specifically Sections 300.15(E), 334.40(C), 545.10, 550.15(I), 551.47(E) Exception No. 1 and 552.48(E) Exception No. 1 and are so identified by specific marking on the carton in which they are packed. Devices employing insulation displacement terminals are intended for assembly with specific installation tools only. Reference must be made to the installation instructions regarding the proper tool and the number of cables (per entry) with which the devices are intended to be used.

Surface Receptacles — Surface receptacles include an enclosure and mounting means for surface mounting without the use of a separate outlet

RECEPTACLES (RTDV)

327

Receptacles for Plugs and Attachment Plugs (RTRT)—Continued

box. They are intended for connection to exposed nonmetallic-sheathed cable as permitted by Article 336 of the NEC. Some may also accept other wiring systems. Surface receptacles rated 50 A that employ enclosures of insulating materials are not intended for use in applications where they are likely to be subject to severe mechanical abuse.

Display Receptacles — Display receptacles are provided with a cover plate for flush-mounted wiring devices or outlet box cover and closure plug or plugs. They are intended for use in show window floors and similar locations where the device is not likely to be subjected to scrub water. They are not intended to be used as substitutes for floor boxes, which are covered under Metallic Outlet Boxes (QCIT) and Nonmetallic Outlet Boxes (QCMZ).

Weather-resistant Receptacles — Receptacles for use in wet and damp locations in accordance with Article 406 of the NEC. Weather-resistant receptacles are identified by the words "Weather Resistant" or the letters "WR" where they will be visible after installation with the cover plate secured as intended.

Interchangeable (Modular) Receptacles — Interchangeable receptacles are flush receptacles that are assembled as single, duplex or triplex outlets in the field from a system of individual outlet modules, mounting yokes, and/or cover plates for flush-mounted wiring devices.

Appliance, Equipment and Fixture Outlets — When an outlet is installed in equipment with a conductive mounting surface, the face of the receptacle shall project a minimum of 3/32 in. and a maximum of 3/16 in. from the mounting surface.

A receptacle employing an integral thermal-interruption mechanism is not intended for hospital locations or other locations where critical patient care equipment is used. Additionally, a receptacle employing an integral thermal-interruption mechanism has not been investigated for its ability to reduce the safety hazards caused by overheating and overloaded circuits.

A receptacle employing an integral thermal-interruption mechanism has been investigated to confirm the manufacturer's stated thermal-interruption temperature range.

Federal Specification — Some receptacles in this category have been investigated for compliance with Federal Specification W-C-596, "General Specification for Electrical Power Connectors". Such devices are identified by a Listing Mark augmented by the capital letters "F" and "S" each in a wing on either side of the UL Mark. The manufacturer may also include the Federal Specification number "W-C-596F" or "W-C-596G" or the Federal Specification part number (which consists of the appropriate specification sheet and dash number described in the specification) on the device or on the smallest container in which the device is packaged.

TERMINALS

Terminals of 15 and 20 A receptacles not marked "CO/ALR" are for use with copper and copper-clad aluminum conductors only. Terminals marked "CO/ALR" are for use with aluminum, copper and copper-clad aluminum conductors.

Terminals of receptacles rated 30 A and above not marked "AL-CU" are for use with copper conductors only. Terminals of receptacles rated 30 A and above marked "AL-CU" are for use with aluminum, copper and copper-clad aluminum conductors.

Terminals marked "75 C" may be wired using the ampacities for conductors rated 75°C as well as conductors rated 60°C in Table 310.16 of the NEC.

Terminals of the wire-binding screw, setscrew, or screw-actuated back wired clamping types are suitable for use with both solid and stranded building wires.

Screwless terminal connectors of the conductor push-in type (also known as "push-in-terminals") are restricted to 15 A branch circuits and are for connection with 14 AWG solid copper wire only. They are not intended for use with aluminum or copper-clad aluminum wire, 14 AWG stranded copper wire, or 12 AWG solid or stranded copper wire.

Single and duplex receptacles rated 15 and 20 A that are provided with more than one set of terminals for the connection of line and neutral conductors have been investigated to feed branch-circuit conductors connected to other outlets on a multi-outlet branch circuit, as follows:

- Back wire (screw actuated clamp type) terminations with multiple wire access holes used concurrently to terminate more than one conductor
- Side wire (binding screw) terminals used concurrently with their respective push-in (screwless) terminations to terminate more than one conductor

Single and duplex receptacles rated 15 and 20 A that are provided with more than one set of terminals for the connection of line and neutral conductors have not been investigated to feed branch-circuit conductors connected to other outlets on a multi-outlet branch circuit, as follows:

- Side wire (binding screw) terminal with its associated back wire (screw actuated clamp type) terminal

Receptacles for Plugs and Attachment Plugs (RTRT)—Continued

- Multiple conductors under a single binding screw
- Multiple conductors in a single back wire hole

Duplex receptacles rated 15 and 20 A that are provided with break off tabs may have those tabs removed so that the two receptacles may be wired in a multi-wire branch circuit.

HORSEPOWER RATINGS

In addition to ampere and voltage ratings, standard AC horsepower ratings corresponding to the ampere and voltage ratings for specific general-use receptacles not incorporating overcurrent protection or a switch are given in the table below. For a Design E motor rated more than 2 horsepower, it is necessary to use a receptacle having a horsepower rating not less than 1.4 times the standard AC horsepower rating. The NEMA configuration designation is included for reference. Devices of configurations other than those indicated in the table have horsepower ratings only if such ratings are marked on the device.

HORSEPOWER RATINGS FOR NEMA CONFIGURATION RECEPTACLES

ADDITIONAL INFORMATION

For additional information, see Receptacles (RTDV) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 498, "Attachment Plugs and Receptacles."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged or on the product when size or shape permits is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Attachment Plug," "Plug," "Receptacle" (or "Recept."), "Attachment Plug with Overload Protection," "Attachment Plug Fuseless," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECEPTACLES, STAGE TYPE (RUFR)**USE**

This category covers attachment plugs, cord connectors, equipment outlets, male inlets and receptacles intended for use in theater and stage applications in accordance with Articles 520 and 530 of ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 498, "Attachment Plugs and Receptacles."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Plug," "Connector," "Stage Type Plug," "Stage Type Connector," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMBINATION RECEPTACLES WITH SWITCHES (RUSZ)**GENERAL**

This category covers combination receptacle and switch devices on the same mounting yoke, intended for household, office and industrial applications.

These devices are marked as follows:

- Listee's name or identification on device
- Catalog number or equivalent on device or carton
- Complete electrical rating
- Terminal identification
- Date code
- Additional markings as required in the Reports

RELATED PRODUCTS

See Snap Switches (WJQR).

ADDITIONAL INFORMATION

RECEPTACLES (RTDV)

Combination Receptacles with Switches (RUSZ)—Continued

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 498, "Attachment Plugs and Receptacles," and ANSI/UL 20, "General-Use Snap Switches."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product, or the UL symbol stamped or molded into the product and the Listing Mark on the smallest unit packaging is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Receptacle/Switch."

In lieu of the UL symbol stamped or molded into the product, "UNDERWRITERS LABORATORIES INC. LISTED" (or "UND. LAB. INC. LIST.") may be stamped or molded into the product. When marked as such, the Listing Mark shall appear on the smallest unit packaging.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UTILITY SERVICE RECEPTACLES (RVNW)

The products covered in this category are Utility Service Receptacles having a unique, non-standard contact configuration and utilizing the grounded neutral conductor of the supply as the equipment grounding conductor.

These receptacles are intended for mounting in a utility pole and for use in conjunction with a Utility Service Cord Set (see Guide ELFT) only by authorized utility company personnel in obtaining temporary power from utility poles. They are rated as marked, for example 125 volts, 15 amperes.

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

These receptacles were investigated in accordance with the requirements for Attachment Plugs and Receptacles (UL 498) with regard to protection from the risk of electrical shock and the ability to function without overheating.

The Classification Marking of Underwriters Laboratories Inc. (shown below) on the product is the only method provided by Underwriters Laboratories Inc. to identify products which have been produced under its Classification and Follow-Up Service.

Utility Service Receptacles
Classified by
Underwriters Laboratories Inc.
as to Protection from Electric Shock
and Ability to Function Without Overheating
No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECREATIONAL VEHICLES (SAET)

Recreational vehicles are primarily designed as temporary living quarters for recreational, camping or travel use. They either have their own mode of power or they are mounted on or drawn by another vehicle. The basic types of recreational vehicles are:

1. **Travel Trailer:** A vehicular portable unit, mounted on wheels, of such a size or weight as not to require special highway movement permits when drawn by a motorized vehicle factory equipped for the road, and of a gross trailer area less than 320 sq ft.
2. **Camping Trailer:** A vehicular portable unit mounted on wheels and constructed with collapsible partial side walls which fold for towing by another vehicle and unfold at the camp site.
3. **Truck Camper:** A portable unit designed to be loaded onto and unloaded from the bed of a pickup truck.
4. **Fifth Wheel Trailer:** A portable vehicular unit, mounted on wheels, of such size and weight as not to require special highway movement permits, of gross trailer area not exceeding 400 sq ft. in the set-up mode and designed to be towed by a motorized vehicle containing a towing mechanism mounted above or forward of the tow vehicle's rear axle.
5. **Motor Home:** A vehicular unit built on a self-propelled motor vehicle chassis or on a chassis cab or van that is an integral part of the completed vehicle.

RECREATIONAL VEHICLES (SAET)

329

6. **Park Trailer:** A recreational vehicle that is built on a single chassis mounted on wheels having a gross trailer area not less than 240 sq ft. and not greater than 400 sq ft. in the set-up mode.

Travel trailers, camping trailers, truck campers, fifth wheel trailers and motor homes have been investigated in accordance with American National Standard A119.2 (NFPA 1192). Park trailers have been investigated in accordance with American National Standard A119.5.

Recreational vehicles are intended for use subject to approval by the Authority Having Jurisdiction.

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products produced under its Classification and Follow-Up Service. The UL Classification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory), the product name "Recreational Vehicle" or "Park Trailer," as applicable, and a control number.

In addition, the Classification Mark includes reference to the specific American National Standards Institute (ANSI) or National Fire Protection Association (NFPA) Standard (including edition) to which the product has been investigated.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REELS, CORD FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (SAOD)

USE AND INSTALLATION

This category covers cord reels intended for use with extra hard usage cord, having a grounding conductor, for connecting portable electrical devices to supply lines. A terminal compartment is provided for connection to threaded rigid conduit systems. Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only when necessary.

The flexible cord should be inspected frequently and replaced when necessary. Terminal connections to the cord should be properly made and maintained.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 355, "Cord Reels."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cord Reel for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REELS, CORD FOR USE IN HAZARDOUS LOCATIONS (SAOX)

GENERAL

This category covers cord reels for use with extra-hard-usage flexible cord, having a grounding conductor, for connecting portable electrical devices to supply lines. A terminal compartment is provided for connection to threaded rigid conduit systems.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

The flexible cord should be inspected frequently and replaced when necessary. Terminal connections to the cord should be properly made and maintained.

REELS, CORD FOR USE IN HAZARDOUS LOCATIONS (SAOX)

330

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/UL 355, "Cord Reels."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cord Reel for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REELS, CORD AND CABLE (SBCV)

GENERAL

This category covers reels, usually spring-powered, to pay out and retract flexible cords and cables employed for supply of portable or mobile equipment.

Electrical ratings of reels are marked on the reels where readily visible. The electrical ratings for reels not supplied with cord are based upon the type, size, and length of cord or cable intended for use with the reel. The electrical ratings for reels complete with cord cover the complete assemblies.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 355, "Cord Reels."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cord Reel," "Cable Reel" or "Reel."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REFRIGERATION EQUIPMENT (SCER)

This category covers mechanical compression refrigeration systems and absorption-type refrigeration systems, including refrigerant-containing components and associated controls.

Some of this equipment may employ water to directly or indirectly cool the refrigerant condenser. Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to connection to water supply and waste disposal lines.

In permanently-wired equipment employing two or more motors or a motor(s) and other loads operating from a single supply circuit, the motor overload protective devices (including thermal protectors for motors) and other factory-installed motor-circuit components and wiring are investigated on the basis of compliance with the motor branch-circuit short-circuit and ground-fault protection requirements of Sec. 430.53(C) of ANSI/NFPA 70, "National Electrical Code" (NEC). Such multimotor and combination load equipment is intended to be connected to a branch circuit protected by overcurrent devices which do not exceed the value marked on the data plate or attached wiring diagram. This marked protective-device rating is the maximum for which the equipment has been investigated and found acceptable. If the marking specifies fuses, the equipment is intended to be protected by fuses only. If the marking specifies "HACR Type" circuit breakers, the equipment can be protected by either fuses or "HACR Type" circuit breakers. If the marking specifies circuit breakers or overcurrent-protective devices, the equipment can be protected by fuses, "HACR Type" circuit breakers, or any properly-sized circuit breakers.

REFRIGERATION EQUIPMENT (SCER)

Cord-connected equipment that requires circuit breakers or time-delay fuses to permit restarting is marked to this effect.

Some of this equipment has been investigated for the field conversion/retrofit to alternative refrigerants. Materials and instructions investigated for retrofitting specific makes and model numbers of equipment are available from the equipment manufacturer. The basic standards used to investigate equipment for field conversion/retrofit are:

ANSI/UL 2170, "Field Conversion/Retrofit of Products to Change to an Alternative Refrigerant-Construction and Operation"

UL 2171, "Field Conversion/Retrofit of Products to Change to an Alternative Refrigerant-Insulating Material and Refrigerant Compatibility"

UL 2172, "Field Conversion/Retrofit of Products to Change to an Alternative Refrigerant – Procedures and Methods"

A marking is required to identify properly retrofitted equipment, which includes the alternative refrigerant and oil, in addition to other information specified in ANSI/UL 2170, UL 2171 and UL 2172.

Requirements for the installation of refrigeration and air-conditioning equipment that may be field converted/retrofitted to use an alternative refrigerant are contained in the NEC and ANSI/ASHRAE 15, "Safety Standard for Refrigeration Systems."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REFRIGERATION ACCESSORIES (SCSQ)

Controllers, Refrigeration (SDFY)

GENERAL

This category covers electrical controls designed for refrigeration and air conditioning equipment and for room temperature or humidity regulation. They are intended for household, commercial or industrial use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

These devices respond directly or indirectly to changes in temperature, humidity, refrigerant level, or pressure to effect temperature control of equipment or appliance operation, etc. These devices may be investigated for functioning during the normal operation (regulating) of the controlled appliance or for functioning in the event of an abnormal condition (limiting) of the controlled appliance.

Ratings — Refrigeration controllers are Listed with a maximum rating of 600 V. A control rated in amps is tested with an inductive (75-80 percent power factor) load for alternating current ratings unless a direct current (noninductive) rating is specified.

Manual reset controls — An "M1" or "M2" marking indicates the following manual reset functions are provided:

- **M1** – Controls that automatically reset to the "closed" position after normal operating conditions have been restored if the reset means is held in the "reset" position.
- **M2** – Controls that do not automatically reset to the "closed" position if the reset means is held in the "reset" position.

Equipment suitable for outdoor use — Equipment identified with an enclosure type designation or as "Rain tight" or "Rainproof" is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

Class 2 output circuits — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Article 725 of the NEC for the Class 2 circuit.

PRODUCT MARKINGS

Refrigeration controllers are marked with the company name or trade-mark, a distinctive catalog number, and the electrical ratings. Additional markings may be required based on the individual Listing reports.

RELATED PRODUCTS

Safety controls for gas- and oil-fired appliances, electric central furnaces, boilers and duct heaters are covered under Controls, Limit (MBPR), Controls, Primary Safety (MCCZ) or Switches (MFHX). Refrigerant valves are covered under Valves, Electrically Operated (YIOZ).

Electrical temperature controls for heating equipment, motor operators, and wall-mounted room thermostats are covered under Temperature-indicating and Regulating Equipment (XAPX).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 873, "Temperature-Indicating and Regulating Equipment." Alternatively, products may be investigated to Part 1 and the appropriate Part 2s of UL 60730, "Automatic Electrical Controls for Household and Similar Use." The standard designation is noted in the individual Listings.

REFRIGERATION EQUIPMENT (SCER)

Controllers, Refrigeration (SDFY)—Continued

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigeration Controller," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

BEVERAGE COOLERS AND BEVERAGE COOLER-DISPENSERS (SFWY)

GENERAL

This category covers beverage coolers and beverage cooler-dispensers. Beverage coolers are intended to be connected to a field-installed dispensing means. Beverage cooler-dispensers include a factory-installed dispensing means. These products may be self-contained, sectional or remote. Accessories intended for use with beverage coolers and beverage cooler-dispensers are also covered under this category.

INSTALLATION

This equipment is rated 600 V ac or less and is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code," and ANSI/ASHRAE 15, "Safety Standard for Refrigeration Systems."

All units are marked with the refrigerant type; some units may employ alternative refrigerants that are not currently listed in ANSI/ASHRAE 15, but are included in ANSI/ASHRAE 34, "Designation and Safety Classification of Refrigerants." The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in ANSI/ASHRAE 15, UL's Listing Report available from the manufacturer identifies installation classifications applicable to the alternative refrigerants in the same manner as shown in ANSI/ASHRAE 15 for currently used refrigerants. The refrigerants are classified A1 or A1/A1 by ANSI/ASHRAE 34 and have been determined to comply with ANSI/UL 2182, "Refrigerants."

A beverage cooler or beverage cooler-dispenser of other than the remote type consists of a completely factory assembled and factory tested refrigeration system comprising one or more assemblies which may be shipped separately but which are intended to be used together. If two or more sections are provided, each section is designed and marked for field interconnection with a matched section(s).

A self-contained beverage cooler or beverage cooler-dispenser consists of a completely factory assembled and factory tested refrigeration system in which all the refrigerant-containing parts are connected at the factory.

A remote beverage cooler or beverage cooler-dispenser is intended to be connected to a field-installed condenser or condensing unit located remote from the beverage cooler or beverage cooler-dispenser.

Accessories for beverage coolers and beverage cooler-dispensers are provided with instructions for installation into the product.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

PRODUCT MARKINGS

Beverage coolers and beverage cooler-dispensers may be designed to accept accessories installed in the field. In such cases both the beverage cooler or beverage cooler-dispenser and the accessory are marked to relate the two for proper installation.

A section of a beverage cooler or beverage cooler-dispenser suitable for outdoor use is so marked. Sections not so marked are for indoor use only.

Some equipment covered under this category employs replaceable pressurized containers that have not been investigated. Such equipment is marked to indicate it is Listed with respect to hazards exclusive of those of the replaceable pressurized container(s).

REBUILT PRODUCTS

This category also covers beverage coolers and beverage cooler-dispensers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt beverage coolers and beverage cooler-dispensers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt beverage coolers and beverage cooler-dispensers are subject to the same requirements as new beverage coolers and beverage cooler-dispensers.

RELATED PRODUCTS

Coin-operated equipment is covered under Vending Machines, Refrigerated (SQMX).

Nonrefrigerated dispensing equipment is covered under Food Preparing Machines, Commercial (IPST).

REFRIGERATION EQUIPMENT (SCER)

331

Beverage Coolers and Beverage Cooler-Dispensers (SFWY)—Continued

Beverage coolers and dispensers for marine use are covered under Beverage Coolers and Beverage Cooler-Dispensers, Marine (SCEV).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 471, "Commercial Refrigerators and Freezers".

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Beverage Cooler," "Beverage Cooler-Dispenser" (for a self-contained unit) "Beverage Cooler Less Condenser," "Beverage Cooler-Dispenser Less Condenser," "Beverage Cooler Less Condensing Unit," "Beverage Cooler-Dispenser Less Condensing Unit" (for a remote beverage cooler or beverage cooler-dispenser), "Section of Beverage Cooler," "Section of Beverage Cooler-Dispenser" (for each section of a beverage cooler or beverage cooler-dispenser shipped separately from the factory, the function of which is essential to the basic operation of the beverage cooler or beverage cooler-dispenser), or "Accessory for Beverage Cooler or Beverage Cooler-Dispenser" (for a part or device, the function of which supplements or modifies the basic operation of the beverage cooler or beverage cooler-dispenser).

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL REFRIGERATORS AND FREEZERS (SGKW)

GENERAL

This category covers commercial refrigerators and freezers such as display cases, reach-in cabinets, meat cases, frozen food and merchandising cabinets, food service carts and soda fountain units. These products may be self-contained, sectional or remote. Accessories intended for use with commercial refrigerators and freezers are also covered under this category.

INSTALLATION

This equipment is rated 600 V ac or less and is intended to be installed in accordance with the requirements of ANSI/NFPA 70, "National Electrical Code," and ANSI/ASHRAE 15, "Safety Standard for Refrigeration Systems."

All units are marked with the refrigerant type; some units may employ alternative refrigerants that are not currently listed in ANSI/ASHRAE 15, but are included in ANSI/ASHRAE 34, "Designation and Safety Classification of Refrigerants." The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in ANSI/ASHRAE 15, UL's Listing Report available from the manufacturer identifies installation classifications applicable to the alternative refrigerants in the same manner as shown in ANSI/ASHRAE 15 for currently used refrigerants. The refrigerants are classified A1 or A1/A1 by ANSI/ASHRAE 34 and have been determined to comply with ANSI/UL 2182, "Refrigerants."

Unitary refrigerators consist of a complete factory assembled and factory tested refrigeration system comprising one or more assemblies which may be shipped separately but which are intended to be used together. If two or more sections are provided, each section is designed and marked for field interconnection with a matched section(s).

A self-contained refrigerator is a unitary refrigerator consisting of a completely factory assembled and factory tested refrigerating system in which all the refrigerant containing parts are permanently connected at the factory.

A remote refrigerator is a refrigerator intended to be connected to a field-installed condensing unit located remote from the refrigerator.

Accessories for commercial refrigerators and freezers are provided with instructions for installation into the product.

Commercial Refrigerators and Freezers (SGKW)—Continued

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

PRODUCT MARKINGS

Some equipment may be designed to accept accessories installed in the field. In such cases, both the commercial refrigerator or freezer and the accessory are marked to relate the two for proper installation.

Equipment or section(s) of the equipment suitable for outdoor installation are so marked. Units not so marked are for indoor use only.

Commercial refrigerators and freezers may employ a wireway to permit end-to-end installation. The wireway of such units is marked accordingly.

Some equipment covered under this category employs replaceable pressurized containers that have not been investigated. Such equipment is marked to indicate it is Listed with respect to hazards exclusive of those of the replaceable pressurized container(s).

REBUILT PRODUCTS

This category also covers commercial refrigerators and freezers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt commercial refrigerators and freezers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt commercial refrigerators and freezers are subject to the same requirements as new commercial refrigerators and freezers.

RELATED PRODUCTS

Refrigerators and freezers for household use are covered under Household Refrigerators (SHZZ) and Household Freezers (SHMR).

Specialized refrigerators or freezers are covered under Refrigerators and Freezers, Special Purpose (SOVQ).

Factory-assembled walk-in refrigerators and freezers are covered under Walk-in Units, Commercial (SQTV).

Door panel assemblies are covered under Door Panel Assemblies (FDIT). Beverage coolers and beverage cooler-dispensers are covered under Beverage Coolers and Beverage Cooler-Dispensers (SFWY).

Nonrefrigerated cabinets are covered under Wired Cabinets (ZNXR).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 471, "Commercial Refrigerators and Freezers."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Commercial Refrigerator and/or Freezer" (for a self-contained unit), "Commercial Refrigerator and/or Freezer Less Condensing Unit" (for a remote unit), "Section of Commercial Refrigerator and/or Freezer" (for a section or device, the function of which is essential to the basic operation of the commercial refrigerator or freezer), or "Accessory for Commercial Refrigerator and/or Freezer" (for each part of a commercial refrigerator shipped separately from the factory, the function of which supplements or modifies the basic operation of the commercial refrigerator or freezer).

The Listing Mark for rebuilt commercial refrigerators and freezers also includes the word "Rebuilt," "Remanufactured" or "Reconditioned" preceding the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONDENSING AND COMPRESSOR UNITS (SGYU)**GENERAL**

These units are intended to be installed in air conditioning and refrigeration systems in accordance with the requirements of the National Electrical Code, NFPA 70, and The Safety Code for Mechanical Refrigeration, ANSI/ASHRAE 15-1978. Optional accessories for use with these units are also covered in this section. Presently listed equipment is rated 600 v or less.

Units in this category intended for refrigeration service may be of any Btu per hour capacity. For listings of units rated more than 135,000 Btu per hour and intended primarily for air conditioning application, see Air Conditioning Systems Equipment, in this Directory.

Condensing and Compressor Units (SGYU)—Continued

Condensing units include one or more compressors and air or water-cooled condensers with interconnecting refrigerant piping and with associated controls and wiring, and may also include a receiver. These units are intended for field connection to a remote evaporator, unit cooler or fan-coil unit.

Compressor units include one or more compressors with associated controls and wiring, and may also include a receiver. These units are intended for field connection to a remote evaporator, unit cooler or fan-coil unit and to a remote condenser having a marked working pressure not less than designated by the marking on the unit data plate.

Some units are intended for field connection to multiple refrigeration systems and include multiple condensing units, compressor units, or compressors, with single or multiple condensers, with associated piping, controls, and wiring, mounted on a common frame or in a common housing.

The acceptability of operation of these units, when associated with other components of a complete system, has not been investigated.

These units are to be used only in systems with the specified refrigerant and operating at pressures not in excess of those indicated by the marked test pressures.

Units that have been investigated and found suitable for use with Listed field installed accessories are marked to identify the specific accessories that may be used.

Units which are suitable for outdoor installation are so marked. Units not marked as suitable for outdoor installation are for indoor use only.

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1995, "Heating and Cooling Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Condensing Unit," "Compressor Unit," "Accessory for Condensing Unit," "Accessory for Compressor Unit" or "Accessory for Condensing or Compressor Unit."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOUSEHOLD FREEZERS (SHMR)**GENERAL**

This category covers self-contained freezers consisting of a complete refrigeration system. The refrigeration systems are of the mechanical compression type, absorption type or thermoelectric type. Accessories intended for use with household freezers are also covered under this category.

INSTALLATION

This equipment is intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code." The equipment is intended for connection to 15 or 20 A, 100 to 140 V or 15 A, 200 to 250 V, single-phase, alternating-current (ac) circuits; or combination ac/dc circuits or direct-current (dc) circuits where the dc voltage does not exceed 30 V.

Household freezers are Listed in three classes as follows:

Freestanding — A freezer intended for open type installation only, not including stacking, locating in closets, alcoves, or other confined spaces.

Recessed Installation — A freezer intended to be supported by the floor or base cabinet, located in an enclosed area but not intended to be permanently attached to the building structure, adjacent cabinets or other appliances. These units are also suitable for freestanding installation.

Built-in Installation — A freezer intended to be permanently attached to or mounted in a wall, a cabinet or other surface of a building.

Accessories for household freezers are provided with instructions for installation into the product.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to connection to water supply lines.

PRODUCT MARKINGS

Household freezers may be designed to accept accessories in the field. In such cases both the freezer and the accessory are marked to relate the two for proper installation.

A freezer intended for freestanding use is so marked on the unit. Each freezer intended for recessed installation has specified installation clearances marked on the unit, if clearances are required.

REFRIGERATION EQUIPMENT (SCER)

Household Freezers (SHMR)—Continued

RELATED PRODUCTS

Household refrigerators are covered under Household Refrigerators (SHZZ).

Household refrigerators for marine use are covered under Refrigerators, Household Type, Marine (SVQL).

Refrigerators and freezers for use in recreational vehicles are covered under Recreational Vehicle Refrigerators and Freezers (SKKQ).

Freezers for commercial use are covered under Commercial Refrigerators and Freezers (SGKW).

Refrigerators and freezers in combination with ranges, microwave ovens and/or sinks are covered under Kitchen Units, Refrigerated (SJPT).

Products Verified for energy efficiency are covered under Refrigerators, Freezers and Wine Chillers, Household Verified for Energy Efficiency (ZXJL).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 250, "Household Refrigerators and Freezers."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Household Freezer" or "Accessory for Household Freezer."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOUSEHOLD REFRIGERATORS (SHZZ)

GENERAL

This category covers self-contained refrigerators, combination refrigerator-freezers consisting of a complete refrigeration system. The refrigeration systems are of the mechanical compression type, absorption type or thermoelectric type. Accessories intended for use with household refrigerators are also covered under this category.

INSTALLATION

This equipment is intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code." The equipment is intended for connection to 15 or 20 A, 100 to 140 V or 15 A, 200 to 250 V, single-phase, alternating-current (ac) circuits; or combination ac/dc circuits or direct-current (dc) circuits where the dc voltage does not exceed 30 V.

Household refrigerators are Listed in three classes as follows:

Freestanding — A refrigerator intended for open type installation only, not including stacking, locating in closets, alcoves or other confined spaces.

Recessed Installation — A refrigerator intended to be supported by the floor or base cabinet, located in an enclosed area but not intended to be permanently attached to the building structure, adjacent cabinets or other appliances. These units are also suitable for freestanding installation.

Built-in Installation — A refrigerator intended to be permanently attached to or mounted in a wall, a cabinet or other surface of a building.

Accessories for household refrigerators are provided with instructions for installation into the product.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to connection to water supply lines.

PRODUCT MARKINGS

Household refrigerators may be designed to accept accessories in the field. In such cases both the refrigerator and the accessory are marked to relate the two for proper installation.

A refrigerator intended for freestanding use is so marked on the unit. Each refrigerator intended for recessed installation has specified installation clearances marked on the unit, if clearances are required.

RELATED PRODUCTS

Household freezers are covered under Household Freezers (SHMR).

Household refrigerators for marine use are covered under Refrigerators, Household Type, Marine (SVQL).

Refrigerators for use in recreational vehicles are covered under Recreational Vehicle Refrigerators and Freezers (SKKQ).

Refrigerators for commercial use are covered under Commercial Refrigerators and Freezers (SGKW).

Refrigerators in combination with ranges, microwave ovens and/or sinks are covered under Kitchen Units, Refrigerated (SJPT).

Products Verified for energy efficiency are covered under Refrigerators, Freezers and Wine Chillers, Household Verified for Energy Efficiency (ZXJL).

REFRIGERATION EQUIPMENT (SCER)

Household Refrigerators (SHZZ)—Continued

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 250, "Household Refrigerators and Freezers."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Household Refrigerator" or "Accessory for Household Refrigerator."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ICE CREAM MAKERS (SINX)

GENERAL

This category covers equipment intended for preparing products such as hard ice cream, soft-serve ice cream, milk shakes and sherbets, and may include means for dispensing the product directly into containers. These products may be self-contained or sectional. Accessories intended for use with ice cream makers are also covered under this category.

INSTALLATION

This equipment is rated 600 V or less and is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code," and ANSI/ASHRAE 15, "Safety Standard for Refrigeration Systems."

All units are marked with the refrigerant type and some units may employ alternative refrigerants that are not currently listed in ANSI/ASHRAE 15, but are included in ANSI/ASHRAE 34-1992 (amendment), "Designation and Safety Classification of Refrigerants." The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in ANSI/ASHRAE 15, UL's Listing Report (available from the manufacturer) identifies installation classifications applicable to the alternative refrigerants in the same manner as shown in ANSI/ASHRAE 15 for currently used refrigerants. The refrigerants are classified A1 or A1/A1 by ANSI/ASHRAE 15 and have been determined to be nonflammable or practically nonflammable in accordance with the requirements in ANSI/UL 2182, "Refrigerants."

Unitary ice cream makers consist of a complete factory assembled and factory tested refrigeration system comprising one or more assemblies that may be shipped separately but intended to be used together. If two or more sections are provided, each section is designed and marked for field interconnection with a matched section(s).

A self-contained ice cream maker is a unitary ice cream maker consisting of a completely factory assembled and factory tested refrigerating system in which all the refrigerant containing parts are permanently connected at the factory.

Accessories for ice cream makers are provided with instructions for installation into the product.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

PRODUCT MARKINGS

Some equipment covered under this category employs replaceable pressurized containers that have not been investigated. Such equipment is marked to indicate it is Listed with respect to hazards exclusive of those of the replaceable pressurized container(s).

Equipment or sections of the equipment suitable for outdoor use are so marked. Units not so marked are for indoor use only.

Some equipment may be designed to accept accessories installed in the field. In such cases, both the ice cream maker and the accessory are marked to relate the two for proper installation.

RELATED PRODUCTS

Ice cream makers (without a compressor) for household use are covered under Food Preparing Machines, Household (IPWZ). Coin-operated equipment is covered under Vending Machines, Refrigerated (SQMX). Nonrefrigerated dispensing equipment is covered under Food Preparing Machines, Commercial (IPST). Beverage coolers and beverage cooler-dispensers are covered under the category of the same name (SFWY).

ADDITIONAL INFORMATION

Ice Cream Makers (SINX)—Continued

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 621, "Ice Cream Makers."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Ice Cream Maker," "Section of Ice Cream Maker" or "Accessory for Ice Cream Maker."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ICE MAKERS (SJBV)**GENERAL**

This category covers devices that automatically manufacture and harvest ice in cube, flake, or other readily usable form, with or without provision for storage or means of dispensing ice. These products may be self-contained or sectional. Accessories intended for use with ice makers are also covered under this category.

This category does not cover tray type ice makers, ice vending machines, or ice makers and ice maker kits used in household refrigerators and freezers. See **RELATED PRODUCTS** below.

INSTALLATION

This equipment is rated 600 V or less and is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code," and ANSI/ASHRAE 15, "Safety Standard for Refrigeration Systems."

All units are marked with the refrigerant type and some units may employ alternative refrigerants that are not currently listed in ANSI/ASHRAE 15, but are included in ANSI/ASHRAE 34, "Designation and Safety Classification of Refrigerants." The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in ANSI/ASHRAE 15, UL's Listing Report (available from the manufacturer) identifies installation classifications applicable to the alternative refrigerants in the same manner as shown in ANSI/ASHRAE 15 for currently used refrigerants. The refrigerants are classified A1 or A1/A1 by ANSI/ASHRAE 34 and have been determined to comply with the requirements of ANSI/UL 2182, "Refrigerants."

An ice maker of other than the remote type consists of a completely factory assembled and factory tested refrigeration system comprising one or more assemblies that may be shipped separately but intended to be used together. If two or more sections are provided, each section is designed and marked for field interconnection with a matched section(s).

A self-contained ice maker consists of a completely factory assembled and factory tested refrigerating system in which all the refrigerant-containing parts are permanently connected at the factory.

A remote ice maker is an ice maker intended to be connected to a field-installed condenser or condensing unit located remote from the ice maker.

Accessories for ice cream makers are provided with instructions for installation into the product.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

PRODUCT MARKINGS

Ice makers may be designed to accept accessories installed in the field. In such cases both the ice maker and the accessory are marked to relate the two for proper installation.

Ice makers or sections of ice makers suitable for outdoor installation are so marked. Ice makers or sections not so marked are for indoor use only.

RELATED PRODUCTS

Coin-operated equipment is covered under Vending Machines, Refrigerated (SQMX).

Ice makers for marine use are covered under Ice Makers, Marine (SAAH).

Ice makers for installation into household refrigerators and freezers are Recognized under Specialty Refrigeration Equipment (SROT2).

Accessory ice maker kits for installation into household refrigerators or freezers are covered under Household Refrigerators (SHZZ) or Household Freezers (SHMR).

Products Verified for energy efficiency are covered under Ice Makers Verified for Energy Efficiency (ZWPR).

Ice Makers (SJBV)—Continued

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 563, "Ice Makers."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Ice Maker," "Ice Maker Without Ice Storage Means" (for a self-contained unit), "Ice Maker Less Condenser," "Ice Maker Without Ice Storage Means Less Condenser," "Ice Maker Less Condensing Unit," "Ice Maker Without Ice Storage Means Less Condensing Unit" (for a remote ice maker), "Section of Ice Maker" (for each section of an ice maker shipped separately from the factory, the function of which is essential to the basic operation of the ice maker), or "Accessory for Ice Maker" (for a part or device, the function of which supplements or modifies the basic operation of the ice maker).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

KITCHEN UNITS, REFRIGERATED (SJPT)**GENERAL**

This category covers refrigerators rated 250 V or less in combination with ranges, microwave ovens and/or sink units. Accessories intended for use with refrigerated kitchen units are also covered under this category.

INSTALLATION

This equipment is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code." The equipment is investigated and tested to determine that it can be properly installed in accordance with the installation instructions provided by the manufacturer. Equipment provided with a gas range is also intended for installation under the requirements of ANSI Z223.1/NFPA 54, "National Fuel Gas Code."

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to connection to water supply and waste disposal lines, if applicable. Equipment connected to plumbing is intended for permanent connection to the source of supply.

PRODUCT MARKINGS

Kitchen units intended for recessed installation are marked to indicate the installation clearances.

Some equipment may be designed to accept accessories installed in the field. In such cases, both the refrigerated kitchen unit and the accessory are marked to relate the two for proper installation.

RELATED PRODUCTS

Household refrigerators are covered under Household Refrigerators (SHZZ).

Household freezers are covered under Household Freezers (SHMR).

Household refrigerators intended for marine use are covered under Refrigerators, Household Type, Marine (SVQL).

Refrigerators intended for use in recreational vehicles are covered under Recreational Vehicle Refrigerators and Freezers (SKKQ).

Refrigerators intended for commercial use are covered under Commercial Refrigerators and Freezers (SGKW).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 250, "Household Refrigerators and Freezers."

The basic standard used to investigate the electric range portion of products in this category is ANSI/UL 858, "Household Electric Ranges."

The basic standard used to investigate the microwave oven portion of products in this category is ANSI/UL 923, "Microwave Cooking Appliances."

The basic standards used to investigate the gas range portion of products in this category are ANSI Z21.1, "Household Cooking Gas Appliances," and ANSI Z21.57, "Recreational Vehicle Cooking Gas Appliances."

UL MARK

REFRIGERATION EQUIPMENT (SCER)

Kitchen Units, Refrigerated (SJPT)—Continued

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigerated Kitchen Unit" or "Accessory for Refrigerated Kitchen Unit."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECREATIONAL VEHICLE REFRIGERATORS AND FREEZERS (SKKQ)

GENERAL

This category covers refrigerators, freezers, and combination refrigerator-freezers, rated 250 V or less ac and/or 30 V or less dc, intended for use in recreational vehicles. These products are electrically operated, self-contained devices consisting of a complete refrigeration system that may be of the mechanical compression type, absorption type or thermoelectric type. These products are not gas-fired.

INSTALLATION

These products are Listed in two classes as follows:

Freestanding — A unit designed for installation in other than a confined space. Each unit intended for freestanding installation is so marked.

Recessed — A unit designed for installation in a confined space. Each unit intended for recessed installation has specified installation clearances, if clearances are required, marked on the unit. These units are also suitable for freestanding installation.

These products are intended for installation in accordance with the manufacturer's instructions and as marked on the product. They are intended to be secured to the recreational vehicle structure. Reference should also be made to ANSI/NFPA 1192, "Standard on Recreational Vehicles."

RELATED PRODUCTS

Electric household refrigerators and freezers are covered under Household Refrigerators (SHZZ) and Household Freezers (SHMR), respectively.

Gas-fired or combination gas/electric recreational vehicle refrigerators are covered under Refrigerators Using Gas Fuel (LPHR).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 250, "Household Refrigerators and Freezers."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Recreational Vehicle Refrigerator" or "Recreational Vehicle Freezer," or other appropriate product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REFRIGERANT-CONTAINING COMPONENTS (SKQZ)

Condensers, Refrigerant (SLSV)

GENERAL

This category covers refrigerant condensers intended to liquefy refrigerant vapor by removal of heat. They are air-cooled, evaporative or water-cooled types. Water-cooled types have not been investigated for use as water heaters. Water-cooled assemblies are shell-and-tube or tube-in-tube type.

PRODUCT MARKINGS

All condensers are marked with the manufacturer's name, model number and the design pressure. Unless provided with a separate marking as indicated below, the products are also marked with the type(s) of refrigerant to be used.

Refrigerant condensers not marked to indicate the type of refrigerant used are provided with a marking that may be on a separate tag or label and

REFRIGERATION EQUIPMENT (SCER)

335

Condensers, Refrigerant (SLSV)—Continued

attached to the unit cooler that reads "The design pressure marked on this component shall not be less than the installed system working pressure or less than the values outlined in ANSI/ASHRAE 15 for the charged refrigerant. After charging, mark the installed equipment with the refrigerant type and oil used," or equivalent.

Finned tube assemblies incorporating a motor-driven fan (forced-air-cooled units) are also marked with the electrical rating. Forced-air-cooled condensers suitable for outdoor installation are so marked.

RELATED PRODUCTS

Water-cooled condensers intended for use as water heaters are covered under Refrigerant Heat Recovery Equipment (SOMU) or Heat Reclaimers, Refrigerant (SNLT).

Condenser receivers are covered under Receivers, Refrigerant (SOJV).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate forced-air-cooled condensers in this category is ANSI/UL 1995, "Heating and Cooling Equipment."

The basic standard used to investigate all other condensers in this category is ANSI/UL 207, "Refrigerant-Containing Components and Accessories, Nonelectrical."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigerant Condenser."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REFRIGERATED MEDICAL EQUIPMENT (SOPT)

GENERAL

This category covers self-contained refrigerated medical equipment, such as oxygen therapy and thermia devices designated for professional use by personnel in hospitals, nursing homes, medical care centers, medical offices and similar health care facilities.

This equipment has been investigated for electric shock, fire and mechanical hazards. Other risks, including those that may result from use of this equipment in the presence of flammable anesthetics, have not been investigated.

INSTALLATION

This equipment is rated 600 V or less and is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

This equipment has been investigated to determine that it can be properly installed in accordance with the installation instructions provided by the manufacturer.

Patient care equipment employs one of two attachment plug caps. One is a locking type cap identified by the marking "Hospital Only" and the other is a nonlocking type ANSI Standard configuration grounding type cap identified by the marking "Hospital Grade" and a green dot on the body of the cap. The identification is visible after installation on the flexible cord. Such products are marked to indicate they are to be connected to a receptacle marked "Hospital Only" or "Hospital Grade."

Oxygen therapy equipment has been investigated with respect to the increased risks resulting from the presence of oxygen and electrical parts within the equipment. In view of the practical design features, it is essential for safety that all possible sources of ignition be kept away from these devices. Possible sources of ignition, against which precautions should be taken, include open flames, matches, cigarettes, accumulations of static electricity and reducing valves on oxygen tanks, which occasionally project flame or sparks due to ignition or explosion of rubber valve seats. The canopy (tent), reducing valve, oxygen cylinders, etc., used with oxygen therapy equipment have not been investigated nor covered as part of the Classified equipment.

UNEVALUATED FACTORS

The effect on a patient of simultaneous use of this equipment with other electrical apparatus and the physiological effects, beneficial or otherwise, which may be produced by this equipment, have not been investigated.

RELATED PRODUCTS

Equipment investigated to determine its suitability or safety for use where a flammable anesthetic is likely to be present is covered under Medical Equipment for Use in Hazardous Locations (PINR).

Refrigerated Medical Equipment (SOPT)—Continued

Nonrefrigerated medical equipment is covered under Medical Equipment (PIDF).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 416, "Refrigerated Medical Equipment."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

REFRIGERATED MEDICAL EQUIPMENT or REFRIGERATED OXYGEN THERAPY EQUIPMENT***AS TO ELECTRICAL SHOCK, FIRE AND MECHANICAL HAZARDS ONLY****Control No.**

* or other appropriate product name as shown in the individual Classifications

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNIT COOLERS (SPLR)**GENERAL**

This category covers unit coolers, which are direct cooling, factory made, encased assemblies consisting of a cooling element, fan(s) and motor(s), intended for the free circulation of air for refrigeration purposes. They may also incorporate means for defrosting of the cooling element.

This equipment is rated 600 V or less and is intended for permanent connection to the source of supply in accordance with ANSI/NFPA 70, "National Electrical Code."

This equipment is intended for use in refrigeration systems charged with the refrigerant indicated on the device, but has not been investigated from the standpoint of operation when associated with other equipment used to form the complete refrigeration system.

PRODUCT MARKINGS

These products are marked with the manufacturer's name, model number, electrical rating and the design pressure. Unless provided with a separate marking as indicated below, the products are also marked with the type(s) of refrigerant to be used.

Unit coolers not marked to indicate the type of refrigerant used are provided with a marking that may be on a separate tag or label and attached to the unit cooler that reads "The design pressure marked on this component shall not be less than the installed system working pressure or less than the values outlined in ANSI/ASHRAE 15 for the charged refrigerant. After charging, mark the installed equipment with the refrigerant type and oil used," or equivalent.

A unit cooler with field wiring terminals is marked to indicate the type of conductors required for the field wiring.

RELATED PRODUCTS

Equipment intended for air conditioning purposes is referenced as fan-coil units and covered under Heating and Cooling Equipment (LZFE).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 412, "Refrigeration Unit Coolers."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Unit Cooler."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss,

Unit Coolers (SPLR)—Continued

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNITS, REFRIGERATING (SPYZ)**GENERAL**

This category covers complete refrigeration systems consisting of a hermetic motor-compressor, condenser, evaporator, refrigerant control, electrical controls, wiring and associated refrigerant-containing components including tubing, and may include a defrost system. These systems are primarily used to refrigerate cooling rooms and warehouses intended for the storage of food and other perishable products. These products may be self-contained or sectional. Accessories intended for use with refrigerating units are also covered under this category.

INSTALLATION

This equipment is rated 600 V or less and is intended for permanent connection to the source of supply in accordance with the requirements of ANSI/NFPA 70, "National Electrical Code."

Refrigerating units consist of one or more factory-made sections. If two or more sections are provided, each section is designed and marked for field interconnection with a matched section(s).

Accessories for refrigerating units are provided with instructions for installation into the product.

PRODUCT MARKINGS

The condensing sections of refrigerating units suitable for outdoor installation are so marked. Sections not marked as suitable for outdoor installation are for indoor use only.

Refrigerating units may be designed to accept accessories in the field. In such cases both the refrigerating unit and the accessory are marked to relate the two for proper installation.

REBUILT PRODUCTS

This category also covers refrigerating units that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt refrigerating units are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt refrigerating units are subject to the same requirements as new refrigerating units.

RELATED PRODUCTS

Refrigerated cabinets and cases are covered under Commercial Refrigerators and Freezers (SGKW).

Nonelectrical insulated wall panels are covered under Building Units (BLBT).

Door and frame assemblies for walk-in coolers are covered under Door Panel Assemblies (FDIT).

Factory assembled walk-in refrigerators and freezers are covered under Walk-in Units, Commercial (SQTV).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 427, "Refrigerating Units."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigerating Unit" (for a self contained unit), "Section of Refrigerating Unit" (for a part or device, the function of which is essential to the basic operation of the refrigerating unit), or "Accessory for Refrigerating Unit" (for each part of a refrigerating unit shipped separately from the factory, the function of which supplements or modifies the basic operation of the refrigerating unit).

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VENDING MACHINES, REFRIGERATED (SQMX)**GENERAL**

This category covers refrigerated vending machines designed for connection to alternating-current circuits rated not more than 600 V, and which

REFRIGERATION EQUIPMENT (SCER)

Vending Machines, Refrigerated (SQMX)—Continued

incorporate refrigeration systems of the air cooled or water-cooled type employing hermetic refrigerant motor-compressors.

This equipment is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code," and ANSI/ASHRAE 15, "Safety Standard for Refrigeration Systems."

Some units may employ alternative refrigerants that are not currently listed in ANSI/ASHRAE 15, but are included in ANSI/ASHRAE 34, "Designation and Safety Classification of Refrigerants." The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in ANSI/ASHRAE 15, UL's Listing Report (available from the manufacturer) identifies installation classifications applicable to the alternative refrigerants in the same manner as shown in ANSI/ASHRAE 15 for currently used refrigerants. The refrigerants are classified A1 or A1/A1 by ASHRAE 34 and have been determined to comply with ANSI/UL 2182, "Refrigerants."

This equipment consists of a complete refrigeration system and associated electrical controls for the system and for delivery of the product.

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

Where the equipment employs connection to a compressed carbon dioxide source, this category does not cover compressed carbon dioxide cylinders.

Some of this equipment employs replaceable pressurized containers that have not been investigated. Such equipment is marked to indicate it is Listed with respect to hazards exclusive of those of the replaceable pressurized container(s).

The burglary and theft features of these machines have not been investigated unless specifically indicated in the individual Listings.

REBUILT PRODUCTS

This category also covers refrigerated vending machines that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt refrigerated vending machines are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt refrigerated vending machines are subject to the same requirements as new refrigerated vending machines.

PRODUCT MARKINGS

These products are marked with the manufacturer's name, model number, electrical rating, design pressure and refrigerant type.

The venders are marked on or adjacent to the electrical rating plate with one of the following: "For Indoor Use Only," "Suitable for Protected Locations – See Installation Instructions" or "Suitable for Outdoor Use." Complete instructions appear on a vender intended for use in a protected location, indicating the manufacturer's recommendations concerning the use and/or installation of any canopies, marquees, shelters, etc. which may be necessary for the protection of the vender. The instructions may be located inside the vender if they are accessible through the front door.

RELATED PRODUCTS

For Listings of machines that vend nonrefrigerated products, see Vending Machines (YWV), or the specific category covering the equipment involved.

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 541, "Refrigerated Vending Machines."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigerated Vending Machine."

For rebuilt products, the word "Rebuilt" or "Remanufactured" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WALK-IN UNITS, COMMERCIAL (SQTV)**GENERAL**

This category covers commercial walk-in refrigerators and freezers that are completely factory assembled. Accessories intended for use with walk-in units are also covered under this category.

REFRIGERATION EQUIPMENT (SCER)

337

Walk-in Units, Commercial (SQTV)—Continued

INSTALLATION

This equipment is rated 600 V or less and is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code," and ANSI/ASHRAE 15, "Safety Standard for Refrigeration Systems."

These units may contain refrigerant-containing components. If refrigerant-containing components are employed, all of the refrigerant-containing parts are permanently connected at the factory and tested for leakage prior to leaving the factory.

All refrigerants that may be employed in this equipment have been investigated to ANSI/ASHRAE 15 and have been determined to be non-flammable or practically nonflammable in accordance with ANSI/UL 2182, "Refrigerants."

Accessories for walk-in units are provided with instructions for installation into the product.

Authorities Having Jurisdiction (AHJ) should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines. AHJs should also be consulted if local installations require structural loading considerations.

PRODUCT MARKINGS

Some equipment may be designed to accept accessories installed in the field. In such cases, both the commercial walk-in unit and the accessory are marked to relate the two for proper installation.

Equipment or sections of the equipment suitable for outdoor installation are so marked. Units not so marked are for indoor use only. Units marked suitable for outdoor installation have not been investigated with respect to wind, snow or other structural loading.

RELATED PRODUCTS

Refrigerated cabinets and cases are covered under Commercial Refrigerators and Freezers (SGKW). Nonelectrical insulated wall panels are covered under Building Units (BLBT). Door and frame assemblies for walk-in coolers are covered under Door Panel Assemblies (FDIT). Refrigeration units are covered under Units, Refrigerating (SPYZ).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 471, "Commercial Refrigerators and Freezers," and UL 427, "Refrigerating Units."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Commercial Walk-in Unit" or "Accessory for Commercial Walk-in Unit."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WATER COOLERS (SRAV)**Drinking Water Coolers (SRJX)****GENERAL**

This category covers bottle- and pressure-type drinking water coolers rated up to 250 V. The coolers are provided with a complete refrigeration system and associated electrical controls, and may also include means for heating water.

This equipment is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code," and ANSI/ASHRAE 15, "Safety Standard for Refrigeration Systems."

Some units may employ alternative refrigerants that are not currently listed in ANSI/ASHRAE 15, but are included in ANSI/ASHRAE 34, "Designation and Safety Classification of Refrigerants." The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in ANSI/ASHRAE 15, UL's Listing Report (available from the manufacturer) identifies installation classifications applicable to the alternative refrigerants in the same manner as shown in ANSI/ASHRAE 15 for currently used refrigerants. The refrigerants are classified A1 or A1/A1 by ANSI/ASHRAE 34 and have been determined to comply with ANSI/UL 2182, "Refrigerants."

Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

Drinking Water Coolers (SRJX)—Continued

PRODUCT MARKINGS

These products are marked with the manufacturer's name, model number, electrical rating, design pressure and refrigerant type.

RELATED PRODUCTS

Water coolers intended for use in hazardous (classified) locations are covered under Water Coolers for Use in Hazardous Locations (SUFT).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 399, "Drinking-Water Coolers."

Water coolers having panels with organic coatings that have been investigated in accordance with the March 1987 proposed revision of ANSI/ASME A112.18.1M-1979, "Plumbing Fixture Fittings," are marked "Panels with organic coatings evaluated by UL in accordance with the March 1987 Proposed Revisions of the American National Standard, Plumbing Fixture Fittings, ANSI/ASME A112.18.1M-1979."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Drinking Water Cooler."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL PROCESSING LIQUID COOLERS (SRFR)

GENERAL

This category covers coolers intended to condition water or other fluids used for developing photographic film, cooling or thawing bulk product, cooling medical equipment, such as magnetic resonance imagers (MRI) or computer axial topography (CAT) scanners, and similar processes. The fluids intended for use in these coolers are limited to glycol, water, and water with additives. These coolers are not intended for the cooling of potable water. These coolers are provided with a complete refrigeration system and associated electrical controls and may also incorporate means for heating and circulating the water or other fluid.

If intended to be connected to the water supply, Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection.

PRODUCT MARKINGS

These coolers are marked with the manufacturer's name, model number, electrical rating, the refrigerant type, and the high- and low-side design pressures.

A cooler with field wiring terminals is marked to indicate the type of conductors required for the field wiring.

RELATED PRODUCTS

Bottle- and pressure-type potable water coolers are covered under Drinking Water Coolers (SRJX).

Nonrefrigerated fluid-handling systems are covered under Packaged Pumping Systems (QCZJ).

Other types of specialized refrigerators are covered under Specialty Refrigeration Equipment (SROT).

Water or liquid chillers specifically for use in semiconductor processing systems are covered under Semiconductor Manufacturing Equipment, Miscellaneous (TWTZ).

ADDITIONAL INFORMATION

For additional information, see Refrigeration Equipment (SCER), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 471, "Commercial Refrigerators and Freezers."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Commercial Processing Liquid Cooler."

Commercial Processing Liquid Coolers (SRFR)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REFRIGERATION EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (SSCR)

ACCESSORIES, REFRIGERATION FOR USE IN HAZARDOUS LOCATIONS (SSPZ)

Controllers, Refrigeration for Use in Hazardous Locations (STDX)

GENERAL

This category covers temperature- and pressure-operated controllers.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigeration Controller for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL REFRIGERATORS AND FREEZERS FOR USE IN HAZARDOUS LOCATIONS (STRV)

GENERAL

This category covers commercial refrigerators and freezers of the self-contained reach-in type, having provision for connection to threaded rigid conduit.

In the storage of any chemicals in the refrigerators and freezers, consideration should be given to the inherent decomposition and reaction hazards of the chemicals.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Commercial Refrigerator and/or Freezer for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WATER COOLERS FOR USE IN HAZARDOUS LOCATIONS (SUFT)

GENERAL

REFRIGERATION EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (SSCR)**Water Coolers for Use in Hazardous Locations (SUFT)—Continued**

This category covers bottled water and line-supplied types of water coolers.

These appliances are self-contained units with a complete refrigeration system and associated electrical controls. The refrigeration system has provision for connection to threaded rigid conduit.

Appliances intended to be connected to external water sources have not been investigated with respect to pollution of water supply through reverse action due to low water pressure or other reasons.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Water Cooler for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REFRIGERATION EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (STFO)

ACCESSORIES, REFRIGERATION FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (STFZ)

Controllers, Refrigeration for Use in Zone Classified Hazardous Locations (STGN)

GENERAL

This category covers temperature- and pressure-operated controllers.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 873, "Temperature-Indicating and -Regulating Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Refrigeration Controller for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES (SYKJ)

This category covers equipment designed for the detection, initiation, notification and control of signals indicative of fire, supervisory, watchman, releasing operation, and the control of the flow of smoke.

SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES (SYKJ) 339

This category also covers service companies who are capable of certifying systems that comply with nationally recognized installation standards.

This equipment is intended to be installed, maintained, and operated as system arrangements in conformity with the following:

- ANSI/NFPA 12, "Carbon Dioxide Extinguishing Systems"
- ANSI/NFPA 12A, "Halon 1301 Fire Extinguishing Systems"
- ANSI/NFPA 13, "Installation of Sprinkler Systems"
- ANSI/NFPA 15, "Water Spray Fixed Systems for Fire Protection"
- ANSI/NFPA 16, "Installation of Foam-Water Sprinkler and Foam-Water Spray Systems"
- ANSI/NFPA 17, "Dry Chemical Extinguishing Systems"
- ANSI/NFPA 17A, "Wet Chemical Extinguishing Systems"
- ANSI/NFPA 72, "National Fire Alarm Code"
- ANSI/NFPA 92A, "Recommended Practice for Smoke-Control Systems"
- ANSI/NFPA 92B, "Guide for Smoke Management Systems in Malls, Atria, and Large Areas"

Users of this equipment should consult Authorities Having Jurisdiction (AHJ) concerning the particular types to be used, number and location of appliances, character and installation of wiring, methods to be followed in the receipt and disposition of signals, keeping of records, rendering of reports, and all other details having a bearing on adequate installation, maintenance and use of the system to be employed.

Listed equipment is subjected to investigation to determine its suitability for its intended service and for installation, maintenance and use in conformity with the applicable NFPA standards, with particular regard to design and construction, practicability of application and reliability of performance in addition to the possible electrical hazards involved in its use.

A complete system is considered to be a combination of interrelated signal-initiating devices, signal-transmitting devices, signal-notification appliances and control unit installed in accordance with regulations enforced by the AHJ who determines the suitability of the installation for its particular application. The Listing indicates that wiring diagrams have been submitted with the equipment, which provide details for interconnecting it to other interrelated devices for the intended application. The interconnection details are shown on the equipment or are in a separate installation document provided with the equipment and referenced in the marking on the equipment by drawing number and issue date and/or revision level.

Equipment may be used in different combinations to form a system. All Listed equipment forming the system may be either of one manufacturer or of different manufacturers. The installation wiring diagram provided as a part of the Listed equipment should be consulted for specific details.

A system formed of separately Listed parts to provide a central station fire alarm system may be certificated by a company Listed under Central Station Protective Signaling Services (UUFX).

A system formed of separately Listed parts to provide a local, auxiliary, remote station, or proprietary fire alarm system may be certificated by a company Listed under Local, Auxiliary, Remote Station, and Proprietary Protective Signaling Services (UUJS).

Products may be Classified in accordance with the applicable Parts of European Norm (EN) 54, "Fire Detection and Fire Alarm Systems." For additional information, see Fire Detection and Alarm Equipment Classified in Accordance with International Publications (UTHN).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONTROL UNITS, SYSTEM (UOJZ)

GENERAL

This category covers electrical control units for fire-protective signaling systems to be employed in indoor locations in accordance with ANSI/NFPA 72, "National Fire Alarm Code."

Products investigated for outdoor locations are identified in the individual Listings with respect to the installation environment (outdoor), location (dry, damp or wet) and maximum air ambient temperature.

A control unit consists of a unit assembly of electrical parts having provision for connection of power-supply circuits routed through the control unit equipment by a prescribed scheme of circuiting. The circuits are extended to separate devices by which the operating parts of the control units are actuated for signals and to separate or incorporated appliances by which the signals are indicated, so as to form a coordinated system combination for definite signaling services.

**SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES
(SYKJ)**

340

Control Units, System (UOJZ)—Continued

The Listee of a control unit furnishes the related actuating devices and signal-indicating appliances for use with the control unit or indicates the particular devices and appliances required and supplies any instructions necessary to complete their interconnection at the installation.

The Listing indicates that wiring diagrams have been submitted with the control unit, along with information regarding its intended application, and the unit has been tested with representative actuating devices and signal-indicating devices to be used with it as an interrelated assembly. Reference is made in the marking of the control unit to the wiring diagram showing complete information except when the installation wiring diagram is secured to the control unit.

Identification of the information in the individual Listings is as follows:

- Local System Type (L)
- Local System Type with Shunt Type Connection to Master Box (LS)
- Auxiliary System Type (A)
- Remote Station System Type (RS)
- Proprietary System Type (P)
- Central Station System Type (CS)
- Protected Premise Unit (Protected premises unit or PPU)
- Supervising Station Unit (Receiving Unit or RU)

System Control Unit with Emergency Voice Communication — A system control unit with emergency voice communication consists of a control unit that employs a speaker system in lieu of conventional general alarm-indicating circuits. The control unit may also have additional provision for telephone communication by use of hand sets. A tape deck with a prerecorded message may also be employed as a supplementary feature.

System Control Unit with Emergency Telephone Communication — A system control unit with emergency telephone communication consists of a control unit with conventional general alarm-indicating circuits and additionally employs telephone communication circuits to remote telephone hand sets for emergency communication during a fire condition, usually for use by fire department personnel.

The types of devices that can be connected for the service indicated in the individual Listings for each type control unit are as follows:

- A — Automatic fire alarm: Thermostats, smoke detectors, etc.
- M — Manual fire alarm: Manually-operated boxes
- WF — Waterflow alarm: Waterflow switches
- SS — Supervisory: Gate valves, water-level switches, temperature switches, carbon monoxide detectors, residential fire alarm control units, etc.
- WSS — Watchman's supervisory service

The type of signaling service applicable to each type of control unit is as follows:

- C — Coded
- NC — Noncoded
- M — March Time
- MX — Multiplex
- 1W-RF — Radio Frequency (one-way private radio)
- 2W-RF — Radio Frequency (two-way private radio)
- Rev Pol — Reverse Polarity
- DAC — Digital Alarm Communicator
- OT — Other Transmission Technologies

Where more than one type of control unit is indicated for a model number, such as Type Fire Alarm (L, LS, A, RS), that particular model is suitable for all the indicated applications. The change from one type to another may be made by deletion or addition of a panel or module inside the control unit cabinet or revisions to operating software to provide the additional function. In other cases a control unit may be suitable for a dual function without any panel changes, such as a Type Fire Alarm (P, RS).

Authorities Having Jurisdiction should be consulted before installation or revision.

PRODUCT MARKINGS

Each complete product is marked to indicate its intended use. This consists of the word "Commercial," followed by "Protected-Premises Control Unit" or "Supervising Station Control Unit," consistent with the description in the individual Listings.

RELATED PRODUCTS

For additional information regarding central station systems, see Central Station Protective Signaling Services (UUFX).

ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 864, "Control Units and Accessories for Fire Alarm Systems."

ADJUNCT SERVICES

Underwriters Laboratories Inc. provides a service for Classification of control units that not only meet the requirements of ANSI/UL 864, but also have been investigated in accordance with ANSI/SIA CP-01-2000, "Control Panel Standard — Features for False Alarm Reduction." See Control Panels, SIA False Alarm Reduction (AMTB).

SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES (SYKJ)
Control Units, System (UOJZ)—Continued
UL MARK

The Signaling Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

The Listing Mark for fire alarm equipment may include the designation "___ of ___." The first space is stamped with the number indicating the position that the panel occupies in the series of panels constituting the fire alarm equipment. The second space is stamped with the total number of units in the fire alarm equipment.

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word "SECURITY" above the UL symbol. The product name is "Fire Alarm and Security Equipment" or "Fire Alarm and Security Subassembly."

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Hospital Signaling and Nurse Call," "and General Signaling," "and Emergency Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "Fire Alarm and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

- S — Security Equipment
- F — Fire Alarm Equipment
- HN — Hospital Signaling and Nurse Call Equipment
- G — General Signaling Equipment
- E — Emergency Signaling Equipment
- EM — Enclosed Energy Management Equipment
- IT — Information Technology Equipment
- T — Telephone Equipment

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated to ANSI/SIA CP-01-2000. The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and the following marking:

ALSO CLASSIFIED IN ACCORDANCE WITH ANSI/SIA CP-01-2000

Where model numbers are indicated in the individual Listings, 100% of the manufacturer's production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**EMERGENCY COMMUNICATION AND
RELOCATION EQUIPMENT (UOQY)**
GENERAL

This category covers units intended to be installed as a system for providing emergency voice communication on either a selective or general basis, within multiple-unit installations.

Specific appliances or appliance groups intended for use with this equipment are identified in the individual Listings. Instructions describing interconnection at the installation site are provided with the product, including wiring diagrams.

This equipment is intended to be installed in areas specified by ANSI/NFPA 72, "National Fire Alarm Code." Authorities Having Jurisdiction should be consulted before installation.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of a specific use description as indicated in the individual Listings.

RELATED PRODUCTS

This equipment differs from Control Unit Accessories, System Equipment (UOXX), providing similar service, in that operation of the equipment is not dependent upon connection to a fire alarm control unit.

Amplifiers included within or connected to this equipment to form systems are covered under Speakers and Amplifiers for Fire Protective Signaling Systems (UEAY) or, as components for use in emergency communication system applications, under Emergency Communication and Relocation Equipment (UOQY2).

**SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated to ANSI/SIA CP-01-2000. The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and the following marking:

ALSO CLASSIFIED IN ACCORDANCE WITH ANSI/SIA CP-01-2000

Where model numbers are indicated in the individual Listings, 100% of the manufacturer's production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DETECTORS, AUTOMATIC FIRE (UPLV)

These are either individual devices or prescribed combinations of devices designed to detect flame, heat, smoke, or combustion gases resulting from a fire and to automatically operate electrical signaling contacts. The signaling contacts may be integral parts of an individual device or parts of a separate device to which the detecting element is connected as an extended component.

The signaling contacts of the detector are intended to be connected to the circuit conductors of fire protective signaling systems recognized by the National Fire Protection Association Standards, so that the fire alarm signal initiated by the detector will be indicated by the system.

The kind of system (central station, proprietary, auxiliary, remote station or local) with which the detector can be used depends upon the design of the signaling circuit to which the detector contacts are intended to be connected. A detector may have non-coded signaling contacts connected directly to the actuating circuit of system control unit or to the actuating circuit of an electrically operated transmitter which will transmit coded signals over the signaling line circuit of a local, auxiliary, proprietary, remote station, or central station system.

The wiring diagram of the transmitter or system control unit with which the detector is used will indicate the circuit application of the detector.

**SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES
(SYKJ)**

342

Detectors, Automatic Fire (UPLV)—Continued

A combination type detector depends upon two or more related but separate pieces of equipment which are designed to be installed together so as to form a complete detector.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Smoke-automatic Fire Detectors (UROX)
GENERAL

This category covers detecting combinations designed to detect smoke particles. Smoke detectors may or may not be designed to be connected to fire alarm system control units (see **APPLICATIONS**).

A heat detector and/or an audible-signaling appliance may be provided integral with the detector.

The primary function of duct detectors is to shut down the blowers and/or dampers of air conditioning and ventilating systems in an attempt to prevent a possible panic and smoke damage from distribution of smoke. Duct detectors are not intended as a substitute for open-area protection.

The level of toxicity produced by the combustibles at which smoke detectors actuate has not been investigated.

DETECTOR TYPES

Photoelectric (P) — Designed to detect an abnormal density of smoke particles, either by obscuration of a projected light path or reflection of light from the smoke particles onto a light-sensitive element.

Ionization (I) — An ionization smoke detector has a small amount of radioactive material that ionizes the air in the sensing chamber, thus rendering it conductive and permitting a current flow through the air between two charged electrodes. This gives the sensing chamber an effective electrical conductance. When smoke particles enter the ionization area, they decrease the conductance of the air by attaching themselves to the ions, causing a reduction in mobility. When the conductance is less than a predetermined level, the detector circuit responds.

Combination Photoelectric/Ionization (P/I) — Employs both principles of detection in one unit.

Projected Beam (PB) — A light beam is projected across the space of area to be protected.

Air Sampling (AS) — Consists of air-sampling ports at the ends of piping or tubing extending from the detector unit to the areas to be protected. A pump draws air from the protected area through the ports and tubing to the detector where the air is analyzed for fire products.

APPLICATIONS

Open-area Protection (OAP) — Requires detector connection to a compatible system control unit for operation.

Releasing Service (RS) — Intended for detector connection only to releasing devices, such as electromagnetic door holders, fire dampers, etc.

Open-area Protection with Releasing Service (OAP/RS) — Incorporates supplementary switching contacts for additional connection to releasing devices.

Duct Detector [D (ST)] — Intended for installation on the side of a duct. Employs sampling tubes that extend into the duct.

Duct Detector [D (I)] — For installation inside a duct.

COMPATIBILITY WITH CONTROL UNITS

Smoke detectors for open-area protection are intended to be connected to the initiating device circuit of a fire alarm system control unit.

Multiple-wire detectors, employing power-supply terminals or leads that do not obtain power from the initiating-device circuit of a system control unit, are compatible with the initiating device circuits of any Listed system control unit if (1) failure of the power to the detector is supervised at the control unit, and (2) the smoke detector is powered from a "Regulated" power-supply output, or a "Special Application" power-supply output for which the voltage outputs have been investigated. Compatible models for "Special Application" outputs are indicated on the installation wiring diagram of the control unit and/or detectors.

Two-wire detectors, whose power-supply terminals or leads are the same as the signaling terminals, and obtain power from the initiating-device circuit of a system control unit, are investigated for compatibility either by test or a review of the circuit parameters of both the detector and control unit. Listing is restricted only to those control units with which such an investigation was made. Interconnection limitations and compatible models are indicated on the installation wiring diagram of control unit and/or detectors.

INSTALLATION

Refer to ANSI/NFPA 72, "National Fire Alarm Code," and ANSI/NFPA 90A, "Standard for the Installation of Air-Conditioning and Ventilating Systems," for installation, maintenance, and testing guidelines.

SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES (SYKJ)
Smoke-automatic Fire Detectors (UROX)—Continued

Spacings — Although there are no assigned spacings to these detectors, test fires, using the maximum amount of combustible for the risk involved, may be employed. See ANSI/NFPA 72 for additional guidelines.

Environmental Considerations — Open-area detectors are intended for indoor use only where normal ceiling temperatures [max 37.8°C (100°F)] prevail. Care should be used that detectors are not installed in areas where conditions may cause unwanted (false) alarms.

Duct detectors are intended to be installed in ducts of heating, ventilating, and air conditioning systems where temperatures at the detector do not exceed 37.8°C (100°F).

Ionization detectors should not be used in an environment of high-level radiation unless tests in the actual environment have shown that the radiation will not interfere with operation of the detectors.

Effect of Velocity — The velocities indicated in the individual Listings are the maximum and minimum to which the detector has been subjected in performance tests without indication of a false alarm or abnormal shift in sensitivity. The performance of photoelectric-type detectors is not affected by velocity. Velocity limits for duct detectors are based on response to fire tests in ANSI/UL 268A, "Smoke Detectors for Duct Application."

Stability Test — In view of the innumerable environmental conditions that exist in the field, it is recommended that the stability of detectors be monitored prior to connection to a fire alarm system for at least three months or more to screen out locations of detectors where unwanted (false) alarms may occur. Relocation of the detectors, use of a detector with a different principle of operation, or a change in the sensitivity setting where permitted in the marking of the detector may be required.

Authorities Having Jurisdiction should be consulted before installation.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of one of the following:

For **nonseparable heads and bases**:

1. Smoke Detector (+) for Open Area Protection
2. Smoke Detector (+) for Open Area Protection. Also Suitable for Releasing Device Service.
3. Smoke Detector (+) for Releasing Device Service
4. Smoke Detector (+) for Duct Application

For **separable heads**:

1. Smoke Detector Head (+) for Use with a (*) UL Listed Base
2. Smoke Detector Head (+) for Open Area Protection When Used with a (*) UL Listed Base
3. Smoke Detector Head (+) for Open Area Protection When Used with a (*) UL Listed Base. Also Suitable for Duct Application.
4. Smoke Detector Head (+) for Open Area Protection When Used with a (*) UL Listed Base. Also Suitable for Releasing Device Service.
5. Smoke Detector Head (+) for Releasing Device Service When Used with a (*) UL Listed Base
6. Smoke Detector Head (+) for Duct Application When Used with a (*) UL Listed Base
7. Smoke Detector Head When Used with a (*) UL Listed Smoke Duct Detector Housing

For **separable bases and duct housing**:

1. Detector Base (+) for Use with a (*) UL Listed Head
2. Detector Base (+) for Open Area Protection When Used with a (*) UL Listed Head
3. Detector Base (+) for Open Area Protection When Used with a (*) UL Listed Head. Also Suitable for Duct Application.
4. Detector Base (+) for Open Area Protection When Used with a (*) UL Listed Head. Also Suitable for Releasing Device Service.
5. Detector Base (+) for Open Area Protection When Used with a (*) UL Listed Head. Also Suitable for Releasing Device Service and Duct Application.
6. Detector Base (+) for Releasing Device Service When Used with a (*) UL Listed Head
7. Smoke-Duct Detector Housing for Use with (*) UL Listed Head

For **separable system assemblies**:

1. Smoke Detector Projected Beam System Unit
 2. Smoke Detector Air Sampling System Unit
 3. Smoke Detector for Duct Application Subassembly
- + To be inserted when applicable: "with Integral Audible Signal," "with Integral Heat Detector" or "with Integral Audible Signal and Heat Detector"

* Company name or File No. (Sxxxx)

Detectors marked with the designation "with Integral Audible Signal" include an audible-signaling appliance in the unit (head or base), which is energized under an alarm condition.

Detectors marked with the designation "with Integral Heat Detector" include a heat detector in the unit, which is connected internally to the smoke detector alarm circuit. Actuation of the head detector results in the same alarm signal as obtained from the smoke detector.

RELATED PRODUCTS

SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES (SYKJ)

Smoke-automatic Fire Detectors (UROX)—Continued

Combination door closers and holders incorporating automatic smoke detection components are covered under Combination Fire Door Closers and Holders (GTIS).

ADDITIONAL INFORMATION

For additional information, see Detectors, Automatic Fire (UPLV), Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate open-area and releasing-service detectors in this category is ANSI/UL 268, "Smoke Detectors for Fire Alarm Signaling Systems."

The basic standard used to investigate duct detectors in this category is ANSI/UL 268A, "Smoke Detectors for Duct Application."

UL MARK

A two-Listing-Mark system is employed for separable detector heads and bases. This permits the separate shipment of bases and heads to facilitate installation and maintenance. The Listing Marks on the separable units, coupled with a marking to cross-reference the head and the base, identify the parts to be used together to form a complete detector assembly.

The Signaling Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

F — Fire Alarm Equipment

Where model numbers are indicated in the individual Listings, 100% of the manufacturer's production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Smoke-automatic Fire Detector Accessories (URRQ)

GENERAL

This category covers smoke detector accessories, which are devices employed to supplement smoke detector operation when connected as part of a fire alarm system or used to validate smoke detector operation. The interconnection is indicated on the installation wiring diagram associated with the detector.

Authorities Having Jurisdiction should be consulted before installation.

PRODUCT MARKINGS

Each product is marked to indicate its intended use as indicated in the individual Listings.

ADDITIONAL INFORMATION

For additional information, see Smoke-automatic Fire Detectors (UROX), Detectors, Automatic Fire (UPLV), Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 268, "Smoke Detectors for Fire Alarm Signaling Systems."

UL MARK

The Signaling Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Smoke Detectors for Special Applications (URXG)

USE AND INSTALLATION

This category covers smoke-automatic fire detectors employing a special construction different from conventional detectors and designed to detect products of combustion in a specific location. These detectors are not intended as a substitute for open-area protection.

These detectors are intended to be installed in accordance with the manufacturer's installation instructions, in a manner acceptable to the Authority Having Jurisdiction and in accordance with ANSI/NFPA 72, "National Fire Alarm Code," or other NFPA Standards that may apply, such as for extinguishing system applications. The sensitivity rating of the detector should be taken into consideration with regard to installation in an area to be protected under operating conditions to guard against false alarms. The detectors may be connected to the initiating-device circuits of Listed control units that provide audible-alarm signals, or employed as part of an extinguishing system.

Authorities Having Jurisdiction should be consulted before installation.

Effect of Velocity — The velocities indicated in the individual Listings are the maximum and minimum to which the detector has been subjected in performance tests without indication of a false alarm or abnormal shift in sensitivity. Velocity limits for duct detectors are based on response to fire tests in ANSI/UL 268A, "Smoke Detectors for Duct Application."

Detector Types

Photoelectric (P) — Designed to detect an abnormal density of smoke particles, either by obscuration of a projected light path or refection of light from the smoke particles onto a light-sensitive element.

Ionization (I) — An ionization smoke detector has a small amount of radioactive material that ionizes the air in the sensing chamber, thus rendering it conductive and permitting a current flow through the air between two charged electrodes. This gives the sensing chamber an effective electrical conductance. When smoke particles enter the ionization area, they decrease the conductance of the air by attaching themselves to the ions, causing a reduction in mobility. When the conductance is less than a predetermined level, the detector circuit responds.

Combination Photoelectric/Ionization (P/I) — Employs both principles of detection in one unit.

Air Sampling (AS) — Consists of air-sampling ports at the ends of piping or tubing extending from the detector unit to the areas to be protected. A pump draws air from the protected area through the ports and tubing to the detector where the air analyzed for fire products.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term "Smoke Detector for Special Application" or "Smoke Detector Accessory for Special Application."

ADDITIONAL INFORMATION

For additional information, see Smoke-automatic Fire Detectors (UROX), Detectors, Automatic Fire (UPLV), Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 268, "Smoke Detectors for Fire Alarm Signaling Systems," and ANSI/UL 268A, "Smoke Detectors for Duct Application."

UL MARK

The Signaling Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

F — Fire Alarm Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**FIRE ALARM DEVICES, SINGLE AND
MULTIPLE STATION, AND ACCESSORIES
(UTER)**

The following listings cover single- and multiple-station heat and smoke detectors and related accessories intended to be installed in ordinary indoor locations in accordance with Chapter 2 of the National Fire Protection Association Standard No. 72 titled the National Fire Alarm Code.

The levels of toxicity produced by the combustibles at which single- and multiple-station fire alarm devices are actuated have not been investigated by the Laboratories.

For a description of the applicable Listing Mark refer to the sub-categories Single- and Multiple-Station Heat Detectors (UTFS) and Single- and Multiple-Station Smoke Detectors (UTGT).

**Single- and Multiple-station Heat Detectors
(UTFS)****USE AND INSTALLATION**

This category covers single- and multiple-station heat detectors intended to be employed in indoor locations.

Single-station Type — Single-station heat detectors are self-contained units incorporating a releasing mechanism, operating mechanism, and an alarm mechanism. In operation, heat actuates the releasing element, permitting stored energy (stored compressed gas or spring) embodied in the unit to sound an alarm. Temperature ratings and spacing limitations are given in the individual Listings.

Multiple-station Type — Multiple-station heat detectors are intended for use in fire alarm systems. They include thermally-sensitive detector units that initiate a signal by releasing compressed gas from a storage cylinder through an alarm mechanism (or horn) to sound an audible signal. These devices are interconnected by tubing.

Both single- and multiple-station units employing compressed gas as the operating mechanism employ a sight glass or visual indicator to check for loss of contents by leakage, tampering or operation.

The individual Listings note the limitations on the maximum length of tubing between the gas storage cylinder, detector units, alarm mechanisms and other system components, and on operating-temperature ratings, spacing limitations (sensitivity), and other details pertinent to the use of these devices.

Ordinarily these devices are intended for locations where normal ceiling temperatures prevail (below 100°F). Locations where temperatures at ceiling are likely to be unduly high, from sources of heat other than fire conditions, such as boiler rooms, demand special consideration. Under these conditions, alarm devices operating normally at higher temperatures and capable of withstanding high temperatures for long periods of time may be required. Care should be exercised to select alarm devices having the proper temperature rating to guard against false alarms from premature operation:

For ceiling temperatures not exceeding 100°F, the 136 to 165°F (ordinary) rating devices are recommended.

For ceiling temperatures exceeding 100°F, but not 150°F, the 174 to 212°F (intermediate) rating devices are recommended.

The spacings specified in the individual Listings are for flat, smooth ceiling construction of ordinary height, generally regarded as the most favorable condition for distribution of heated air currents resulting from a fire. Under other forms of ceiling constructions, reduced spacing of alarm devices may be required.

The placement and spacing of alarm devices should be based on consideration of the ceiling construction, ceiling height, room or space areas, space subdivision, the normal ceiling temperature, possible exposure of the devices to abnormal heat conditions, and to draft conditions likely to be encountered at the time of a fire.

ADDITIONAL INFORMATION

For additional information, see Fire Alarm Devices, Single and Multiple Station, and Accessories (UTER), Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 539, "Single and Multiple Station Heat Alarms."

UL MARK

The Signaling Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and one of the following product names as appropriate: "Single Station Heat Detector," "Multiple-Station Heat Detector," "Single- and/or Multiple-Station Heat Detector" or "Single- and/or Multiple-Station Heat Detector Accessory"

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss,

Single- and Multiple-station Heat Detectors (UTFS)—Continued

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**Single- and Multiple-station Smoke Alarms
(UTGT)****USE**

This category covers single- and multiple-station smoke alarms intended to be employed in indoor locations where sensitivity testing and maintenance of alarms, per section 10.4.4 of ANSI/NFPA 72, "National Fire Alarm Code" (2007), is required by code, Authorities Having Jurisdiction, or other requirement.

This category also covers single- and multiple-station smoke alarms that have been performance tested to a minimum 10-year extended battery life under normal ambient conditions. Unless otherwise noted in the individual Listings, the alarms are intended for flush-mounted installation only, and are not intended for use on surface-mounted boxes.

This category also covers supplementary devices and accessories for use with these units, such as a remote horn. These products are identified in the individual Listings.

ALARM TYPES

Single Station — Self-contained units that incorporate a smoke chamber, an optional heat detector, and related electrical components to initiate an audible alarm signal from the unit when abnormal smoke or heat (when a supplementary heat detector is provided) actuates the unit. These devices may be energized from a commercial power-supply source by means of permanent wiring in accordance with ANSI/NFPA 70, "National Electrical Code," flexible power-supply cord, use of limited-energy cable or equivalent wiring connected to the output of a suitable Class 2 power supply, or by one or more batteries.

Where a battery is employed as the main supply, its depletion below the level at which an alarm signal would be obtained is indicated by a distinctive audible trouble signal which persists for at least seven days.

Multiple Station — Similar to single-station units but provided with leads or terminals (or integral RF transmitter/receiver units) to permit the interconnection of single-station units so that actuation of any one unit results in actuation of the audible alarms of all units. The installation instructions (manual) indicate the maximum number of units that can be interconnected.

Refer to Chapter 11 of ANSI/NFPA 72 and the instruction manual provided with each smoke alarm for installation data. ANSI/NFPA 72 includes installation requirements of fire warning equipment in family living units. This is intended to cover living areas only and not common usage areas of multifamily buildings such as corridors, lobbies, stairwells, etc.

Travel Alarm — Consists of a battery-operated smoke alarm provided with a mounting bracket for top of door mounting only. May also consist of a battery-operated single-station smoke alarm with the addition of a mounting bracket. The difference is indicated on the UL Listing Mark.

Alarm for Recreational Vehicles — ANSI/UL 217, "Single and Multiple Station Smoke Alarms," applies, except more stringent environmental tests are conducted.

Alarm for Recreational Boats — ANSI/UL 217 applies, except more stringent environmental tests are conducted.

ADDITIONAL INFORMATION

For additional information, see Fire Alarm Devices, Single and Multiple Station, and Accessories (UTER), Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 217, "Single and Multiple Station Smoke Alarms."

Products in this category marked "For The Hearing Impaired" have additionally been investigated to ANSI/UL 1971, "Signaling Devices for the Hearing Impaired."

UL MARK

The Signaling Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and one of the following product names as appropriate:

"Single-station Smoke Alarm"

"Multiple-station Smoke Alarm"

"Single- and/or Multiple-station Smoke Alarm"

"Single- and/or Multiple-station Smoke Alarm Accessory"

"Travel Smoke Alarm"

"Single-station Smoke Alarm – Also Suitable as a Travel Smoke Alarm"

"Single-station Smoke Alarm – Also Suitable for Use in Recreational Vehicles"

"Single-station Smoke Alarm – Also Suitable for Use in Recreational Boats"

**SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES
(SYKJ)**
Single- and Multiple-station Smoke Alarms (UTGT)—Continued

“Single-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglary Alarm Unit”
 “Single-station Smoke Alarm – Also Suitable as a Single-station Carbon Monoxide Alarm”
 “Multiple-station Smoke Alarm – Also Suitable as a Multiple-station Carbon Monoxide Alarm”
 “Single- and/or Multiple-station Smoke Alarm – Also Suitable as a Single- and/or Multiple-station Carbon Monoxide Alarm”
 “Single-station Smoke Alarm – Also Suitable as a Commercial Residential Smoke Alarm”
 “Multiple-station Smoke Alarm – Also Suitable as a Commercial Residential Multiple-station Smoke Alarm”

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word “SECURITY” above the UL symbol. The product name is one of the following:

“Single-station Smoke Alarm and Household Burglar Alarm Unit”
 “Single- and/or Multiple-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglar Warning System Control Unit”
 “Single- and/or Multiple-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglar Warning System Control Unit, Home Health Care Control Unit, and Signal Appliance Control Unit”
 “Single- and/or Multiple-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglar Warning System Control Unit Accessory, Personal Call Unit, and Signal Appliance Environment Transmitter”
 “Single-station Smoke Alarm Accessory – Also Suitable for Use as a Household Burglary Alarm Unit”
 “Single-station Smoke Alarm Accessory – Also Suitable for Use as a Home Health Care Control Unit”
 “Single-station Smoke and/or Carbon Monoxide Alarm Accessory – Also Suitable for Use as a Home Health Care Control Unit”

Any of the preceding product names may include “for the Hearing Impaired” for products so identified in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEAT-ACTUATED DEVICES FOR SPECIAL APPLICATION (UTHV)
USE AND INSTALLATION

This category covers fixed-temperature, heat-actuated-type detectors employing a special construction different from conventional thermostats and designed to detect an abnormal increase in air temperature.

These detectors are intended to be installed adjacent to the equipment being protected as identified in the installation instructions, and in accordance with the Authority Having Jurisdiction and ANSI/NFPA 70, “National Electrical Code,” or other NFPA Standards that may apply, such as for extinguishing system applications. The temperature rating of the detector should be taken into consideration with regard to installation in the ambient temperature of the equipment to be protected under operating conditions to guard against false alarms. The detectors are intended to be connected to the initiating device circuits of Listed control units that provide audible alarm signals or employed as part of an extinguishing system.

Authorities Having Jurisdiction should be consulted before installation.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term “Heat Actuated Device for Special Application,” “Control Unit for Special Application” or “Control Unit Accessory for Special Application.”

ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 521, “Heat Detectors for Fire Protective Signaling Systems.”

UL MARK

The Signaling Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word “SIGNALING” above the UL symbol and the word “LISTED” below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name “Fire Alarm Equipment” or “Fire Alarm Subassembly.”

The product name may be abbreviated as follows: The word “Type:” followed by the appropriate Type Code (as shown below), additionally followed by “Subassembly,” as applicable.

Type Codes:

SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES (SYKJ) 345
**Heat-actuated Devices for Special Application
(UTHV)—Continued**
F – Fire Alarm Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOUSEHOLD FIRE-WARNING SYSTEM UNITS (UTLQ)

This category covers the individual units that are interconnected to form an electrically-operated household fire-warning system. These units include a main control unit (with integral or separate power supply) and related accessories intended for connection to the control unit.

Additional equipment and materials, such as bells, horns, heat detectors, smoke detectors, and limited-energy fire detector circuit wiring, may be required in various applications to complete a system. Such products are covered under Audible-signal Appliances (ULSZ), Smoke-automatic Fire Detectors (UROX), Heat-automatic Fire Detectors (UQGS) and Fire Alarm Devices, Single and Multiple Station, and Accessories (UTER).

The units comprising a system are intended to be installed in accordance with the applicable requirements of Chapter 2 of ANSI/NFPA 72, “National Fire Alarm Code.” Authorities Having Jurisdiction should be notified of the installation.

At least one smoke detector is required to be provided in a household fire-warning system. The smoke detector can be either electrically wired to and operated from the control unit, or be a separately-operated device, such as an electrically-operated single-station fire alarm device.

An installation drawing and/or detailed instructions are employed as the controlling factor to assure proper installation and interconnection among units. This material may be attached to the control unit, provided detached, or included as part of an instruction booklet.

An instruction booklet illustrating typical installation layouts, operation, maintenance, servicing and test procedures is supplied with the main control unit. Printed information for a household emergency evacuation plan may be separate or included as part of the booklet.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Control Units and Accessories, Household System Type (UTOU)
USE AND INSTALLATION

This category covers control units and accessories intended to be used as part of a household fire-warning system.

Control Unit — Consists of a unit assembly of electrical parts having provision for connection of power supply, signal-actuating devices (thermostats, smoke detectors, switches, etc.), and signal-indicating devices (bells, horns, etc.).

Combination Control Unit — A control unit may additionally include circuit facilities for connection to burglar alarm devices to form a combination fire-burglary control unit. In such a combination unit the fire alarm signal takes precedence over the burglar alarm signal and a distinction between alarm signals is required. A common trouble signal may be employed for both.

Modular Control or Combination Unit — A control unit may be pre-wired at the factory or assembled from readily installed modules. A Listed burglary module can be added after the unit is installed to expand the system capability. The installation diagram indicates the type and number of modules that can be employed in a control unit.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term “Household” or “Residential” and the specific use description as indicated in the individual Listings.

ADDITIONAL INFORMATION

For additional information, see Household Fire-warning System Units (UTLQ), Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 985, “Household Fire-Warning System Units.”

ADJUNCT SERVICES

Underwriters Laboratories Inc. (UL) provides a service for the Classification of control units and accessories for use in household fire-warning

systems that not only meet the appropriate requirements of UL but also have been investigated to ANSI/SIA CP-01-2000, "Control Panel Standard — Features for False Alarm Reduction." See Control Panels, SIA False Alarm Reduction (AMTB).

UL MARK

The Signaling Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word "SECURITY" above the UL symbol. The product name is "Fire Alarm and Security Equipment" or "Fire Alarm and Security Subassembly."

Some of these products are also Listed under other Signaling and Information Technology or Telephone categories. When applicable, the product name may include "and General Signaling," "and Emergency Signaling," "and Information Technology" or "and Telephone," as appropriate (e.g., "Fire Alarm and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

- S — Security Equipment
- F — Fire Alarm Equipment
- G — General Signaling Equipment
- E — Emergency Signaling Equipment
- IT — Information Technology Equipment
- T — Telephone Equipment

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated to ANSI/SIA CP-01-2000. The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and the following marking:

ALSO CLASSIFIED IN ACCORDANCE WITH ANSI/SIA CP-01-2000

Where model numbers are indicated in the individual Listings, 100% of the manufacturer's production for those models is required to be labeled. Where model numbers are not indicated, the manufacturer is not obliged to label 100% of production.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER-SUPPLY UNITS (UTRZ)
USE

This category covers power supply units intended for application as components of fire-protective signaling systems.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of a specific use description as indicated in the individual Listings.

ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1481, "Power Supplies for Fire-Protective Signaling Systems."

UL MARK

The Signaling Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

The Listing Mark for fire alarm equipment may include the designation "___ of ___." The first space is stamped with the number indicating the position that the panel occupies in the series of panels constituting the fire alarm equipment. The second space is stamped with the total number of units in the fire alarm equipment.

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements

SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES (SYKJ)
Power-supply Units (UTRZ)—Continued

detailed above and the word "SECURITY" above the UL symbol. The product name is "Fire Alarm and Security Equipment" or "Fire Alarm and Security Subassembly."

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Hospital Signaling and Nurse Call," "and General Signaling," "and Emergency Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "Fire Alarm and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

- S — Security Equipment
- F — Fire Alarm Equipment
- HN — Hospital Signaling and Nurse Call Equipment
- G — General Signaling Equipment
- E — Emergency Signaling Equipment
- EM — Enclosed Energy Management Equipment
- IT — Information Technology Equipment
- T — Telephone Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SPEAKERS AND AMPLIFIERS FOR FIRE-
PROTECTIVE SIGNALING SYSTEMS (UUMW)**
USE AND INSTALLATION

This category covers speakers, amplifiers and their accessories investigated for use in fire alarm and/or emergency communication systems.

Speakers have been investigated for audible output of 75dBA or greater measured at 10 ft, when powered from a source of pink noise over a range of 400 – 4000 Hz. The units are marked with a minimum audibility rating.

Accessories, such as enclosures, have been investigated with respect to both mechanical and acoustical consideration when used with speakers specified in the individual Listings.

Where a Listed product is formed by the assembly of two or more parts and all parts are not provided as a single package, the specific parts are identified in the individual Listings and each part bears a separate Listing Mark. The marking on each part references installation instructions that show assembly and installation of the parts to form a Listed product.

Amplifiers have been investigated with respect to specified input/output parameters in a variety of tests, including harmonic distortion. These products are not to be confused with amplifiers tested as elements of control unit adjunct systems for personnel emergency relocation and evacuation; see Control Unit Accessories, System (UOXX). Amplifiers used in adjunct systems are suitable for use only in specified configurations.

All products covered under this category are intended for indoor use only, unless otherwise specifically identified as suitable for outdoor use by markings on the product and in the individual Listings.

Speakers and/or amplifiers and their accessories that have been investigated for mounting in air-handling spaces are specifically identified by markings on the product and in the individual Listings. Installation details are shown on the product or are provided in a separate installation document provided with the product and referenced in the marking on the product.

PRODUCT MARKINGS

Each product is marked to indicate its intended use as indicated in the individual Listings.

ADDITIONAL INFORMATION

For additional information, see Signal and Fire Alarm Equipment and Services (SYKJ) and Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1480, "Speakers for Fire Protective Signaling Systems," and UL 1711, "Amplifiers for Fire Protective Signaling Systems."

The basic standard used to investigate nonmetallic materials of products marked suitable for use in air-handling spaces in this category is UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces."

UL MARK

The Signaling Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated

**SIGNAL AND FIRE ALARM EQUIPMENT AND SERVICES
(SYKJ)****Speakers and Amplifiers for Fire-protective Signaling Systems
(UUMW)—Continued**

in the Introduction of this Directory), a control number, and the product name "Fire Alarm Equipment" or "Fire Alarm Subassembly."

Some of these products are also Listed under other Signaling categories. When applicable, the product name may include "and General Signaling," as appropriate (e.g., "Fire Alarm and General Signaling Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

F – Fire Alarm Equipment

G – General Signaling Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RELEASING DEVICE EQUIPMENT
FOR USE IN HAZARDOUS
LOCATIONS (TBCX)**

Releasing Devices with accessory equipment are designed to release operating weights or air or water under pressure in the functioning of fire protection and fire alarm equipment.

They are available in both heat responsive (automatic) and manual types. The heat responsive types may be had in either fixed temperature or rate-of-rise types or a combination of these two.

The heat responsive portions of releasing devices are integral parts of some patterns. In other patterns they are separate parts, such as air chambers which are mounted in the fire area and connected by small-bore tubing to the releasing device; or thermostatically operated electric switches (thermostats) mounted in the fire area and connected by an electric wiring circuit to the releasing device. Devices which have normally open contacts are listed as "Heat-Automatic Fire Detectors" and those which have normally closed contacts are listed as "Heat Detectors for Releasing Device Service."

Proper location and spacing of the auxiliary heat responsive devices (heat detectors, air chambers, tubing, etc.) involve consideration of service conditions throughout the area to be protected - such as ceiling construction, subdivisions of areas (including closets, small rooms, etc.) normal temperatures, high temperatures (if existent), resulting from manufacturing processes or other causes and draft conditions. Because of this, the recommendation regarding spacing of detectors gives a maximum limitation only, and recognizes that specific system settings, abnormal temperature changes, or other field conditions may require downward adjustment of these maximum spacing limits in field installations. Individual Listings should be consulted for details of spacing and locations of the heat responsive devices.

Authorities Having Jurisdiction should be consulted in all cases before installation of systems or devices.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**HEAT DETECTORS FOR RELEASING
DEVICE SERVICE FOR USE IN HAZARDOUS
LOCATIONS (TBGR)****GENERAL**

This category covers heat detectors having normally closed circuit contacts used for thermo-responsive elements of releasing systems. They are intended to be installed in accordance with ANSI/NFPA 72, "National Fire Alarm Code."

These heat detectors have been investigated for indoor use only unless otherwise indicated in the individual Listings.

The operating principles included in the individual Listings are coded as follows:

- ROR – Rate of rise
- FT – Fixed temperature
- ROR-FT – Combination rate of rise and fixed temperature
- RC – Rate compensation

RELATED PRODUCTS**RELEASING DEVICE EQUIPMENT FOR USE IN HAZARDOUS
LOCATIONS (TBCX)**

347

**Heat Detectors for Releasing Device Service for Use in
Hazardous Locations (TBGR)—Continued**

Heat detectors having normally open contacts are covered under Heat-automatic Fire Detectors for Use in Hazardous Locations (UIRV).

ADDITIONAL INFORMATION

For additional information, see Releasing Device Equipment for Use in Hazardous Locations (TBCX) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Heat Detector for Releasing Device Service for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**RELEASING DEVICES FOR USE IN
HAZARDOUS LOCATIONS (TBJW)****GENERAL**

This category covers releasing devices intended for use in supporting and releasing loads in connection with automatic operating devices or systems where loads at release lever hook do not exceed those specified in the individual Listings.

This category also covers releasing devices intended for use as a means of releasing air or water under pressure from a piping system confining and conducting that pressure through pipes or tubing to operate any connected pressure-operated mechanism.

A releasing device and its associated detection system may be adjusted to compensate for more or less severe ambient temperature changes by different settings of the release, or by varying the size of the compensating vents in the system to increase or decrease the rate of built-up pressure caused by exposure to some given temperature rise. Because of this, the recommendation regarding spacing of detectors gives a maximum limitation only, and recognizes that specific system settings, abnormal temperature changes, or other field conditions may require downward adjustment of these maximum spacing limits in field installations.

RELATED PRODUCTS

See Heat Detectors for Releasing Device Service for Use in Hazardous Locations (TBGR) and Heat-automatic Fire Detectors for Use in Hazardous Locations (UIRV).

ADDITIONAL INFORMATION

For additional information, see Releasing Device Equipment for Use in Hazardous Locations (TBCX) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/UL 864, "Control Units and Accessories for Fire Alarm Systems."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Releasing Device for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

REPACKAGED ELECTRICAL CONSTRUCTION EQUIPMENT (TEOZ)

GENERAL

This category covers repackaged Listed and Classified electrical construction equipment.

Required user instructions and ratings are marked on or packed with the smallest unit container in which the product is packaged.

Listed wire or cable that has been subjected to processing or respooling subsequent to its manufacture is covered under Processed Wire (ZKLU).

Lightning conductors, air terminals and fittings (see OVTZ) are intended for installation in Listed lightning protection systems and are not eligible for repackaging.

Products under UL's Listed by Report Service may require special descriptions and recommended methods of installation and are not covered under this category.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are referenced in Repackaged Product Program Requirements at www.ul.com.

UL MARK

The Listing or Classification Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify these products manufactured under its Listing or Classification and Follow-Up Service.

The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name.

The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), a control number, the appropriate product name, and information pertaining to the scope of the Classification (e.g., "AS TO ELECTRIC SHOCK AND MECHANICAL INJURY," "IN ACCORDANCE WITH IEEE C37.59").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ROBOTS AND ROBOTIC EQUIPMENT (TETZ)

GENERAL

This category covers robots, integrated work cells, programmable production equipment, remote sensing equipment, robotic servo power supplies, and similar equipment.

This equipment has been investigated with respect to risks of electric shock, fire and injury to persons.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1740, "Robots and Robotic Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Robot," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ROTARY AUTOMATIC PRODUCT-FILLING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (TONI)

GENERAL

ROTARY AUTOMATIC PRODUCT-FILLING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (TONI)

This category covers equipment for automatically filling fluids into aerosol cans, bottles and similar containers.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Rotary Automatic Product Filling Equipment for Hazardous Locations" or "Product Filling Equipment for Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SANITATION, FOOD SERVICE EQUIPMENT (TSQS)

COMMERCIAL COOKING, RETHERMALIZATION AND POWERED HOT FOOD HOLDING AND TRANSPORT EQUIPMENT (TSQT)

USE

This category covers cooking and hot-food-holding equipment, including brewers, steam tables, griddles, broilers, ovens, fryers, food warmers, and similar equipment intended for commercial use.

PRODUCT MARKINGS

Equipment may be marked with use limitations or may provide guidance on intended application.

Rethermalization equipment is provided with a marking that specifies the maximum capacity of the unit.

Equipment provided with a security package for installation in areas where security may be a concern is marked "Intended for use only in environments where security is a concern, such as correctional facilities, mental health facilities, or some schools."

RELATED PRODUCTS

Electric equipment and warming and serving equipment intended for commercial use and investigated to UL Safety Standards is covered under Commercial Cooking Appliances (KNGT) and Custom-built Food Service Equipment (KNNS).

Gas-fired commercial cooking appliances investigated to UL Safety Standards or other standards are covered under Cooking Appliances, Commercial (LBOZ).

Gas-fired food service equipment investigated to UL Safety Standards or other standards is covered under Gas-fired Food Service Equipment (LGQX).

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS).

REQUIREMENTS

The basic standard used to investigate products in this category is NSF/ANSI 4, "Commercial Cooking, Rethermalization and Hot Food Holding and Transport Equipment."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

COOKING EQUIPMENT or HOT FOOD STORAGE EQUIPMENT*

NSF/ANSI 4

Control No.

* or other appropriate product name as shown in the individual Classifications

For those products which are also Listed or Classified by Underwriters Laboratories Inc. under another category, the marking includes the appropriate Listing or Classification Mark, the EPH Mark, and the text "NSF/ANSI 4" below the EPH Mark.

SANITATION, FOOD SERVICE EQUIPMENT (TSQS)

Commercial Cooking, Rethermalization and Powered Hot Food Holding and Transport Equipment (TSQT)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FOOD EQUIPMENT (TSQU)

USE

This category covers equipment for handling and processing food in food service applications. Products covered include tables, counters, hoods, shelves, cutting boards, wheels, casters, food shields, sinks and utensils intended for commercial use.

This category also covers custom equipment designed and manufactured for a specific installation or application. Specific types of custom equipment are identified in the individual Classifications. They may contain components, design or performance features covered by other applicable NSF standards.

This category does not cover hybrid equipment (e.g., a food transport cabinet with the capability to both heat and refrigerate food) that is not custom equipment. Such equipment is covered by NSF/ANSI 169, "Special Purpose Food Equipment and Devices."

PRODUCT MARKINGS

Equipment provided with a security package for installation in areas where security may be a concern is marked "Intended for use only in environments where security is a concern, such as correctional facilities, mental health facilities, or some schools."

RELATED PRODUCTS

Electric cooking equipment intended for commercial use and investigated to UL Safety Standards is covered under Commercial Cooking Appliances (KNGT) and Custom-built Food Service Equipment (KNNS).

Refrigerators and freezers intended for commercial use and investigated to UL Safety Standards are covered under Commercial Refrigerators and Freezers (SGKW).

Gas-fired commercial cooking appliances investigated to UL Safety Standards or other standards are covered under Cooking Appliances, Commercial (LBOZ).

Gas-fired food service equipment investigated to UL Safety Standards or other standards is covered under Cooking Gas-fired Food Service Equipment (LGQX).

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS).

REQUIREMENTS

The basic standard used to investigate products in this category is NSF/ANSI 2, "Food Equipment."

As appropriate, additional requirements for specific design and performance features are obtained from relevant NSF standards. These include but are not limited to:

- NSF/ANSI 4, "Commercial Cooking, Rethermalization, and Powered Hot Food Holding and Transport Equipment"
- NSF/ANSI 7, "Commercial Refrigerators and Freezers"

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

FABRICATED FOOD SERVICE EQUIPMENT*

NSF/ANSI 2

Control No.

* or other appropriate product name as shown in the individual Classifications (e.g., **HOTEL PAN, CUSTOM COUNTER**)

For those products which are also Listed or Classified by Underwriters Laboratories Inc. under another category, the marking includes the appropriate Listing or Classification Mark, the EPH Mark, and the text "NSF/ANSI 2" below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL REFRIGERATORS AND STORAGE FREEZERS (TSQV)

GENERAL

SANITATION, FOOD SERVICE EQUIPMENT (TSQS)

349

Commercial Refrigerators and Storage Freezers (TSQV)—Continued

This category covers refrigerators and storage freezers, or components for use in these units, intended for commercial use.

Equipment intended solely for storing and/or displaying certain types of products is required to have a permanently attached label indicating what the intended products are. These products include 1) packaged food products, except ice cream and frozen desserts; and 2) nonpotentially hazardous, bottled or canned food and beverage products (e.g., beverage coolers).

Refrigerated buffet units, refrigerated food preparation units, and similar open-top refrigeration equipment is required to have permanent labels indicating that the equipment is intended for use in rooms having an ambient temperature of 30°C (86°F) or less. Display cases, for example, units intended to be installed in the customer service area, and not in the kitchen, that have glass doors only, also have this marking.

Equipment storing potentially hazardous food or beverages (except ice cream and other frozen desserts) including open-top equipment has been subject to performance testing to verify storage temperatures and compressor run time.

Prefabricated walk-in and roll-in refrigerators and storage freezers are not required to be tested. Adequate performance of these units is assured through the proper determination of refrigeration equipment demands.

Unit coolers for installation in walk-in or reach-in refrigerators and storage freezers have been investigated for design, construction and materials only.

PRODUCT MARKINGS

Equipment intended solely for the storage and display of packaged food products (other than self-service display refrigerators or units intended solely for the storage and display of ice cream and other frozen desserts) is marked "This equipment is intended for the storage and display of packaged products only."

Beverage coolers are marked "This equipment is intended for the storage and display of nonpotentially hazardous, bottled or canned products only."

Refrigerated buffet units, refrigerated food preparation units, and similar open-top refrigeration equipment are marked to indicate that the equipment is intended for use in rooms having an ambient temperature of 86°F (30°C) or less.

Type I display refrigerators are marked to indicate that the equipment is intended for use in an area where the environmental conditions are controlled and maintained so that the ambient temperature typically does not exceed 75°F (24°C).

Type II display refrigerators are marked to indicate that the equipment is intended for use in an area where the environmental conditions are controlled and maintained so that the ambient temperature typically does not exceed 80°F (27°C).

Display refrigerators intended solely for the display of foods that are not potentially hazardous are marked "This display refrigerator is not for the display of potentially hazardous foods."

Prefabricated walk-in and roll-in refrigerators and freezers used for the storage of food in the original sealed package are marked "This equipment is intended for the storage of food in the original sealed package only."

RELATED PRODUCTS

Refrigerators and freezers intended for commercial use and investigated to UL Safety Standards are covered under Commercial Refrigerators and Freezers (SGKW).

Unit coolers intended for commercial use and investigated to UL Safety Standards are covered under Unit Coolers (SPLR).

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/NSF 7, "Commercial Refrigerators and Storage Freezers."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

[PRODUCT IDENTITY]*

NSF/ANSI 7

Control No.

* **COMMERCIAL REFRIGERATOR, COMMERCIAL STORAGE FREEZER, COMMERCIAL REFRIGERATOR AND STORAGE**

FREEZER, or other appropriate product name as shown in the individual Classifications. The product name is to be preceded with the text "Component of" when the product covered is not a complete refrigerator or freezer as defined by NSF/ANSI 7.

Commercial Refrigerators and Storage Freezers (TSQV)—Continued

For those products which are also Listed by Underwriters Laboratories Inc. under Commercial Refrigerators and Freezers (SGKW), the marking includes the appropriate Listing Mark, the EPH Mark, and the text "NSF/ANSI 7" below the EPH Mark.

For those products which are also Listed by Underwriters Laboratories Inc. under Unit Coolers (SPLR), the marking includes the appropriate Listing Mark, the EPH Mark, and the text "NSF/ANSI 7" below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

DOORS AND DOOR OPERATOR SYSTEMS FOR USE IN MEAT AND POULTRY PLANTS (TSRC)

GENERAL

This category covers doors and door operator systems Classified with respect to their materials of construction and sanitary design for use in regulated meat and poultry plants.

Authorities Having Jurisdiction should be consulted regarding suitability of this equipment for use in specific applications.

These products have not been evaluated for electrical, fire or casualty hazards unless the product also bears UL's Listing Mark of Safety. Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to these hazards.

RELATED PRODUCTS

For doors and door operators investigated to UL Safety Standards, see Door, Drapery, Gate, Louver, and Window Operators and Systems (FDDR).

For food service equipment investigated for compliance with ANSI/NSF Standards, see Commercial Cooking, Rethermalization and Powered Hot Food Holding and Transport Equipment (TSQT), Food Equipment (TSQU), Commercial Refrigerators and Storage Freezers (TSQV) and Commercial Powered Food Preparation Equipment, Sanitation (DUIA).

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS).

REQUIREMENTS

Doors and door operator systems are investigated in accordance with the Code of Federal Regulations, 9 CFR, Parts 308 and 381, and the Federal Register, Vol. 62, No. 164, Appendix A, "Guidelines on the Establishment of Facilities and Equipment," issued August 25, 1997.

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

DOOR and/or DOOR OPERATOR SYSTEM*

FOR SANITATION IN ACCORDANCE WITH 9CFR, PARTS 308 AND 381, AND FED. REG. VOL. 62, NO. 164, APPENDIX A (AUGUST 25, 1997)

Control No.

* or other appropriate product name as shown in the individual Classifications

For those products which are also Listed by Underwriters Laboratories Inc. under Door, Drapery, Gate, Louver, and Window Operators and Systems (FDDR), the marking includes the appropriate Listing Mark, the EPH Mark, and the text "For sanitation in accordance with 9CFR, Parts 308 and 381, and Fed. Reg. Vol. 62, No. 164, Appendix A (August 25, 1997)" in close proximity to the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FREEZERS, DISPENSING (TSRE)

USE

This category covers dispensing freezers intended for commercial use. The types of freezers include:

1. Dispensing freezers that process and freeze previously pasteurized product, such as soft ice cream, yogurt and custard, then dispense that product directly into a consumer's container
2. Dispensing freezers that dispense premanufactured frozen product,

Freezers, Dispensing (TSRE)—Continued

- such as ice cream, directly into a consumer's container
3. Batch-dispensing freezers

PRODUCT MARKINGS

Each dispensing freezer is marked with the manufacturer's recommended cleaning and sanitizing procedures.

Batch-dispensing freezers are not designed for product storage and are marked that a single batch of product should not remain in the unit for longer than one hour.

RELATED PRODUCTS

Dispensing freezers intended for commercial use and investigated to UL Safety Standards are covered under Ice Cream Makers (SINX).

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS).

REQUIREMENTS

The basic standard used to investigate products in this category is NSF/ANSI 6, "Dispensing Freezers."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

DISPENSING FREEZER*

NSF/ANSI 6

Control No.

* or other appropriate product name as shown in the individual Classifications

For those products which are also Listed by Underwriters Laboratories Inc. under Ice Cream Makers (SINX), the marking includes the appropriate Listing Mark, the EPH Mark, and the text "NSF/ANSI 6" below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ICE-MAKING EQUIPMENT, AUTOMATIC (TSVG)

USE

This category covers automatic ice makers intended for commercial use. This category also covers commercial equipment used to process, convey, dispense and hold ice.

PRODUCT MARKINGS

Automatic ice-making equipment is marked with the manufacturer's recommended cleaning and sanitization procedures.

RELATED PRODUCTS

Ice makers intended for commercial use and investigated to UL Safety Standards are covered under Ice Makers (SJBV).

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is NSF/ANSI 12, "Automatic Ice Making Equipment."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

AUTOMATIC ICE MAKER*

NSF/ANSI 12

Control No.

* or other appropriate product name as shown in the individual Classifications

For those products which are also Listed by Underwriters Laboratories Inc. under Ice Makers (SJBV), the marking includes the appropriate Listing Mark, the EPH Mark, and the text "NSF/ANSI 12" below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FOOD- AND BEVERAGE-DISPENSING EQUIPMENT, MANUAL (TSXL)**GENERAL**

This category covers equipment and/or devices intended for commercial use that dispense food or beverages in bulk or portions. Equipment directly connected to the potable water supply is intended to comply with local plumbing codes.

This category does not cover vending machines, dispensing freezers, bulk milk-dispensing equipment, beer taps (valves) or coffee urns.

PRODUCT MARKINGS

Dispensing equipment designed without temperature-controlled storage of potentially hazardous foods or beverages is marked "This machine is designed only for use with a specific product and container combination. The use of a product and container combination not recommended by the manufacturer may result in consumer illness." In addition, it identifies the product and container combinations for which the equipment is approved, or directs the operator to consult the manufacturer of the equipment for appropriate product and container combinations.

RELATED PRODUCTS

Beverage coolers and beverage-cooler dispensers are covered under Beverage Coolers and Beverage-Cooler Dispensers (SFWY).

Coffee machines investigated to sanitation requirements are covered under Commercial Cooking, Rethermalization and Powered Hot Food Holding and Transport Equipment (TSQT).

Coffee urns investigated to sanitation requirements are covered under Food Equipment (TSQU).

Commercial bulk milk-dispensing equipment investigated to sanitation requirements is covered under Milk-dispensing Equipment, Commercial, Bulk (TSXQ).

Vending machines for food and beverages investigated to sanitation requirements are covered under Vending Machines for Food and Beverages (TSYA).

Valves, beer taps, and other special beverage-dispensing devices investigated to sanitation requirements are covered under Special Purpose Food Equipment and Devices, Sanitation (VCZU).

Vending machines are covered under Vending Machines (YWXV).

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is NSF/ANSI 18, "Manual Food and Beverage Dispensing Equipment."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

MANUAL DISPENSING EQUIPMENT***NSF/ANSI 18****Control No.**

* or other appropriate product name as shown in the individual Classifications

For those products which are also Listed or Classified by Underwriters Laboratories Inc. under another category, the marking includes the appropriate Listing or Classification Mark, the EPH Mark, and the text "NSF/ANSI 18" below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MILK-DISPENSING EQUIPMENT, BULK, COMMERCIAL (TSXQ)**USE**

This category covers bulk milk-dispensing equipment, dispensing servings of milk or milk products by manual or machine actuation, intended for commercial use.

This category does not cover dispensing freezers, vending machines or manual food- and beverage-dispensing devices.

RELATED PRODUCTS

Beverage coolers and dispensers intended for commercial use and investigated to UL Safety Standards are covered under Beverage Coolers and Beverage Cooler-Dispensers (SFWY).

ADDITIONAL INFORMATION**Milk-dispensing Equipment, Bulk, Commercial (TSXQ)—Continued**

For additional information, see Food Safety and Quality, Products and Equipment (AAFS).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/NSF 20, "Commercial Bulk Milk Dispensing Equipment."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

COMMERCIAL BULK MILK DISPENSING EQUIPMENT***ANSI/NSF 20****Control No.**

* or other appropriate product name as shown in the individual Classifications

For those products which are also Listed by Underwriters Laboratories Inc. under Beverage Coolers and Beverage Cooler-Dispensers (SFWY), the marking includes the appropriate Listing Mark, the EPH Mark, and the text "ANSI/NSF 20" below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AIR CURTAINS FOR USE IN COMMERCIAL FOOD SERVICE ENTRANCEWAYS (TSXT)**USE**

This category covers air curtains intended for use over service and customer entryways and windows in commercial food service establishments.

PRODUCT MARKINGS

These air curtains are provided with the manufacturer's instructions specifying the maximum design width and height of the opening to be protected.

RELATED PRODUCTS

Nonheating-type electric air-curtain fans intended for commercial use and investigated to UL Safety Standards are covered under Fans, Electric (GPWV); heating-type electric air-curtain fans are covered under Air Heaters, Room, Fixed and Location-dedicated (KKWS).

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS).

REQUIREMENTS

The basic standard used to investigate products in this category is NSF/ANSI 37, "Air Curtains for Entranceways in Food and Food Service Establishments."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

AIR CURTAIN**FOR USE IN COMMERCIAL FOOD SERVICE ENTRANCEWAYS*****NSF/ANSI 37****Control No.**

* or other appropriate product name as shown in the individual Classifications

For those products which are also Listed or Classified by Underwriters Laboratories Inc. under another category, the marking includes the appropriate Listing or Classification Mark, the EPH Mark, and the text "NSF/ANSI 37" below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RESIDENTIAL DISHWASHERS (TSXU)**USE AND INSTALLATION**

This category covers dishwashers intended for residential use. A residential dishwasher is designed and constructed to wash and sanitize

Residential Dishwashers (TSXU)—Continued

dishes by means of a spray wash and a sanitizing rinse. It is intended for use in a private home or other location that is not a food establishment as defined by Section 1.201-10 of the United States FDA Food Code.

Each dishwasher is provided with a means to indicate that the sanitization cycle has been successfully completed when sanitization is selected.

Authorities Having Jurisdiction should be consulted with respect to requirements for connection to water supply and waste disposal lines.

PRODUCT MARKINGS

Residential dishwashers are marked "Certified residential dishwashers are not intended for licensed food establishments."

RELATED PRODUCTS

For dishwashers intended for residential use investigated to UL Safety Standards, see Dishwashers, Household (DMY); for dishwashers intended for commercial use, see Commercial Warewashing Equipment (TSXV).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

These products have been investigated for public health and sanitation requirements in accordance with NSF/ANSI 184, "Residential Equipment – Residential Dishwashers."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

RESIDENTIAL DISHWASHER**NSF/ANSI 184****Control No.**

For those products which are also Listed or Classified by Underwriters Laboratories Inc. under another category, the marking includes the appropriate Listing or Classification Mark, the EPH Mark, and the text "NSF/ANSI 184" below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COMMERCIAL WAREWASHING EQUIPMENT (TSXV)**USE**

This category covers stationary rack- and conveyor-type warewashing equipment intended for commercial use. Typical ware includes dishes, glasses, pots, pans and utensils. Cleaning is accomplished by spray of detergent solutions and water, with sanitizing effected through exposure to hot water and/or chemical sanitizing solutions.

RELATED PRODUCTS

For electric, steam and gas-fired dishwashers and glasswashers intended for commercial use investigated to UL Safety Standards, see Dishwashers, Commercial (DMGR).

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

These products have been investigated for sanitation requirements in accordance with ANSI/NSF 3, "Commercial Warewashing Equipment."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

COMMERCIAL WAREWASHING EQUIPMENT***ANSI/NSF 3****Control No.**

* or other appropriate product name as shown in the individual Classifications

For those products which are also Listed or Classified by Underwriters Laboratories Inc. under another category, the marking includes the appropriate Listing or Classification Mark, the EPH Mark, and the text "ANSI/NSF 3" below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss,

Commercial Warewashing Equipment (TSXV)—Continued

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SHATTER CONTAINMENT OF LAMPS FOR USE IN REGULATED FOOD ESTABLISHMENTS (TSXX)**USE**

This category covers shatter protection and protected lamps intended for use in food applications to reduce the risk of adulteration of food caused by broken glass. These products are Classified for design and construction characteristics relating to sanitation and performance of the shatter-protection means.

The types of shatter protection covered under this category include shields, guards, globes, tubes and sleeves. Also covered are integrally-protected lamps employing coatings applied directly to the lamp.

This category does not cover luminaires (lighting fixtures), lampholders or other apparatus that support the lamps and/or shatter-containment mechanism.

The breakage of lamps in food establishments, including processing environments and retail facilities, can present a risk of adulteration to exposed food. Protection against adulteration is addressed in 21CFR110, "Current Good Manufacturing Practice in Manufacturing, Packing, or Holding Human Food," and the U.S. FDA Food Code, Chapter 6, Subpart 6-202.11, "Light Bulbs, Protective Shielding."

Lamps are fragile and can break regardless of the precautions taken to avoid this, including use of a shatter-containment system. Therefore the performance of the containment systems under use conditions is only investigated to determine whether the risk of food adulteration is mitigated when such systems are installed and used as intended. Producers are then able to demonstrate performance under use conditions and provide uniform guidance to facility operators and personnel on the intended applications for the shatter-containment system.

These lamps are Classified for use in three types of environments: general use, high temperature and low temperature. General use correlates with facility lighting. Low-temperature lamps are conditioned at water-freezing temperatures, while high-temperature lamps are conditioned at temperatures representative for commercial cooking applications.

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2007A, "Outline of Investigation for Shatter Containment of Lamps for Use in Regulated Food Establishments."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

LAMP***AS TO + ONLY****Control No.**

* or other appropriate product name as shown in the individual Classifications

+ SHATTER CONTAINMENT or SHATTER PROTECTION

For those products which are also Listed or Classified by Underwriters Laboratories Inc. under another category, the marking includes the appropriate Listing or Classification Mark, the EPH Mark, and the text "AS TO + ONLY" below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VENDING MACHINES FOR FOOD AND BEVERAGES (TSYA)**USE**

This category covers food and beverage vending machines that dispense unit servings of food or beverages, in bulk or in packages, upon insertion of a coin, paper currency, token, card, key or by manual operation. These machines are intended for commercial use.

RELATED PRODUCTS

SANITATION, FOOD SERVICE EQUIPMENT (TSQS)

Vending Machines for Food and Beverages (TSYA)—Continued

For vending machines intended for commercial use investigated to UL Safety Standards, see Vending Machines (YWXV) and Vending Machines, Refrigerated (SQMX).

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/NSF 25, "Vending Machines for Food and Beverages."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

VENDING MACHINE FOR FOOD AND BEVERAGES***ANSI/NSF 25****Control No.**

* or other appropriate product name as shown in the individual Classifications

For those products which are also Listed by Underwriters Laboratories Inc. under Vending Machines (YWXV) or Vending Machines, Refrigerated (SQMX), the marking includes the appropriate Listing Mark, the EPH Mark, and the text "ANSI/NSF 25" below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WASHING MACHINES, COMMERCIAL SPRAY-TYPE FOR POTS, PANS AND UTENSILS (TSYF)

USE

This category covers spray-type pot, pan and utensil washing machines intended for commercial use.

RELATED PRODUCTS

Electric, steam and gas-fired pot, pan and utensil washers intended for commercial use and investigated to UL Safety Standards are covered under Dishwashers, Commercial (DMGR).

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is NSF 26, "Pot, Pan, and Utensil Washers."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

POT, PAN, AND UTENSIL WASHING MACHINE***NSF 26****Control No.**

* or other appropriate product name as shown in the individual Classifications

For those products which are also Listed or Classified by Underwriters Laboratories Inc. under another category, the marking includes the appropriate Listing or Classification Mark, the EPH Mark, and the text "NSF 26" below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WATER HEATERS, HOT WATER SUPPLY BOILERS AND HEAT RECOVERY EQUIPMENT (TSYO)

GENERAL

This category covers commercial water heaters and hot water supply boilers operated by electricity, gas and/or oil, and heat recovery equipment. The equipment provides hot water for washing, sanitizing and other pur-

poses in food service applications. It is intended that the manufacturer provide instructions for installation, operation and maintenance of the equipment. For those units with recirculation systems supplied by the manufacturer, it is intended that the manufacturer provide guidelines for the acceptable method(s) of installation and recirculation.

This category does not cover boilers used for space heating.

RELATED PRODUCTS

For electrically-operated equipment investigated to UL Safety Standards, see the following categories:

Commercial Storage Tank and Booster Water Heaters (KSBZ)

Miscellaneous Water Heaters (KSGR)

Boilers, Electric (BDJS)

For gas-fired and/or oil-fired equipment investigated to UL Safety Standards, see the following categories:

Gas-fired Water Heaters, Commercial-Industrial (LUYW)

Gas-Oil-fired Water Heaters (LVCQ)

Multi-energy Water Heaters (LVEG)

Oil-fired Water Heaters (LVFV)

Gas-fired Boiler Assemblies (KVTR)

Gas-Oil-fired Boiler Assemblies (KWGZ)

Oil-fired Boiler Assemblies (KWUX)

Waste-heat Recovery Boiler Assemblies (KXFF)

ADDITIONAL INFORMATION

For additional information, see Food Safety and Quality, Products and Equipment (AAFS) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is NSF/ANSI 5, "Water Heaters, Hot Water Supply Boilers, and Heat Recovery Equipment."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the EPH Mark (as illustrated in the Introduction of this Directory) and the following additional information:

WATER HEATER***NSF/ANSI 5****Control No.**

* or other appropriate product name as shown in the individual Classifications

For those products which are also Listed or Classified by Underwriters Laboratories Inc. under another category, the marking includes the appropriate Listing or Classification Mark, the EPH Mark, and the text "NSF/ANSI 5" below the EPH Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SEMICONDUCTOR MANUFACTURING EQUIPMENT (TWKH)

USE

This category covers equipment and accessories used in the manufacturing, metrology, assembly and testing of semiconductor products. Equipment intended for both semiconductor product-related use and non-semiconductor product-related use may be covered under this category, as well as in the applicable non-semiconductor categories. These products do not include equipment intended only for non-semiconductor product-related use.

UNEVALUATED FACTORS

The accuracy or quality characteristics of any measured, analyzed or prepared quantities have not been investigated. The sound pressure levels and physiological effects of the RF have not been investigated.

REQUIREMENTS

This equipment has only been investigated for use in unclassified (ordinary) locations as defined in ANSI/NFPA 70, "National Electrical Code" (NEC). Equipment that has been investigated to determine its suitability for use in hazardous (classified) locations as defined in the NEC may be found in the Hazardous Locations Equipment Directory.

This equipment may also have been investigated by UL using the guideline titled "Safety Guidelines for Semiconductor Manufacturing Equipment", SEMI@S2-XX, where XX is the edition of the Guideline. Such equipment is provided with the supplementary marking "Design evalu-

354 SEMICONDUCTOR MANUFACTURING EQUIPMENT (TWKH)

ated by UL in accordance with Safety Guidelines for Semiconductor Manufacturing Equipment, SEMI® S2-XX. See accompanying report for details." This marking is located adjacent to the UL Mark.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ANALYSIS AND MEASUREMENT EQUIPMENT (TWLR)

This category covers analysis/measurement equipment and accessories designed for technological activities involving:

- (a) The measurement of physical or chemical properties of materials.
- (b) The measurement of the functional performance of a piece of equipment.
- (c) Qualitative or quantitative constituent analysis of substances.
- (d) Preparation of materials for further analysis or measurements.

Equipment covered by this category includes, but is not limited to, equipment involving:

Defect Detection Equipment
Film Thickness Equipment
Probe Stations
Surface Inspection/Flatness Equipment

ADDITIONAL INFORMATION

For additional information, see Semiconductor Manufacturing Equipment (TWKH) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2011, "Outline of Investigation for Factory Automation Equipment" or UL 3111-1, "Electrical Measuring and Test Equipment; Part 1: General Requirements." Requirements used are indicated in the individual Listings.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the category identifier "Semiconductor Manufacturing Equip" or "TWLR," and may also include the appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AUTOMATION AND WAFER-HANDLING EQUIPMENT (TWPV)

GENERAL

This category covers automated production equipment, remote sensing equipment, robotic servo power supplies, wafer handling equipment and the like. Equipment covered by this category includes, but is not limited to, equipment involving:

Wafer Sorters
Front Opening Universal Ports (FOUP)
Wafer Transport Systems
Wafer Loaders
Standard Mechanical Interfacers (SMIF)
Other Handling and Transfer Equipment

RELATED PRODUCTS

For apparatus designated as robotic equipment, see Robots and Robotic Equipment (TETZ).

ADDITIONAL INFORMATION

For additional information, see Semiconductor Manufacturing Equipment (TWKH) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in Subject 2011, "Outline of Investigation for Factory Automation Equipment" or UL 3121-1, "Process Control Equipment." Requirements used are indicated in the individual Listings.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the category identifier "Semiconductor Manufacturing Equip" or "TWPV," and may also include the appropriate product name as shown in the individual Listings.

SEMICONDUCTOR MANUFACTURING EQUIPMENT (TWKH)**Automation and Wafer-handling Equipment (TWPV)—Continued**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONTROL PANELS (TWRF)

USE

The category covers control panels and equipment used to provide power and control to semiconductor process equipment. The Classification Mark for these products covers both the enclosure and the panel provided with it. The panels may be provided with RF power supplies, DC power supplies, control transformers, motor controllers, overload devices, contactors, a main disconnect device and emergency power off (EPO). Semiconductor manufacturing equipment control panels have been Classified only as to electrical fire and shock hazards incident to their use in ordinary locations. The compatibility of the panel with the controlled equipment from the standpoint of other potential hazards has not been investigated.

Control panels are for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

RELATED PRODUCTS

For industrial control panels for general use, see Industrial Control Panels (NITW) and Industrial Control Equipment (NIMX).

ADDITIONAL INFORMATION

For additional information, see Semiconductor Manufacturing Equipment (TWKH) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 508A, "Industrial Control Panels." In addition, the following applicable requirements from SEMI S2-XX are applied, where XX is the issue date of SEMI S2: Safety-related Interlocks, Electrical, Emergency Shutdown, Hazard Warnings, Ergonomics, Seismic, and Documentation.

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), the product identity "Control Panel for Semiconductor Manufacturing Equipment" or "Semiconductor Manufacturing Equipment Control Panel," "AS TO FIRE AND ELECTRIC SHOCK ONLY," and a control number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LIQUID CHEMICAL DISTRIBUTION SYSTEMS (TWSP)

This category covers equipment designed for activities involving control of liquid chemicals used in wafer processing, such as mixing, dispensing, and waste management.

These units may include a complete distribution system consisting of pumps, liquid chemical containing components (tubing, etc.), and associated electrical controls, or modules of such a system.

This equipment is limited to the use of non-flammable liquids. Semiconductor process chemicals present certain inherent hazards. Such inherent hazards such as toxicity have not been investigated. The instructions and warnings supplied with and applicable to each piece of equipment should be carefully observed.

The liquid chemical pumps used in the equipment in this category may be individually covered under the product category Power-Operated Chemical Pumps, RBOG. Listings under (RBOG) cover power-operated pumps intended for liquid transfer or loop systems. Limitations of use, including chemical service and pressure and temperature ratings, are indicated in the individual listings and are marked on the pump.

This equipment is marked with the following information: "For *, _____ psi max, _____ degree F", where * is the name of the chemical.

For additional information, see Semiconductor Manufacturing Equipment (TWKH) and Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic standard used to investigate products in this category is UL 3121-1, Standard for Process Control Equipment.

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its

SEMICONDUCTOR MANUFACTURING EQUIPMENT (TWKH)

Liquid Chemical Distribution Systems (TWSP)—Continued

Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED", a control number, and one of the following category identifiers: "Semiconductor Manufacturing Equip" or "TWSP", and may also include the appropriate product name as shown in the individual listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MISCELLANEOUS SEMICONDUCTOR MANUFACTURING EQUIPMENT (TWTZ)

GENERAL

This category covers miscellaneous semiconductor manufacturing equipment including, but not limited to, equipment involving commercial processing water chillers, cryogenic refrigeration systems, cryopumps and compressors, heat exchangers, recirculators, turbo molecular pumps, and water heaters.

USE

Water chillers, heaters, heat exchangers and recirculators are intended for cooling and tempering water used in semiconductor processing system (PVD, CVD, Etcher, etc.). These units may be provided with a complete refrigeration system (consisting of a hermetic motor-compressor, condenser, evaporator, refrigerant control, electrical controls, wiring and associated refrigerant-containing components including tubing) and associated electrical controls, and may also incorporate means for heating and circulating water.

Vacuum pumps/accessories, turbo molecular pumps, cryopumps and compressors are intended for use on nominal system voltages of 600 V or less, except for equipment driven by an electromagnetic mechanism, which is for use on nominal system voltages of 250 V or less.

SUPPLY CONNECTIONS

These appliances are cord-connected or provided with means for field wiring connections.

SPECIAL INSTRUCTIONS

For equipment with refrigeration systems, documentation (instructions and warnings) supplied with the equipment identifies the investigated refrigerants.

ADDITIONAL INFORMATION

For additional information, see Semiconductor Manufacturing Equipment (TWKH) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are as follows:

Equipment containing refrigeration systems or components thereof are investigated to UL 61010A-1, "Electrical Equipment for Laboratory Use; Part 1: General Requirements," UL 471, "Commercial Refrigerators and Freezers", and UL 1995, "Heating and Cooling Equipment".

Heat exchangers and water heaters are investigated to UL 61010A-1 and UL 1995.

Equipment containing air compressors or vacuum pumps are investigated to UL 61010A-1 and UL 1450, "Motor-Operated Air Compressors, Vacuum Pumps, and Painting Equipment."

Other miscellaneous equipment is investigated to the standards indicated in the individual Listings covering the equipment.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the category identifier "Semiconductor Manufacturing Equip" or "TWTZ." The Listing Mark may also include the appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER SUPPLIES, SEMICONDUCTOR (TWVJ)

USE

SEMICONDUCTOR MANUFACTURING EQUIPMENT (TWKH)

355

Power Supplies, Semiconductor (TWVJ)—Continued

This category covers radio frequency and DC power supplies used to support semiconductor processing. These power supplies may be water cooled.

UNEVALUATED FACTORS

The investigation of a device covered in this category does not include the effects it may have on the system or equipment connected thereto.

ADDITIONAL INFORMATION

For additional information, see Semiconductor Manufacturing Equipment (TWKH) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 60950, "Information Technology Equipment," UL 3101-1, "Electrical Equipment for Laboratory Use," UL 1012, "Power Units Other Than Class 2 Power Supplies" and UL 73, "Motor Operated Appliances."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the category identifier "Semiconductor Manufacturing Equip" or "TWVJ," and may also include the appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROCESS EQUIPMENT (TWWT)

This category covers semiconductor process equipment, process management equipment, and process signaling equipment. Equipment covered by this category includes, but is not limited to equipment involving:

Chemical Mechanical Planarization (CMP)

Chemical Vapor Deposition (CVD)

Dry Etching

Epitaxy

Ion Implantation

Liquid Heating

Lithography

Photomasking

Physical Vapor Deposition (PVD)

Spin/Rinse Drying

Vacuum Deposition (Evaporation/Sputtering)

Wet Etching

Scrubbers

Equipment covered by this category may use liquid chemicals to complete a process. Equipment that does not utilize liquid chemicals for a process (i.e. serves only to distribute, store, or prepare the liquid chemicals) is covered in the category Liquid Chemical Distribution System Equipment (TWSP). Process Equipment has been Classified only as to fire and electric shock hazards incident to their use. The chemical hazards associated with this equipment (i.e. compatibility, inhalation, ingestion, or contact) have not been evaluated.

For additional information, see Semiconductor Manufacturing Equipment (TWKH) and Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic standard used to investigate products in this category is UL 3121-1, Standard For Process Control Equipment.

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Marking for these products includes: (1) the UL symbol; (2) the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory); (3) one of the following category identifiers: "Semiconductor Manufacturing Equip" or "TWWT", and may also include the appropriate product name as shown in the individual listings; (4) "AS TO FIRE AND ELECTRIC SHOCK ONLY"; and (5) a control number.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SEMICONDUCTOR MANUFACTURING EQUIPMENT, LIMITED PRODUCTION (TWWU)

USE

This category covers equipment and accessories that are of limited production. Equipment bearing the limited production Classification is not under routine Follow-Up Service.

Limited production equipment bearing the Classification Marking has been Classified only as to electrical fire and shock hazards incident to its use in ordinary locations.

ADDITIONAL INFORMATION

For additional information, see Semiconductor Manufacturing Equipment (TWKH) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in Subject 2011, "Outline of Investigation for Factory Automation Equipment", NFPA 79, "Electrical Standard for Industrial Machinery", and UL 508, "Industrial Control Equipment".

UL MARK

The Classification Marking of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products produced under its Classification Service. The Classification Marking includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), "AS TO ELECTRICAL FIRE AND SHOCK ONLY," a control number, and the product identifier "Semiconductor Manufacturing Equipment, Limited Production."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SERVICE CABLE (TXKT)

SERVICE-ENTRANCE CABLE (TYLZ)

GENERAL

This category covers service-entrance cable designated Type SE and Type USE for use in accordance with Article 338 of ANSI/NFPA 70, "National Electrical Code" (NEC).

Service-entrance cable, rated 600 V, is Listed in sizes 14 AWG and larger for copper, and 12 AWG and larger for aluminum or copper-clad aluminum. The cable is designated as follows:

Type SE — Indicates cable for aboveground installation. Both the individual insulated conductors and the outer jacket or finish of Type SE are suitable for use where exposed to sun. Type SE cable contains Type RHW, RHW-2, XHHW, XHHW-2, THWN or THWN-2 conductors.

Types USE and USE-2 — Indicates cable for underground installation including direct burial in the earth. Cable in sizes 4/0 AWG and smaller and having all conductors insulated is suitable for all of the underground uses for which Type UF cable is permitted by the NEC. Multiconductor Type USE cable contains conductors with insulation equivalent to RHW or XHHW. Multiconductor Type USE-2 contains insulation equivalent to RHW-2 or XHHW-2 and is rated 90°C wet or dry. Single- and multiconductor Types USE and USE-2 are not suitable for use in premises or aboveground except to terminate at the service equipment or metering equipment. Both the insulation and the outer covering, when used, on single- and multiconductor Types USE and USE-2, are suitable for use where exposed to sun.

Submersible Water Pump Cable — Indicates a multiconductor cable in which 2, 3 or 4 single-conductor Type USE or USE-2 cables are provided in a flat or twisted assembly. The cable is Listed in sizes 14 AWG to 4/0 AWG inclusive, copper, and 12 AWG to 4/0 AWG inclusive, aluminum or copper-clad aluminum. The cable is tag marked "For use within the well casing for wiring deep-well water pumps where the cable is not subject to repetitive handling caused by frequent servicing of the pump units." The insulation may also be surface marked "Pump Cable." The cable may be directly buried in the earth in conjunction with this use.

For termination information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

Based upon tests which have been made involving the maximum heating that can be produced, an uninsulated conductor employed in a service cable assembly is considered to have the same current-carrying capacity as the insulated conductors even though it may be smaller in size.

PRODUCT MARKINGS

The Type designation of the conductors may be marked on the surface of the cable. When used, this marking indicates that the temperature rating for the cable corresponds to the temperature rating of the conductors. When this marking does not appear, the temperature rating of the cable is 75°C.

Service-entrance Cable (TYLZ)—Continued

Cable acceptable for installation in cable trays is so marked.

Cable may employ copper, aluminum, or copper-clad aluminum conductors. Cable with copper-clad aluminum conductors is surface printed "AL (CU-CLAD)" or "Cu-Clad Al." Cable with aluminum conductors is surface printed "AL."

Cable employing compact-stranded copper conductors is so identified directly following the conductor size, wherever it appears (surface, tag, carton or reel) by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 854, "Service-Entrance Cables."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Service-entrance cable that contains copper or copper-clad aluminum conductor(s) has the product name "Service-Entrance Cable"; service-entrance cable that contains aluminum conductors has the product name "Aluminum Service-Entrance Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Service-entrance Cable Fittings (TYZX)

GENERAL

This category covers service-entrance cable connectors and service-entrance heads or hoods suitable for use with service-entrance cable. This cable is intended for installation and use in accordance with the following information.

The individual Listings for each connector used with nonmetallic-sheathed cable may have details about the size and number of the nonmetallic-sheathed cable it will secure.

Service-entrance heads or hoods are intended to be used on service-entrance cable that is mounted in a vertical position.

Raintight Fittings — Rubber and neoprene gland-type fittings suitable for being raintight are identified by a marking on the carton.

Cable Size — Fittings are marked on the carton with the cable range sizes for which the fitting is intended to be used.

MARKINGS

Some connectors are also acceptable for use with flexible cord, flexible nonmetallic tubing or nonmetallic-sheathed cable as indicated on the device or carton. Connectors for use with nonmetallic-sheathed cable are also suitable for use with multiconductor underground feeder and branch-circuit cable where used in dry locations. Unless marked otherwise on the carton, the connectors are suitable for connection of only one cable per cable entry.

RELATED PRODUCTS

Fittings covered under Power and Control Tray Cable Connectors (QPOZ), Nonmetallic-sheathed Cable Connectors (PXJV), Conduit Fittings (DWTT) and Armored Cable Connectors (AWSX) are also suitable for use with service-entrance cable when specifically indicated on the device or carton.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Service Entrance Cable Fitting," "Connector" or "Service Entrance Head," or other appropriate product name as shown in the individual Listings.

SERVICE CABLE (TXKT)

Service-entrance Cable Fittings (TYZX)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SHIPBOARD CABLE, MARINE (UBVZ)

USE AND INSTALLATION

This category covers cable for installation and use aboard marine vessels, fixed and floating offshore petroleum facilities and mobile offshore drilling units (MODUs) in accordance with United States Coast Guard Electrical Engineering Regulation 46CFR111.60, "Wiring Materials and Methods." This cable has not been investigated for use in accordance with ANSI/NFPA 70, "National Electrical Code."

The cable covered under this category is distribution cable rated 600 V, 1 kV, 2 kV or 5 kV, 5–35 kV shielded, control cable rated 600 V, 1 kV, and signal and instrumentation cable rated 300 V.

PRODUCT MARKINGS

Cable is surface marked with temperature and voltage rating and the cable Type designation.

Cable surface marked with a low-temperature rating complies with low-temperature bending and low-temperature impact tests.

Cable surface marked "FT4" complies with the requirements of the CSA FT4 Flame Test.

Cable that has a continuous corrugated aluminum armor is identified by the marking "CWCMC" in addition to the cable Type designation.

ADDITIONAL INFORMATION

For additional information, see Marine Products (AAMP) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1309, "Marine Shipboard Cable."

Listed cable that is additionally marked "ALSO CLASSIFIED IN ACCORDANCE WITH IEEE 1580-2001" complies with the construction and performance requirements of that international standard.

Listed cable that is additionally marked "ALSO CLASSIFIED IN ACCORDANCE WITH IEEE 45-1998" complies with the construction and performance requirements of that international standard.

Listed cable that is additionally marked "ALSO CLASSIFIED IN ACCORDANCE WITH IEC 60092 Part No. [specify appropriate Part No.]" complies with the construction and performance requirements of that international standard.

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Marine Shipboard Cable."

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated in accordance with IEEE 1580-2001, IEEE 45-1998, or IEC 60092 Part No. 350, 353, 354, 373, 374, 375 and/or 376. The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and "ALSO CLASSIFIED IN ACCORDANCE WITH [Specification name and number]."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SHIPBOARD CABLE FITTINGS, MARINE (UBWE)

USE AND INSTALLATION

This category covers fittings intended for use with marine shipboard cable with and without metal wire armor and with and without nonmetallic jacket over the metal wire armor. No splices of conductors are intended to be made in the fittings. Restrictions on application, position, and/or location of the fittings are indicated in the manufacturer's instructions.

These fittings are intended for use on mobile offshore oil rigs and drilling platforms. Investigations of these fittings include an evaluation for conformity to the installation and use provisions of United States Coast Guard Electrical Engineering Regulation 46CFR111.60, "Wiring Materials and Methods," as applied by the Authority Having Jurisdiction.

ADDITIONAL INFORMATION

For additional information, see Shipboard Cable, Marine (UBVZ), Marine Products (AAMP) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings."

UL MARK

The UL symbol on the product and the Marine Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged with the UL symbol on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Marine Listing Mark for these products includes the UL symbol with the word "MARINE" above the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Shipboard Cable Fitting," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SHIPBOARD CABLE, MARINE
CLASSIFIED IN ACCORDANCE WITH
INTERNATIONAL SPECIFICATIONS
(UBWK)

GENERAL

This category covers marine shipboard cable whose construction and performance characteristics have been determined by Underwriters Laboratories Inc. to be in accordance with one or more of the following standards:

IEEE 45-1998, "IEEE Recommended Practice for Electric Installations on Shipboard"

IEEE 1580-2001, "IEEE Recommended Practice for Marine Cable for Use on Shipboard and Fixed or Floating Platforms"

IEC 60092-350, "Electrical Installations in Ships - Part 350: Shipboard Power Cables - General Construction and Test Requirements"

IEC 60092-353, "Electrical Installations in Ships - Part 353: Single and Multicore Non-Radial Field Power Cables with Extruded Solid Insulation for Rated Voltages 1 kV and 3 kV"

IEC 60092-354, "Electrical Installations in Ships - Part 354: Single and Three-Core Power Cables with Extruded Solid Insulation for Rated Voltages 6 kV, 10 kV and 15 kV"

IEC 60092-373, "Shipboard Telecommunication Cables and Radio-Frequency Cables Shipboard Flexible Coaxial Cables"

IEC 60092-374, "Shipboard Telecommunication Cables and Radio-Frequency Cables Telephone Cables for Non-Essential Communication Services"

IEC 60092-375, "Shipboard Telecommunication Cables and Radio-Frequency Cables General Instrumentation, Control and Communication Cables"

IEC 60092-376, "Electrical Installations in Ships Part 376: Shipboard Multicore Cables for Control Circuits"

This cable has not been investigated for use in accordance with ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Marine Products (AAMP).

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

MARINE SHIPBOARD CABLE

any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNAL APPLIANCES (UCEV)

This category covers equipment intended for general utility signaling, such as paging and intercommunication, and has been investigated only with regard to electrical fire and accident hazard.

AUDIBLE-SIGNAL APPLIANCES, GENERAL SIGNAL (UCST)

GENERAL

This category covers electrically-operated bells, buzzers, horns and similar signal-sounding appliances intended for general signaling only. These devices may differ from audible-signal appliances intended for fire-protective signaling service in construction, and are not required to be marked with an audibility rating.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term "Audible Signal Appliance for General Signaling (Nonfire-Alarm) Use" or "Audible Signal Appliance Subassembly for General Signaling (Nonfire-Alarm) Use."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 464, "Audible Signal Appliances."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "General Signaling Equipment" or "General Signaling Subassembly."

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

G – General Signaling Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNAL SYSTEM UNITS (UDTZ)

USE

This category covers units intended to be used in combinations with related Listed equipment to form installed systems for general-utility signaling purposes. The units have been investigated only for hazard of fire and electric shock and are not associated with property protection and/or life safety. The general-purpose signaling nature of each product is categorized as Type NM (Nonmonitored).

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the phrase "Type NM" and a the specific use description as indicated in the individual Listings.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1077, "General-Purpose Signaling Devices and Systems."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "General Signaling Equipment" or "General Signaling Subassembly."

Some of these products are also Listed under other Signaling categories. When applicable, the Signaling Mark is also included. The Signaling Mark consists of the Listing Mark elements detailed above, with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol. When applicable, the product name may include "and Hospital Signaling and Nurse Call," "and Emergency Signaling" or "and Fire Alarm," as appropriate (e.g., "General Signaling and Fire Alarm Equipment").

SIGNAL APPLIANCES (UCEV)

Signal System Units (UDTZ)—Continued

Some of these products are also Listed under Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Enclosed Energy Management," "and Temperature-indicating," "and Temperature-regulating," "and Information Technology" or "and Telephone," as appropriate (e.g., "General Signaling and Telephone Equipment").

For products also bearing the Signaling Mark, the product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

F – Fire Alarm Equipment

HN – Hospital Signaling and Nurse Call Equipment

G – General Signaling Equipment

E – Emergency Signaling Equipment

EM – Enclosed Energy Management Equipment

IT – Information Technology Equipment

T – Telephone Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SPEAKERS (UEAY)

USE AND INSTALLATION

This category covers speakers investigated for use in general-utility signaling applications with respect to risk of fire and electric shock, when powered from a source of pink noise over a range of 400 – 4000 Hz.

Where a Listed product is formed by the assembly of two or more parts and all parts are not provided as a single package, the specific parts are identified in the individual Listings, and each part bears a separate Listing Mark. Marking on each part references installation instructions that show assembly and installation of the parts to form a Listed product.

All products covered under this category are intended for indoor use only, unless otherwise specifically identified as suitable for outdoor use by markings on the product and in the individual Listings.

Speakers and their accessories that have been investigated for mounting in air-handling spaces are specifically identified by markings on the product and in the individual Listings. Installation details are shown on the product or are provided in a separate installation document provided with the product and referenced in the marking on the product.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term "Signaling Speaker," "Signaling Speaker Enclosure" or "Signaling Speaker Accessory."

RELATED PRODUCTS

Devices intended for use in fire alarm and/or emergency communication systems are covered under Speakers and Amplifiers for Fire Protective Signaling Systems (UUMW). These devices are also suitable for use in general-utility signaling applications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1480, "Speakers for Fire Alarm, Emergency, and Commercial and Professional Use."

The basic standard used to investigate nonmetallic materials of products marked suitable for use in air-handling spaces is UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "General Signaling Equipment" or "General Signaling Subassembly."

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

G – General Signaling Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss,

SIGNAL APPLIANCES (UCEV)

Speakers (UEAY)—Continued

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VISUAL-SIGNAL APPLIANCES (UEES)**USE AND INSTALLATION**

This category covers visual-signal appliances and accessories intended for use in general-signaling applications. These devices have been investigated with respect to risk of fire and shock.

Accessories, such as enclosures and back boxes, and the products with which they are compatible are identified in the individual Listings.

Where multiple parts are employed to form a complete unit, the specific parts are identified in the individual Listings. The marking on each part references installation instructions which show assembly and installation of the parts to form a Listed product.

These products are intended for indoor use only unless otherwise specifically marked.

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term "Visual Signaling Appliance" or "Visual Signaling Appliance Accessory."

RELATED PRODUCTS

Devices intended for use in fire alarm and/or emergency-protective signaling applications are covered under Visual-signal Appliances for Fire Protective Signaling Systems (UVAV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1638, "Visual Signaling Appliances – Private-Mode Emergency and General Utility Signaling."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "General Signaling Equipment" or "General Signaling Subassembly."

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

G – General Signaling Equipment

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNAL APPLIANCES, MISCELLANEOUS (UEHX)**GENERAL**

This category covers miscellaneous signaling appliance units that have been investigated only for hazard of fire and electric shock and are not associated with property protection and/or life safety. The general-purpose signaling nature of each product is categorized as Type NM (Nonmonitored).

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the phrase "Type NM" and a the specific use description as indicated in the individual Listings.

RELATED PRODUCTS

For information regarding Emergency Signaling, see Emergency Alarm Equipment (FSVW), Emergency Alarm System Control Units (FSZI) and Emergency Alarm System Accessories (FSYE).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2017, "General-Purpose Signaling Devices and Systems."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "General Signaling Equipment" or "General Signaling Subassembly."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNAL APPLIANCES FOR USE IN HAZARDOUS LOCATIONS (UFXR)

Equipment for use in hazardous locations investigated for fire-protective signaling service also appears under Signal and Fire Alarm Equipment and Services (SYKJ) in the Fire Protection Equipment Directory.

AUDIBLE-SIGNAL APPLIANCES FOR USE IN HAZARDOUS LOCATIONS (UGKZ)**GENERAL**

This category covers audible-signal appliances, such as bells, sirens and horns.

Audible-signal appliances Listed for use in any of the groups under Class I hazardous locations have been investigated with respect to safety of operation in the presence of flammable and explosive mixtures of specific vapors and gases with air. Those for use in any of the groups under Class II hazardous locations have been investigated for dusttightness and have been subjected to operation tests to establish safety of operation in the presence of the specific combustible dusts, and also to establish that they will function as intended with dust accumulated on external parts.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Audible Signal Appliance for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party.

turer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EXTINGUISHING SYSTEM ATTACHMENTS FOR USE IN HAZARDOUS LOCATIONS (UGYX)

GENERAL

This category covers devices having electrical signaling contacts that are designed for attachment to extinguishing system equipment so as to provide (1) alarm signals indicating discharge of extinguishing means, and (2) supervisory signals indicating abnormal conditions of extinguishing system equipment and restoration to normal.

The signal contacts of these attachments may be of the noncoded or coded type.

Devices classified as noncoded types have contacts that perform a switching function and are intended for connection to actuating circuits of a separate electrically-operated transmitter or to the signaling line circuit of a separate electrical control unit by which their action is indicated.

Devices classified as coded types have contacts that perform a coded signaling impulse function resulting from the operation of a transmitting mechanism, which is a part of the attachment, and are intended for connection to the signaling line circuit of a separate electrical control unit by which their action is indicated.

ATTACHMENT TYPES

Attachments for automatic sprinkler systems are classified as follows:

Waterflow Alarm Signal Types

Alarm Dry-pipe Valve Attachment — Mechanically operated on lifting of alarm valve clapper or pressure operated by suitable connection to alarm or dry-pipe valve piping trim.

Waterflow Indicator — Paddle operated.

Special Attachment — Type not included by above classification.

Supervisory Signal Types

Valve Position Signal Attachment — Operated by mechanical linkage to movable parts of valve.

Water Level Signal Attachment — Operated by tank float.

Pressure Signal Attachment — Operated by pressure change of air, steam or water.

Temperature Signal Attachment — Operated by water or air temperature change.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Extinguishing System Attachment for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIRE ALARM DEVICES FOR USE IN HAZARDOUS LOCATIONS (UHMV)

USE AND INSTALLATION

This category covers coded and noncoded fire alarm boxes and fire and watch boxes for use with private fire alarm systems.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

SIGNAL APPLIANCES FOR USE IN HAZARDOUS LOCATIONS (UFXR)

Fire Alarm Devices for Use in Hazardous Locations (UHMV)—Continued

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Alarm Box for Hazardous Locations" or "Fire and Watch Box for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. FLAME-AUTOMATIC FIRE DETECTORS FOR USE IN HAZARDOUS LOCATIONS (UIAZ)

USE AND INSTALLATION

This category covers fire detectors designed to detect flames, either in infrared or ultraviolet regions.

Each detector provides signaling contacts for connection to a signal-indicating appliance, electrically actuated transmitters, or a system control unit to form a fire alarm system as indicated by the installation wiring diagram supplied with the unit.

Each unit is intended to be installed in accordance with the manufacturer's control drawing, the Authority Having Jurisdiction, and ANSI/NFPA 72, "National Fire Alarm Code," or other NFPA standards that may apply.

Detector Location

The location of flame detectors should be based on an engineering survey of the conditions to be anticipated in service and the principle of operation. Detectors should be installed only after a thorough study has been made of the area or premises to be protected (whether in planning or construction stage) and of the life and property values involved. Prior to engineering, a layout of an installation and a copy of the manufacturer's technical bulletin should be obtained and reviewed to determine recommended detector locations. Consideration should be given to all features which could have a bearing on the location and sensitivity of the detectors, including such pertinent factors as coverage in partitioned sections, ceiling heights, and overlapping of areas of cone coverage to provide maximum protection. Test flames should be employed to check proper detector location.

Environmental Considerations

Where indicated in the individual Listings, detectors are intended for indoor and/or outdoor use. For indoor use, detectors should be located in areas where normal ceiling temperatures prevail. For outdoor use, detectors should be located such that an accumulation of snow, dirt, or road film is not likely to occur on the lens. Accordingly, detectors should be located under a building overhang or positioned on a downward angle to minimize the occurrence of such conditions.

Detectors should not be installed where unwanted false alarms are likely to occur, such as other sources of ultraviolet or infrared radiation.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/UL 268, "Smoke Detectors for Fire Alarm Signaling Systems."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flame-automatic Fire Detector for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GROUND INDICATORS FOR USE IN HAZARDOUS LOCATIONS (UIOR)

GENERAL

SIGNAL APPLIANCES FOR USE IN HAZARDOUS LOCATIONS (UFXR)**Ground Indicators for Use in Hazardous Locations (UIOR)—Continued**

This category covers electronic type ground indicators, the ratings of which are given on the individual product. These devices indicate by audible or visible signals whether an adequate connection to gasoline tank trucks, tank cars, or drums has been established for dissipation of static electricity.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Ground Indicator for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEAT-ACTUATED DEVICES FOR SPECIAL APPLICATION FOR USE IN HAZARDOUS LOCATIONS (UIPV)**USE AND INSTALLATION**

This category covers fixed-temperature, heat-actuated-type detectors employing special constructions designed to detect an abnormal increase in air temperature.

These detectors are intended to be installed adjacent to the equipment being protected in indoor locations in a manner acceptable to the Authority Having Jurisdiction and in accordance with ANSI/NFPA 72, "National Fire Alarm Code," or other NFPA standards that may apply, such as for extinguishing system applications. The temperature rating of the detector shall be taken into consideration with regard to installation in specific ambient environments under operating conditions of the equipment to be protected. The detectors are intended to be connected to the initiating device circuits of Listed control units which provide audible alarm signals or employed as part of an extinguishing system. Authorities Having Jurisdiction should be consulted before installation.

Spacings for Equipment Protection — Reference should be made to the manufacturer's installation drawings and instructions. Spacings for smooth ceilings with large bays are included in the individual Listings.

RELATED PRODUCTS

For open area protection, see Heat-automatic Fire Detectors for Use in Hazardous Locations (UIRV).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Heat Actuated Device for Special Application for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. HEAT-AUTOMATIC FIRE DETECTORS FOR USE IN HAZARDOUS LOCATIONS (UIRV)**USE AND INSTALLATION**

This category covers fire alarm heat detectors only, and not the wiring or other appliances of which they form a part.

SIGNAL APPLIANCES FOR USE IN HAZARDOUS LOCATIONS (UFXR)

361

Heat-automatic Fire Detectors for Use in Hazardous Locations (UIRV)—Continued

Fire alarm heat detectors are of the fixed temperature (FT), rate of rise (ROR), combination fixed temperature and rate-of-rise (ROR-FT), or rate compensation (RC) type. There are basically two types: (1) A spot-pattern-type detector is one in which the thermally-sensitive element is a compact unit of small area; (2) a line-pattern-type detector is one in which the thermally-sensitive element is continuous along a line.

These heat detectors are intended for locations where normal ceiling temperatures prevail (below 100°F). Locations where temperatures at ceiling are likely to be unduly high (from sources of heat other than fire conditions, such as boiler rooms, dry kilns, etc.) demand special consideration and selection of heat detectors operating normally at higher temperatures, and which are capable of withstanding high temperatures for long periods of time. Care should be exercised to select heat detectors having the proper temperature rating to guard against false alarms from premature operation:

For ceiling temperatures not exceeding 100°F, install 135 to 165°F (ordinary) rating thermostats

For ceiling temperatures exceeding 100°F, but not 150°F, install intermediate 175 to 225°F rating thermostats

For ceiling temperatures exceeding 150°F, but not 225°F, install 250 to 300°F (high) rating thermostats

For ceiling temperatures exceeding 225°F, but not 300°F, install 325 to 360°F (extra high) rating thermostats

Low-degree-rated heat detectors are intended only for installation in areas having controlled temperature conditions at least 20°F below rating.

The spacings specified are for flat, smooth-ceiling construction of ordinary height, generally regarded as the most favorable condition for distribution of heated air currents resulting from a fire. Under other forms of ceiling construction reduced spacing of thermostats may be required. The fire tests conducted to determine the suitability of the spacings are conducted in a 60 x 60 ft room having a 15 ft 9 in. high smooth ceiling and minimum air movement. The test fire (denatured alcohol) is located approximately 3 ft above the floor and of a magnitude so that sprinkler operation is obtained in approximately two minutes. For comparative purposes, automatic sprinklers rated 160°F are installed on a 10 x 10 ft spacing schedule in an upright position with the deflectors approximately 7 in. below the ceiling. At the maximum permissible spacing for the heat detectors, they must operate prior to operation of the sprinklers.

The placement and spacing of thermostatic devices should be based on consideration of the ceiling construction, ceiling height, room or space areas, space subdivisions, the normal room temperature, possible exposure of the devices to abnormal heat, such as may be produced by manufacturing processes or equipment and to draft conditions likely to be encountered at the time of a fire.

For Listings that include references to "rain tight type," the devices have been subjected to tests designed to simulate exposure to beating rain to determine that such exposure will not result in the entrance of water.

These detectors are intended to be installed in accordance with ANSI/NFPA 72, "National Fire Alarm Code." Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

Heat detectors having normally closed contacts used in special applications are covered under Heat Detectors for Releasing Device Service for Use in Hazardous Locations (TBGR).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Magnetic-operated Contact for Use in Hazardous Locations," "Signal Relay for Use in Hazardous Locations" or "Monitor Unit (Associated Apparatus) for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNALING EQUIPMENT ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS (UJQO)
USE

This category covers retrofit devices in kits consisting of parts and/or sub-assemblies, installation/instruction manuals, and retaining means, intended for field installation in UL Listed audible signaling appliances for use in hazardous locations. These products have been investigated by UL to determine that when used in accordance with the manufacturer's instructions they do not adversely affect the operation of the complete unit.

PRODUCT MARKINGS

Retrofit devices are marked with electrical and environmental ratings as specified in the individual reports.

Signaling Equipment Accessories for Use in Hazardous Locations (UJQO)—Continued

For additional information, see Signal Appliances for Use in Hazardous Locations (UFXR) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/UL 464, "Audible Signal Appliances," or ANSI/UL 1480, "Speakers for Fire Alarm, Emergency, and Commercial and Professional Use."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

AUDIBLE SIGNAL RETROFIT KIT FOR USE WITH LISTED [model number(s)] ONLY Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SMOKE-AUTOMATIC FIRE DETECTORS FOR USE IN HAZARDOUS LOCATIONS (UJRN)
GENERAL

This category covers detecting combinations designed to detect smoke particles. Smoke detectors may or may not be designed to be connected to fire alarm system control units. See APPLICATIONS below.

A heat detector and/or an audible signaling appliance may be provided integral with the detector.

The primary function of duct detectors is to shut down the blowers and/or dampers of air conditioning and ventilating systems in an attempt to prevent a possible panic and smoke damage from distribution of smoke. Duct detectors are not intended as a substitute for open-area protection.

The level of toxicity produced by the combustibles at which smoke detectors actuate has not been investigated.

DETECTOR TYPES

Air Sampling (AS) — Consists of air-sampling ports at the ends of piping or tubing extending from the detector unit to the areas to be protected. A pump draws air from the protected area through the ports and tubing to the detector where the air is analyzed for fire products.

Photoelectric (P) — Designed to detect an abnormal density of smoke particles, either by obscuration of a projected light path or reflection of light from the smoke particles onto a light-sensitive element.

Ionization (I) — An ionization smoke detector has a small amount of radioactive material that ionizes the air in the sensing chamber, thus rendering it conductive and permitting a current flow through the air between two charged electrodes. This gives the sensing chamber an effective electrical conductance. When smoke particles enter the ionization area, they decrease the conductance of the air by attaching themselves to the ions, causing a reduction in mobility. When the conductance is less than a predetermined level, the detector circuit responds.

Combination Photoelectric/Ionization (P/I) — Employs both principles of detection in one unit.

Projected Beam (PB) — A light beam is projected across the space of the area to be protected.

Integral Radio Frequency Transmitter (RF) — Uses an integral radio frequency transmitter to communicate with a receiver in the fire alarm control panel, in place of a wired connection.

APPLICATIONS

Duct Detector [D(I)] — For installation inside the duct.

Duct Detector [D(ST)] — Intended for installation on the side of the duct. Employs sampling tubes that extend into the duct.

Open-area Protection (OAP) — Requires detector connection to a compatible system control unit for operation.

Releasing Service (RS) — Intended for detector connection only to releasing devices, such as electromagnetic door holders, fire dampers, etc.

Open-area Protection with Releasing Service (OAP/RS) — Incorporates supplementary switching contacts for additional connection to releasing devices.

Special Application (SA) — For installation in nonstandard locations, as noted in the individual Listings.

SIGNAL APPLIANCES FOR USE IN HAZARDOUS LOCATIONS (UFXR)

Smoke-automatic Fire Detectors for Use in Hazardous Locations (UJRN)—Continued

COMPATIBILITY WITH CONTROL UNITS

Smoke detectors investigated for open-area protection are intended to be connected to the initiating device circuit of a fire alarm system control unit.

Multiple-wire detectors, employing power-supply terminals or leads that do not obtain power from the initiating device circuit of a system control unit, are compatible with any Listed system control unit if failure of the power to the detector is supervised at the control unit.

Two-wire detectors, whose power-supply terminals or leads are the same as the signaling terminals, and obtain power from the initiating device circuit of a system control unit, are investigated for compatibility either by test or a review of the circuit parameters of both the detector and control unit. Listing is restricted only to those control units with which such an investigation was made. Interconnection limitations and compatible models are indicated on the installation wiring diagram of the control unit and/or the detectors.

INSTALLATION

Standards — Refer to ANSI/NFPA 72, "National Fire Alarm Code," and ANSI/NFPA 90A, "Standard for the Installation of Air-Conditioning and Ventilating Systems," for installation, maintenance and testing guidelines.

Spacings — Although there are no assigned spacings to these detectors, test fires, using the maximum amount of combustible for the risk involved, may be employed. See ANSI/NFPA 72 for additional guidelines.

Environmental Considerations — Open-area detectors are intended for indoor use only where normal ceiling temperatures [max 37.8°C (100°F)] prevail. Care should be used that detectors are not installed in areas where conditions may cause unwanted (false) alarms.

Duct detectors are intended to be installed in ducts of heating, ventilating, and air conditioning systems where temperatures at the detector do not exceed 37.8°C (100°F).

Ionization detectors should not be used in an environment of high-level radiation unless tests in the actual environment have shown that the radiation will not interfere with operation of the detectors.

Effect of Velocity — The velocities indicated in the individual Listings are the maximum and minimum to which the detector has been subjected in performance tests without indication of a false alarm or abnormal shift in sensitivity. The performance of photoelectric-type detectors is not affected by velocity. Velocity limits for duct detectors are based on response to fire tests in ANSI/UL 268A, "Smoke Detectors for Duct Application."

Stability Test — Since there are innumerable environmental conditions that exist in the field, it is recommended that the stability of detectors be monitored prior to connection to a fire alarm system for at least three months or more to screen out locations of detectors where unwanted alarms may occur. Relocation of the detectors, use of a detector with a different principle of operation, or a change in the sensitivity setting where permitted in the marking of the detector, may be required.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate open area and releasing service detectors in this category is ANSI/UL 268, "Smoke Detectors for Fire Alarm Signaling Systems."

The basic unclassified (ordinary) locations standard used to investigate duct detectors in this category is ANSI/UL 268A, "Smoke Detectors for Duct Application."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate:

* Company name or File no. (EXXXXX)
+ To be inserted when applicable: "with Integral Audible Signal," "with Integral Heat Detector" or "with Integral Audible Signal and Heat Detector"

Detectors with the designation "with Integral Audible Signal" in the product name include an audible signaling appliance in the unit (head or base), which is energized under an alarm condition.

Detectors with the designation "with Integral Heat Detector" in the product name include a heat detector in the unit, which is connected internally to the smoke detector alarm circuit. Actuation of the heat detector results in the same alarm signal as obtained from the smoke detector.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VISUAL-SIGNAL APPLIANCES FOR USE IN HAZARDOUS LOCATIONS (UJTK)

GENERAL

This category covers visual-signal appliances, such as rotating beacons and strobe lights, intended for use in general signal applications, and sub-assemblies of visual-signal appliances intended for final assembly into visual-signal appliances.

Subassemblies, such as mounting bodies, globes and guards, and the products with which they are compatible are identified in the individual Listings.

Where multiple parts are employed to form a complete unit, the specific parts are identified in the individual Listings. Marking on each part references installation instructions which show assembly and installation of the parts to form a Listed product.

Visual-signal appliances Listed for use in any of the groups under Class I hazardous locations have been tested with respect to safety of operation in the presence of flammable and explosive mixtures of specific vapors and gases with air. Those for use in any of the groups under Class II hazardous locations have been tested for dust-tightness and have been subjected to operation tests to establish safety of operation in the presence of the specific combustible dusts and also to establish that they will function as intended with dust accumulated on external parts.

SIGNALING APPLIANCES AND EQUIPMENT FOR THE HEARING IMPAIRED FOR USE IN HAZARDOUS LOCATIONS (UXWC)**GENERAL**

This category covers visual-signaling appliances, vibrators or other sensory apparatus and associated equipment investigated for fire protective signaling services to alert hearing-impaired persons, and subassemblies of signaling appliances intended for final assembly into signaling appliances.

Subassemblies, such as mounting bodies, globes and guards, and the products with which they are compatible are identified in the individual Listings.

Where multiple parts are employed to form a complete unit, the specific parts are identified in the individual Listings. Marking on each part references installation instructions that show assembly and installation of the parts to form a Listed product.

These signaling appliances are intended to be used in conjunction with Listed compatible fire alarm control units, alarm initiating devices and the like. The interconnection, use and installation requirements of the products are intended to be in accordance with ANSI/NFPA 72, "National Fire Alarm Code."

The signaling appliances in this category have been investigated as to their ability to alert most hearing-impaired persons. However, since the ability of signal recognition varies among individuals, the effectiveness of alerting a person can only be ensured by actual testing of that person with the installed signaling appliance.

Visual-signaling appliances covered under this category are intended to be used in the "Public Operating Mode" as defined in ANSI/NFPA 72.

RELATED PRODUCTS

Visual-signaling appliances intended to be used in the "Private Mode" are covered under Visual-signal Devices for Use in Hazardous Locations (UJTK).

This category does not cover signaling devices for the hearing impaired that are an integral part of other alarm-initiating or -indicating devices. When such a combination exists, suitability as a signaling appliance for the hearing impaired will be noted in the Listings of the primary product. Refer to Audible-Signal Devices for Use in Hazardous Locations (UGKZ).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/UL 1971, "Signaling Devices for the Hearing Impaired."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name

SIGNALING APPLIANCES AND EQUIPMENT FOR THE HEARING IMPAIRED FOR USE IN HAZARDOUS LOCATIONS (UXWC)

"Signaling Appliance for the Hearing Impaired for Use in Hazardous Locations," "Signaling Appliance Accessory for the Hearing Impaired for Use in Hazardous Locations," or "Signaling Appliance Subassembly for the Hearing Impaired for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNS (UXYT)

USE AND INSTALLATION

This category covers electric signs employing incandescent lamps, LEDs (light-emitting diodes), electro-luminescent panels, neon tubing, fluorescent lamps, high-intensity-discharge lamps or combinations thereof for installation in accordance with Article 600 of ANSI/NFPA 70, "National Electrical Code."

Cord-and-plug-connected signs do not have provision for permanent mounting to a building or structure. Due to servicing considerations, specific types of cord and plug-connected signs are intended and have provision for installation on end-use equipment.

Signs or sections of a sign forming a complete enclosure intended for permanent connection to a source of supply are provided with permanent means for attachment to a building, to a support or to a hanging rig. The mounting hardware, poles and other structural components of a sign have not been evaluated with respect to local variable conditions such as local wind and snow loading or soil conditions.

Electric signs, of such size that shipment in one carton or fully assembled is impractical, may be divided into sections. Each major subassembly bears an "Electric Sign Section" Listing Mark. Sign faces, trim and mounting hardware are not considered major subassemblies. Each sign has installation instructions describing or illustrating the proper assembly, mounting and connection of the sign sections. The acceptability of the assembled sections in the field rests with the Authority Having Jurisdiction.

PRODUCT MARKINGS

Signs intended for permanent installation and which have been investigated for indoor use only are so marked. Cord-connected signs investigated for outdoor use are marked "Outdoor." Signs for outline lighting are marked "Outdoor Sign for Outline Lighting."

Signs, sign sections or outline lighting marked "The neon supply(ies) complies(y) with the secondary ground-fault protection requirements of UL 2161" are provided with neon transformers and power supplies that comply with the secondary fault protection requirements specified in UL 2161, "Neon Transformers and Power Supplies."

REBUILT PRODUCTS

This category also covers signs that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt signs are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt signs are subject to the same requirements as new signs.

RELATED PRODUCTS

Accessories intended for use in Listed signs are covered under Sign Accessories (UYMR).

Retrofit conversions intended to be field installed in Listed electric signs are covered under Sign Conversions, Retrofit (UYWU).

Changing message center signs may contain integral controllers or may be intended for use with externally connected controllers. Externally connected controllers are covered under Sign Controllers, Message Centers (UYTQ).

This category does not cover billboard illumination, exit lights, skeletal neon tubing for show windows, or illuminated clocks rated 600 V or less.

Field-assembled neon systems used in display windows, outline lighting, or skeletal neon signs are covered under Skeletal Neon Sign and Outline Lighting Systems, Field Assembled (UZBL).

Field-assembled cold cathode electric discharge lighting systems that provide general illumination are covered under Electric Discharge Lighting Systems, Cold Cathode (IFAY).

Field-installed neon outline lighting systems that outline or call attention to architectural details of a room or building are covered under Field Installed Neon Outline Lighting Systems (UYAM).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 48, "Electric Signs."

Electric signs that comply with the requirements in UL 153, "Portable Electric Lamps" may also be Listed as Portable Lamps (QOWZ) in the Electrical Appliance and Utilization Equipment Directory.

UL MARK

SIGNS (UXYT)

365

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Indoor Electric Sign," "Electric Sign" or "Electric Sign Section."

For rebuilt signs the word "Rebuilt" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIELD-INSTALLED NEON OUTLINE LIGHTING SYSTEMS (UYAM)

This category covers neon outline lighting systems that incorporate neon tubing with ferrule type end caps which are electrically connected to the output of a transformer, power supply or ballast by ferrule type lampholders. Each transformer or power supply in the system has a maximum output current rating of 300 mA. These systems are for installation in accordance with Article 600 of the National Electrical Code.

These lighting systems outline or call attention to architectural details of a room or building.

Neon outline lighting systems are provided as a system of parts that are field installed. These systems are installed using tools and techniques available only to an electrician. The systems are provided with installation instructions which define the scope of the system and method for installation. It is intended that the system installation instructions be retained with the installation to which they apply.

The Listing of a neon outline lighting system does not constitute approval of the design which is the responsibility of the manufacturer and the Authority Having Jurisdiction nor approval of the installation. The final acceptance of the field installed neon outline lighting system is the responsibility of the Authority Having Jurisdiction.

These systems are intended for permanent installation indoors unless marked as "Suitable for Outdoor Locations".

Neon outline lighting systems marked "The neon supply(ies) complies(y) with the secondary ground-fault protection requirements of UL 2161" are provided with neon transformers and power supplies that comply with the secondary ground-fault protection requirements specified in the Standard for "Neon Transformers and Power Supplies", UL 2161.

This category does not cover neon tubing for display windows or signs which are covered under category Signs (UXYT).

This category does not cover field assembled neon systems in display windows, outline lighting, or skeletal neon signs which are covered under the category of "Field Assembled Skeletal Neon Signs and Outline Lighting Systems", (UZBL).

This category does not cover cold cathode electric discharge lighting systems for general illumination which are covered under the category "Electric Discharge Lighting Systems, Cold Cathode", (IFAY).

Outline lighting of the incandescent, HID or fluorescent type fabricated in factory-built sections is covered under the category Signs (UXYT).

Lighting systems operating at 1000V or less are covered under categories Fluorescent Fixtures (IEUZ), HID Fixtures (IEXT), and Incandescent Fixtures (IEZR).

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic standard used to investigate products in this category is UL 48, "Electric Signs".

The Listing Mark of Underwriters Laboratories Inc. on each transformer and transformer enclosure, and the containers in which the remaining neon outline lighting system parts are packaged, or on the remaining neon outline lighting system parts themselves, referencing a specific field-installed neon outline system number is the only method provided by UL to identify neon outline lighting systems manufactured under its Listing and Follow-Up Services. The Listing mark for these systems includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED", a control number, the product name, "Field Installed Neon Outline Lighting System Part", and the words "The Listing of this neon outline lighting system is contingent upon installation according to the specifications of (Listee's Name), System No. _____ and the National Electrical Code".

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGNS, CHANGING MESSAGE (UYFS)

GENERAL

This Listing covers illuminated and nonilluminated changing message signs intended to be installed and connected to an electrical supply source in accordance with the National Electrical Code, ANSI/NFPA 70.

Illuminated changing message signs include incandescent, fluorescent, HID (high intensity discharge), electric discharge tubing (including neon) LED (light emitting diode), and other sources of illumination.

Non-illuminated changing message signs include scrolling, flipper, LCD (liquid crystal display), and similar types that are generally motor operated or electronically controlled.

Sign Section — The changing message signs may be divided into sections. Each section of the sign bears a "Changing Message Sign Section" Listing Mark that states in combination with the Listing Mark "Section _____ of _____." The first blank space identifies the number of the section, and the second blank space identifies the total number of sections required to constitute a complete changing message sign. Suitable installation instructions describing or illustrating the proper assembly, mounting, and connection of the numbered sign sections are provided.

SIGN INSTALLATION MARKINGS

Indoor/Outdoor Use — Permanently connected changing message signs are investigated and intended for use outdoors unless marked "For Indoor Use Only." Cord-Connected changing message signs are investigated and intended for use indoors unless marked "Portable Outdoor Changing Message Sign."

Trailer Mounted — Changing message signs intended to be trailer mounted are marked "Trailer On Which Sign May Be Mounted Has Not Been Investigated."

Orientation Marking — A changing message sign intended for outdoor use that is not provided with construction features to ensure proper orientation is marked to indicate the proper mounting position.

Wall Mounted — A changing message sign for outdoor use, wall mounting and provided with drain holes along the bottom edge of the back of the sign, and marked "Maintain 1/2 Inch Clearance Between All Drain Openings And The Mounting Surface" is intended to be installed so that the drain holes are not covered by the building surface.

REBUILT PRODUCTS

This Listing also covers rebuilt changing message signs which have been reconditioned or rebuilt. Such changing message signs have been factory reconditioned to the extent necessary by disassembly and reassembly using new or reconditioned component parts. Reconditioned or rebuilt changing message signs are subject to the same requirements as new changing message signs.

RELATED PRODUCTS

Components and parts intended for use on or with changing message signs are Listed or Classified under the separate categories of Sign Accessories (UYMR), Sign Conversions Retrofit (UYWU), and Sign Controllers - Message Centers (UYTQ).

Changing message signs may also be Listed under category Signs (UXYT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 48, "Electric Signs", and UL 1433, "Control Centers For Changing Message Type Electric Signs".

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. A Listing Mark for these products include the name and/or symbol of Underwriters Laboratories Inc. (as illustrated in the introduction of this directory) together with the word "LISTED", a control number, and one of the following product names as appropriate: "Indoor Changing Message Sign", "Changing Message Sign", "Changing Message Sign Section", or the product name preceded by the word, "Rebuilt."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGN ACCESSORIES (UYMR)

USE

This category covers sign components, such as combinations of frame plastic panels with metal or plastic characters; sign-rotating equipment for use in electric signs where weather protection and electrical enclosures are provided by the sign; ballast lead covers or enclosures intended to provide weather and mechanical protection to leads of outdoor ballasts; fluorescent U-tube and lampholder assemblies consisting of lampholders in sheet-metal brackets with spring and loaded rod and hook assemblies with or without a

Sign Accessories (UYMR)—Continued

ballast; insulating caps for use on electrode receptacles to provide electrical insulation; low-voltage power supplies consisting of assemblies of Class 2 transformers, an enclosure and a power-supply cord; and kickback bases intended for indoor use and provided with a receptacle for connection of a related display and provided with a power-supply cord.

RELATED PRODUCTS

Lampholders and electrode receptacles are covered under Lampholders, Electric Discharge, Over 1000 Volts (OJOV).

ADDITIONAL INFORMATION

For additional information, see Signs (UXYT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 879, "Electric Sign Components." This standard supersedes UL 48, "Electric Signs," and ANSI/UL 73, "Motor-Operated Appliances," which formerly contained the requirements for sign components.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sign Accessory."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGN COMPONENTS CLASSIFIED FOR USE WITH SPECIFIED EQUIPMENT (UYTA)

USE AND INSTALLATION

This category covers specific components that are Classified for use with components manufactured by others, such as:

Listed GTO cable surface marked "Integral Sleeve" that is also Classified for use with specific Listed or Recognized Component neon electrode boots; and Listed or Recognized Component neon electrode boots that are also Classified for use with specific Listed GTO cable surface marked "Integral Sleeve."

The combination of the GTO cable with integral sleeve and neon electrode boot has been evaluated and found to comply with the enclosure requirements for:

- the splice between neon tubing electrode leads and GTO cable, and
- the GTO cable leading to the splice.

These products are provided with installation instructions that define the scope of the system and method of installation.

ADDITIONAL INFORMATION

For additional information, see Signs (UXYT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in Subject 879B, "Outline of Investigation for Polymeric Enclosure Systems for the Splice Between Neon Tubing Electrode Leads and GTO Cable, and the GTO Cable Leading to the Splice."

LOOK FOR CLASSIFICATION MARK ON PRODUCT

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), a control number, and one of the following statements as appropriate:

GTO Cable with Integral Sleeve (or Neon Electrode Boot, as appropriate) Cat. No. _____ for use only with the specified Neon Electrode Boot (or GTO Cable with Integral Sleeve, as appropriate) in _____ (blank to be completed with "dry and damp" or "dry, damp and wet" as appropriate) locations. See installation instructions.

or

GTO Cable with Integral Sleeve (or Neon Electrode Boot, as appropriate) Cat. No. _____ for use only with _____ (blank to be completed with the manufacturer's name and catalog number, or equivalent, of the Neon Electrode Boot or GTO Cable with Integral Sleeve, as appropriate) in _____ (blank to be completed with "dry and damp" or "dry, damp and wet" as appropriate) locations.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss,

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SIGN CONTROLLERS, MESSAGE CENTERS
(UYTQ)****GENERAL**

This category covers control panels or units intended for changing-message signs.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1433, "Control Centers for Changing Message Type Electric Signs."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sign Controller," or other appropriate product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGN CONVERSIONS, RETROFIT (UYWU)**USE AND INSTALLATION**

This category covers retrofit sign conversions consisting of subassemblies or kits intended for field installation in Listed signs. There are several types of sign conversions as specified below.

Scrolling units (motor-operated message assemblies), devices to change the type of illumination (such as from incandescent to fluorescent), or combinations thereof consist of subassemblies intended for field installation in specific Listed permanently connected electric signs. The conversion identifies the catalog number (or other description) and company name of the sign in which it is intended to be used.

Light-emitting diode (LED) kits consist of the power source, the LEDs and the LED mounting means necessary to change the type of illumination originally contained in the sign to LED illumination. The kit installation instructions specify the type of sign in which the kit is intended to be installed.

These retrofit sign conversions have been investigated to determine that, when used in accordance with the manufacturer's instructions provided with the retrofit device, they do not adversely affect the operation of the complete electric sign.

ADDITIONAL INFORMATION

For additional information, see Signs (UXYT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate retrofit sign conversions in this category is UL 48, "Electric Signs."

The basic requirements used to investigate retrofit sign conversion LED kits in this category are contained in UL Subject 879A, "Outline of Investigation for LED Kits."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**RETROFIT SIGN CONVERSION
FOR USE ONLY WITH SIGN**

MODEL ____ MANUFACTURED BY ____
Control No.

or

RETROFIT SIGN CONVERSION LED KIT

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SIGN FLASHERS (UYZZ)

This listing covers flashing devices intended to control incandescent lamps or gas tube sign transformers.

The installation of open type flashing devices in electric signs shall be in accordance with the National Electrical Code as follows: (a) within a standard cutout box or cabinet, or (b) within an enclosed compartment, accessible and weatherproof, of metal at least as thick as that of the sign itself and located in or on the body or structure of the sign.

Flashing devices of the thermostatic type are intended to control incandescent lamps and are for indoor use only.

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic standards used to investigate products in this category are UL 48, "Electric Signs", UL 1433, "Control Centers for Changing Message Type Electric Signs", and UL 508, "Electric Industrial Control Equipment".

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Sign Flasher", "Blinker", "Winker", "Flasher", or other appropriate product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SKELETAL NEON SIGN AND OUTLINE
LIGHTING SYSTEMS, FIELD ASSEMBLED
(UZBL)**

The presence of the Listing Mark ("Field Assembled Skeletal Neon Sign System" or "Field Assembled Skeletal Neon Outline Lighting System") is evidence that the installation of the skeletal neon sign or outline lighting system (1) has been assembled and installed by an installer who is authorized by UL to apply UL Listing Marks described below and who subscribes to UL Follow-Up Service; (2) employs materials and components subject to a factory inspection service bearing the UL Mark; and (3) is subject to a field inspection program covering proper installation of the system.

These systems are field assembled for permanent installation in accordance with Article 600 of the National Electrical Code.

These systems are intended for outdoor use unless marked for indoor use.

Skeletal neon signs and outline lighting systems marked "The neon supply(ies) complies(y) with the secondary ground-fault protection requirements of UL 2161" are provided with neon transformers and power supplies that comply with the secondary ground-fault protection requirements specified in the Standard for "Neon Transformers and Power Supplies", UL 2161.

The Listing of a system does not constitute approval of the completed assembly and installation which is the responsibility of the installer and the Authority Having Jurisdiction.

This category does not cover field assembled cold cathode electric discharge lighting systems that provide general illumination. Those products are covered by the category "Electric Discharge Lighting Systems, Cold Cathode, (IFAY)".

This category does not cover field installed neon outline lighting systems that outline or call attention to architectural details of a room or building. Those products are covered by the category "Field Installed Neon Outline Lighting Systems", (UYAM).

This category does not cover factory assembled neon signs and outline lighting or sectional signs that require some field assembly. Those products are covered under the category Signs, UXYT.

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic standard used to investigate a system in this category is the Standard for "Electric Signs", "UL 48."

The Listing Mark on the transformer or power supply enclosure is the only method provided by UL to identify that a Field Assembled Skeletal Neon Sign or Outline Lighting System is covered under its Listing and Follow-Up Service. The Listing Mark for these systems includes the name

Skeletal Neon Sign and Outline Lighting Systems, Field Assembled (UZBL)—*Continued*

and symbol of Underwriters Laboratories Inc. (as Illustrated in the introduction of this directory) together with the word "LISTED", a control number, the installing company name or logo, date of installation, location and the following words as appropriate "Field Assembled Skeletal Neon Sign System" or "Field Assembled Skeletal Neon Outline Lighting System".

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SOLENOIDS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (VAMH)

USE

This category covers solenoids for installation on valves. The solenoids are incomplete devices inasmuch as the plungers or pistons are intended to actuate an external valve or other equipment. This category covers the solenoid only and not the valve or other equipment to which the solenoids are mounted.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 429, "Electrically Operated Valves."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Solenoid for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SOLENOIDS FOR USE IN HAZARDOUS LOCATIONS (VAPT)

USE

This category covers solenoids intended for connection to threaded rigid conduit. These solenoids may include the plungers or pistons intended to actuate an external valve or other equipment. This category covers the solenoid only and not the valve or other equipment to which the solenoids are mounted.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is UL 429, "Electrically Operated Valves."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Solenoid for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or

any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SOLENOID PUMPS FOR USE IN HAZARDOUS LOCATIONS (VAWS)

GENERAL

This category covers solenoid pumps for connection to threaded rigid conduit. The solenoid pumps are complete devices intended to actuate an external metering device or other equipment. These category covers the solenoid pump only and not the metering device or other equipment to which the solenoid pumps are mounted.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Solenoid Pump for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SOLVENT DISTILLATION UNITS FOR USE IN HAZARDOUS LOCATIONS (VBFY)

GENERAL

This category covers solvent distillation units with a maximum capacity of 60 gal (227 l), which are intended to recycle nonflammable, flammable or combustible solvents. These units have only been investigated for use with the solvent(s) indicated in the instruction manual provided with the unit. In addition, these units are marked to indicate the solvent(s) or with a statement referencing the instruction manual.

This equipment is intended for installation and use in accordance with ANSI/NFPA 70, "National Electrical Code," ANSI/NFPA 30, "Flammable and Combustible Liquids Code," and the "Uniform Fire Code," published by the International Fire Code Institute.

This category does not cover carbon-bed units, units intended to be installed outdoors, units intended to distill solvents containing nitrocellulose or other unstable reactives, or units intended for high-volume distillation processes typical of the petrochemical or distilled spirits industries.

The storage, use and disposal of any flammable or combustible solvents and hazardous materials used with or produced by the equipment, the physiological effects of these solvents and hazardous wastes, and the purity of the recycled solvent have not been investigated.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2208, "Solvent Distillation Units."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Solvent Distillation Unit for Use in Hazardous Locations," or equivalent.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SOUND-METERING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (VBYC)
SOUND-METERING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (VBYC)
GENERAL

This category covers equipment that measures and stores the ambient noise levels in industrial areas.

RELATED PRODUCTS

Equipment that has been investigated for use only in the Classified locations of automotive and marine service stations appears under Control, Monitoring and Auxiliary Equipment (EQXX).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Noise Dosimeter" or "Sound Level Meter," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SOUND-METERING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (VBYX)
USE AND INSTALLATION

This category covers sound metering equipment that measures and stores the ambient noise levels in industrial areas.

Certain products in this category are associated apparatus and are intended for installation in unclassified (ordinary) locations. They are provided with intrinsically safe circuits as indicated on the product, for extension into a hazardous location.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are identified in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Noise Dosimeter for Use in Hazardous Locations," "Sound Level Meter for Use in Hazardous Locations" or "Sound Level Meter (Associated Apparatus) for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SOUND-RECORDING AND -REPRODUCING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (VCSV)
USE
SOUND-RECORDING AND -REPRODUCING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (VCSV)

369

This category covers speakers and similar equipment intended for use in sound-recording and -reproducing systems.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sound Recording Equipment for Use in Hazardous Locations" or "Sound Reproducing Equipment for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SPRINKLER SYSTEM AND WATER SPRAY SYSTEM DEVICES FOR USE IN HAZARDOUS LOCATIONS (VQNT)

These listings cover devices and equipment for use in sprinkler systems and water spray systems.

These devices and equipment should be installed in compliance with the Standards of National Fire Protection Association, NFPA 13 for Sprinkler Systems, NFPA 15 for Water Spray Systems for Fire Protection, and NFPA 16 for Foam-Water Sprinkler and Spray Systems. Inspection authorities having jurisdiction should be consulted regarding use of these listed devices and equipment before installation.

These systems also appear under "Sprinkler Systems and Water Spray System Devices" in the Laboratories' Fire Protection Equipment List.

SPECIAL SYSTEM WATER CONTROL VALVES AND SYSTEM ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS (VQRZ)

Class I - See description of devices in this grouping on Guide Card VQWV.

Special System Water Control Valves for Use in Hazardous Locations (VQWV)
USE AND INSTALLATION

This category covers valves intended for controlling water flow to sprinkler and water spray systems. Unless otherwise stated, deluge valves are intended to be installed in the vertical position only.

These valves are intended to be installed in accordance with ANSI/NFPA 13, "Standard for the Installation of Sprinkler Systems," ANSI/NFPA 15, "Standard for Water Spray Fixed Systems for Fire Protection," or ANSI/NFPA 16, "Standard for the Installation of Foam-Water Sprinkler and Foam-Water Spray Systems." Authorities Having Jurisdiction should be consulted regarding use of these Listed devices and equipment before installation.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Deluge Valve for Use in Hazardous Locations."

370 SPRINKLER SYSTEM AND WATER SPRAY SYSTEM DEVICES FOR USE IN HAZARDOUS LOCATIONS (VQNT)

Special System Water Control Valves for Use in Hazardous Locations (VQVV)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, PRESSURE FOR USE IN HAZARDOUS LOCATIONS (VRBR)

USE

This category covers pressure-operated switches intended for connection with sprinkler equipment, water spray systems and like protection systems, as a means of initiating electrical alarms upon flow of water in the equipment or for actuation of other auxiliary equipment.

ADDITIONAL INFORMATION

For additional information, see Sprinkler System and Water Spray System Devices for Use in Hazardous Locations (VQNT) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pressure Switch for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

STATIC NEUTRALIZING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (VXDY)

USE AND INSTALLATION

This category covers high-voltage power units and discharge bars designed for individual installation on equipment in hazardous locations where static charges are generated during operation.

Due to the nature of these installations, high-voltage parts are necessarily exposed and cannot be completely shielded from contact.

Care should be taken to follow the instructions provided with the equipment regarding the installation of static neutralizers, including proper grounding of the equipment; operating personnel should be carefully instructed regarding its correct operation and maintenance.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Static Neutralizing Equipment for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SPILL CONTAINMENT FOR STATIONARY LEAD-ACID BATTERY SYSTEMS (VXMB)

SPILL CONTAINMENT FOR STATIONARY LEAD-ACID BATTERY SYSTEMS (VXMB)

GENERAL

This category covers spill containment for stationary lead-acid battery systems investigated for liquid tightness and electrolyte pH neutralization capability in accordance with Chapter 52 of ANSI/NFPA 1, "Uniform Fire Code," and acid resistance in accordance with OSHA 1926.441(a)(4), "Battery Locations and Battery Charging."

These systems are intended to provide a reliable means of containment for hazardous material liquids in the event of electrolyte leakage from stationary lead-acid battery systems.

Requirements for spill detection, spill clean-up, containment dimensions, containment capacity, neutralizer capacity and ventilation are included in the applicable federal or local governing codes, such as Chapter 52 of ANSI/NFPA 1, and OSHA 1926.441.

INSTALLATION

These systems are field assembled and require complete written installation instructions to ensure proper assembly.

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2436, "Outline of Investigation for Spill Containment for Stationary Lead-Acid Battery Systems."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Spill Containment for Stationary Lead-Acid Battery Systems," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

STRAPS, RESTRAINT, ELECTRICALLY CONDUCTIVE, RELATING TO HAZARDOUS LOCATIONS (VZAR)

USE

This category covers restraint straps made from electrically-conductive natural or synthetic rubber, intended for use in hospital operating rooms where accumulation of charges of static electricity presents a hazard due to the possibility of static sparks being formed in the presence of flammable anesthetic-air mixtures.

Tests indicate that these restraint straps in lengths used in hospital operating rooms are sufficiently electrically conductive to equalize electrostatic charges between electrical conductors connected thereby.

As oil is injurious to rubber compounds and impairs the electrical conductive properties of these materials, contact with oil should be avoided.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1067, "Electrically Conductive Equipment and Materials for Use in Flammable Anesthetizing Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electrically Conductive Restraint Straps Relating to Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SURGE PROTECTIVE DEVICES (VZCA)

GENERAL

This category covers surge protective devices (SPDs) designed for repeated limiting of transient voltage surges as specified in the standard on 50 or 60 Hz power circuits not exceeding 1000 V and designated as follows:

Type 1 — Permanently connected SPDs intended for installation between the secondary of the service transformer and the line side of the service equipment overcurrent device, as well as the load side, including watt-hour meter socket enclosures and intended to be installed without an external overcurrent protective device.

Type 2 — Permanently connected SPDs intended for installation on the load side of the service equipment overcurrent device, including SPDs located at the branch panel.

Type 3 — Point-of-utilization SPDs, installed at a minimum conductor length of 10 m (30 ft) from the electrical service panel to the point of utilization, e.g., cord-connected, direct plug-in, receptacle type and SPDs installed at the utilization equipment being protected. The distance (10 m) is exclusive of conductors provided with or used to attach SPDs.

SPDs have been investigated to verify that the average of the transient voltage surges is limited to the Voltage Protection Rating (VPR) marked on the product.

Voltage Protection Rating (VPR) — A rating selected from a list of preferred values as given in Table 63.1 of ANSI/UL 1449 and assigned to each mode of protection. The value of the VPR is determined as the nearest highest value taken from Table 63.1 to the measured limiting voltage determined during the transient-voltage surge suppression test using the combination wave generator at a setting of 6 kV, 3 kA.

Mode(s) — Refers to the pair of electrical connections where the VPR applies. The term "ALL" indicates that the VPR applies to all combinations of pairs of electrical connections.

SPD Type Testing

Type 1 and 2 SPDs are subjected to a Nominal Discharge Current test where an 8 x 20 μ s surge current (magnitude specified by the manufacturer) is impressed through the SPD.

Type 3 SPDs are subjected to an Operating Duty Cycle test with a combination wave at 6 kV/3 kA.

PRODUCT MARKINGS

The following information is marked on Type 1, 2 and 3 SPDs:

Electrical ratings, including the operating voltage rating (volts), ac power frequency (Hz) and number of phases. For a two-port SPD, the ratings include the load current rating (amperes).

Voltage Protection Rating (VPR) in volts.

Nominal Discharge Current (In) Rating in amps or kA — for Type 1 and 2 SPDs.

Maximum Continuous Operating Voltage Rating (MCOV) in volts — for Type 1 and 2 SPDs.

Short-circuit Current Rating (SCCR) in amps or kA — for Type 1 and 2 SPDs.

UNEVALUATED FACTORS

The effect of the suppressor on connected loads, the effect of the suppressor on harmonic distortion of the supply voltage, and the adequacy of the suppression level to protect connected equipment from damage due to transient voltage surges has not been investigated.

RELATED PRODUCTS

Cord-connected SPDs employing cord sets provided with leakage current detection and interruption are covered under Cord Sets with Leakage Current Detection and Interruption (ELGN).

Cord-connected SPDs employing ground-fault circuit interrupters are covered under Ground-fault Circuit Interrupters (KCXS).

Cord-connected and direct plug-in SPDs are not intended for use with medical, dental or health care facilities equipment.

Component SPDs (Type 4), including discrete components as well as component assemblies, are covered under Surge Protective Devices (VZCA2).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1449, "Surge Protective Devices" (third edition).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surge Protective Device" (or "SPD").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or

any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SURGE ARRESTERS 1000 VOLTS AND HIGHER (VZQK)

GENERAL

This category covers surge arresters rated 1000 V ac and higher, intended to repeatedly limit the voltage surges on 48–62 Hz power circuits and to afford protection against surge-related damage to wiring systems and/or to downstream equipment.

Surge arresters are categorized by their intended application and prescribed test requirements. These categories are station, intermediate, distribution heavy duty, distribution normal duty, and distribution light duty.

RELATED PRODUCTS

Low-voltage surge arresters (less than 1000 V ac) are covered Surge Arresters (OWHX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate metal-oxide surge arresters in this category is ANSI/IEEE C62.11, "Standard for Metal-Oxide Surge Arresters for AC Power Circuits." All other types of surge arresters in this category are investigated to IEEE C62.1, "Standard for Gapped Silicon-Carbide Surge Arresters for AC Power Circuits."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surge Arrester," "Distribution Normal Duty Surge Arrester" or "Station Class Surge Arrester," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SURGE PROTECTORS AND ISOLATORS FOR USE ON CATHODICALLY-PROTECTED SYSTEMS FOR USE IN HAZARDOUS LOCATIONS (VZQO)

GENERAL

This category covers surge protectors and isolators used to provide ac grounding and dc blocking for cathodic protection of underground pipelines and similar installations in hazardous locations. They may also be used to minimize galvanic corrosion between structures of dissimilar metals.

These devices have been investigated for providing effective grounding path characteristics as noted in Section 250-2(d) of ANSI/NFPA 70, "National Electrical Code" (NEC, 1999 edition). Additionally, these devices have been investigated for providing isolation of objectionable dc ground currents as noted in Section 250-6(e) of the NEC (1999 edition). Manufacturers of these devices provide installation instructions and maintenance information to assure proper installation and continuous protection of the equipment.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured

SURGE PROTECTORS AND ISOLATORS FOR USE ON CATHODICALLY-PROTECTED SYSTEMS FOR USE IN HAZARDOUS LOCATIONS (VZQO)

372

under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surge Protector for Use in Hazardous Locations," "Overvoltage Protector for Use in Hazardous Locations" or "Polarization Cell Replacement Unit for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SURFACE VEHICLE CABLE (VZSA)

LOW-VOLTAGE BATTERY CABLE CLASSIFIED IN ACCORDANCE WITH SAE J1127 (VZSL)

GENERAL

This category covers low-voltage battery cable intended for use in surface vehicle electrical systems. The cable consists of a single insulated conductor and is rated 60 V dc (25 V ac), 80 or 125°C.

PRODUCT MARKINGS

Low-voltage battery cable is marked with the cable type and the manufacturer's name or other identification.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Marine Products (AAMP).

REQUIREMENTS

The basic standard used to investigate products in this category is SAE J1127, "Low Voltage Battery Cable."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

LOW-VOLTAGE BATTERY CABLE IN ACCORDANCE WITH SAE J1127

Issue No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

STRUCTURED CABLING PROGRAMS (VZYY)

GENERAL

A structured cabling system is a field-assembled set of cabling and connectivity products that integrates the data, voice, video, and various management systems of a building (such as building automation systems, safety alarms, security access, energy systems, etc.).

Structured cabling systems are investigated under UL's Performance Verification Service, and the performance standards used in the investigation can be proprietary manufacturer standards, industry standards, or the UL XTR Structured Cabling Program (VZZL).

Performance Verification testing includes passive and/or active testing of the Permanent Link, Basic Link or Channel (system). Passive testing employs a reference signal that is transmitted through the system under test. Transmission performance of the system is investigated against the applicable performance standard. Active testing employs packets of 8-bit hexadecimal or binary formatted data, which is transmitted through the system under test, in order to detect the presence of bit errors in the data packet.

These systems may be tested in a laboratory environment or in the field as installed cabling as described in the individual Structured Cabling Program categories.

The cabling and connectivity products contained in a structured cabling system may be supplied by one or more manufacturers.

Structured cabling systems are commonly referred to as "Solutions," and this terminology is used to identify systems that have been Verified for per-

STRUCTURED CABLING PROGRAMS (VZYY)

formance under the individual Structured Cabling Programs. Typical Solution configurations are defined as follows:

Permanent Link — A 90-meter horizontal run of cable terminating in a telecommunications outlet connector or either a transition point (TP) connector or consolidation point (CP) connector at one end and in a telecommunications cross connection at the other end. The total Solution length is 90 meters.

Basic Link — A 90-meter horizontal run of cable terminating in a telecommunications outlet connector or either a transition point (TP) connector or consolidation point (CP) connector at one end and in a telecommunications cross connection at the other end with 2-meter patch cords at each end. The total Solution length is 94 meters.

Channel — A 90-meter horizontal run of cable terminating in a telecommunications outlet connector or either a transition point (TP) connector plus a 5-meter patch cord or consolidation point (CP) connector plus a 5-meter patch cord at one end and in a telecommunications cross connection plus a 5-meter patch cord at the other end with 2-meter patch cords at each end. The total Solution length is 100 meters.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UL XTR STRUCTURED CABLING PROGRAM (VZZL)

GENERAL

This category covers field-assembled structured cabling systems (referred to as "Solutions") whose signal transmission characteristics have been investigated in accordance with the UL XTR Structured Cabling Program.

The UL XTR Program investigates how a Solution's transmission performance affects live data as it interacts with active network components. Solutions investigated for performance under the UL XTR Program have been investigated for the expanded performance properties necessary to maintain true data throughput and component interoperability.

The UL XTR Test Program requires testing of the Solution's horizontal cable, patch cords and connecting hardware, as well as passive channel, active channel and expanded active channel testing.

ADDITIONAL INFORMATION

For additional information, see Structured Cabling Programs (VZYY) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is the UL XTR Specification.

Components used in the Solution are also required to be UL Listed for Safety and UL Verified for Performance in accordance with the Standards shown below:

Safety		
Component	Standard	Guide
Cable	ANSI/UL 444, "Communications Cables"	DUZX
Connecting Hardware	ANSI/UL 1863, "Communications-Circuit Accessories"	DUXR
Patch Cords	ANSI/UL 1863	DUXR

Performance Verification

Component	Standard	Guide
Category 5e Cable	ANSI/TIA/ EIA-568-B.2, "Commercial Building Telecommunications Cabling Standard Part 2: Balanced Twisted-Pair Cabling Components Revision of ANSI/ TIA/EIA-568-A"	DUZX

STRUCTURED CABLING PROGRAMS (VZYY)

UL XTR Structured Cabling Program (VZZL)—Continued

Component	Standard	Guide
Category 6 Cable	ANSI/TIA/ EIA-568-B.2-1, “Commercial Building Telecommunications Cabling Standard Part 2: Balanced Twisted Pair Cabling Components Addendum 1 – Transmission Performance Specifications for 4-Pair 100 Category 6 Cabling Addendum No. 1 to ANSI/TIA/ EIA-568-B.2”	DUZX
Category 5e Connecting Hardware	ANSI/TIA/ EIA-568-B.2	DUXR
Category 6 Connecting Hardware	ANSI/TIA/ EIA-568-B.2-1	DUXR
Category 5e Patch Cords	ANSI/TIA/ EIA-568-B.2	DUXR
Category 6 Patch Cords	ANSI/TIA/ EIA-568-B.2-1	DUXR

UL MARK

The Verification Mark of Underwriters Laboratories Inc. on the Bill of Lading, the Bulk Shipment Certificate, or on UL's Certificate of Conformity Assessment is the only method provided by UL to identify products manufactured under its Verification and Follow-Up Service. The Verification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “VERIFIED,” the term “UL XTR Program,” a control number, and the Solution name and part number. The Verification Mark (label) is not applied directly to Solutions that have been investigated for performance under the UL XTR Program, since these products are field assembled.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROPRIETARY STRUCTURED CABLING PROGRAMS (VZZX)

GENERAL

This category covers field-assembled structured cabling systems (referred to as “Solutions”) whose signal transmission characteristics have been investigated in accordance with proprietary manufacturer network cabling standards or industry standards.

Performance Verification testing includes passive and/or active testing of the Permanent Link, Basic Link or Channel. If the performance standard specifies active testing, the investigation will review how a Solution's transmission performance affects live data as it interacts with active network components. Solutions subjected to active testing have been investigated for the performance properties necessary to maintain true data throughput and component interoperability.

ADDITIONAL INFORMATION

For additional information, see Structured Cabling Programs (VZYY) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

Components used in the Solution are also required to be UL Listed for Safety and UL Verified for Performance in accordance with the Standards shown below:

Component	Safety	Standard	Guide
Cable		ANSI/UL 444, “Communications Cables”	DUZX
Connecting Hardware		ANSI/UL 1863, “Communications-Circuit Accessories”	DUXR
Patch Cords		ANSI/UL 1863	DUXR

STRUCTURED CABLING PROGRAMS (VZYY)

373

Proprietary Structured Cabling Programs (VZZX)—Continued

Component	Performance Verification	Standard	Guide
Category 5e Cable		ANSI/TIA/ EIA-568-B.2, “Commercial Building Telecommunications Cabling Standard Part 2: Balanced Twisted-Pair Cabling Components Revision of ANSI/ TIA/EIA-568-A”	DUZX
Category 6 Cable		ANSI/TIA/ EIA-568-B.2-1, “Commercial Building Telecommunications Cabling Standard Part 2: Balanced Twisted Pair Cabling Components Addendum 1 – Transmission Performance Specifications for 4-Pair 100 Category 6 Cabling Addendum No. 1 to ANSI/TIA/ EIA-568-B.2”	DUXR
Category 5e Connecting Hardware		ANSI/TIA/ EIA-568-B.2	DUXR

Category 5e Patch Cords		ANSI/TIA/ EIA-568-B.2	DUXR
Category 6 Patch Cords		ANSI/TIA/ EIA-568-B.2-1	DUXR

UL MARK

The Verification Mark of Underwriters Laboratories Inc. on the Bill of Lading, the Bulk Shipment Certificate, or on UL's Certificate of Conformity Assessment is the only method provided by UL to identify products manufactured under its Verification and Follow-Up Service. The Verification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “VERIFIED,” the name of the Performance Standard, a control number, and the Solution name and part number. The Verification Mark (label) is not applied directly to Solutions that have been investigated for performance under this category, since these products are field assembled.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWIMMING POOL AND SPA EQUIPMENT (WABX)

USE

This category covers equipment for use with swimming pools, decorative pools, wading pools, therapeutic pools, and hot tubs and spas in accordance with Article 680 of NFPA 70, “National Electrical Code” (NEC).

This category also covers self-contained hot tubs and spas as well as cord-connected portable appliances for use with aboveground storable swimming pools, hot tubs and spas.

Information concerning the suitability of the equipment for use indoors or outdoors is given in the General Information Section for each individual category.

RELATED PRODUCTS

Ground-fault circuit interrupters intended for use with swimming pool equipment are covered under Ground-fault Circuit Interrupters (KXCS).

Suction fittings are covered under Swimming Pool and Spa Suction Fittings (WEBS).

Fountains covered by Article 680, Part E, of the NEC are covered under Architectural and Floating Fountains (AWEG).

Speakers intended for installation underwater in swimming pools are covered under Speakers (UEAY).

BLOWERS (WAGN)

USE AND INSTALLATION

This category covers equipment intended to introduce pressurized air into spas and hot tubs to create a hydromassage effect. They are intended for installation in accordance with Article 680 of ANSI/NFPA 70, "National Electrical Code."

These products are acceptable for both indoor and outdoor use unless marked otherwise. They are provided with an accessible pressure-wire connector for equipotential bonding during installation.

To avoid water contacting live electrical parts, these products are intended to be installed in accordance with the manufacturer's instructions and permanently mounted at least 12 in. above the overflow level of the spa or hot tub.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1563, "Electric Spas, Equipment Assemblies, and Associated Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Spa Blower," "Hot Tub Blower" or "Spa/Hot Tub Blower."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CONTROLS (WAWU)

USE

This category covers controllers, timers, temperature-regulating equipment, etc., for control of equipment intended for use with swimming pools, hot tubs and spas. This category also covers control panels for use with equipment intended for water-play fountains and water playground areas, swimming pools and spas, or fountains with water in common with swimming pools.

These products are acceptable for both indoor and outdoor use unless marked "For Indoor Use Only."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1563, "Electric Spas, Equipment Assemblies, and Associated Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Spa Controller" or "Swimming Pool Controller," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

COVERS FOR SWIMMING POOLS AND SPAS (WBAH)

USE AND INSTALLATION

This category covers manual and power safety covers intended for use with swimming pools, spas and hot tubs, as well as covers of other than the safety type, as defined in ASTM F1346, "Standard Performance Specification for Safety Covers and Labeling Requirements for All Covers for Swimming Pools, Spas and Hot Tubs."

The ability of the manual or power safety cover to perform its intended function is dependent upon proper installation. Installation should be per-

Covers for Swimming Pools and Spas (WBAH)—Continued

formed by a qualified installer using the manufacturer's instructions. Authorities Having Jurisdiction should be consulted before installation.

PRODUCT TYPES

Manual Safety Covers — A manual safety cover is a barrier that is manually placed over the water. It is intended to impede access to the contained body of water. It is provided with a means for removing significant levels of collected surface water.

Power Safety Covers — A power safety cover is a barrier that can be placed over the water area and removed with a motorized mechanism. It is intended to impede access to the contained body of water. It is provided with a means for removing significant levels of collected surface water. A power safety cover includes an operator that is Listed under Swimming Pool and Spa Cover Operators, Electric (WDDJ).

Other Covers — A cover of other than the safety type, such as an energy conservation or a solar energy cover, is a cover that has been investigated in accordance with only the materials, manufacture and labeling requirements of ASTM F1346. Covers of this type are not intended to impede access to the contained body of water. Such covers are marked "This Is Not A Safety Cover."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ASTM F1346, "Standard Performance Specification for Safety Covers and Labeling Requirements for All Covers for Swimming Pools, Spas and Hot Tubs."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY*]

IN ACCORDANCE WITH ASTM F1346-[issue date]

Control No.

* **MANUAL SAFETY COVER, POWER SAFETY COVER or POOL COVER**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

LUMINAIRES AND FORMING SHELLS (WBDT)

USE

This category covers luminaires and forming shells for installation in accordance with Article 680 of ANSI/NFPA 70, "National Electrical Code" (NEC).

PRODUCT MARKINGS

Luminaires suitable for use only in fresh water are marked "Fresh Water Only." Luminaires suitable for use in either fresh or salt water are marked "Salt Water or Fresh Water." Luminaires investigated for operation only in contact with water are marked "CAUTION To reduce the risk of electric shock submerge before lighting" or the equivalent, and such marking is visible after installation. Additional markings for specific types of luminaires are described below.

PRODUCT TYPES AND INSTALLATION

Dry-niche Underwater Luminaires for Swimming Pools and Spas — These luminaires have been investigated for permanent installation only in the wall of a swimming pool or field-fabricated spa unless accompanying installation instructions indicate suitability for installation in the bottom of a pool or spa. These luminaires have been investigated for installation with the top of the lens not less than 450 mm (18 in.) below the normal water level unless otherwise marked. These luminaires are designed for servicing from the rear in a passageway behind the pool or spa wall or, if mounted in the bottom of a pool or spa, in a tunnel underneath the pool or spa. The luminaire may include (1) a factory-installed length of flexible cord terminating in an attachment plug and (2) an attachment plug receptacle for connection of the branch-circuit conductors.

Wet-niche Underwater Luminaires for Swimming Pools and Spas — These luminaires, with the mating forming shell (luminaire housing), have been investigated for installation only in the wall of a swimming pool or field-fabricated spa unless accompanying installation instructions indicate suitability for installation in the bottom of a pool or spa. These luminaires have been investigated for installation with the top of the lens not less than 450 mm (18 in.) below the normal water level unless otherwise marked.

SWIMMING POOL AND SPA EQUIPMENT (WABX)

Luminaires and Forming Shells (WBDD)—Continued

These luminaires have been investigated for installation in a permanently installed forming shell (luminaire housing) in which the luminaire will be completely surrounded by water. These luminaires are marked to indicate the proper forming shells with which they have been investigated for use. Mismatching a wet-niche luminaire and forming shell can increase the risk of electric shock or injury to users. These luminaires are provided with a factory installed, permanently attached flexible cord with an exposed length of not less than 3.6 m (12 ft). The flexible cord is confined in the forming shell by the luminaire and permits the luminaire to be removed from the forming shell and to be lifted to the pool or spa deck for servicing without lowering the water level or disconnecting the luminaire from the branch-circuit conductors. Luminaires with longer cords are available for installations where the junction box or splice enclosure is so located that a 3.6 m (12 ft) long cord will not permit luminaire removal from the forming shell and placement on the deck for servicing. To reduce the risk of product damage, any cord length in excess of that necessary for servicing should be trimmed from the supply end rather than stored in the forming shell.

Forming Shell (Housing) for Wet-niche Underwater Luminaires for Swimming Pools and Spas — These are structures designed to support a mating wet-niche luminaire, for mounting in a pool structure. Forming shells are marked to indicate the luminaires with which the forming shells have been investigated for use. Mismatching a wet-niche luminaire and forming shell can increase the risk of electric shock or injury to users. Forming shells are designed to require the supply end of the conduit connected to the forming shell to be directly connected to a Listed swimming pool junction box (see WCEZ). This forming shell-connected conduit may alternatively be connected directly to other equipment (such as Swimming Pool and Spa Transformers (WDGV), Ground-Fault Circuit Interrupters (KCXS), Panelboards (QEUU), or pool or spa control equipment) only when such other equipment has been investigated for this use, as indicated by the marking "Suitable for direct conduit connection to a wet-niche or no-niche luminaire," or the equivalent.

No-niche Underwater Luminaires for Swimming Pools and Spas — These luminaires have been investigated for installation only on the walls of a swimming pool or field-fabricated spa unless accompanying installation instructions indicate suitability for installation in the bottom of a pool or spa. These luminaires have been investigated for installation with the top of the lens not less than 450 mm (18 in.) below the normal water level unless otherwise marked. These luminaires have been investigated for mounting to a bracket permanently secured in or on the pool or spa wall or bottom where the luminaire will be completely surrounded by water. These luminaires are provided with a factory installed, permanently attached flexible cord with an exposed length of not less than 3.6 m (12 ft). The flexible cord is confined by the luminaire and pool wall or bottom and permits the luminaire to be removed from the mounting bracket and to be lifted to the pool or spa deck for servicing without lowering the water level or disconnecting the luminaire from the branch-circuit conductors. The information provided above for wet-niche luminaires regarding the availability of luminaires with longer flexible cords and the need to trim excess cord from the supply end also applies to no-niche luminaires.

Mounting Brackets for No-niche Underwater Luminaires for Swimming Pools and Spas — These are structures designed to support a mating no-niche luminaire, for mounting in or on a pool structure. Mounting brackets are marked to indicate the luminaires with which the mounting brackets have been investigated for use. Mismatching a no-niche luminaire and mounting bracket can increase the risk of electric shock or injury to users. Mounting brackets are designed to require the supply end of the conduit connected to the mounting bracket to be directly connected to a Listed swimming pool junction box (see WCEZ). The information provided above about alternate supply-end termination of conduit connected to forming shells also applies for supply-end termination of conduit connected to the mounting brackets of no-niche luminaires.

Underwater Luminaires for Aboveground Storable Swimming Pools — These luminaires are a type of through-wall lighting assembly as described in Article 680 of the NEC. They have been investigated for use with an aboveground storable pool (a pool that is constructed on or above the ground and is capable of holding water to a maximum depth of 1.0 m (42 in.), or a pool with nonmetallic, molded polymeric walls regardless of dimension). They include all three of the following factory-provided parts:

1. Lamp assembly for temporary installation on or through the wall of an aboveground pool
2. Transformer or ground-fault circuit interrupter assembly provided with a 0.9 m – 1.8 m (3 – 6 ft) power supply cord for connection to a source of supply and for temporary mounting away from the pool (the remote assembly)
3. Jacketed flexible cord of not less than 7.6 m (25 ft) in length connecting the lamp assembly and the remote assembly

These luminaires have been investigated for installation with the top of the lens not less than 200 mm (8 in.) below the top of the pool. A hole through the pool wall may be required for luminaire installation. Unless otherwise indicated in the luminaire's installation instructions, the luminaire

SWIMMING POOL AND SPA EQUIPMENT (WABX)

375

Luminaires and Forming Shells (WBDD)—Continued

design has been investigated for the lower edge of any hole that a luminaire installer must cut in the pool wall to be no more than 360 mm (14 in.) below the top of the pool wall. The pool wall manufacturer may provide, at a greater depth, a properly sized hole or a reinforced wall section designed for field-cutting a properly sized hole for a luminaire or plumbing fitting. Unless otherwise marked for a maximum installation depth, these luminaires have been investigated for installation in such a hole at a greater depth where the pool installation instructions provide for the hole placement and usage.

Underwater Luminaires for Aboveground Nonstorable Swimming Pools — These luminaires are a type of through-wall lighting assembly as described in Article 680 of the NEC. They have been investigated for permanent installation through or on the wall of an aboveground nonstorable pool. The information provided above for underwater luminaires for aboveground storable swimming pools regarding installation depth and using an existing hole or cutting a new hole for installation also applies to underwater luminaires for aboveground nonstorable swimming pools.

Convertible Underwater Luminaires for Aboveground Swimming Pools — These luminaires are initially configured as an underwater luminaire for aboveground storable swimming pool for use as described above. They include provisions for the one-time field conversion of the luminaire to an underwater luminaire for aboveground nonstorable swimming pool for use as described above. Once converted, these luminaires are not suitable for being modified back to their original configuration.

Fiber Optic Luminaires for Swimming Pools and Spas — These luminaires consist of a lamp/electrical enclosure that has been investigated for permanent mounting not less than 1.5 m (5 ft) from the pool or spa wall and a fiber optic element and associated fittings to transmit the light to the pool or spa. The lamp/electrical enclosure has been investigated for installation above the level at which water splashed from the pool or spa or from another source may collect.

SUPPLY CIRCUIT CURRENT RATING

An underwater luminaire for aboveground storable swimming pools has been investigated for connection to the branch circuit specified in the NEC for receptacles having a blade configuration corresponding to the blade configuration of the luminaire attachment plug. For all other luminaires, unless marked to identify a permitted greater or required lower maximum supply circuit current rating, a luminaire with a voltage and current rating shown in the table below has been investigated for installation on a supply circuit rated not more than as specified in the table. A luminaire with a voltage or current rating not covered by the table is marked to identify the maximum supply circuit current rating for its installation.

Maximum Current Rating for Supply Circuit
(Except as Specified in Preceding Paragraph)

Luminaire Voltage Rating	Luminaire Current Rating	Max Current Rating for Luminaire Supply Circuit
15 V ac or less	25 A or less	25 A
110 V ac – 120 V ac	16 A or less	20 A
110 V ac – 120 V ac	More than 16 A, not more than 24 A	30 A

RELATED PRODUCTS

See Submersible Luminaires (IFEV) for underwater luminaires intended for use in fountains and similar water-containing vessels not intended to accommodate the complete or partial immersion of persons.

See Swimming Pool Junction Boxes (WCEZ) for junction boxes intended for use with wet-niche luminaires and their forming shells. See Swimming Pool and Spa Transformers (WDGV) for transformers for use to supply swimming pool and spa luminaires. See Potting Compounds (WCYR) for compounds for the user to encapsulate grounding and bonding conductor splices in swimming pool, spa or fountain equipment, including luminaires, forming shells and junction boxes.

ADDITIONAL INFORMATION

For additional information, see Swimming Pool and Spa Equipment (WABX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 676, "Underwater Luminaires and Submersible Junction Boxes."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate:

- "Dry-niche Underwater Luminaire for Swimming Pool"
- "Wet-niche Underwater Luminaire for Swimming Pool"
- "Forming Shell (or Housing) for Wet-niche Luminaire"
- "No-niche Underwater Luminaire for Swimming Pool"

Luminaires and Forming Shells (WBDT)—Continued

- “Mounting Bracket for No-niche Luminaire”
- “Underwater Luminaire for Aboveground Storable Swimming Pool”
- “Underwater Luminaire for Aboveground Nonstorable Swimming Pool”
- “Convertible Underwater Luminaire for Aboveground Swimming Pool”
- “Fiber Optic Luminaire for Swimming Pool”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HEATERS (WBRR)**USE**

This category covers heaters intended for permanent installation in or adjacent to swimming pools or spas.

These products have not been investigated for outdoor use unless they are marked “For Outdoor Use,” or equivalent, in which case they are acceptable for both outdoor and indoor use.

RELATED PRODUCTS

Heaters intended for use with hydromassage bathtubs are covered under Hydromassage Bathtubs (NCHX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1261, “Electric Water Heaters for Pools and Tubs.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Swimming Pool Heater” or “Spa Heater.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOT TUB AND SPA EQUIPMENT ASSEMBLIES (WBYQ)**USE AND INSTALLATION**

This category covers equipment assemblies intended for use with non-self-contained spas and hot tubs, rated 250 V or less, for household or commercial use indoors, outdoors, or both.

This category also covers equipment assemblies that do not contain a water heater and do not contain a water temperature-regulating control or a water temperature-limiting control. A water heater, a temperature-regulating control and a temperature-limiting control should be provided in the final installation and their adequacy determined by the Authority Having Jurisdiction.

Equipment assemblies may be cord-and-plug connected, convertible, or permanently wired. Convertible equipment assemblies are shipped from the factory with a power-supply cord but designed for field conversion to a permanently-wired configuration, for 120 V, 240 V, or either rating. Once a convertible equipment assembly is converted to permanently wired, it is not intended to be returned to a cord-connected configuration.

Equipment assemblies are prepackaged combinations of various components, such as pumps, filters, heaters, blowers, lights and controls, and are designed for use with field-supplied tubs. Equipment assemblies are designed for installation and use in accordance with Article 680 of ANSI/NFPA 70, “National Electrical Code.” Equipment assemblies should be installed at least 5 feet from the inside walls of a spa or hot tub and be connected by nonmetallic pipe only.

Equipment assemblies have not been investigated for below-grade installation.

Equipment assemblies have not been investigated for use within an outer enclosure or under the skirt of a spa or hot tub unless so marked.

Equipment assemblies that contain a gas-fired water heater have not been investigated for indoor use, for use within an outer enclosure, or for use under the skirt of a spa or hot tub unless so marked.

Hot Tub and Spa Equipment Assemblies (WBYQ)—Continued

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1563, “Electric Spas, Equipment Assemblies, and Associated Equipment.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Equipment Assembly for Spa/Hot Tub,” “Hot Tub Equipment Assembly” or “Spa Equipment Assembly.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWIMMING POOL JUNCTION BOXES (WCEZ)**USE**

This category covers junction boxes intended for use with underwater swimming pool and spa luminaires. The boxes are acceptable for both outdoor and indoor use.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1241, “Junction Boxes for Swimming Pool Luminaires.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Swimming Pool Junction Box.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

OZONE GENERATORS (WCKA)**USE AND INSTALLATION**

This category covers ozone generators rated 600 V or less and intended for use in the treatment of nonpotable water in swimming pools, and in spas and hot tubs of other than the self-contained type.

These products have been found suitable for use in wet and damp locations as well as dry locations unless marked “For Use in Dry Locations Only.”

These products have been investigated with respect to risk of electric shock, fire and mechanical injury only.

Ozone generators involve features of installation and use not ordinarily present in electrical utilization equipment. Such features are covered in the manufacturer’s installation instructions. The installation is intended to be in accordance with the manufacturer’s instructions furnished with the equipment and the requirements of the Authorities Having Jurisdiction.

Maximum ozone threshold limit recommendations are set by the American Conference of Governmental Industrial Hygienists as found in 21CFR801.415, “Maximum Acceptable Level of Ozone.” Compliance with the applicable regulations under conditions of normal and abnormal operation has not been investigated.

ADDITIONAL INFORMATION

For additional information, see Swimming Pool and Spa Equipment (WABX), Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1563, “Electric Spas, Equipment Assemblies and Associated Equipment.”

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for

these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**OZONE GENERATOR
WITH RESPECT TO RISK OF ELECTRIC SHOCK,
FIRE AND MECHANICAL INJURY ONLY**

Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**SWIMMING POOL AND SPA EQUIPMENT
CLASSIFIED IN ACCORDANCE WITH NSF 50
(WCNZ)**

USE

This category covers pool and spa equipment, such as filters, centrifugal pumps, surface skimmers, ozone generators, chemical feeding equipment, chlorinators and other units installed in water circulation and filtration systems of pools, spas and hot tubs.

RELATED PRODUCTS

Some products covered under this category may also be Listed under Water Treatment Equipment (WDL), Swimming Pool and Spa Equipment, Miscellaneous (WDUT) or Pumps (WCSX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is NSF/ANSI 50, “Circulation System Components and Related Materials for Swimming Pools, Spas/Hot Tubs.”

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY*]

IN ACCORDANCE WITH NSF/ANSI 50-[issue date]

Control No.

* **SWIMMING POOL FILTER, OZONE GENERATOR, SPA CHLORINATOR** or other appropriate product name as shown in the individual Classifications

For those products which are also Listed or Classified by Underwriters Laboratories Inc. under another category, the marking includes the appropriate Listing or Classification Mark and the statement “ALSO CLASSIFIED IN ACCORDANCE WITH NSF/ANSI 50-[issue date].”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POTTING COMPOUNDS (WCRY)

USE

This category covers compounds intended to be used to encapsulate grounding and bonding conductor splices or terminations in swimming pool, spa or fountain equipment such as fixtures, fixture housings, and junction boxes where the splices or terminations may be exposed to salt-free swimming pool or fountain water and sunlight for varying lengths of time, including continuous exposure. This category also covers potting compounds used to fill underwater junction boxes.

These compounds have been investigated for their resistance to the deteriorating effects of salt-free swimming pool and fountain water and ultraviolet light. They have also been investigated for their ability to adhere to typical metals, such as copper alloy, stainless steel and to plastic. The container or package is marked to identify the materials to which the compound has been determined to suitably adhere.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

SWIMMING POOL AND SPA EQUIPMENT (WABX)

Potting Compounds (WCRY)—Continued

The basic requirements used to investigate products in this category are contained in UL Subject 676A, “Outline of Investigation for Potting Compounds for Swimming Pool, Fountain, and Spa Equipment.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Swimming Pool, Fountain and Spa Equipment Conductor Splice Potting Compound” (any of the locations may be omitted).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PUMPS (WCSX)

GENERAL

This category covers pumps for circulating the water in swimming pools, hot tubs and spas. These products are intended for installation in accordance with Article 680 of ANSI/NFPA 70, “National Electrical Code.”

These products are acceptable for both outdoor and indoor use unless marked otherwise, and have been investigated for use with either permanently-installed pools or storable pools.

Pumps investigated for permanently-installed pools are so identified and are additionally marked “Do Not Use With Storable Pools.” Permanently-installed pool pumps are intended to be permanently connected to the water circulation system and they may be permanently wired or provided with a 3-ft nondetachable power-supply cord terminating in a grounding-type attachment plug. The attachment plug may be of the locking or nonlocking type. Units provided with locking-type attachment plugs are intended to be installed at least 5 ft from the inside walls of the pool and are marked accordingly. Units provided with a nonlocking-type attachment plug are intended to be installed at least 10 ft from the inside walls of the pool and are marked accordingly. Permanently-installed pool pumps are provided with an accessible pressure-wire connector for equipotential bonding.

Pumps investigated for storable pools are so identified and are additionally marked “Do Not Use With Permanently Installed Pools.” Storable pool pumps are intended to be connected to a water circulation system constructed so that the pump may be readily disassembled from the system for storage and future reassembly to its original integrity. Storable pool pumps are provided with a minimum 25-ft nondetachable power-supply cord terminating in a grounding-type attachment plug, are double insulated, have no accessible grounded metal parts, have inaccessible noncurrent-carrying metal parts connected to the grounding conductor of the supply cord, and do not have an equipotential bonding connector.

These pumps may be provided with integral filters. The suitability of the filters to clean water has not been determined.

REBUILT PRODUCTS

This category also covers pumps that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt pumps are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt pumps are subject to the same requirements as new pumps.

RELATED PRODUCTS

Filters investigated to NSF/ANSI 50, “Circulation System Components and Related Materials for Swimming Pools, Spas/Hot Tubs,” are covered under Swimming Pool and Spa Equipment Classified in Accordance with NSF 50 (WCNZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1081, “Swimming Pool Pumps, Filters, and Chlorinators.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Swimming Pool Pump,” “Spa Pump” or “Swimming Pool or Spa Pump,” or other appropriate product name as shown in the individual Listings.

Pumps (WCSX)—Continued

For rebuilt products, the word “Rebuilt,” “Remanufactured” or “Reconditioned” precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SELF-CONTAINED SPAS (WCZW)**USE AND INSTALLATION**

This category covers self-contained spas for aboveground use, for household or commercial use, and for both indoor and outdoor use, unless marked otherwise. These spas are not designed or intended to have the water drained after each use. They are intended for installation in accordance with Article 680 of ANSI/NFPA 70, “National Electrical Code.”

A self-contained spa is a continuous-duty appliance in which all control, water-heating and water-circulating equipment is an integral part of the product, located entirely under the spa skirt.

Self-contained spas may be cord connected, convertible, or permanently wired. A convertible spa is shipped from the factory with a power-supply cord but is designed for field conversion to a permanently-wired configuration, either 120 V, 240 V, or both. Once a convertible spa is converted to permanently wired, it is not intended to be returned to a cord-connected configuration.

Self-contained spas may be provided with electric or gas heaters. Spas with gas heaters are intended for permanent wiring and permanent installation, and are intended for outdoor use only.

Each spa is provided with a marking on the wiring diagram in the field-wiring compartment or in the installation instructions or on a separate configuration sheet, to identify the major components of the spa when manufactured. The configuration sheet and the installation instructions are intended to be available during installation and inspection.

Self-contained spas may be shipped completely assembled or in knock-down form.

Knockdown spas are packaged by major component in multiple cartons to aid in shipping. They consist of a completely assembled and plumbed tub and an equipment package. The skirt may be attached to the tub or it may be provided in prefabricated sections for assembly in the field. The equipment package is completely assembled, pre-wired and plumbed. Connections are made by union fittings or similar quick-disconnect plumbing that does not require tools or special materials. All cartons used to ship a knock-down spa are marked to indicate the contents, the spa model, and the total number of required cartons.

RELATED PRODUCTS

Hydromassage bathtubs are covered under Hydromassage Bathtubs (NCHX).

Hydrotherapy equipment for professional treatment of athletes or patients is covered under Medical and Dental Equipment, Professional (KFBQ).

Factory-made assemblies of pumps, heaters, blowers, lights and controls intended for use with field-supplied hot tubs and spas are covered under Hot Tub and Spa Equipment Assemblies (WBYQ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1563, “Electric Spas, Equipment Assemblies, and Associated Equipment.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Self Contained Spa.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWIMMING POOL AND SPA COVER OPERATORS, ELECTRIC (WDDJ)**USE AND INSTALLATION**

This category covers electrically-driven cover operators intended for use with swimming pools and spas, together with controls for use with such operators. The cover operators generally consist of a motor-driven appara-

Swimming Pool and Spa Cover Operators, Electric (WDDJ)—Continued

tus used to move the covering material. These operators are intended to be installed in accordance with Article 680 of ANSI/NFPA 70, “National Electrical Code.” These products have been found suitable for both indoor and outdoor use.

RELATED PRODUCTS

Some products covered under this category may incorporate pool covers Classified under Covers for Swimming Pools and Spas (WBAH). Unless Classified as a power safety cover under WBAH, a cover provided with the operator has not been investigated as a safety cover.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2452, “Outline of Investigation for Electric Swimming Pool and Spa Cover Operators.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Swimming Pool Cover Operator,” “Spa Cover Operator” or “Pool Cover Operator.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWIMMING POOL AND SPA TRANSFORMERS (WDGV)**USE**

This category covers swimming pool and spa transformers of the isolated two-winding type having a grounded metal barrier between the primary and secondary windings, and intended to supply swimming pool, spa or submersible (fountain) luminaires in accordance with Article 680 of ANSI/NFPA 70, “National Electrical Code.” The primary rating is 120 V and the maximum secondary ratings are 15 V rms and 1 kVA. The transformers are provided with integral overload protection.

These products are provided with a power supply cord or have provisions for conduit connection to the branch circuit supply. Transformers not provided with a power supply cord are provided with leads or with studs or terminal pads to which Listed pressure wire connectors can be factory or field installed to accommodate field wiring. Wire binding screws or studs with cupped washers should be used for copper wire 10 AWG max.

Transformers provided with a power supply cord are intended for supplying low-voltage submersible (fountain) luminaires as indicated by marking on the transformer. They are not intended for use with a swimming pool or spa luminaires.

Unless marked otherwise, these transformers are not suitable for connection to a conduit which extends directly to a wet-niche or no-niche luminaire.

These products have not been investigated for outdoor use, unless they are marked “For Outdoor Use” or equivalent, in which case they have been found acceptable for both outdoor and indoor use.

ADDITIONAL INFORMATION

For additional information, see Swimming Pool and Spa Equipment (WABX), Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 379, “Outline of Investigation for Transformers for Fountain, Swimming Pool, and Spa Luminaires.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Fountain Transformer,” “Swimming Pool Transformer,” “Spa Transformer” or “Fountain, Swimming Pool or Spa Transformer.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss,

SWIMMING POOL AND SPA EQUIPMENT (WABX)

Swimming Pool and Spa Transformers (WDGV)—Continued

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WATER TREATMENT EQUIPMENT (WDLC)**USE AND INSTALLATION**

This category covers chlorinators, brominators, ozone generators, ion generators, and similar equipment intended to sanitize water in pools, spas and hot tubs. This category also covers equipment designed to monitor water chemistry in pools, spas and hot tubs, with or without the capability of adding chemicals to the water to adjust water chemistry. These products are intended for installation in accordance with Article 680 of ANSI/NFPA 70, "National Electrical Code."

These products are acceptable for both indoor and outdoor use unless marked otherwise. They are provided with an accessible pressure-wire connector for equipotential bonding during installation.

UNEVALUATED FACTORS

The ability of this equipment to sanitize pool and spa water has not been investigated.

RELATED PRODUCTS

Equipment investigated for sanitation is covered under Pool and Spa Equipment Classified in Accordance with NSF 50 (WCNZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 1081, "Swimming Pool Pumps, Filters, and Chlorinators," and UL 1563, "Electric Spas, Equipment Assemblies, and Associated Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Swimming Pool Chlorinator," "Spa Chlorinator" or "Swimming Pool and Spa Chlorinator," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWIMMING POOL AND SPA EQUIPMENT, MISCELLANEOUS (WDUT)**GENERAL**

This category covers accessory equipment for swimming pools, hot tubs and spas, such as valves and pool cover operators.

Unless marked otherwise, these products are acceptable for both indoor and outdoor use.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 1563, "Electric Spas, Equipment Assemblies, and Associated Equipment" and UL 1081, "Swimming Pool Pumps, Filters and Chlorinators."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pool Cover Operator," "Pool Valve Actuator" or "Pool Freeze Protector," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SUCTION FITTINGS FOR SWIMMING POOLS, WADING POOLS, SPAS AND HOT TUBS (WEBS)**USE AND INSTALLATION**

SWIMMING POOL AND SPA EQUIPMENT (WABX)

379

Suction Fittings for Swimming Pools, Wading Pools, Spas and Hot Tubs (WEBS)—Continued

This category covers suction fittings intended for use in swimming pools, wading pools, in-ground and self-contained spas, hot tubs, and similar installations.

These fittings have been investigated for resistance to hair, body, finger and limb entrapment.

Suction fittings have been investigated for both indoor and outdoor use. They are intended to be installed following the instructions that are packaged with each fitting.

RATINGS

Each suction fitting is marked with a waterflow rate in gallons per minute. This rate must equal or exceed the maximum flow rate of the pump(s) used in the water circulating system.

PRODUCT MARKINGS

These fittings are marked with the intended installation position: "Wall Only," "Floor Only" or "Wall or Floor." They may additionally be marked with the statement, "For Single or Multiple Drain Use," "For Single Drain Use" or "For Multiple Drain Use Only."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/ASME A112.19.8-2007, "Suction Fittings for Use in Swimming Pools, Wading Pools, Spas, and Hot Tubs."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Swimming Pool Suction Fitting" (or "Sw Pool Sctn Ftn").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHBOARDS (WEIR)**SWITCHBOARDS, DEAD-FRONT (WEVZ)****GENERAL**

This category covers dead-front switchboards rated 600 V or less.

Switchboards are large single panels, structural frames or assemblies of panels or structural frames on which may be mounted, on the face or back or both: switches, overcurrent, and other protective devices, buses, and instruments. Switchboards may be accessible from the rear as well as from the front and are not intended to be installed in cabinets.

A **switchboard section** is that portion of a switchboard which is prevented by the structural framework from being physically separated into smaller units. Framework that is welded or joined with steel rivets over 1/4 in. in diameter is considered to constitute a single section.

A **switchboard enclosure** is intended to enclose one or more switchboard sections or switchboard interiors, or is intended to provide auxiliary wiring space for an adjacent switchboard section.

A **switchboard interior** is intended to be field installed in a switchboard enclosure to become the equivalent of a dead-front switchboard section.

USE, INSTALLATION AND RATINGS**Electrical Ratings**

Each switchboard section is marked with the current rating of the supply bus. Within a group of sections, a through or splice bus is not required to be marked with its rating. The ampacity of the through bus and supply bus supplying the next section may be reduced but should not be less than the supply rating of the next section. The current rating of the through and splice bus in the last section of a group (which might be used in the future to supply an additional section) is shown in the switchboard section marking if the through or splice bus rating is less than the supply rating of that section. The current rating of the section bus is also included in the marking. The adequacy of the supply, through, splice, or section bus current rating with respect to the calculated load current using the appropriate diversity factors noted in Section 230.42 and Article 220 of ANSI/NFPA 70, "National Electrical Code" (NEC), can only be determined by the Authority Having Jurisdiction (AHJ) at the final installation.

Short-circuit Ratings

Dead-front switchboard sections or interiors are marked with their short-circuit-current rating in rms symmetrical amps. The marking states

Switchboards, Dead-front (WEVZ)—Continued

that short-circuit ratings are limited to the lowest short-circuit rating of (1) any switchboard section connected in series, or (2) the lowest interrupting rating of any device installed or intended to be installed therein. However, for combination series-connected devices, the short-circuit-current rating marked on the switchboard may be higher than the interrupting rating of a specific circuit breaker installed or intended to be installed in the switchboard. This higher rating is valid only if the specific overcurrent devices identified in the marking are used within or ahead of the switchboard in accordance with the marked instructions. In many cases the short-circuit ratings are associated with instructions for securing supply wiring within the switchboard.

Service Equipment

The marking "Suitable for Use as Service Equipment" appears on each switchboard section or switchboard interior containing one or more service disconnects optionally intended for use at a service.

A switchboard section or interior marked for use at services as indicated above may also be used to provide the main control and means of cutoff for a separately derived system or a separate building.

A switchboard section or interior intended for use with multiple sources of supply and marked "Service Equipment" is provided with a means to disconnect load conductors from all sources of supply terminated in that section. Multiple-section switchboard assemblies intended for use with multiple sources may not be provided with a means to disconnect from all sources of supply; alternate nonservice sources may terminate in a nonservice-rated section. Only disconnects provided in sections marked "Service Equipment" have been investigated as being suitable for use as a means to disconnect and isolate load conductors from the source of supply.

Some switchboard sections or interiors incorporate neutrals factory bonded to the enclosure. Such units are marked "Suitable Only for Use as Service Equipment."

Some switchboards may have terminals or provisions for terminals, marked as taps, located on the supply side of the service disconnecting means. The suitability of these terminals as taps connected on the supply side of the service disconnect is intended to be determined in accordance with the NEC.

Ground-fault Protection

Some switchboard sections may be provided with ground-fault protection for services or major feeders. The circuit(s) so protected are identified by a marking such as on a wiring diagram or on the relaying equipment. Instructions are provided for on-site testing of the ground-fault protection at the time of installation.

Overcurrent Protection

Where in normal operation the load will continue for three hours or more, molded-case circuit breakers and fused switches other than fused power circuit devices should not be loaded to exceed 80% of their current rating unless the device is otherwise marked. Low-voltage ac power switching devices (see PAPU) and fused power circuit devices (see IYSR) used in switchboards are suitable for continuous use at 100% of their rating.

Field-installed Equipment

A switchboard section or interior may have provision for field installation of additional suitable equipment such as branch, splice or through buses, meter socket bases, circuit breakers, switches, panelboards, and terminal connectors. The switchboard section or interior is marked with the name or trademark of the manufacturer and the catalog number or equivalent of such equipment that is intended to be installed in the field. A switchboard section or interior may also have provision for utility-installed current transformers and metering equipment.

Installation

A switchboard section or enclosure investigated to determine that it is rainproof is marked "Type 3R" and may also be marked "Rainproof."

A section or enclosure suitable for connection to a busway is marked to indicate the manufacturer and type of busway.

The acceptability of conduit stubs serving unit sections, with respect to wiring space and spacing from live parts, can be determined only by the AHJ at the final installation.

In some cases, field drilling of holes in the ground bus may be needed to add additional grounding terminals.

Field Terminations

Dead-front switchboard sections covered under this category are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Aluminum conductors may be used if such marking is independent of any marking on terminal connectors and if it appears on a wiring diagram or other readily visible location.

Unless the equipment is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14 – 1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger, as specified in Table 310.16 of the NEC. Termination provisions are determined based on values provided in Table 310.16, with no adjustment made for correction factors.

Switchboards may have terminals or provisions for terminals located on the supply side of the service disconnecting means. These terminals or pro-

Switchboards, Dead-front (WEVZ)—Continued

visions for terminals are marked "TAP," and the switchboard is marked to indicate the specific terminals or terminal kits intended to be field installed. The suitability of equipment connected to these taps is to be determined in accordance with NEC Sections 230.46, 230.82, 690.64(A), 701.11(E) and 705.12 by the AHJ at the final installation.

RELATED PRODUCTS

Single panels or groups of panel units designed for assembly in the form of a single panel, including buses and automatic overcurrent devices, and equipped with or without switches for the control of light, heat, or power circuits; designed to be placed in a cabinet or cutout box placed in or against a wall, partition, or other support; and accessible only from the front are covered under Panelboards (QEUU).

Theater switchboards, incandescent lighting switchboards with dimmers, and laboratory switchboards are covered under Switchboards, Special Purpose (WFJX).

Distribution equipment, the sole function of which is the automatic or nonautomatic transferring of one or more load conductor connections from one power source to another, is covered under Transfer Switches (WPTZ).

Factory-wired assemblies of industrial control equipment intended to control industrial processes are covered under Industrial Control Panels (NITW).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 891, "Switchboards."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Dead Front Switchboard Section," "Switchboard Interior" or "Switchboard Enclosure." The Listing Mark for dead-front switchboard sections includes the statement "____ of ____." The first space is stamped with a number indicating the position that the section occupies in the series of sections constituting the switchboard. The second space is stamped with the total number of sections in the switchboard (including sections not bearing a UL Listing Mark).

The Listing Mark covers only the section so marked; it does not cover other sections included in the complete switchboard.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHBOARDS, SPECIAL PURPOSE (WFJX)**USE, INSTALLATION AND MARKINGS**

This category covers theater switchboards, incandescent lighting switchboards with dimmers, and laboratory switchboards rated 600 V or less.

These switchboards are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless the equipment is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14–1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger, as specified in Table 310.16 of ANSI/NFPA 70, "National Electrical Code." Termination provisions are determined based on values provided in Table 310.16, with no adjustment made for correction factors.

Short-circuit Rating

Special purpose switchboards are marked with their short-circuit-current rating in rms symmetrical amps. The marking states that short-circuit ratings are limited to the lowest interrupting rating of any device installed or intended to be installed therein. However, for combination series-connected devices, the short-circuit-current rating marked on the switchboard may be higher than the interrupting rating of a specific circuit breaker installed or intended to be installed in the switchboard. This higher rating is valid only if the specific overcurrent devices identified in the marking are used within or ahead of the switchboard in accordance with the marked instructions. In the case of rack-type theater-dimming switchboards with removable modules, the rating may depend on the use of specific dimming modules. These dimming modules are marked on the switchboard. In many cases the short-circuit ratings are associated with instructions for securing supply wiring within the switchboard.

Duty Rating

SWITCHBOARDS (WEIR)

Switchboards, Special Purpose (WFJX)—Continued

Theater-dimming switchboards have been investigated to operate continuously at 100% of their marked input rating.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 891, "Switchboards."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Laboratory Switchboard," "Theater Switchboard" or "Incandescent Lighting Switchboard," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES (WFXV)

PULLOUT SWITCHES, DETACHABLE TYPE (WGEU)

USE AND INSTALLATION

This category covers switches having detachable pullout heads, with or without fuseholders, for cartridge fuses. These switches may be enclosed or nonenclosed.

Nonenclosed switches are intended for use in other assemblies, such as panelboards, service equipment, or the like.

Enclosed pullout switches may contain meter sockets and/or neutral assemblies and contain more than one independent switch without connection between switches.

Some enclosed pullout switches incorporate neutrals that are factory bonded to the enclosure. Such switches are marked "Suitable Only for Use as Service Equipment."

Enclosed pullout switches marked for use as service equipment may also be used to provide the main control and means of cutoff for a separately derived system or for a second building.

Class CTL pullout switches have the physical size, configuration or other means which, in conjunction with the physical means provided in a Class CTL assembly, are designed to prevent the installation of more switch poles than that number for which the assembly is designed and rated.

Class CTL pullout switches may be identified by the words "Class CTL" or "CTL" on the switch as part of the marking.

Enclosed pullout switches that are rain-tight or rainproof are marked accordingly.

These pullout switches are intended for use with copper conductors unless marked to indicate that certain terminals are suitable for use with aluminum conductors. Such markings are independent of any marking on the terminal connectors and appear on a wiring diagram or other readily visible location.

Unless a switch is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14 – 1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Table 310.16 of ANSI/NFPA 70, "National Electrical Code." Termination provisions are determined based on values provided in Table 310.16, with no adjustment made for correction factors.

RATINGS

Ratings of enclosed or nonenclosed pullout switches are limited to 600 V or less, 400 A or less.

Switches without fuseholders (unfused) have been tested to determine their acceptability for continuous operation at their marked rated load.

Fused pullout switches are marked "Continuous load current not to exceed 80 percent of the rating of fuses employed in other than motor circuits."

Pullout switches with horsepower ratings in addition to amp ratings are suitable for use in motor circuits as well as for general use. Pullout switches with amp ratings only are suitable for general use only.

Pullout switches rated higher than 100 hp are restricted to use as motor disconnecting means and are not intended for use as motor controllers.

Motor-circuit pullout switches are intended for use only in motor circuits and are marked "Motor-Circuit Pullout Switch."

SWITCHES (WFXV)

381

Pullout Switches, Detachable Type (WGEU)—Continued

Horsepower ratings are associated with particular voltages and number of phases. A horsepower-rated switch is not intended for use with motors on circuits having voltages or number of phases different from that shown on the marking.

Some pullout switches have dual horsepower ratings, the larger of which is based on the use of fuses with time delay appropriate for the starting characteristics of the motor. Switches with such horsepower ratings are marked to indicate this limitation and are tested at the larger of the two ratings.

Switches marked "Suitable For Use On A Circuit Capable of Delivering Not More Than ___ Amps, RMS, Symmetrical, ___ Volts Maximum: Use Class ___ Fuses Having An Interrupting Rating Of No Less Than The Maximum Available Short-Circuit Current Of The Circuit," have been investigated for the additional rating indicated.

Some enclosed pullout switches are suitable for use as service switches. Such switches are marked "Suitable For Use As Service Equipment." Enclosed pullout switches with the neutral bonded to the frame or enclosure at the factory are marked "Suitable Only for Use as Service Equipment."

RELATED PRODUCTS

Products with similar uses are covered under Switches, Enclosed (WIA), Motor Controllers, Manual (NLRV), Switches, Dead-front (WHXS) and Switches, Open Type (WHY).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1429, "Pullout Switches."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Pullout Switch," "Enclosed Pullout Switch," "Motor Circuit Pullout Switch" or "Enclosed Motor Circuit Pullout Switch."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, AUTOMATIC (WGLT)

Switches, Clock Operated (WGZR)

GENERAL

This category covers mechanically-driven, clock-operated switches (timers). These devices are actuated by clockwork, by a gear train, by electrically-wound spring motor, or the equivalent. The switching circuit includes separable contacts (air gap).

This category does not cover electronic timers or electronic solid-state switching devices.

Clock-operated switches may be marked with the following:

Manufacturer's name, trademark or identifier (visible after installation)

Model number (visible after installation)

Factory code (if the device is produced at more than one location)

Electrical ratings, including: volts, hertz, amps, load type (visible after installation)

Lamp load maximum ratings are indicated or is one-tenth of the full amp rating

Electrical loads, when applicable, are indicated as follows:
 "Tungsten" (or "T") for tungsten-filament-lamp loads
 "Resistance only" (or "R") for noninductive resistance loads
 "Inductive" (or "H") for inductive loads, such as IT equipment and appliances
 "Pilot duty" (or "PD") for magnet-coil loads

Clock-operated switches marked "Replace with Type HPN cord only" are suitably rated for SP-2 replacement cord

Permanently connected devices may be marked as follows:

Terminals are identified so that it is obvious how to connect the conductors or correspond to the wiring diagram (provided with the device).

"For supply connections, use ___ AWG or larger wire suitable for at least ___°C (___°F)," or equivalent. If no wire size is provided, 14 AWG was used; if no temperature is provided, 60°C wire was used.

Switches, Clock Operated (WGZR)—Continued

“AL” or “Use aluminum wire only” identifies terminals for aluminum supply wire only.

“CU” or “Use copper wire only” identifies terminals for copper supply wire only.

“CU-AL” or “AL-CU” or “Use copper or aluminum wire” identifies terminals for copper or aluminum supply wire.

“Use copper wire only except at terminals _____” identifies a specific terminal wired to a conductor other than copper. Identification of specific terminals is required.

RATINGS

Clock-operated switches are rated for ac, dc, or both, and may be rated up to 600 V.

RELATED PRODUCTS

Special-use switches investigated to ANSI/UL 1054, “Special-Use Switches,” are covered under Switches, Special Use (WOYR2).

Appliance switches investigated to ANSI/UL 61058-1, “Appliance Switches,” are covered under Switches, Appliance (WKY2).

General-use snap switches or flush-mounted switches installed in a wiring system per ANSI/NFPA 70, “National Electrical Code,” are covered under Switches, Surface (WOKT) and Switches, Flush (WMUZ), respectively.

Manual motor controllers are covered under Motor Controllers, Manual (NLRV).

Switches for industrial applications are covered under Power Circuit and Motor-mounted Apparatus (NMTR).

Nonindustrial photoelectric switches for lighting control and/or motion-sensitive switches intended for nonindustrial applications are covered under Switches, Photoelectric (WJCT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 917, “Clock-Operated Switches.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Clock Operated Switch” or “Timer Switch.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, OPEN TYPE (WHTY)**USE AND INSTALLATION**

This category covers open-type switches without an enclosure that are provided with a handle operator. These switches may be provided with fuseholders for plug- or cartridge-type fuses. These switches are intended for installation in a panelboard, switchboard, motor control center, industrial control panel or the like, or for installation in a Listed cabinet or a cutout box in accordance with the switch installation instructions, or without an enclosure where acceptable.

These switches are intended to be mounted in enclosures such that they are manually operable by means of an external handle without opening the enclosure. Externally-operated handles mounted to the sidewall of an enclosure or through the cover of an enclosure are intended to be installed in accordance with the switch installation instructions. Open-type switches may be factory or field installed, and minimum enclosure size provided with the switch installation instructions may not incorporate the space necessary for the deflection of conductors entering or leaving the enclosure. The need for, and adequacy of, wire-bending space at terminals should be determined at the time of installation.

These switches are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless a switch is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14 – 1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Table 310.16 of ANSI/NFPA 70, “National Electrical Code.” Termination provisions are determined based on values provided in Table 310.16 or Section 310.15(B)(6), with no adjustment made for correction factors.

RATINGS

Switches without fuseholders (unfused) have been tested to determine their acceptability for continuous operation at their marked rated load.

Switches, Open Type (WHTY)—Continued

Fused switches are marked “Continuous load current not to exceed 80 percent of the rating of fuses employed in other than motor circuits.”

Ratings of Listed open-type switches are limited to 4000 A, 500 hp, 600 V. Open-type switches rated at more than 1200 A at 250 V or less, and switches rated at more than 600 A at more than 250 V are available in two classes, one intended for general use and the other intended for isolating use only. Switches intended for isolating use only are marked “For Isolating Use Only – Do Not Open Under Load.”

Open-type switches with horsepower ratings in addition to ampere ratings are suitable for use in motor circuits as well as for general use. Open-type switches with ampere ratings only are intended for general use only. Open-type motor circuit switches are intended for use only in motor circuits and are marked “Motor-Circuit Switch.”

Open-type switches rated higher than 100 hp are restricted to use as motor disconnecting means and are not for use as motor controllers.

Ratings of Listed open-type motor circuit switches are limited to 500 hp, 600 V.

Horsepower ratings are associated with particular voltages and number of phases. A switch is not intended for use with motors on circuits having voltages or number of phases different from that shown on the marking.

Some open-type switches have dual horsepower ratings, the larger of which is based on the use of fuses with a time delay appropriate for the starting characteristics of the motor. Switches with such horsepower ratings are marked to indicate this limitation and are tested at the larger of the two ratings.

Switches are marked with their short-circuit current rating(s) in rms symmetrical amps.

RELATED PRODUCTS

Products with similar uses are covered under Switches, Enclosed (WIAX), Switches, Molded Case (WJAZ), Motor Controllers, Manual (NLRV), Pullout Switches, Detachable Type (WGEU), Switches, Knife (WIOV) and Switches, Dead-front (WHXS).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 98A, “Outline of Investigation for Open Type Switches.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Open Type Switch” or “Open Type Motor-Circuit Switch.”

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, DEAD-FRONT (WHXS)**USE AND INSTALLATION**

This category covers dead-front switches having all current-carrying parts enclosed when mounted in an enclosed panelboard, dead-front switchboard or the like. These switches may be provided with fuseholders for plug- or cartridge-type fuses. These switches are manually operable by means of external handles without opening the enclosure or are hinged pullout switches.

Switches without fuseholders (unfused) have been tested to determine their acceptability for continuous operation at their marked rated load.

Fused switches are marked “Continuous load current not to exceed 80 percent of the rating of fuses employed in other than motor circuits.”

These switches are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless a switch is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14 – 1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Table 310.16 of ANSI/NFPA 70, “National Electrical Code.” Termination provisions are determined based on values provided in Table 310.16, with no adjustment made for correction factors.

RATINGS

Ratings of Listed dead-front switches are limited to 4000 A, 500 hp, 600 V. Dead-front switches rated 800 or 1200 A at more than 250 V at more than 1200 A at 250 V or less, and switches rated at more than 600 A at more than 250 V are available in two classes, one intended for general use and the

SWITCHES (WFXV)

Switches, Dead-front (WHXS)—Continued

other intended for isolating use only. Switches intended for isolating use only are marked "For Isolating Use Only — Do Not Open Under Load."

Dead-front switches with horsepower ratings in addition to ampere ratings are suitable for use in motor circuits as well as for general use. Dead-front switches with ampere ratings only are intended for general use only.

Some hinged pullout switches achieve an "off" position only by leaving the door open. These switches are restricted to use only as a single main in a panel board or the like and are rated not higher than 200 A and 250 V.

Dead-front switches rated higher than 100 hp are restricted to use as motor disconnecting means and are not for use as motor controllers.

Enclosed motor-circuit switches are intended for use only in motor circuits and are marked "Motor-circuit Switch."

Ratings of Listed dead-front motor-circuit switches are limited to 500 hp, 600 V.

Horsepower ratings are associated with particular voltages and number of phases. A switch is not intended for use with motors on circuits having voltages or number of phases different from that shown on the marking.

Some dead-front switches have dual horsepower ratings, the larger of which is based on the use of fuses with a time delay appropriate for the starting characteristics of the motor. Switches with such horsepower ratings are marked to indicate this limitation and are tested at the larger of the two ratings.

Switches are marked with their short-circuit current rating(s) in rms symmetrical amps.

RELATED PRODUCTS

Switches mounted in an enclosure in which all current-carrying parts are enclosed and which are operable without opening the enclosure are covered under Switches, Enclosed (WIAX).

Switches that have blade-jaw-type construction where all blade joints are subject to high clamping pressure when the switch is closed by means of a bolt, cam or similar mechanical action (referred to as bolted-pressure contact switches), and switches that have butt-type contacts with a spring-charged mechanism (referred to as high-pressure butt-type contact switches) are covered under Fused Power Circuit Devices (IYSR).

Detachable-head pullout switches are covered under Pullout Switches, Detachable Type (WGEU).

Open-type knife switches are covered under Switches, Knife (WIOV).

Dead-front switches intended for use aboard marine vessels are covered under Switches, Enclosed, Marine (WIZZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 98, "Enclosed and Dead-Front Switches."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Dead-front Switch," "Dead-front Motor-circuit Switch" or "Hinged Pullout Switch."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, ENCLOSED (WIAX)

USE AND INSTALLATION

This category covers enclosed switches and enclosed motor-circuit switches that are externally operable without opening the enclosure. These switches may be provided with fuseholders for plug- or cartridge-type fuses and may be electrically tripped.

These switches are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless a switch is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14 – 1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Table 310.16 of ANSI/NFPA 70, "National Electrical Code." Termination provisions are determined based on values provided in Table 310.16, with no adjustment made for correction factors.

RATINGS

Switches without fuseholders (unfused) have been tested to determine their acceptability for continuous operation at their marked rated load.

SWITCHES (WFXV)

383

Switches, Enclosed (WIAX)—Continued

Enclosed switches identified with an Enclosure Type designation are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

Fused enclosed switches are marked "Continuous load current not to exceed 80 percent of the rating of fuses employed in other than motor circuits."

Ratings of Listed enclosed switches are limited to 4000 A, 500 hp, 600 V. Enclosed switches rated at more than 1200 A at 250 V or less, and switches rated at more than 600 A at more than 250 V are available in two classes, one intended for general use and the other intended for isolating use only. Switches intended for isolating use only are marked "For Isolating Use Only — Do Not Open Under Load."

Enclosed switches with horsepower ratings in addition to amp ratings are suitable for use in motor circuits as well as for general use. Enclosed switches with amp ratings are intended for general use. Enclosed motor-circuit switches are intended for use only in motor circuits and are marked "Motor-circuit Switch."

Double-throw switches that have been investigated for switching a common load from a normal supply to an optional standby system are marked "Suitable for Use in Accordance with Article 702 of the National Electrical Code."

Enclosed switches rated higher than 100 hp are restricted to use as motor disconnecting means and are not intended for use as motor controllers.

Ratings of Listed enclosed motor-circuit switches are limited to 500 hp, 600 V.

Horsepower ratings are associated with particular voltages and number of phases. A switch is not intended for use with motors on circuits having voltages or number of phases different from that shown on the marking.

Some enclosed switches have dual horsepower ratings, the larger of which is based on the use of fuses with a time delay appropriate for the starting characteristics of the motor. Switches with such horsepower ratings are marked to indicate this limitation and are tested at the larger of the two ratings.

Switches are marked with their short-circuit current rating(s) in rms symmetrical amps.

Enclosed switches may also be suitable for use as service switches. Such switches are marked "Suitable for Use as Service Equipment."

Some enclosed switches incorporate neutrals factory bonded to the enclosure. Such switches are marked "Suitable Only for Use as Service Equipment."

Enclosed switches marked for use at services may also be used to provide the main control and means of cutoff for a separately derived system, or for a second building.

Electrically-tripped switches may be provided with ground-fault sensing and relaying equipment.

Switches suitable for use with ground-fault protection but the ground-fault protection sensors or relaying equipment (or both) are located in a separate enclosure are marked "Suitable for Ground Fault Protection When Combined with Class ____ (or Manufacturer and Cat. No.) Ground Fault Sensing Element," or the equivalent.

Switches intended for use with Class I ground-fault sensing and relaying equipment include those that are capable of interrupting 12 times their rated current or that have integral means to prevent disconnecting at levels of fault current exceeding their contact-interrupting capability.

Switches for use with Class II ground-fault sensing and relaying equipment are capable of interrupting 10 times their rated current and are intended for use in ground-fault protection systems where means to prevent disconnecting at levels of fault current exceeding their contact-interrupting capability are incorporated within the ground-fault sensing and relaying equipment.

RELATED PRODUCTS

Dead-front switches having all current-carrying parts enclosed when mounted in an enclosed panelboard, dead-front switchboard or the like are covered under Switches, Enclosed (WHXS).

Switches that have blade-jaw-type construction where all blade joints are subject to high clamping pressure when the switch is closed by means of a bolt, cam or similar mechanical action (referred to as bolted-pressure contact switches), and switches that have butt-type contacts with a spring-charged mechanism (referred to as high-pressure butt-type contact switches) are covered under Fused Power Circuit Devices (IYSR).

Detachable-head pullout switches are covered under Pullout Switches, Detachable Type (WGEU).

Open-type knife switches are covered under Switches, Knife (WIOV).

Enclosed switches intended for use aboard marine vessels are covered under Switches, Enclosed, Marine (WIZZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

Switches, Enclosed (WIAX)—Continued

The basic standard used to investigate products in this category is ANSI/UL 98, "Enclosed and Dead-Front Switches."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Enclosed Switch" or "Enclosed Motor-circuit Switch."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, KNIFE (WIOV)**USE AND INSTALLATION**

This category covers open-type knife switches. Knife switches may be provided with or without fuseholders for plug fuses or for cartridge fuses. Knife switches may have individual bases intended for either front or rear wiring connection or may have switch parts without bases that are intended for mounting on switchboards and panelboards. Knife switches may be single- or multiple-pole, and with or without quick-break or auxiliary contacts, except where such contacts are specifically required.

Knife switches without fuseholders (unfused) have been tested to determine their acceptability for continuous operation at their marked rated load. Knife switches are provided with one of the following means for field connection:

- Terminal pads to which pressure wire connectors can be factory or field installed
- Terminal pads for the connection of busbars
- Wire-binding screws (when intended for the connection of a 10 AWG or smaller wire)

Knife switches without a base and intended for mounting on a panelboard, switchboard, or the like are not required to be provided with a means for field connection.

RATINGS

Standard voltage ratings for knife switches are: 125, 250, 250 dc – 500 ac, 500 ac and 600. For 125, 250 and 600 V, unless otherwise indicated in the marking, the rating includes both alternating and direct currents.

Standard current ratings for knife switches are: 30, 60, 100, 200, 400, 600, 800, 1200, 1600, 2000, 2500, 3000, 4000, 5000 and 6000 A.

Knife switches are not intended for interrupting current of more than 1200 A when the potential rating is 250 V or less, nor are they intended for interrupting current of more than 600 A when the potential rating is more than 250 V. Switches having ratings greater than these limits are marked "For Disconnecting Use Only." Knife switches that are not intended for interrupting current, but have ratings lower than those limits specified above are marked "For Isolating Use Only."

Knife switches are marked with a short-circuit current rating in rms symmetrical amperes.

RELATED PRODUCTS

Switches with knife-blade action are also covered under the following:

Switches mounted in an enclosure in which all current-carrying parts are enclosed, and which are operable without opening the enclosure are covered under Switches, Enclosed (WIAX).

Switches that have all current-carrying parts enclosed when mounted in an enclosed panelboard, dead-front switchboard or the like, and that are manually operable by means of external handles without opening the enclosure are covered under Switches, Dead-front (WHXS).

Switches that have blade-jaw-type construction where all blade joints are subject to high clamping pressure when the switch is closed by means of a bolt, cam or similar mechanical action (referred to as a bolted-pressure contact switch) and switches that have butt-type contacts with a spring-charged mechanism (referred to as a high-pressure butt-type contact switch) are covered under Fused Power-circuit Devices (WIOV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 363, "Knife Switches."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illus-

Switches, Knife (WIOV)—Continued

trated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Knife Switch."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, LOAD INTERRUPTER AND ISOLATING, OVER 600 VOLTS (WIQG)**GENERAL**

This category covers enclosed medium-voltage load interrupter and isolating switches having ac voltage ratings from 4.76 kV through 38 kV, with continuous current ratings up to 3000 A. These switches are intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code." Load interrupter switches are rated 200 through 1200 A and may be provided with or without fuses. Switches rated more than 1200 A at any voltage and those rated more than 600 A at 27 kV or greater are isolating only. These switches are available in either stationary or draw-out versions.

These switches are generally three-pole devices; however some switches may be one- or two-pole. Enclosures may be either ventilated or nonventilated.

An enclosure investigated to determine that it is rainproof is marked "Rainproof," "Outdoor" or "3R."

Enclosures are marked to indicate the exposure category (A, B or C) for which they are intended. Enclosures marked "Category A" are intended to be installed in areas accessible to the unsupervised general public; enclosures marked "Category B" are intended to be installed in areas accessible to authorized personnel only; enclosures marked "Category C" are intended for use in areas accessible to qualified personnel only.

Unless specifically marked otherwise, these switches are intended for use on three-phase circuits where the nominal voltage to ground is 0.58 times the line-to-line voltage.

Switches may or may not be provided with magnetizing current interrupting ratings.

Switches may or may not be provided with cable charging ratings.

Load interrupter switches are marked with a fault close rating. They should not be used on circuits having available fault currents in excess of the fault close rating. When provided with some fuses, it may be necessary for the supply circuit to have an available fault current that is less than the fault close rating of the switch due to the limited interrupting ability of the fuses. Switches are marked as follows on the outside of the enclosure:

"SUITABLE FOR USE ON A CIRCUIT CAPABLE OF DELIVERING NOT MORE THAN ____ RMS SYMMETRICAL AMPS."

These switches may consist of a single freestanding vertical section or they may consist of several abutting vertical sections intended for interconnection by a horizontal bus. When provided with a horizontal bus, each vertical section is marked with the ampacity of the horizontal bus in amps. Switches that are intended to be part of such a line-up are provided with a "____ of ____" marking, where the second blank indicates the total number of vertical sections provided (including sections not bearing a UL Listing Mark) and the first blank indicates the position (reading from left to right) of the vertical section bearing the marking.

A section, with only horizontal bus or with no installed equipment, may be provided. This section is identified as an enclosure and is numbered as part of a line-up.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/NEMA C37.58- 2003, "Indoor AC Medium-Voltage Switches for Use in Metal-Enclosed Switchgear – Conformance Test Procedures," ANSI/NEMA C37.57- 2003, "Metal-Enclosed Interrupter Switchgear Assemblies – Conformance Testing," and ANSI/IEEE C37.20.3- 2001, "Metal-Enclosed Interrupter Switchgear."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Isolating Switch," "Metal-Enclosed Interrupter Switchgear," "Metal Enclosed Switchgear," "Load Interrupter Switch" or "Load Interrupter Switchgear."

In an assembly of products the Listing Mark is applied to each vertical section eligible for Listing. The Listing Mark covers only the sections included in the assembly.

SWITCHES (WFXV)

Switches, Load Interrupter and Isolating, Over 600 Volts (WIQG)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, MOLDED CASE (WJAZ)**GENERAL**

This category covers both fused and unfused molded-case switches.

The maximum voltage rating of a molded-case switch is 600 V.

Unfused switches are tested to determine their acceptability for continuous operation at their marked rated load.

Unfused switches are tested under overload conditions at six times amp rating to cover motor-circuit applications and are suitable for use as motor-circuit disconnects per Section 430.109 of ANSI/NFPA 70, "National Electrical Code."

Fused switches are tested for interrupting capacity at rated voltage and at six times motor full-load running current for alternating-current ratings and at four times motor full-load running current for direct-current ratings.

USE AND INSTALLATION

Unfused two-pole molded-case switches marked to indicate suitability for use on 3-phase circuits have been investigated for controlling 3-phase, corner-grounded delta circuits.

These switches are for use with copper conductors, unless marked to indicate which terminals are suitable for use with aluminum conductors. Such markings are independent of any markings on terminal connectors and are readily visible.

Unless the device is marked to indicate otherwise, the wiring space and current-carrying capacity are based on the use of 60°C wire where wire sizes 14-1 AWG are used, and 75°C wire where wire sizes 1/0 AWG and larger are used.

Molded-case switches without enclosures are intended for use in Listed circuit-breaker enclosures, or as a part of other Listed equipment or where open-type molded-case switches are acceptable.

Some unfused switches have a release mechanism that causes the switch to open automatically to protect itself in the event of a short-circuit current fault. Such switches are marked to indicate that they may open.

Some enclosed molded-case switches may be provided with ground-fault protection for services or major feeders. The circuit(s) so protected will be identified by a marking, such as on a wiring diagram.

Listed molded-case switches may be mounted in any position.

Line-and-load markings on a molded-case switch are intended to limit connections to those as marked.

Molded-case switches may be equipped with factory-installed accessories, such as alarm and auxiliary switches, remotely energized electrically-operated trip mechanisms, and electrical operators.

PRODUCT MARKINGS

No overcurrent protection is provided by the unfused switches and they are marked with a short-circuit current withstand rating.

The fused switches have one or more replaceable fuses to provide overcurrent protection and they are marked with a short-circuit current interrupting rating.

Fused switches are marked "Continuous load current not to exceed 80 percent of the rating of fuses employed."

Some enclosed molded-case switches are marked as suitable for use as service equipment.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 489, "Molded-Case Circuit Breakers, Molded-Case Switches, and Circuit-Breaker Enclosures."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Molded Case Switch" (or "M.C.S.") or "Fused Molded Case Switch" (or "Fused M.C.S.>").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES (WFXV)

385

SWITCHES, PHOTOELECTRIC (WJCT)**GENERAL**

This category covers photoelectric switches and motion detectors intended for use in nonindustrial locations, rated maximum 250 V, 2000 VA, and protected by branch circuit protection not to exceed 20 A.

Switches investigated for the control of tungsten filament lamp loads are marked "Tungsten." Switches investigated for the control of the applicable ballast loads (such as fluorescent) are marked "Mechanical Ballast" or "Electronic Ballast."

The investigation of devices identified as "Rain tight" includes a test designed to simulate exposure to beating rain to determine that such exposure will not result in the entrance of water.

These switches have been tested to determine their acceptability for continuous operation at their marked load rating.

RELATED PRODUCTS

Photoelectric switches and motion detectors designed to provide protection for mercantile premises, stock rooms, safes, vaults, etc., are covered under Intrusion-detection Units (ANSR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 773A, "Nonindustrial Photoelectric Switches for Lighting Control."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Photoelectric Switch" or "Motion Detector Switch."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Photocontrols, Plug-in, Locking Type (WJFX)

This category covers plug-in locking type photo controls for use on outdoor type electric lighting fixtures which are used for both street lighting and area lighting (lighting of parking lots and similar applications).

Unless marked specifically "Tungsten" or "Ballast" these products are suitable for use with either type of fixture, rated not more than the rating of the photo control. Voltage rating is 480 v, ac, maximum.

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic standard used to investigate products in this category is UL 773, "Plug-In Locking-Type Photocontrols for Use with Area and Roadway Lighting".

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Photocontroller", "Photocontroller Shorting Plug", "Photocontroller Open Circuit Plug".

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SNAP SWITCHES (WJQR)**GENERAL**

This category covers general-use snap switches, which are so constructed that they can be installed in flush device boxes or on outlet box covers or otherwise used in connection with wiring systems recognized by ANSI/NFPA 70, "National Electrical Code" (NEC).

Door switches are investigated for use only in combination with a specific switch, special switch box and cover. See Switches, Door (WLFV).

Flush snap switches investigated for use without separate outlet boxes with nonmetallic-sheathed cable, Types NM, NMC, NM-B and NMC-B cable in accordance with the NEC, are so identified by a specific marking on the carton in which they are packed.

Snap switches have not been investigated for switching a load between two alternate sources of supply. Double-throw enclosed switches (see Switches, Enclosed [WIAJ]) or switches Listed as transfer switches (see

Snap Switches (WJQR)—Continued

Transfer Switches [WPTZ] and Emergency Lighting and Power Equipment [FTBR]) should be used for this purpose.

Multi-pole, general-use snap switches have not been investigated for more than single-circuit operation unless marked "2-circuit" or "3-circuit."

Snap switches without a grounding connection are intended for replacement use only in accordance with NEC 404.9, Exception to (B).

General-use snap switches are classified into two categories: AC-DC general use and AC general use. AC general-use switches are marked "AC" to limit their use to alternating-current circuits. AC-DC general-use switches are not so limited; no such marking is required or generally provided.

AC-DC GENERAL-USE SNAP SWITCHES

The standard amp and voltage ratings for an AC-DC general-use snap switch for controlling direct- or alternating-current circuits are given in Table I. While many of these snap switches will operate successfully on circuits that have some reactance, in general, an inductive load should not exceed one-half the amp rating of the switch at the voltage involved. However, some of these snap switches are marked with additional horsepower ratings at one or more voltages, which indicate that a switch so marked has been tested for the control of a motor of the horsepower and voltage rating indicated. Such a snap switch has been tested for the control of tungsten-filament lamp loads and is marked with the letter "T" as part of the suitable tungsten-filament lamp load rating at 125 V.

Table I**Snap Switch Ratings in Amperes Corresponding to Direct-Current Potentials**

125 V	250 V	600 V	125 V	250 V	600 V
—	—	1	—	10	—

—	5	—	—	—	30
10	5	—	—	30	—
—	10	5	60	30	—
—	—	10	—	60	—

Note: The above ratings apply equally when these switches are used on alternating-current circuits

* These dual ratings may be assigned only to a three-way, four-way, two-circuit, three-circuit, or a fixture switch

** A panelboard switch may be rated at 30 A, 125 V, without the corresponding 250 V rating

AC GENERAL-USE SNAP SWITCHES

An AC general-use snap switch has a marked current and voltage rating only for alternating current, which is one of the ratings given in Table II, and is intended for installation in a flush device box (flush snap switch), mounting on an outlet box cover, or surface mounting (surface snap switch).

AC general-use snap switches are tested for the control of resistive, inductive (including electric discharge lamp) and tungsten-filament lamp loads at 120 V up to the full current rating of the switch, and for motor loads up to 80% of the amp rating of the switch, but not exceeding 2 hp.

Table II**AC Snap Switch Ratings in Amperes Corresponding to Alternating-Current Potentials**

30	—	15
30	—	20

Snap switches rated 240 or 250 V that are intended for use on circuits involving a nominal potential to ground of 120 or 125 V, respectively, are tested on such circuits and are marked with the voltage rating "240" or "250" (no underlining). Snap switches rated 240 or 250 V that are suitable for use at full potential to ground are marked with the voltage rating 240 or 250 (double underlining). Snap switches having voltage ratings other than 240 or 250 V are tested on circuits involving full rated potential to ground.

Terminals of 15 A and 20 A switches not marked "CO/ALR" are intended for use with copper and copper-clad aluminum conductors only. Terminals marked "CO/ALR" are for use with aluminum, copper and copper-clad aluminum conductors.

Snap Switches (WJQR)—Continued

Terminals of the wire-binding screw, setscrew, or screw-actuated back-wired clamping types are suitable for use with solid building wires unless otherwise indicated either on the device or in the installation instructions.

Screwless terminal connectors of the conductor push-in type (also known as "push-in terminals") are restricted to 15 A branch circuits and are intended for connection with 14 AWG solid copper wire only. They are not intended for use with aluminum or copper-clad aluminum wire, 14 AWG stranded copper wire, or 12 AWG solid or stranded copper wire.

Terminals of switches rated 30 A and above not marked "AL-CU" are intended for use with copper conductors only. Terminals of switches rated 30 A and above marked "AL-CU" are for use with aluminum, copper and copper-clad aluminum conductors.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Switches, Door (WLFV)**USE**

This category covers snap switches intended for use in door jambs.

This category covers an assembly consisting of a switch, special switch box and cover. The special switch box is not an outlet box. It is only intended to terminate the switch leads. It is not intended for any other type of field wiring.

PRODUCT MARKINGS

Listed door switches are marked with the Listee's name or trademark and electrical rating in a location where readily visible after installation. An ac-only door switch, if rated in wattage, is marked "For use with incandescent lighting only" where visible after installation.

The catalog designation is marked on the assembly, on the package, or on a stuffer sheet packaged with each assembly.

ADDITIONAL INFORMATION

For additional information, see Snap Switches (WJQR) and Electrical Equipment for Use in Ordinary Locations (AALZ)..

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 20, "General-Use Snap Switches."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the assembly, or the UL symbol stamped or molded into the assembly and the Listing Mark on the smallest unit packaging is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Switch."

In lieu of the UL symbol stamped or molded into the assembly, "UNDERWRITERS LABORATORIES INC. LISTED" (or "UND. LAB. INC. LIST.") may be stamped or molded into the assembly. When marked as such, the Listing Mark shall appear on the smallest unit packaging.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Switches, Fixture, Socket and Special Mechanism Types (WMHR)**USE**

This category covers fixture, socket and special-mechanism-type switches intended for use in appliances, electric fixtures and portable lamps.

PRODUCT MARKINGS

The devices are marked as follows:

- Listee's name or identification on device.
- Catalog number or equivalent on device or carton.
- Complete electrical rating on device.
- Switches intended for control of tungsten filament lamps on both direct and alternating current are marked with the letter "T," located to indicate that it applies only to the rating at 125 V. AC/DC switches intended for the control of electric discharge lamps are marked with the letter "F." A switch may be marked with both letters to indicate both uses.
- Switches intended for appliance use are marked "FOR APPLIANCE USE."

ADDITIONAL INFORMATION

For additional information, see Snap Switches (WJQR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

SWITCHES (WFXV)

Switches, Fixture, Socket and Special Mechanism Types
(WMHR)—Continued

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 20, "General-Use Snap Switches."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product, or the UL symbol stamped or molded into the product and the Listing Mark on the smallest unit packaging is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Switch," "Fixture Snap Switch" or "Fixture Switch."

In lieu of the UL symbol stamped or molded into the product, "UNDERWRITERS LABORATORIES INC. LISTED" (or "UND. LAB. INC. LIST.") may be stamped or molded into the product. When marked as such, the Listing Mark shall appear on the smallest unit packaging.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Switches, Flush (WMUZ)

USE

This category covers snap switches intended for mounting in flush device boxes, and also switches investigated for use without separate outlet boxes with Types NM and NMC cable.

ADDITIONAL INFORMATION

For additional information, see Snap Switches (WJQR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 20, "General-Use Snap Switches."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product, or the UL symbol stamped or molded into the product and the Listing Mark on the smallest unit packaging is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Switch."

In lieu of the UL symbol stamped or molded into the product, "UNDERWRITERS LABORATORIES INC. LISTED" (or "UND. LAB. INC. LIST.") may be stamped or molded into the product. When marked as such, the Listing Mark shall appear on the smallest unit packaging.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Switches, Pendant (WNIX)

GENERAL

This category covers pendant switches, through-cord switches, and combination pendant switches with attachment plug receptacles.

ADDITIONAL INFORMATION

For additional information, see Snap Switches (WJQR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 20, "General-Use Snap Switches."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product, or the UL symbol stamped or molded into the product and the Listing Mark on the smallest unit packaging is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Switch."

In lieu of the UL symbol stamped or molded into the product, "UNDERWRITERS LABORATORIES INC. LISTED" (or "UND. LAB. INC. LIST.") may be stamped or molded into the product. When marked as such, the Listing Mark shall appear on the smallest unit packaging.

Switches, Pendant (WNIX)—Continued

any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Switches, Surface (WOKT)

GENERAL

This category covers snap switches intended for surface mounting, unless otherwise stated in the individual Listings.

ADDITIONAL INFORMATION

For additional information, see Snap Switches (WJQR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 20, "General-Use Snap Switches."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product, or the UL symbol stamped or molded into the product and the Listing Mark on the smallest unit packaging is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Switch."

In lieu of the UL symbol stamped or molded into the product, "UNDERWRITERS LABORATORIES INC. LISTED" (or "UND. LAB. INC. LIST.") may be stamped or molded into the product. When marked as such, the Listing Mark shall appear on the smallest unit packaging.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFER SWITCHES (WPTZ)

GENERAL

This category covers automatic and nonautomatic transfer switches, including associated control devices, with maximum ratings of 600 V ac and transfer equipment rated more than 600 V ac but not more than 38 kV.

Transfer switches rated for total system transfer are marked "Suitable for control of motors, electric discharge lamps, tungsten filament lamps, and electric heating equipment where the sum of motor full-load ampere ratings and the ampere ratings of other loads do not exceed the ampere rating of the switch and the tungsten load does not exceed ____ percent of the switch rating."

Transfer switches have been investigated for load switching and inrush capability and for a number of cycles of operation based on their intended use which, in the case of an automatic transfer switch, is expected to include scheduled test operations switching full load.

Automatic transfer switches are required to be designed so that the load cannot remain simultaneously disconnected from both the normal and alternative sources when either or both sources are available, except that transfer switches marked "SUITABLE FOR USE AS SERVICE EQUIPMENT" are provided with externally accessible means to independently disconnect each source intended to be a service.

Automatic transfer switches transfer a common load from a normal supply to an alternate supply in the event of failure of the normal supply, and automatically return the load to the normal supply when the normal supply is reestablished.

Additional sensing devices that may initiate or delay transfer have been investigated in accordance with the manufacturer's marked operating values.

Automatic transfer switches may have a switching contact to initiate the starting of an engine generator set.

Some transfer switches may be provided with ground-fault protection for services or major feeders. The circuit(s) so protected are identified by a marking, such as on a wiring diagram.

Transfer switches are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is indicated on a wiring diagram or other readily visible location.

TRANSFER SWITCHES RATED 600 V OR LESS

Listed transfer switches without enclosures are intended for use as part of other equipment or where open-type devices are acceptable. These devices have the Listing Mark applied to the transfer switch panel. Markings or instructions are provided for open transfer switches to indicate the minimum size enclosure into which the open transfer switch should be installed.

Transfer Switches (WPTZ)—Continued

When the Listing Mark is applied to the enclosure of an enclosed transfer switch or bypass switch, it indicates the Listing of the complete enclosed assembly.

Transfer switches intended for use as service equipment are marked "SUITABLE FOR USE AS SERVICE EQUIPMENT."

Transfer switches intended to be connected as service equipment for the normal source only may be provided with a disconnect for the normal source only, in which case the transfer switch is marked "Suitable for use as service equipment — NORMAL source only. An additional disconnect must be readily available for the alternate source, unless the alternate source is an accessible generator and can be readily shut down."

Transfer switches are not intended for connection to a supply capable of delivering currents in excess of the maximum available rms symmetrical amperes (short-circuit current) marked on the transfer switch.

Transfer switches having manual operators accessible only by opening the enclosure are not intended for manual operation under load.

Unless the device is marked otherwise, the wiring space and terminations are based on 60°C wire for switches rated 100 A or less, and 75°C for switches rated more than 100 A.

Overcurrent/Short-circuit Protection

Transfer switches without integral overcurrent protective devices are suitable for continuous use at 100% of rated current. Transfer switches incorporating integral overcurrent devices are suitable for continuous use at 100% of rated current unless restricted to use at 80% of rated current, as indicated by the marking "CONTINUOUS LOAD CURRENT NOT TO EXCEED 80 PERCENT OF SWITCH RATING" on the switch.

Transfer switches provided with integral overcurrent protection are marked "This transfer switch is rated for use on a circuit capable of delivering not more than ____ rms symmetrical amperes, ____ volts maximum," where the blanks are filled with the available short-circuit current and voltage for which the switch was tested.

Transfer switches not provided with integral overcurrent protection are marked in accordance with a), b) or c) below.

- a) "When protected by ____ ampere maximum Class ____ fuse or Type ____ circuit breaker rated no more than ____ amperes, this transfer switch is rated for use on a circuit capable of delivering not more than ____ rms symmetrical amperes, ____ volts maximum." The first two blanks in this marking are filled with the maximum ampere rating and Class of fuse to be used. The third blank is filled with the specific circuit breaker to be used, including the manufacturer and type designation of the circuit breaker. The fourth blank is filled with the maximum current rating of the circuit breaker. Transfer switches may be marked with only the fuse information or the circuit breaker information, when investigated for use only with fuses or circuit breakers, respectively.
- b) "When protected by a circuit breaker rated no more than ____ amperes, this transfer switch is rated for use on a circuit capable of delivering not more than 10 kA rms symmetrical amperes, ____ volts maximum." The first blank is filled with the maximum current rating of circuit breaker, and the second blank is filled with the maximum circuit voltage. Transfer switches that bear this marking are intended only for use with a molded-case circuit breaker as the overcurrent protection, and may not be rated more than 400 A.
- c) "When protected by a circuit breaker without an adjustable short-time response only or by fuses, this transfer switch is rated for use on a circuit capable of delivering no more than ____ rms symmetrical amperes, ____ volts maximum."

Transfer switches may be marked with an optional short-time current rating. Short-time current is the maximum amount of fault current a switch has been shown to withstand at a specified voltage for a given amount of time and remain functional (including the ability to carry full rated current).

TRANSFER EQUIPMENT RATED OVER 600 V

Transfer equipment rated over 600 V is investigated only as a completely enclosed assembly.

Transfer equipment rated over 600 V is suitable for use on circuits having available fault currents not exceeding the rating marked on the equipment.

Transfer switches rated over 600 V intended for use as service equipment may be marked "SUITABLE FOR USE AS SERVICE EQUIPMENT."

Unless transfer equipment rated over 600 V is marked otherwise, the wiring space and terminations are based on the use of Type MV90 conductors. The ampacity of Type MV90 conductors is specified in Tables 310.75 and 310.76 of ANSI/NFPA 70, "National Electrical Code."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Accessories, Transfer Switch (WPVQ)**GENERAL**

Accessories, Transfer Switch (WPVQ)—Continued

This category covers accessories intended for use with transfer switches rated 600 V or less, including bypass/isolation switches, status indicator panels, enclosed power inlets, and other accessories intended solely for use with Listed transfer switches. These accessories are intended for use in conjunction with transfer switches, but are not intended to modify the function or construction of the transfer switch itself.

Bypass switches permit testing and maintenance of emergency system components that could not be otherwise maintained without disruption of important functions. The bypass switching sequence is manually initiated.

A transfer and bypass/isolation switch for use in emergency systems consists of a transfer switch suitable for emergency systems, and with the transfer switch isolated or disconnected the bypass/isolation switch functions as an independent nonautomatic transfer switch and allows the load to be connected to either power source.

Enclosed power inlets are intended for use in standby systems to facilitate cord connection of portable generators for use during temporary outages of utility power. Inlets are intended to be remotely mounted from the transfer switch and connected to the "alternate source" terminals of the transfer switch, such that the blades or pins of the inlet are energized only through the use of a cord connection to a portable generator. Inlets are fully enclosed, such that there are no accessible energized parts with the cord connector in place. Inlets are not intended for use indoors, but may be intended for use in protected areas, such as covered porches or detached garages. Inlets intended for use where exposed to weather are marked Type 3, 3R, 3S, 4, 4X, 6 or 6P, and have been determined to be suitable for outdoor use.

ADDITIONAL INFORMATION

For additional information, see Transfer Switches (WPTZ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1008, "Transfer Switch Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Transfer Switch Accessory," "Transfer and Bypass/Isolation Switch," "Bypass/Isolation Switch," "Bypass/Transfer Switch," "Transfer and Bypass/Isolation Switch for Emergency Systems" or "Enclosed Power Inlet."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Automatic Transfer Switches for Use in Emergency Systems (WPWR)**USE**

This category covers automatic transfer switches, rated 600 V or less, intended for use in emergency systems in accordance with Articles 517 and 700 of ANSI/NFPA 70, "National Electrical Code" (NEC). These transfer switches are also suitable for use in legally required standby systems and in optional standby systems in accordance with Articles 701 and 702, respectively, of the NEC.

ADDITIONAL INFORMATION

For additional information, see Transfer Switches (WPTZ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1008, "Transfer Switch Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Automatic Transfer Switch for Emergency Systems."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Automatic Transfer Switches for Use in Optional Standby Systems (WPXT)

USE

This category covers automatic transfer switches with a maximum rating of 600 V ac, intended for use in optional standby systems in accordance with Article 702 of ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Transfer Switches (WPTZ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1008, "Transfer Switch Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Automatic Transfer Switch for Use in Optional Standby Systems."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Meter-mounted Transfer Switches (WPXW)

USE

This category covers transfer switches rated 600 V or less, intended for mounting in a meter base, on the line side of the service disconnect switch. These transfer switches are intended to transfer the loads connected to the load side of the meter from the normal utility supply to an alternate supply, consisting of a portable generator that is temporarily cord connected to the meter-mounted transfer switch. These devices are not intended for use in emergency systems or in legally required standby systems.

The installation of these devices is intended to be under the exclusive control of the serving utility, and is not considered under the purview of ANSI/NFPA 70, "National Electrical Code." As such, these devices are not considered service equipment.

ADDITIONAL INFORMATION

For additional information, see Transfer Switches (WPTZ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1008M, "Outline of Investigation for Transfer Switch Equipment, Meter Mounted."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Meter-mounted Transfer Switch."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Automatic Transfer Switches Over 600 Volts (WPYC)

USE

This category covers automatic transfer switches intended for use in systems rated more than 600 V ac. An automatic transfer switch automatically transfers a load to another source of power when the original source fails and will automatically retransfer the load to the original source under desired conditions.

SWITCH TYPES

These switches may be of the fixed preferential, nonpreferential or selective-preferential type.

A fixed-preferential type switch automatically transfers to the original source when it is available.

A nonpreferential type switch retransfers the load to the original source only when the second or emergency source fails.

A selective-preferential type switch is a type in which either source may be selected as the preferred source and which will retransfer the load to the preferred source upon its reenergization.

CONSTRUCTION

Automatic Transfer Switches Over 600 Volts (WPYC)—Continued

The basic switching devices in this equipment may be circuit breakers, load interrupter switches or contactors. The number of expecting operations under load is dependent on the type and of switching device used, and the continuous current rating thereof.

The equipment covered under this category is completely enclosed. The equipment may be metal-enclosed, metal-clad or other construction.

An enclosure investigated to determine that it is rainproof is marked "Rainproof," "Outdoor" or "3R." Enclosures may be either nonventilated or ventilated.

This equipment is intended to be installed in areas accessible to qualified personnel only ("Category C") unless the enclosures are marked "Category A" or "Category B." Enclosures marked "Category A" are intended to be installed in areas accessible to the unsupervised general public; enclosures marked "Category B" are intended to be installed in areas accessible to authorized personnel only; enclosures marked "Category C" are intended to be installed in areas accessible to qualified personnel only. The environmental and exposure category marking need only appear on the first vertical section of a line-up.

RATINGS

These switches are rated over 600 V, up to 38 kV. Assemblies are marked with the following ratings: maximum voltage, frequency, insulating level, continuous current, short-time current and momentary current. This marking appears on each vertical section bearing the UL Mark.

ADDITIONAL INFORMATION

For additional information, see Transfer Switches (WPTZ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1008A, "Outline of Investigation for Transfer Switch Equipment, Over 600 Volts."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Automatic Transfer Switch."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Nonautomatic Transfer Switches (WPYV)

USE

This category covers nonautomatic transfer switches, rated 600 V or less, intended to transfer a common load from a normal supply to an alternate supply of an equipment system in accordance with Sections 517.34 and 517.43 of ANSI/NFPA 70, "National Electrical Code" (NEC), or to an optional standby system in accordance with Article 702 of the NEC.

ADDITIONAL INFORMATION

For additional information, see Transfer Switches (WPTZ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1008, "Transfer Switch Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Non-Automatic Transfer Switch."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES FOR USE IN HAZARDOUS LOCATIONS (WQNV)

Switches rated in horsepower have been tested with respect to interruption of the maximum operating overload current of motors of the same

390 SWITCHES FOR USE IN HAZARDOUS LOCATIONS (WQNV)

horsepower and voltage ratings. When rated in amps and volts only the switches have not been investigated with respect to use in motor circuits.

SWITCHES, CLOCK OPERATED FOR USE IN HAZARDOUS LOCATIONS (WRBT)**GENERAL**

This category covers clock-operated switches Listed with horsepower ratings tested at rated voltage and at six times motor full load running current for ac ratings, and at ten times motor full load running current for dc ratings.

Clock-operated switches Listed with pilot duty ratings are intended for control of electromagnetic loads, such as a solenoid of a motor controller or electrically-operated valve, and are tested with an appropriate electromagnetic load.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Clock Operated Switch for Use in Hazardous Locations," or other appropriate product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ENCLOSED SWITCHES FOR USE IN HAZARDOUS LOCATIONS (WRPR)**GENERAL**

This category covers enclosed switches, with or without fuseholders, intended for plug or cartridge fuses. Enclosed switch ratings are limited to 3600 A, 500 hp, 600 V.

Enclosed switches with horsepower ratings in addition to amp ratings are suitable for use in motor circuits as well as for general use. Enclosed switches with amp ratings are intended for general use.

Enclosed switches are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless the device is marked to indicate otherwise, the wiring space and current-carrying capacity are based on the use of 60°C wire in circuits rated 100 A or less, and the use of 75°C wire for higher amp-rated circuits.

Enclosed motor-circuit switches and enclosed switches with horsepower ratings are tested for interrupting capacity at rated voltage and at six times motor full-load running current for alternating-current ratings, and at four times motor full-load running current for direct-current ratings.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/UL 98, "Enclosed and Dead-Front Switches."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Enclosed Switch for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES FOR USE IN HAZARDOUS LOCATIONS (WQNV)**SNAP SWITCHES FOR USE IN HAZARDOUS LOCATIONS (WSQX)****GENERAL**

This category covers snap switches that are limited to 30 A, 600 V, ac; 60 A, 250 V, ac or dc; and not more than 2 hp at 600 V or less, ac, 250 V or less, dc.

Snap switches with horsepower ratings have been tested with respect to interruption of maximum overload currents of motors of the same horsepower and voltage ratings.

Snap switches having a "T" rating are capable of controlling tungsten-filament lamp loads corresponding to the 125 V rating of the switches.

Snap switches provided with a factory seal of conductors entering the switch enclosure are so identified by a marking on the product.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Snap Switch for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, MISCELLANEOUS FOR USE IN HAZARDOUS LOCATIONS (WTEV)**GENERAL**

This category covers various types of switches, such as bin-level indicators, flow switches, limit switches, vibration switches, and the like. The switches in this category are not fused. The suitability of these switches for use on high-capacity circuits has not been investigated.

Switches with amp ratings are intended for general use. Switches with horsepower ratings are suitable for use in motor circuits.

Switches Listed with horsepower ratings are tested for interrupting capacity at rated voltage and at six times motor full load running current for ac ratings and at four times motor full load running current for dc ratings.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flow Switch for Use in Hazardous Locations" or "Limit Switch for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (WTSN)

Switches rated in horsepower have been tested with respect to interruption of the maximum operating overload current of motors of the same horsepower and voltage ratings. When rated in amps and volts only the switches have not been investigated with respect to use in motor circuits.

ENCLOSED SWITCHES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (WUGF)

GENERAL

This category covers enclosed switches either with or without fuseholders for plug or cartridge fuses. Enclosed switch ratings are limited to 3600 A, 500 hp, 600 V.

Enclosed switches with horsepower ratings in addition to amp ratings are suitable for use in motor circuits as well as for general use. Enclosed switches with amp ratings are intended for general use.

Enclosed switches are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Unless the device is marked to indicate otherwise, the wiring space and current-carrying capacity are based on the use of 60°C wire in circuits rated 100 A or less, and the use of 75°C wire for higher amp-rated circuits.

Enclosed motor-circuit switches and enclosed switches with horsepower ratings are tested for interrupting capacity at rated voltage and at six times motor full-load running current for alternating-current ratings, and at four times motor full-load running current for direct-current ratings.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Enclosed Switch for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHGEAR ASSEMBLIES, METAL ENCLOSED, LOW-VOLTAGE POWER CIRCUIT BREAKER TYPE (WUTZ)

GENERAL

This category covers metal-enclosed, low-voltage power circuit breaker switchgear rated up to 600 V ac, nominal.

These switchgear assemblies are completely enclosed on all sides and top with sheet metal (except for ventilation openings and inspection windows) and may contain the following: (1) low-voltage power circuit breakers, either fused or unfused, (2) bare and/or insulated busbars and connections, (3) instrument and control power transformers, (4) instruments, meters and relays, and (5) control wiring and accessory devices.

The low-voltage power circuit breakers are contained in individual grounded metal compartments and are controlled either remotely or from the front of the enclosure. The circuit breakers may be stationary or of the draw-out type.

These switchgear assemblies may consist of a single vertical section housing one or more individual low-voltage power circuit breaker compartments or auxiliary compartments, along with the associated busbar structure, or may consist of several abutting sections interconnected by horizontal buses.

The auxiliary compartments may house such auxiliary equipment as potential transformers, control power transformers, or other miscellaneous devices.

These switchgear assemblies are marked with the following ratings or with a reference to a drawing which is included with the product and marked with the following ratings: (1) rated maximum voltage, (2) rated frequency, (3) rated insulation level, (4) rated continuous current, (5) rated short-time current, and (6) rated short circuit current.

Low-voltage power switching devices used in these switchgear assemblies are suitable for continuous use at 100 percent of their continuous current rating.

The marking "Suitable for Use as Service Equipment" appears on each switchgear section or assembly optionally intended for use at a service.

A switchgear section marked for use at services may also be used to provide the main control and means of cutoff for a separately derived system.

SWITCHGEAR ASSEMBLIES, METAL ENCLOSED, LOW-VOLTAGE POWER CIRCUIT BREAKER TYPE (WUTZ)

391

Generally this switchgear is shipped without wire connectors and the busbar terminations are provided with standard bolt hole patterns. The suitability of the wire connectors installed must be determined by Authorities Having Jurisdiction at the time of final inspection.

A switchgear section investigated to determine if it is rainproof is marked "Rainproof."

The individual power circuit breaker compartments or adapters are intended to accommodate a low-voltage power circuit breaker and are marked to indicate the type(s) of circuit breaker that may be installed.

Individual auxiliary compartments are intended to house control components such as meters, instrument and/or control power transformers, and the like.

Low-voltage power circuit breaker switchgear assemblies are generally provided with shop drawings or the like that include circuit and connection diagrams of the assembly, continuous current ratings of the main and section buses, details of control and ground-fault protection (if provided) circuits, etc.

ARC-RESISTANT SWITCHGEAR

Metal-enclosed switchgear specially designed to provide some degree of protection to an operator, or other personnel in the vicinity of the equipment, from the effects of an internal arc occurring in atmospheric air within the enclosure when the doors and covers are secured as intended, may additionally be Classified as arc-resistant switchgear.

Arc-resistant switchgear has been investigated for installation in buildings (for indoor applications) that have sufficient overhead space to permit venting without reflecting arc products, as specified in the installation instructions.

Arc-resistant switchgear is marked with an Accessibility Type designation of Type 1 or 2, 1B or 2B, 1C or 2C, or 1D based upon the construction and the standard used for the investigation.

Type 1 denotes that arcing does not cause holes in the freely accessible front of the enclosure.

Type 2 denotes that arcing does not cause holes in the freely accessible front, sides and rear of the enclosure.

Type 1B denotes that arcing does not cause holes in the freely accessible front of the enclosure or in the walls isolating the low-voltage control or instrument compartments.

Type 2B denotes that arcing does not cause holes in the freely accessible front, sides and rear of the enclosure or in the walls isolating the low-voltage control or instrument compartments.

Type 1C denotes that arcing does not cause holes in the freely accessible front of the enclosure or in the walls separating the compartment in which the arc is initiated from all adjacent compartments.

Type 2C denotes that arcing does not cause holes in the freely accessible front of the enclosure or in the walls separating the compartment in which the arc is initiated from all adjacent compartments, except that a fault in the main busbar compartment is allowed to propagate into the main busbar compartment of adjacent vertical sections.

Type 1D denotes that arcing does not cause holes in the freely accessible front and any other surface of the enclosure under investigation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 1558, "Metal-Enclosed Low-Voltage Power Circuit Breaker Switchgear," and IEEE C37.20.1, "IEEE Standard for Metal-Enclosed Low-Voltage Power Circuit Breaker Switchgear."

The basic standard used to investigate switchgear Classified as "arc resistant" is IEEE C37.20.7, "IEEE Guide for Testing Medium-Voltage Metal-Enclosed Switchgear for Internal Arcing Faults."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low-Voltage Power Circuit Breaker Switchgear Section," "Low-Voltage Power Circuit Breaker Compartment" or "Low-Voltage Power Circuit Breaker Auxiliary Compartment."

The Listing Mark for low-voltage power circuit breaker switchgear sections also includes the marking "___ of ___." The first blank is stamped with a number indicating the position that the section occupies in the series of sections constituting the switchgear assembly. The second blank is stamped with the total number of sections in the switchgear assembly. Only those sections and compartments that bear the Listing Mark are covered under UL's Follow-Up Service.

Classification Mark for Arc-resistant Switchgear

The Classification Mark of Underwriters Laboratories Inc. on switchgear investigated as arc resistant is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Ser-

392 SWITCHGEAR ASSEMBLIES, METAL ENCLOSED, LOW-VOLTAGE POWER CIRCUIT BREAKER TYPE (WUTZ)

vice. The Classification Mark consists of the appropriate Listing Mark (noted above) and the following additional information:

ARC-RESISTANT SWITCHGEAR

ALSO CLASSIFIED IN ACCORDANCE WITH IEEE C37.20.7

The Classification Mark appears on the front of each vertical section eligible for Classification. The Classification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly, or the removable circuit breaker. Each vertical section of a line-up of abutting vertical sections is provided with a "____ of ____" marking, where the first blank indicates the position (from left to right) of the vertical section bearing the UL Mark, and the second blank indicates the total number of vertical sections (including sections not bearing the UL Mark).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHGEAR, GAS INSULATED TYPE, OVER 600 VOLTS (WVEK)

GENERAL

This category covers indoor medium-voltage switchgear where gas, typically sulfur hexafluoride (SF₆), is used as the insulating medium. The term "indoor" does not preclude the use of this equipment in outdoor enclosures, but rather defines the class of equipment. This equipment includes circuit breakers that are specifically intended to provide feeder or branch-circuit overcurrent protection. This equipment is not intended for use as service entrance equipment. These devices are intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code."

CIRCUIT BREAKERS

The circuit breakers are three-pole devices, fixed, trip-free. Interruption may take place in a gas-filled chamber or in a vacuum interrupter that is in a gas-filled chamber. Each circuit breaker pole may be housed separately.

Each circuit breaker is connected to an isolating/grounding switch that can connect the circuit breaker to the circuit, disconnect the circuit breaker, or ground the load circuit through the circuit breaker.

Circuit Breaker Ratings

Each circuit breaker is provided with a marking that indicates the voltage and current ratings for both the close and trip coils. This marking also contains a "close-and-latch" rating in kiloamperes that is equivalent to the momentary rating (maximum asymmetrical current rating) of the circuit breaker. This rating is expressed in rms asymmetrical amperes. Circuit breakers have a rated maximum voltage of 4.76, 8.25, 15, 27 or 38 kV with continuous current ratings of 1200, 2000 or 3000 A.

Circuit breakers are marked with an interrupting rating "I" in rms symmetrical amperes that is applicable at the maximum rated voltage. Circuit breakers using the rating structure of ANSI/IEEE C37.06-1987, "AC High-Voltage Circuit Breakers Rated on a Symmetrical Current Basis Preferred Ratings and Related Required Capabilities," are also provided with a "K" factor for determining the interrupting rating at a use voltage lower than the maximum rated voltage. The circuit breaker may interrupt a current greater than "I" by a factor up to the value of "K," at a voltage reduced from the maximum rated voltage, "V max" by the same factor, or at a lower voltage, as depicted in Illustration 1 of Circuit Breakers and Metal-clad Switchgear Over 600 V (DLAH). Circuit breakers using the rating structure of ANSI/IEEE C37.06-1997 or later do not have a "K" factor, or are marked with a "K" factor of 1.0.

Unless specifically marked otherwise, these circuit breakers are intended for use on three-phase circuits where the nominal voltage-to-ground is 0.58 times the line-to-line voltage.

GAS-INSULATED SWITCHGEAR

This switchgear may consist of several gas-filled compartments connected together. Gas-filled compartments are isolated from each other by gas seals. The compartments are electrically connected together and grounded. A compartment may house a circuit breaker, a length of bus, or a switch. A dual bus system, with isolating switches, may be provided.

A vertical section may consist of a circuit breaker, a switch, a bus compartment and a control compartment. A vertical section may be a single free-standing section or they may consist of a number of abutting vertical sections intended for interconnection by a horizontal bus.

Each vertical section of a line-up of abutting vertical sections is provided with a "____ of ____" marking where the second blank indicates the total number of vertical sections provided (including sections not bearing the UL Listing Mark) and the first blank indicates the position (from left to right) of the vertical section bearing the UL Listing Mark.

Auxiliary equipment such as potential transformers and current transformers are factory installed. Other auxiliary equipment such as protective relays and the like are separately enclosed within the switchgear. They are not typically in gas-insulated compartments.

SWITCHGEAR, GAS INSULATED TYPE, OVER 600 VOLTS (WVEK)

The output of these current sensors is connected to either protective relays or similar sensing and relaying equipment that is typically panel mounted or located behind a dead front.

Gas-insulated Switchgear Ratings

Switchgear assemblies are marked with the following ratings: maximum voltage, frequency, insulating level, continuous current, short-time current and momentary current. When provided with a horizontal bus, each section is marked with the ampacity of the horizontal bus in amperes. This marking appears on each vertical section bearing the UL Listing Mark.

ENCLOSURES

The standard enclosure for the parts operating at medium voltage consists of the metal housing that contains the gas-insulating medium. The enclosures are intended for indoor applications.

An additional enclosure investigated to determine that it is rainproof is marked "Rainproof," "Outdoor" or "3R." These enclosures may be either nonventilated or ventilated. Enclosures intended for outdoor use are marked to indicate the exposure Category (A, B or C) for which they are intended. Enclosures marked "Category A" are intended to be installed in areas accessible to the unsupervised general public; enclosures marked "Category B" are intended to be installed in areas accessible to authorized personnel only; enclosures marked "Category C" are intended to be installed in areas accessible to qualified personnel only. The environmental and exposure category marking need only appear on the first (incoming) switchgear vertical section of a line-up.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are IEEE C37.20.2-1993, "Standard for Metal-Clad Switchgear," ANSI/NEMA C37.54-2002, "Indoor Alternating Current High-Voltage Circuit Breakers Applied as Removable Elements in Metal-Enclosed Switchgear – Conformance Test Procedures," and ANSI/NEMA C37.55-2002, "Switchgear – Medium Voltage Metal-Clad Assemblies – Conformance Test Procedures." Circuit breakers investigated prior to 2002 were investigated to ANSI/NEMA C37.54-1987.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Gas Insulated Switchgear."

In an assembly of products, the Listing Mark is applied to each vertical section eligible for Listing. The Listing Mark on the overall enclosure covers only the vertical section to which it is affixed and any installed fixed circuit breakers; it does not cover other vertical sections included in the assembly, or removable circuit breakers.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHGEAR, METAL ENCLOSED, OVER 600 VOLTS (WVGN)

GENERAL

This category covers medium-voltage, metal-enclosed switchgear where air is used as the primary insulating medium. This does not preclude the use of gas within the switching chamber of a switch or circuit breaker used in the switchgear. This equipment may include load break switches, or circuit breakers that are specifically intended to provide feeder or branch-circuit overcurrent protection. This equipment may also include isolating type switches that are interlocked with circuit breakers or load break switches. These devices are intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code."

CIRCUIT BREAKERS

Circuit breakers are three-pole, fixed type devices. Interruption may take place in a vacuum interrupter, in a gas-filled chamber, or in a vacuum interrupter that is in a gas-filled chamber. Each circuit breaker pole may be housed separately.

Each circuit breaker is connected to an isolating/grounding switch that can connect the circuit breaker to the circuit, disconnect the circuit breaker, or ground the load circuit through the circuit breaker.

Circuit Breaker Ratings

Each circuit breaker is provided with a marking that indicates the voltage and current ratings for both the close and trip coils. This marking also contains a "close-and-latch" rating in kiloamperes that is equivalent to the momentary rating (maximum asymmetrical current rating) of the circuit breaker. This rating is expressed in rms asymmetrical amperes. The pre-

**SWITCHGEAR, METAL ENCLOSED, OVER 600 VOLTS
(WVGN)**

ferred maximum voltage ratings for circuit breakers are 4.76, 8.25, 15, 27 or 38 kV with preferred continuous current ratings of 1200, 2000 or 3000 A. Circuit breakers may have ratings other than these preferred ratings.

Circuit breakers are marked with an interrupting rating "I" in rms symmetrical amperes that is applicable at the maximum rated voltage. Unless specifically marked otherwise, these circuit breakers are intended for use on three-phase circuits where the nominal voltage-to-ground is 0.58 times the line-to-line voltage.

SWITCHES

Switches are three-pole, gang-operated type devices. Interruption may take place in air, or in a gas-filled chamber. The switches provide either a load break or isolating function, and may also provide a means to ground the load conductors. Switches intended for isolation only are interlocked with a device that has been investigated for switching of loads.

Switch Ratings

Each switch is provided with a marking that indicates the switch ratings. This marking includes the rated maximum voltage and continuous current rating of the switch. The preferred maximum voltage ratings for switches are 4.76, 8.25, 15, 27 or 38 kV with preferred continuous current ratings of 200, 600, 1200, 2000 or 3000 A. Switches may have ratings other than these preferred ratings. Switches are also marked with a momentary withstand rating, expressed in rms asymmetrical amperes (kA).

Load break-type switches are marked with a fault-making rating, expressed in rms asymmetrical amperes, which is applicable at the maximum rated voltage. Unless specifically marked otherwise, these switches are intended for use on three-phase circuits where the nominal voltage-to-ground is 0.58 times the line-to-line voltage.

METAL-ENCLOSED SWITCHGEAR

Vertical sections may consist of a circuit breaker, a switch, a bus compartment and a control compartment. Vertical sections may be single freestanding sections or they may consist of a number of abutting vertical sections intended for interconnection by a horizontal bus.

Each vertical section of a line-up of abutting vertical sections is provided with a "___ of ___" marking, where the second blank indicates the total number of vertical sections provided (including sections not bearing the UL Mark) and the first blank indicates the position (from left to right) of the vertical section bearing the UL Mark.

Auxiliary equipment, such as potential transformers and current transformers, are factory installed. Other auxiliary equipment, such as protective relays and the like, are separately enclosed within the switchgear. They are not typically in gas-insulated chambers.

The output of each potential and current transformer is connected to either protective relays or similar sensing and relaying equipment that is typically panel mounted or located behind a dead front.

Metal-enclosed Switchgear Ratings

Switchgear assemblies are marked with the following ratings: maximum voltage, frequency, insulating level, continuous current, short-time current and momentary current. When provided with a horizontal bus, each section is marked with the ampacity of the horizontal bus in amperes. This marking appears on each vertical section bearing the UL Mark.

ENCLOSURES

The standard enclosure for the parts operating at medium voltage consists of the metal housing that contains the switches, circuit breakers, and auxiliary equipment. The enclosures are intended for indoor applications unless marked otherwise.

Enclosures are marked to indicate the exposure category (A, B or C) for which they are intended. Enclosures marked "Category A" are intended to be installed in areas accessible to the unsupervised general public; enclosures marked "Category B" are intended to be installed in areas accessible to authorized personnel only; enclosures marked "Category C" are intended to be installed in areas accessible to qualified personnel only.

When intended for outdoor use, an enclosure is investigated to determine that it is rainproof and is marked "Rainproof" or "Outdoor." These enclosures may be either nonventilated or ventilated.

The environmental and exposure category marking need only appear on the first (incoming) switchgear vertical section of a line-up.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are:
ANSI/IEEE 1247-2005, "IEEE Standard for Interrupter Switches for Alternating Current Rated Above 1000 Volts"
ANSI/IEEE C37.20.3-2001, "Metal-Enclosed Interrupter Switchgear"
ANSI/IEEE C37.20.4-2001, "Standard for Indoor AC Switches (1 kV – 38 kV) for Use in Metal-Enclosed Switchgear"
ANSI/NEMA C37.54-2002, "For Indoor Alternating Current High-Voltage Circuit Breakers Applied as Removable Elements in Metal-Enclosed Switchgear – Conformance Test Procedures"
ANSI/NEMA C37.57-2003, "Metal-Enclosed Interrupter Switchgear Assemblies – Conformance Testing"
ANSI/NEMA C37.58-2003, "Indoor AC Medium-Voltage Switches for Use in Metal-Enclosed Switchgear – Conformance Test Procedures"

SWITCHGEAR, METAL ENCLOSED, OVER 600 VOLTS (WVGN) 393**UL MARK**

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Metal-enclosed Switchgear, Over 600 V."

In an assembly of products, the Listing Mark is applied to each vertical section eligible for Listing. The Listing Mark on the overall enclosure covers only the vertical section to which it is affixed and any installed fixed mount switches or fixed mount circuit breakers; it does not cover other vertical sections included in the assembly, or removable switches or circuit breakers.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TABLES, UTILITY (WWJT)

This listing covers tea or coffee tables, lightweight kitchen and utility tables, portable ironing boards, projector tables, portable cabinets, and desks; all with permanently attached receptacles, and with a separable cord set or permanently attached power supply cord. Except for projector tables which may contain a small lamp for previewing slides, the units contain no electrical load other than optional pilot lights.

The basic standards used to investigate products in this category are UL 498, "Attachment Plugs and Receptacles", UL 817, "Cord Sets and Power Supply Cords", and UL 1363, "Temporary Power Taps".

For carts intended for use with audio -, video - or television - type products that have a shelf more than one (1) meter (39.37 inches) above the floor and that are intended for use in schools, institutions, and the like, refer to the Listing for "Carts, Tall Institutional".

For carts, stands, racks, shelves, and the like intended for household or commercial use with audio -, video -, or television - type products; such as television carts, audio racks, wall - mounted or ceiling - hung shelves, and television pedestals, refer to "Carts and Stands for Use with Audio -, Video -, and Television - Type Appliances".

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Utility Table", "Projector Table", "Desk", "Drafting Table", "Portable Utility Cabinet", "Ironing Board With Supply Cord" or other appropriate product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**TANK-MONITORING EQUIPMENT
FOR USE IN HAZARDOUS
LOCATIONS (WWQS)****GENERAL**

This category covers tank-monitoring equipment, including control units, indicators, sensors, transmitters, liquid-level probes and auxiliary devices used for tank monitoring or as part of tank-monitoring systems.

Certain products in this category are associated apparatus and are intended for installation in unclassified locations. They are provided with intrinsically safe circuit(s) as indicated on the product, for extension into a hazardous location.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured

TANK-MONITORING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (WWQS)

under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Tank Monitoring Equipment for Use in Hazardous Locations" or "Tank Monitoring Equipment (Associated Apparatus)," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELECOMMUNICATION EQUIPMENT (WYIE)

Listing of the following products appear in this section:

Custom-Built Telecommunication Equipment
Telephone Appliances and Equipment
Telephones, Cellular.

Telephone power supplies are Listed under "Power Supplies, Telephone" (QQJE). Telecommunication Equipment covered under this category has not been evaluated for use in computer/information technology rooms as defined in the "Standard for the Protection of Electronic Computer/Data Processing Equipment", NFPA 75. Computers and related equipment, including telecommunication equipment, that interface with electronic data processing systems and are intended for use in computer/information technology rooms are Listed under "Data Processing Equipment, Electronic" (EMRT) or "Information Technology Equipment" (NWGO).

Telecommunication equipment which is identified as suitable for outdoor locations is marked with an enclosure type designation or as "Rain tight" or "Rainproof" and is intended for use as indicated in the guide information for Equipment for Use in Ordinary Locations (AALZ). Telecommunication equipment not marked as suitable for outdoor locations is for indoor use only and the acceptability of such equipment when installed in semi-protected or otherwise shielded locations is determined by the Authority Having Jurisdiction.

Unless marked to indicate special circuit characteristics (such as "Class 2" or "Class 3") or another specific function (such as "keyboard"), telecommunication type output connectors (such as RJ series modular jacks, 50 pin commercial connectors, and insulation piercing terminals) of telecommunication equipment are limited to telecommunication circuit levels and are suitable for connection to typical telecommunication networks and distribution wiring installed in accordance with Article 800 of ANSI/NFPA 70, "National Electrical Code" (NEC).

Certain types of telecommunication equipment are intended to be installed on telecommunication lines protected by a secondary protector and are marked to indicate this fact. Secondary protectors are Listed under "Secondary Protectors for Communication Circuits" (QVRG).

Certain types of telecommunication equipment are Listed as accessories for use only with other Listed equipment or systems and are identified by the word "Accessory."

Telecommunication equipment and their accessories that are suitable for mounting in air-handling spaces, as covered by Section 300.22(C) of the NEC, are specifically identified by markings on the product and in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

CUSTOM-BUILT TELECOMMUNICATION EQUIPMENT (WYKM)

GENERAL

This category covers custom-built, modular telecommunication equipment and accessories that include various combinations of cabinets, racks, circuit card assemblies, power supplies, and the like designed for field installation by trained service personnel. They are intended for installation in accordance with Article 800 of ANSI/NFPA 70, "National Electrical Code" (NEC).

This equipment is intended to be installed and maintained by local exchange carriers (LECs), inter-exchange carriers (IXCs), and similar operating telecommunication companies, which provide service to the subscriber's premise and access to the public network.

INSTALLATION

Custom-built telecommunication equipment is intended to be installed only in restricted access locations, such as equipment rooms or closets,

TELECOMMUNICATION EQUIPMENT (WYIE)

Custom-built Telecommunication Equipment (WYKM)—Continued

where access is limited to trained service personnel, unless it is installed in a Listed rack, cabinet, or similar enclosure identified with the installation code "E."

Some units may have accessible parts (such as the output terminals of a low power ring-generator power supply) that operate at Class 3 voltage levels. The location of these units either in the restricted access location or in the final system configuration is intended to be such that unintentional contact with these parts is unlikely.

Unless identified with the installation code "B" or "E," custom-built telecommunication equipment is intended to be installed only over a noncombustible surface or in a Listed rack, cabinet, or similar enclosure that is identified with the installation code "B" or "E."

Custom-built telecommunication equipment is intended to be configured in a system and installed in accordance with the manufacturer's installation instructions and the network carrier's installation practices. In order to ensure proper coordination of the individual units in the final installation, letter codes are provided to identify significant input, output, and installation parameters. These are divided into three categories: Power Codes (PC), Telecommunication Codes (TC), and Installation Codes (IC).

Power Codes (PC)

Power codes provide information relating to the type of power required to be supplied to the unit (input) or the type of power supplied by the unit (output).

C — As an input code, this designation requires the power inputs to the unit to be limited to normal telecommunication levels. Acceptable sources of power are Listed telephone power supplies identified as having "Level C" outputs, Listed custom-built telecommunication equipment with an output code "C," or communication line powering from Listed telephone equipment or the public network.

As an output code, this designation indicates that the outputs are limited to normal telecommunication levels (Level C) and are suitable for connection to typical telecommunication networks and distribution wiring that are installed in accordance with Article 800 of the NEC.

F — As an input code, this designation requires the power inputs to the unit to be provided with overcurrent protection or be otherwise power limited. Acceptable sources of power are Listed telephone power supplies identified as having "Class 2" or "Level C" outputs, a Listed Class 2 power source, or Listed custom-built telecommunication equipment with an output code of "F" or "C."

As an output code, this designation indicates that the unit provides power-limited outputs that are intended to be used for custom-built telecommunication equipment in the same system. These outputs have not been investigated as Class 2 circuits or communication circuits unless identified as such.

L — As an input code, this designation requires that, with overcurrent protection bypassed, the power source supplying the unit be limited to 250 VA and the current source be limited to 1000 V max. Acceptable types of limited power sources are Listed Class 2 power supplies, a Listed telephone power supply with outputs identified as being source limited, or Listed custom-built telecommunication equipment with a power output code "L."

As an output code, this designation indicates that, with overcurrent protection bypassed, the unit provides power outputs that are source limited to 250 VA with the current limited to 1000 V max.

The following table summarizes acceptable power sources for units with input power codes C, F and L.

Power Source	May Supply Unit With An Input Power Code:
Output power code "L"	L
Output power code "F"	F
Output power code "C"	L, F, C
Class 2 power source	L, F
Communication circuits (e.g., public network)	L, F, C
Listed telephone power supplies with identified "Level C" outputs	L, F, C
Listed telephone power supplies with identified "source-limited" outputs	L

Telecommunication Codes (TC)

Telecommunication codes provide information relating to the characteristics of the telecommunication circuits that may be connected to the unit.

T — Provided as an output code, this designation indicates that the equipment provides isolation from "exposed" circuits requiring protection in accordance with Section 800.30 of the NEC.

X — As an input code or as an output code, this designation indicates that the input or output telecommunication circuits are suitable for connection to "exposed" circuits requiring protection in accordance with Section 800.30 of the NEC. Absence of this code is an indication that the equipment is intended to be isolated from "exposed" circuits by

TELECOMMUNICATION EQUIPMENT (WYIE)

Custom-built Telecommunication Equipment
(WYKM)—Continued

equipment with an output code designation "T."

Installation Codes (IC)

Installation codes provide information relating to the location and/or installation of the unit.

A — Where provided, this designation indicates that additional information is provided regarding the installation of the unit. Such information may be provided in the form of a permanent tag or information sheet attached to the unit.

B — Where provided, this designation indicates that the equipment provides side and bottom enclosures that minimize the risk of spread of fire. Cabinets, racks, and similar equipment identified with an installation code "B" are not intended to completely enclose or limit accessibility to Listed subassemblies mounted within the enclosure and are, therefore, not intended for use outside of restricted access locations.

E — Where provided, this designation indicates that the equipment provides a complete enclosure for parts that may present a risk of electric shock, electrical energy/high current levels, or fire and limits accessibility to these parts. Cabinets, racks, and similar equipment identified with an installation code "E" are intended to enclose and limit accessibility to Listed subassemblies mounted within the enclosure and may be used outside of restricted access locations.

Marking on Units

The codes are marked in the following format:

	In	Out
Power Code (PC)	F	C
Telecommunication Code (TC)	X	T, X
Installation Code (IC)	A	—

In this example, the "F" Power Code (PC) for the input indicates that the power inputs require overcurrent protection from the equipment that provides power to this unit. The "C" Power Code (PC) for the output indicates that the outputs are limited to levels compatible with communication wiring systems. The "X" input Telecommunication Code (TC) means that the communication circuit inputs are suitable for connection to exposed circuits. The "T" Telecommunication Code (TC) for the output indicates that the unit provides isolation between the exposed circuits connected at the input and the telecommunication output ports. The "X" Telecommunication Code (TC) for the output indicates that the output circuits are also suitable for connection to exposed circuits. The "A" Installation Code (IC) indicates that additional important installation information is provided on a tag or an attached information sheet. The lack of any other installation codes indicates that the equipment should be installed in restricted access locations over a noncombustible surface or mounted in a suitable enclosure with an "E" or "B" installation code.

Power supplies and assemblies containing power supplies or power distribution components are marked with electrical ratings. Assemblies that present a load on the power system are marked with a load or input rating. The total load ratings for any system should not exceed the power supply/distribution ratings.

Custom-built telecommunication equipment is intended to be installed or situated in a location or position that does not cause excessive heat build-up or interfere with its proper ventilation.

RELATED EQUIPMENT

Complete telephone equipment (e.g., PABXs, telephones, telephone answering machines) is covered under Telephone Appliances and Equipment (WYQQ) or Information Technology Equipment Including Electrical Business Equipment (NWGQ).

Information technology equipment is covered under Information Technology Equipment Including Electrical Business Equipment (NWGQ).

Equipment intended to be installed on the network side of the subscriber demarcation point and installed and maintained by telephone companies, CATV companies, and similar network communication companies is covered under Communication Service Equipment (DUZO).

Cabinet, enclosure and rack/frame systems that are not complete information technology (IT) or telecommunication equipment, but include components and assemblies that are intended to power, protect, heat, cool of otherwise support IT or telecommunication equipment that will be installed at a later time, are covered under Information Technology and Communications Equipment Cabinet, Enclosure and Rack Systems (NWIN).

ADDITIONAL INFORMATION

For additional information, see Telecommunication Equipment (WYIE) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1459, "Telephone Equipment," or ANSI/UL 60950 or ANSI/UL 60950-1, "Safety of Information Technology Equipment," and ANSI/UL 60950-21, "Safety of Information Technology Equipment – Remote Power Feeding," as appropriate.

UL MARK

TELECOMMUNICATION EQUIPMENT (WYIE)

395

Custom-built Telecommunication Equipment
(WYKM)—Continued

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Custom-built Telecommunication Equipment" (or "Custom Tel Eq." or "Custom Telecom").

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELEPHONES, CELLULAR (WYLR)**USE**

This category covers hand-held cellular telephones, transportable cellular telephones, and cellular telephone voice-dialers that may be used in households or commercial establishments, or on a vehicle, boat or the like where the telephone interconnects with the telephone network through a radio transmitter and receiver.

UNEVALUATED FACTORS

Possible physiological effects of these devices have not been investigated.

RELATED PRODUCTS

Cell site equipment and similar equipment that forms the "base station" for a cellular communications network, and incorporates the interface to the wired telecommunication network, controllers, amplifiers, and transmitting/receiving equipment is covered under Telephone Appliances and Equipment (WYQQ) or Information Technology Equipment Including Electrical Business Equipment (NWGQ).

ADDITIONAL INFORMATION

For additional information, see Telecommunication Equipment (WYIE) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 6500, "Audio/Video and Musical Instrument Apparatus for Household, Commercial, and Similar General Use," UL 60065, "Audio, Video and Similar Electronic Apparatus – Safety Requirements," UL 1492, "Audio-Video Products and Accessories," or UL 60950 or UL 60950-1, "Safety of Information Technology Equipment," as well as the product certification requirements to current FCC Regulations.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cellular Telephone" (or "Telephone, Cellular") or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**TELEPHONE APPLIANCES AND
EQUIPMENT (WYQQ)****GENERAL**

This category covers appliances and equipment intended to be electrically connected to a telecommunication network that has an operating voltage to ground that does not exceed 200 V peak, 300 V peak-to-peak or 150 V rms, installed or used in accordance with ANSI/NFPA 70, "National Electrical Code."

EQUIPMENT TYPES

Examples of equipment covered under this category include:

- Telephones, telephone answering devices, and telephone dialers that do not deliver a recorded message.
- Key telephone systems, automatic telephone call sequencers, customer administration panels, four-wire channel terminating units, intelligent switching subsystems, message transmitters, mounting shelves, PABX (private automatic branch exchange) systems, phone line TV interface systems, remote telephone base stations, telecontrollers, terminals, terminal sets, WATS boxes and cordless telephones.

INSTALLATION

Telephone Appliances and Equipment (WYQQ)—Continued

Certain types of telephone appliances and equipment have been investigated for installation only over a noncombustible surface and are marked as such.

Certain types of telephone appliances and equipment have been investigated for installation only in restricted access locations, such as equipment rooms or closets, where access is limited to trained service personnel, and are marked as such.

RELATED EQUIPMENT

Information technology equipment, including other telecommunication appliances and equipment, is covered under Information Technology Equipment Including Electrical Business Equipment (NWGQ).

Modular assemblies (e.g., racks, circuit card assemblies) designed for field installation by trained service personnel are covered under Custom-built Telecommunication Equipment (WYKM).

Equipment intended to be installed on the network side of the subscriber demarcation point and installed and maintained by telephone companies, CATV companies and similar network communication companies is covered under Communication Service Equipment (DUZO).

Cabinet, enclosure and rack/frame systems that are not complete information technology (IT) or telecommunication equipment, but include components and assemblies that are intended to power, protect, heat, cool or otherwise support IT or telecommunication equipment that will be installed at a later time, are covered under Information Technology and Communications Equipment Cabinet, Enclosure and Rack Systems (NWIN).

Power distribution centers for communications equipment are covered under Power Distribution Centers for Communications Equipment (QPQY).

Power supplies for information technology and telecommunication equipment are covered under Power Supplies, Information Technology Equipment Including Electrical Business Equipment (QQGQ) and Power Supplies, Telephone (QQJE).

Accessories and Subassemblies

Field-installed accessories and subassemblies (component assemblies) to Listed equipment are provided with suitable markings and/or instructions, providing details on proper installation or assembly of the accessory/subassembly with equipment specified in the markings or instructions.

ADDITIONAL INFORMATION

For additional information, see Telecommunication Equipment (WYIE) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1459, "Telephone Equipment."

Certain types of equipment have been investigated for installation in an environmental air space and are provided with a marking or installation instruction, which states "Suitable for Use in Other Environmental Air Space in Accordance with Section 300.22(C) of the National Electrical Code," or similar wording. In such cases, UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and their Accessories Installed in Air-Handling Spaces," has been applied.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Telephone Appliance," "Telephone Equipment," "Telecommunication Equipment," "Telephone Answering Appliance," "Telephone Call Diverter," "Automatic Dialer," or other appropriate product name as shown in the individual Listings.

The product name for field-installed accessories or subassemblies is provided with the additional word "Accessory" or "Subassembly."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELEMETERING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (WYMG)

GENERAL

This category covers telemetering transmitter coil assemblies, small generators, pulse generators, fluid-flow indicators and meters, transmitter and receiver units employing selsyn motors, and similar equipment.

The investigation of telemetering equipment marked "Raintight" includes a test designed to simulate exposure to beating rain to determine that such exposure will not result in the entrance of water.

TELEMETERING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (WYMG)

Telemetering equipment provided with a factory seal of conductors entering the device enclosure is so identified on the product.

RELATED PRODUCTS

Equipment investigated for use only in the classified locations of automotive and marine service stations is covered under Control, Monitoring and Auxiliary Equipment (EQXX).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Telemetering Equipment for Use in Hazardous Locations," "Section of Telemetering Equipment for Use in Hazardous Locations," "Telemetering Equipment Relating to Hazardous Locations," "Section of Telemetering Equipment Relating to Hazardous Locations," an appropriate abbreviation, or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELEMETERING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (WYMV)

GENERAL

This category covers telemetering transmitter coil assemblies, small generators, pulse generators, fluid flow indicators and meters, transmitter and receiver units employing selsyn motors, and similar equipment.

Investigation of telemetering equipment marked "Rain tight" includes a test designed to simulate exposure to beating rain to determine that such exposure will not result in the entrance of water.

Telemetering equipment provided with a factory seal of conductors entering the device enclosure is so identified on the product.

RELATED PRODUCTS

Equipment that has been investigated for use only in the Classified locations of automotive and marine service stations appears under Control, Monitoring and Auxiliary Equipment (EQXX).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Telemetering Equipment for Use in Hazardous Locations," "Section of Telemetering Equipment for Use in Hazardous Locations," "Telemetering Equipment Relating to Hazardous Locations" or "Section of Telemetering Equipment Relating to Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELEMETERING EQUIPMENT ACCESSORIES FOR USE IN
HAZARDOUS LOCATIONS (WYOS)TELEMETERING EQUIPMENT
ACCESSORIES FOR USE IN
HAZARDOUS LOCATIONS (WYOS)

GENERAL

This category covers retrofit devices and kits consisting of parts and/or subassemblies intended for field installation in Listed telemetering equipment. These products have been investigated to determine that, when used in accordance with the manufacturer's instructions, they do not adversely affect the operation of the complete unit.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY]*
FOR USE WITH [specified product]
Control No.

* The appropriate product name as shown in the individual Classifications

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELEPHONE EQUIPMENT, LEGACY
INSTALLATIONS (WYXR)

USE

This category covers equipment with remote feeding telecommunication circuits intended for backwards compatibility in legacy telecommunication equipment.

This equipment is limited to that which forms part of a telecommunication network up to and including the demarcation point. The circuitry associated with this type of equipment is intended to be installed and located in service access areas only, which may or may not be provided by the equipment housing. This equipment is generally considered central office equipment, though it may be deployed elsewhere in similarly controlled environments.

PRODUCT TYPES

Examples of types of equipment covered under this category are:

- Circuit packs or cards with existing or new technologies designed to be installed into shelf assemblies that form part of a service provider's existing infrastructure.
- Shelf assemblies intended as replacements for existing shelf assemblies mounted in frame line-ups that form part of a service provider's existing infrastructure.
- Shelf assemblies or enclosures intended as replacements for existing service provider infrastructure equipment that are required to be compatible with cards or circuit packs already in service.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2391, "Outline of Investigation for Equipment with Remote Feeding Telecommunication Circuits Intended for Backwards Compatibility in Legacy Telecommunication Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Circuit Pack" or "Shelf Assembly," or other appropriate product name as shown in the individual Listings.

TELEPHONE EQUIPMENT, LEGACY INSTALLATIONS (WYXR) 397

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELEPHONES FOR USE IN
HAZARDOUS LOCATIONS (WZAT)

USE AND INSTALLATION

This category covers telephones, sound-powered telephones, and communication equipment and systems. Unless identified as intrinsically safe or for use in Division 2 locations only, the equipment is of the explosion-proof design.

The handset and cord assembly should be carefully inspected and should be replaced if there is any evidence of damage or deterioration.

The equipment should be installed in accordance with the installation instructions provided with the product and in accordance with ANSI/NFPA 70, "National Electrical Code."

Station equipment, power supply equipment, protectors, and other equipment as detailed in the installation instructions should be located outside the hazardous area.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Telephone for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELEPHONE ACCESSORIES FOR USE IN
HAZARDOUS LOCATIONS (WZOR)

USE

This category covers dialing units, push-button stations, relays, snap switches, and also conduit boxes having terminal blocks for connection to telephone sets.

ADDITIONAL INFORMATION

For additional information, see Telephones for Use in Hazardous Locations (WZAT) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Telephone Accessory for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

AUTOMATIC ELECTRICAL CONTROLS FOR HOUSEHOLD AND SIMILAR USE (XAAA)

AUTOMATIC ELECTRICAL PRESSURE- SENSING CONTROLS (XAAK)

GENERAL

This category covers automatic electrical pressure-sensing controls with a minimum gauge pressure rating of -8.7 psi and a maximum gauge pressure rating of 609.6 psi intended for use in, on, or in association with equipment for household and similar use for heating, air conditioning, ventilation, and similar applications. The equipment may use electricity, gas, oil, solid fuel, solar thermal energy, etc., or a combination thereof. They are intended for household or commercial use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

This category does not cover pressure-sensing in-line cord controls and automatic electrical pressure-sensing controls intended exclusively for industrial applications.

These devices are individual controls utilized as part of a control system with or without nonelectrical outputs or controls that are mechanically integral with multifunctional controls having nonelectrical outputs.

The automatic electrical pressure-sensing controls incorporate electronic devices. These products are investigated to the inherent safety, and to the operating values, operating times and operating sequence where such are associated with equipment safety.

When appropriate, these devices are additionally investigated for functional safety during normal and abnormal operation of the controlled appliance.

Class 2 output circuit — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Article 725 of the NEC for the Class 2 circuit.

Ratings — These pressure-sensing controls have a voltage rating not exceeding 600 V. The input, output, and other environmental ratings of the product are based on the manufacturer's declarations and verified through testing.

PRODUCT MARKINGS

Automatic electrical pressure-sensing controls are marked with the company's name or trademark, a distinctive catalog number, and electrical ratings (e.g., volts, amps, hertz, psi, load type). Additional markings may be required based on the individual Listing Reports.

RELATED PRODUCTS

Automatic electrical pressure-sensing controls intended for gas- and oil-fired appliances, electric central furnaces, boilers and duct heaters are covered under Controls, Primary Safety (MCCZ), Switches (MFHX) and Controls, Limit (MBPR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 60730-1A, "Automatic Electrical Controls for Household and Similar Use, Part 1: General Requirements," and UL 60730-2-6, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Automatic Electrical Pressure Sensing Controls, Including Mechanical Requirements."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Automatic Electrical Pressure-sensing Control."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRIC ACTUATORS (XABE)

GENERAL

This category covers electric actuators intended for use in, on, or in association with equipment for household and similar use for heating, air conditioning, ventilation, and similar applications. The equipment may use electricity, gas, oil, solid fuel, solar thermal energy, etc., or a combination thereof. They are intended for household or commercial use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

Electric Actuators (XABE)—Continued

This category does not cover electric actuators intended exclusively for industrial applications.

The individual Listings of electric actuators do not include valves or other connected mechanical loads. Motors used in electric actuators are investigated to the appropriate motor standards.

These devices are individual controls utilized as part of a control system with or without nonelectrical outputs or controls that are mechanically integral with multifunctional controls having nonelectrical outputs.

The electric actuators incorporate electronic devices and use thermistors. These products are investigated to the inherent safety, and to the operating values, operating times and operating sequence where such are associated with equipment safety.

When appropriate, these devices are additionally investigated for functional safety during normal and abnormal operation of the controlled appliance.

Electric actuators intended for plenum use are investigated for the application and their fire-resistance and low-smoke-producing characteristics in accordance with UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces."

Class 2 output circuit — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Article 725 of the NEC for the Class 2 circuit.

Ratings — These electric actuators have a voltage rating not exceeding 600 V. The input, output, and other environmental ratings of the product are based on the manufacturer's declarations and verified through testing.

PRODUCT MARKINGS

Electric actuators are marked with the company's name or trademark, a distinctive catalog number, and electrical and thermal ratings (e.g., volts, amps, hertz, torque, temperature). Additional markings may be required based on the individual Listing Reports.

RELATED PRODUCTS

See Releasing Devices for Use in Hazardous Locations (TBJW), Temperature-indicating and -Regulating Equipment for Use in Hazardous Locations (XBDV) and Carbon Dioxide Extinguishing System Units, General Use (FYJR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 60730-1A, "Automatic Electrical Controls for Household and Similar Use, Part 1: General Requirements," and UL 60730-2-14, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Electric Actuators."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Thermostat," "Temperature Limiter" or "Thermal Cut-out," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HUMIDITY-SENSING CONTROLS (XACI)

GENERAL

This category covers automatic electric humidity-sensing controls intended for use in, on, or in association with equipment for household and similar use, including electrical controls for heating, air conditioning, ventilation, and similar applications. The equipment may use electricity, gas, oil, solid fuel, solar thermal energy, etc., or a combination thereof. They are intended for household or commercial use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

This category does not cover automatic electrical humidity-sensing controls intended exclusively for industrial applications.

These devices are individual controls utilized as part of a control system with or without nonelectrical outputs or controls that are mechanically integral with multifunctional controls having nonelectrical outputs.

The humidity-sensing controls incorporate electronic devices and use thermistors. These products are investigated to the inherent safety, and to the operating values, operating times and operating sequence where such are associated with equipment safety.

AUTOMATIC ELECTRICAL CONTROLS FOR HOUSEHOLD
AND SIMILAR USE (XAAA)

Humidity-sensing Controls (XACI)—Continued

When appropriate, these devices are additionally investigated for functional safety during normal and abnormal operation of the controlled appliance.

Class 2 output circuit — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Article 725 of the NEC for the Class 2 circuit.

Ratings — These humidity-sensing controls have a voltage rating not exceeding 600 V. The input, output, and other environmental ratings of the product are based on the manufacturer's declarations and verified through testing.

PRODUCT MARKINGS

Humidity-sensing controls are marked with the company's name or trademark, a distinctive catalog number, and electrical and thermal ratings (e.g., volts, amps, hertz, load type, temperature). Additional markings may be required based on the individual Listing Reports.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 60730-1A, "Automatic Electrical Controls for Household and Similar Use, Part 1: General Requirements," and UL 60730-2-13A, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Humidity Sensing Controls."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Humidity-sensing Control" or "Room Humidistat," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MISCELLANEOUS CONTROLS (XACN)

GENERAL

This category covers automatic electrical controls for use in, on, or in association with equipment for household and similar use, including controls for heating, air conditioning, ventilation, and similar applications. The equipment may use electricity, gas, oil, solid fuel, solar thermal energy, etc., or a combination thereof. They are intended for household or commercial use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

This category does not cover automatic electrical controls intended exclusively for industrial applications.

These controls are mechanically or electrically operated, and are responsive to or control such characteristics as temperature, pressure, passage of time, humidity, light, electrostatic effects, flow or liquid level, current, voltage, acceleration and the like. Automatic controls that do not specifically fall under the scope of other product categories are covered under this category.

These devices are individual controls utilized as part of a control system with or without nonelectrical outputs or controls that are mechanically integral with multifunctional controls having nonelectrical outputs.

The automatic electrical controls incorporate electronic devices and use thermistors. These products are investigated to the inherent safety, and to the operating values, operating times and operating sequence where such are associated with equipment safety.

When appropriate, these devices are additionally investigated for functional safety during normal and abnormal operation of the controlled appliance.

Class 2 output circuit — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Article 725 of the NEC for the Class 2 circuit.

Ratings — These automatic electrical controls have a voltage rating not exceeding 600 V. The input, output, and other environmental ratings of the product are based on the manufacturer's declarations and verified through testing.

PRODUCT MARKINGS

Automatic electrical controls are marked with the company's name or trademark, a distinctive catalog number, and electrical and thermal ratings (e.g., volts, amps, hertz, load type, temperature). Additional markings may be required based on the individual Listing Reports.

RELATED PRODUCTS

AUTOMATIC ELECTRICAL CONTROLS FOR HOUSEHOLD AND
SIMILAR USE (XAAA)

Miscellaneous Controls (XACN)—Continued

Automatic controls intended for gas- and oil-fired appliances, electric central furnaces, boilers and duct heaters are covered under Controls, Primary Safety (MCCZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 60730-1A, "Automatic Electrical Controls for Household and Similar Use, Part 1: General Requirements," in addition to one or more of the following:

UL 60730-2-2, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Thermal Motor Protectors"

UL 60730-2-3, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Thermal Protectors for Ballasts for Tubular Fluorescent Lamps"

UL 60730-2-4, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Thermal Motor Protectors for Hermetic and Semi-Hermetic Motor-Compressors"

UL 60730-2-6, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Automatic Electrical Pressure Sensing Controls, Including Mechanical Requirements"

UL 60730-2-7, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Timers and Time Switches"

UL 60730-2-8, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Electrically Operated Water Valves, Including Mechanical Requirements"

UL 60730-2-9, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Temperature Sensing Controls"

UL 60730-2-10A, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Motor Starting Relays"

UL 60730-2-11A, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Energy Regulators"

UL 60730-2-12A, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Electrically Operated Door Locks"

UL 60730-2-13A, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Humidity Sensing Controls"

UL 60730-2-14, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Electric Actuators"

UL 60730-2-16A, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Automatic Electrical Water Level Controls of the Float Type for Household and Similar Applications"

UL 60730-2-18, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Automatic Electrical Water and Air Flow Sensing Controls, Including Mechanical Requirements"

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Foot-actuated Control" or "Electronic Protective Control," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TEMPERATURE-SENSING CONTROLS
(XACX)

GENERAL

This category covers automatic electrical temperature-sensing controls for use in, on, or in association with equipment for household and similar use, including electrical controls for heating, air conditioning, ventilation, and similar applications. The equipment may use electricity, gas, oil, solid fuel, solar thermal energy, etc., or a combination thereof. They are intended for household or commercial use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

This category does not cover automatic electrical temperature-sensing controls intended exclusively for industrial applications.

AUTOMATIC ELECTRICAL CONTROLS FOR HOUSEHOLD AND SIMILAR USE (XAAA)

400

Temperature-sensing Controls (XACX)—Continued

These devices are individual controls utilized as part of a control system with or without nonelectrical outputs or controls that are mechanically integral with multifunctional controls having nonelectrical outputs.

The automatic electrical temperature-sensing controls incorporate electronic devices and use thermistors. These products are investigated to the inherent safety, and to the operating values, operating times and operating sequence where such are associated with equipment safety.

When appropriate, these devices are additionally investigated for functional safety during normal and abnormal operation of the controlled appliance.

Class 2 output circuit — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Article 725 of the NEC for the Class 2 circuit.

Equipment intended for agricultural use — Controls marked to indicate use in agricultural buildings in accordance with Article 547 of the NEC have been tested in the environmental conditions of 547.1(A) and 547.1(B) of the NEC.

Ratings — These temperature-sensing controls have a voltage rating not exceeding 600 V. The input, output, and other environmental ratings of the product are based on the manufacturer's declarations and verified through testing.

PRODUCT MARKINGS

Automatic temperature-sensing controls are marked with the company's name or trademark, a distinctive catalog number, and electrical and thermal ratings (e.g., volts, amps, hertz, load type, temperature). Additional markings may be required based on the individual Listing Reports.

RELATED PRODUCTS

Automatic controls intended for gas- and oil-fired appliances, electric central furnaces, boilers and duct heaters are covered under Controls, Primary Safety (MCCZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 60730-1A, "Automatic Electrical Controls for Household and Similar Use, Part 1: General Requirements," and UL 60730-2-9, "Automatic Electrical Controls for Household and Similar Use; Part 2: Particular Requirements for Temperature Sensing Controls."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Thermostat," "Temperature Limiter" or "Thermal Cut-out," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TEMPERATURE-INDICATING AND -REGULATING EQUIPMENT (XAPX)

GENERAL

This category covers electrical controls designed for heating and cooling equipment, room temperature or humidity regulation, and industrial uses. They are intended for household, commercial or industrial use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

These devices respond directly or indirectly to changes in temperature, humidity, or pressure to effect temperature control of equipment or appliance operation, etc. These devices may be investigated for functioning during the normal operation (regulating) of the controlled appliance or for functioning in the event of an abnormal condition (limiting) of the controlled appliance.

Ratings — Temperature-indicating and regulating equipment is Listed with a maximum rating of 600 V. A control rated in amps is tested with an inductive (75-80 percent power factor) load for alternating current ratings unless a direct current (noninductive) rating is specified.

Manual reset controls — An "M1" or "M2" marking indicates the following manual reset functions are provided:

- **M1** — Controls that automatically reset to the "closed" position after normal operating conditions have been restored if the reset means is held in the "reset" position.

TEMPERATURE-INDICATING AND -REGULATING EQUIPMENT (XAPX)

- **M2** — Controls that do not automatically reset to the "closed" position if the reset means is held in the "reset" position.

Room thermostats — Room thermostats intended for the direct control of electric space heating equipment that are to be permanently connected electrically and are provided with a marked or implied "off" position, disconnect all ungrounded poles of the supply circuit when adjusted to the "off" position.

Equipment suitable for outdoor use — Equipment identified with an enclosure type designation or as "Rain tight" or "Rainproof" is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

Class 2 output circuits — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Article 725 of the NEC for the Class 2 circuit.

Equipment intended for agricultural use — A control marked to indicate use in agricultural buildings in accordance with Article 547 of the NEC has been tested in the environmental conditions of Paragraph 547.1(A) and 547.1(B) of the NEC.

Motor operators — The Listings of motor operators do not include valves or other connected mechanical loads.

PRODUCT MARKINGS

Temperature-indicating and regulating equipment is marked with the company's name or trademark, a distinctive catalog number, and the electrical ratings. Additional markings may be required based on the individual Listing reports.

RELATED PRODUCTS

Safety controls for gas- and oil-fired appliances, electric central furnaces, boilers and duct heaters are covered under Controls, Limit (MBPR), Controls, Primary Safety (MCCZ) or Switches (MFHX).

Controls for refrigeration and air conditioning (except remote, wall-mounted room thermostats) are covered under Controllers, Refrigeration (SDFY).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 873, "Temperature-Indicating and -Regulating Equipment". Alternatively, products may be investigated to Part 1 and the appropriate Part 2s of UL 60730, "Automatic Electrical Controls for Household and Similar Use". The standard designation is noted in the individual Listings.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Temperature Indicating Equipment" or "Temperature Regulating Equipment" or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TEMPERATURE-INDICATING AND -REGULATING EQUIPMENT, ELECTRICAL (XATJ)

GENERAL

This category covers electrical controls designed for heating and cooling equipment, room temperature or humidity regulation, and industrial uses. They are intended for household, commercial or industrial use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

These devices respond directly or indirectly to changes in temperature, humidity, or pressure to effect temperature control or equipment or appliance operation, etc. These devices may be investigated for functioning during the normal operation (regulating) of the controlled appliance or for functioning in the event of an abnormal condition (limiting) of the controlled appliance.

Ratings — Temperature-indicating and regulating equipment is Listed with a maximum rating of 600 V. A control rated in amperes is tested with an inductive (75-80 percent power factor) load for alternating current ratings unless a direct current (noninductive) rating is specified.

Manual reset controls — An "M1" or "M2" marking indicates the following manual reset functions are provided:

TEMPERATURE-INDICATING AND -REGULATING EQUIPMENT, ELECTRICAL (XATJ)

● **M1** – Controls that automatically reset to the “closed” position after normal operating conditions have been restored, if the reset means is held in the “reset” position.

● **M2** – Controls that do not automatically reset to the “closed” position if the reset means is held in the “reset” position.

Room thermostats — Room thermostats intended for the direct control of electric space heating equipment that are to be permanently connected electrically and are provided with a marked or implied “off” position, disconnect all ungrounded poles of the supply circuit when adjusted to the “off” position.

Equipment suitable for outdoor use — Equipment identified with an enclosure type designation or as “Rain tight” or “Rainproof” is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

Class 2 output circuits — A device that incorporates a Class 2 transformer or a Class 2 power source with provision for field wiring of the output circuit is marked to permit wiring as specified in Article 725 of the NEC for the Class 2 circuit.

Equipment intended for agricultural use — A control marked to indicate use in agricultural buildings in accordance with Article 547 of the NEC has been tested in the environmental conditions of 547.1(A) and 547.1(B) of the NEC.

Motor operators — The Listings of motor operators do not include valves or other connected mechanical loads.

PRODUCT MARKINGS

Temperature-indicating and regulating equipment is marked with the company’s name or trademark, a distinctive catalog number, and the electrical ratings. Additional markings may be required based on the individual Listing reports.

RELATED PRODUCTS

Safety controls for gas- and oil-fired appliances, electric central furnaces, boilers and duct heaters are covered under Controls, Limit (MBPR), Controls, Primary Safety (MCCZ) or Switches (MFHX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 60730-1A, “Automatic Electrical Controls for Household and Similar Use; Part 1: General Requirements,” together with the following appropriate Part 2 Standards:

UL 60730-2-3, “Particular Requirements for Thermal Protectors for Ballasts for Tubular Fluorescent Lamps”

UL 60730-2-4, “Particular Requirements for Thermal Motor Protectors for Motor-Compressors of Hermetic and Semi-Hermetic Type”

UL 60730-2-6, “Particular Requirements for Automatic Electrical Pressure Sensing Controls Including Mechanical Requirements”

UL 60730-2-9, “Particular Requirements for Temperature Sensing Controls”

UL 60730-2-10A, “Particular Requirements for Motor Starting Relays”

UL 60730-2-13A, “Particular Requirements for Humidity Sensing Controls”

UL 60730-2-14, “Particular Requirements for Electric Actuators”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Temperature Indicating Equipment” or “Temperature Regulating Equipment,” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TEMPERATURE-INDICATING AND -REGULATING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (XBAI)

USE AND INSTALLATION

This category covers electrical controls for heating and cooling equipment, room temperature or humidity regulation, and industrial uses. These

TEMPERATURE-INDICATING AND -REGULATING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (XBAI)

401

devices respond directly or indirectly to changes in temperature, humidity, or pressure to affect temperature control, or equipment or appliance operation, etc.

RATINGS

Temperature-indicating and regulating equipment is Listed with a maximum rating of 600 V.

Controls intended for across-the-line motor starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and at six times motor full load running current for alternating current motor ratings and at ten times motor full load running current for direct current motor ratings.

A switching device rated in “pilot duty” is intended for control of electromagnetic loads, such as the solenoid of a motor controller or electrically operated valve, and is tested with an appropriate electromagnetic load.

A control rated in amps is tested with an inductive (75-80 percent power factor) load for alternating current ratings unless a noninductive rating is specified, and with a noninductive load for a direct current rating.

The Listings of motor operators do not include valves or other connected mechanical loads.

The Thermostats in the following Listings can be adjusted, or are preset to operate at various temperature settings. The exterior surfaces of the equipment to which the thermostats, or remote bulbs of the thermostats, are attached should not exceed the maximum safe temperature for the hazardous locations involved.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 873, “Temperature-Indicating and Regulating Equipment.”

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Thermostat for Use in Hazardous Locations,” “Temperature-Indicating Equipment for Use in Hazardous Locations” or “Temperature-Indicating Equipment (Associated Apparatus),” or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TEMPERATURE-INDICATING AND -REGULATING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (XBDV)

GENERAL

This category covers electrical controls designed for heating and cooling equipment, room temperature or humidity regulation, and industrial uses. These devices respond directly or indirectly to changes in temperature, humidity, or pressure to effect temperature control, or equipment or appliance operation, etc.

Temperature-indicating and -regulating equipment is Listed with a maximum rating of 600 V. A control rated in amps is tested with an inductive (75-80% power factor) load for alternating-current ratings unless a noninductive rating is specified, and with a noninductive load for a direct-current rating.

Controls intended for across-the-line motor starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and at six times motor full-load running current for alternating-current motor ratings, and at ten times motor full-load running current for direct-current motor ratings.

A switching device rated in “pilot duty” is intended for control of electromagnetic loads, such as the solenoid of a motor controller or electrically-operated valve, and is tested with an appropriate electromagnetic load.

The motor operators in this category do not include valves or other connected mechanical loads.

TEMPERATURE-INDICATING AND -REGULATING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (XBDV)

402

The thermostats covered under this category can be adjusted, or are preset to operate at various temperature settings. The exterior surfaces of the equipment to which the thermostats, or remote bulbs of the thermostats, are attached should not exceed the maximum safe temperature for the hazardous locations involved.

Equipment marked "rain tight" has been subjected to tests designed to simulate exposure to a beating rain to determine that such exposure will not result in entrance of water.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is UL 873, "Temperature-Indicating and -Regulating Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Thermostat for Use in Hazardous Locations," "Temperature-Indicating Equipment for Use in Hazardous Locations" or "Temperature-Indicating Equipment (Associated Apparatus)," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TEMPORARY-LIGHTING STRINGS (XBRT)

USE AND INSTALLATION

This category covers temporary-lighting strings rated 20 A, 125 V, intended for use indoors and outdoors to provide temporary illumination in accordance with Article 590 of ANSI/NFPA 70, "National Electrical Code."

Temporary-lighting strings consist of a factory assembly of flexible cord or cable incorporating a series of Edison-base lampholders provided with lamp guards. The flexible cord may be terminated at one end with an attachment plug, for connection to the source of supply, and with a cord connector at the opposite end. If an attachment plug is not provided, the temporary-lighting string is provided with instructions for proper connection to the source of supply.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1088, "Temporary Lighting Strings."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Temporary Lighting String."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RELOCATABLE POWER TAPS (XBYS)

USE AND INSTALLATION

This category covers relocatable power taps rated 250 V ac or less, 20 A or less. They are intended for indoor use as relocatable multiple outlet extensions of a single branch circuit to supply laboratory equipment, home workshops, home movie lighting controls, musical instrumentation, and to provide outlet receptacles for computers, audio and video equipment, and other equipment.

Relocatable power taps consist of:

RELOCATABLE POWER TAPS (XBYS)

- One attachment plug and a single length of flexible cord terminated in a single enclosure in which one or more receptacles may be mounted, or
- One attachment plug and a single length of flexible cord terminated in a single enclosure in which one or more receptacles may be mounted. Up to six lengths of flexible cord, not exceeding 1-1/2 ft in length, may exit the enclosure with each length terminating in a separate, single cord connector, or
- One attachment plug and a single length of flexible cord terminated in an enclosure in which one or more receptacles may be mounted. A second enclosure in which one or more receptacles may be mounted that is interconnected to the first enclosure with flexible cord, maximum 1-1/2 ft long, may be employed. An interconnected switch housing may also be employed to remotely control the relocatable power tap, provided that the length of the flexible cord between the enclosure and switch housing is not greater than 6 ft.

They may, in addition, be provided with fuses or other supplementary overcurrent protection, switches, suppression components and/or indicator lights in any combination, or connections for cable, communications, telephone and/or antenna.

Relocatable power taps are intended to be directly connected to a permanently installed branch circuit receptacle. Relocatable power taps are not intended to be series connected (daisy chained) to other relocatable power taps or to extension cords.

Relocatable power taps are not intended for use at construction sites and similar locations.

Relocatable power taps are not intended to be permanently secured to building structures, tables, work benches or similar structures, nor are they intended to be used as a substitute for fixed wiring. The cords of relocatable power taps are not intended to be routed through walls, windows, ceilings, floors or similar openings.

The length of the power-supply cord, as measured from the outside surface of the enclosure of the relocatable power tap to the plane of the face of the attachment plug, should not exceed 25 ft (7.62 m) nor be less than 1.5 ft (0.46 m).

Relocatable power taps have not been investigated and are not intended for use with general patient care areas or critical patient care areas of health care facilities as defined in Article 517 of ANSI/NFPA 70, "National Electrical Code."

RELATED PRODUCTS

Relocatable power taps employing cord sets provided with leakage-current detection and interruption are covered under Cord Sets with Leakage-current Detection and Interruption (ELGN).

Portable ground-fault circuit interrupters are covered under Ground-fault Circuit Interrupters (KCXS).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1363, "Relocatable Power Taps."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Relocatable Power Tap," "Power Tap" or "Outlet Strip."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TERMINATION BOXES (XCKT)

GENERAL

This category covers termination boxes rated 600 V or less that (1) consist of lengths of busbars, terminal strips, or terminal blocks with provision for wire connectors to accommodate incoming or outgoing conductors or both, and (2) are intended to be used in accordance with ANSI/NFPA 70, "National Electrical Code." Termination boxes have a rating in amperes based on the size of the bus located within the termination box.

Termination boxes do not contain switching devices, overcurrent protective devices, or any control components (see RELATED PRODUCTS).

This category also covers termination bases to be field installed in termination boxes, and termination boxes in which termination bases are to be field installed.

USE AND INSTALLATION

Termination boxes rated and marked for use on the line side of service equipment may also be used on the load side of service equipment. Termination

TERMINATION BOXES (XCKT)

nation boxes not marked for use on the line side of service equipment and rated 100 A or less are only for use on the load side of service equipment.

Termination boxes may have knockouts or openings for the connection of cable fittings, conduit or electrical metallic tubing. They may also have openings for connection with openings in other equipment, such as meter sockets, panelboards, switch or circuit breaker enclosures, wireways, raceways and the like.

Termination boxes are generally freestanding structures or can be mounted on to a post or pedestal.

A mounting post is intended to be mounted in concrete at grade level or below or is intended to be secured to some other mounting support. A mounting post is marked with a grade level line to which the post should be encased.

A mounting pedestal is intended to be mounted to a concrete slab.

A mounting post or pedestal either has ventilation to inhibit condensation or is provided with instructions indicating the correct mounting procedure.

Unless marked otherwise, a mounting post or pedestal is intended to be self-supporting, and is not intended to serve as the support of a mast for overhead wiring.

PRODUCT MARKINGS

Termination boxes are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Termination boxes intended for use with field-installed wire connectors are marked stating which pressure terminal connectors, component terminal assemblies or termination bases are to be used.

Factory-installed field wiring connectors requiring the use of a special tool (such as crimp connectors) are provided with instructions concerning the proper tool to be used for the termination of conductors.

Termination boxes are marked with their short-circuit current ratings in rms symmetrical amps and with the words "Short-Circuit Current Rating."

Termination boxes are marked with an enclosure type as described in Electrical Equipment for Use in Ordinary Locations (AALZ). Termination boxes marked with an enclosure Type designation of Type 3, 3S, 4, 4X, 6 or 6P may additionally be marked "Raintight." A termination box marked Type 3R may additionally be marked "Rainproof."

Termination boxes suitable for use on the line side of service equipment are marked "Suitable for Use on the Line Side of Service Equipment," or equivalent.

RELATED PRODUCTS

Equipment connected only by busbars to both input and output circuits and equipment known as "end cable tap boxes" are covered under Busways and Associated Fittings (CWFT).

Equipment containing switching devices, relays or overcurrent devices is covered under the appropriate category; see Switchboards (WEIR), Industrial Control Equipment (NIMX) or Panelboards (QEUU).

Posts or pedestals intended to support and feed distribution equipment such as a power outlet, panelboard, or circuit breaker enclosure are covered under Mounting Posts and Pedestals for Distribution Equipment (PUPR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1773, "Termination Boxes."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Termination Box," or the name of the specific type of product as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

THERMAL BARRIER SYSTEMS (XCLF)

GENERAL

Thermal barrier systems consist of components and materials intended for installation as protection for electrical wiring systems specified in the individual system designs with respect to heat transmission from exterior fire exposure. The specifications for the thermal barrier systems and their assembly are important details in the development of the ratings. Information concerning these details are described in the individual systems. System components identified with an (*) in the description text are Classified under the Classification and Follow-Up Service Program of Underwriters

THERMAL BARRIER SYSTEMS (XCLF)

403

Laboratories. Such components and names of manufacturers who are authorized to apply the Classification Mark are identified under the specific product category.

Ratings apply only to the entire thermal barrier system. Individual components and materials are designed for use in a specific system(s) for which corresponding ratings have been developed and are not intended to be interchanged between systems. Ratings are not assigned to individual system components or materials.

Classification of these thermal barrier systems contemplates installation in interior environments with representative heating and air conditioning, unless stated otherwise in the individual Classifications.

The products used in these systems are intended to be installed in accordance with the applicable accompanying instructions. Authorities Having Jurisdiction should be consulted as to the specific requirements covering the installation and use of these Classified systems.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Batts and Blankets (XCLR)

USE AND INSTALLATION

This category covers insulating batts and blankets used to wrap electrical wiring systems in accordance with the application instructions provided with the product, and as specified in the individual thermal barrier system.

Authorities Having Jurisdiction should be consulted before installation.

UNEVALUATED FACTORS

Properties of these materials, other than the degree of fire resistance to specific electrical wiring systems, have not been investigated.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXRH).

REQUIREMENTS

The basic standard used to investigate the thermal barrier systems in which these products are installed is ASTM E1725-2008, "Standard Test Methods for Fire Tests of Fire-Resistive Barrier Systems for Electrical System Components."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**BATTS AND BLANKETS
FOR USE IN THERMAL BARRIER SYSTEMS
SEE UL FIRE RESISTANCE DIRECTORY
Control No.**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

THROUGH-PENETRATION FIRESTOP SYSTEMS (XHEZ)

GENERAL

This category covers firestop systems, which are specific constructions consisting of a wall or floor assembly, a penetrating item passing through an opening in the wall or floor assembly, and the materials designed to prevent the spread of fire through the openings. The specifications for materials in a firestop system and the assembly of the materials are details that directly relate to the established ratings. Information concerning these details is described in the individual systems. The hourly ratings apply only to the complete systems. Individual components are designated for use in a specific system to achieve specified ratings. The individual components are not assigned ratings and are not intended to be interchanged between systems. Additionally, the substitution or elimination of components required in a system should not be made unless specifically permitted in the individual system or in these general guidelines.

The firestop systems covered under this category have been investigated with a positive furnace pressure differential of at least 0.01 in. of water maintained at a distance of 12 in. below horizontal test assemblies and

404 THROUGH-PENETRATION FIRESTOP SYSTEMS (XHEZ)

0.78 in. below the fill materials surrounding the penetrating items passing through vertical test assemblies. The Classifications of firestop systems contemplate installation in heated and air conditioned environments unless stated otherwise in the description of the system.

ANSI/UL 1479, "Fire Tests of Through-Penetration Firestops," defines the criteria for hourly F, T, L and W ratings for firestop systems. The F-rating criteria prohibits flame passage through the system and requires acceptable hose stream test performance. The T-rating criteria prohibits flame passage through the system and requires the maximum temperature rise on the unexposed surface of the wall or floor assembly, on the penetrating item and on the fill material not to exceed 325°F (181°C) above ambient, and requires acceptable hose stream test performance.

The L-rating criteria determines the amount of air leakage, in cu feet per minute per square foot of opening (CFM/sq ft), through the firestop system at ambient and/or 400°F air temperatures at an air pressure differential of 0.30 in. W.C. The L ratings are intended to assist Authorities Having Jurisdiction, and others, in determining the suitability of firestop systems for the protection of penetrations and miscellaneous openings in floors and smoke barriers for the purpose of restricting the movement of smoke in accordance with ANSI/NFPA 101, "Life Safety Code."

The Class 1 W rating determines the capability of the firestop system to maintain watertightness of the penetration through a floor or wall construction at ambient air conditions under 3 ft of water pressure head (1.3 psi) for a period of 72 hours. The W rating may be applicable for building structures whose floors are subjected to incidental standing water and/or for buildings that house critical equipment as described in ANSI/NFPA 75, "Standard for the Protection of Information Technology Equipment," and ANSI/NFPA 76, "Standard for the Fire Protection of Telecommunications Facilities."

Acceptance is based upon the ability of the firestop system to withstand the applied pressure without the passage of any water through the firestop system. After the Class 1 watertightness test, the firestop system is conditioned in accordance with the requirements of ANSI/UL 1479 and the fire and hose stream tests described in the standard are conducted.

The W rating is intended to assist Authorities Having Jurisdiction and others in determining the suitability of firestop systems in applications where submersion in water may be a factor.

Materials used in the firestop systems are to be installed in accordance with the manufacturer's instructions provided with the materials. The structural integrity of the floor or wall assembly needs to be investigated when providing openings for the penetrating items.

ANSI/NFPA 90A, "Standard for the Installation of Air-Conditioning and Ventilating Systems," contains requirements on the use of fire dampers in conjunction with ventilation ducts. Unless specifically indicated as part of the Classification of the damper, the annular space around the damper sleeve should not be firestopped with the materials described herein.

The systems covered in this category are Classified with respect to (1) installation in a wall only, (2) installation in a floor only or (3) installation in either a wall or a floor. Unless otherwise indicated in the systems, the ratings for firestop systems installed in walls apply when either face of the wall is exposed to fire. The ratings for firestop systems installed in a floor apply when the underside or ceiling surface is exposed to fire.

The hourly fire endurance rating of the walls and floors incorporating these systems are not indicated. Volume 1 of the Fire Resistance Directory covers the hourly fire endurance ratings of floor and wall assemblies. Firestop systems that specify installation in concrete floors may include installation in floors consisting of fluted or corrugated steel deck topped with structural concrete, provided that (1) the concrete topping thickness measured above the top plane of the steel deck is equal to or greater than the minimum concrete thickness specified in the system, and (2) the firestop system does not require any portion of the forming material or fill material to extend below the bottom plane of the floor.

Some firestop systems specify the use of hollow-core precast concrete unit floor assemblies. Where not specified, firestop systems utilizing caulk, sealant, putty or spray materials installed over a mineral wool or ceramic blanket may be installed in hollow-core floors, provided that (1) the thickness of the hollow-core floor is equal to or greater than the minimum concrete thickness specified in the system, (2) the maximum size of the opening is 7 in. diameter or 7 in. by 7 in., and (3) any cores of the precast concrete units penetrated as a result of the firestop system are sealed with a minimum 4 in. depth of either firmly packed minimum 4 pcf mineral wool or ceramic fiber blanket, or concrete, grout or mortar. Additionally, firestop systems utilizing a firestop device or wrap strips/steel collar installed around the penetrant beneath the floor may be installed in hollow-core floors, provided that (1) the thickness of the hollow-core floor is equal to or greater than the minimum concrete thickness specified in the system, and (2) the maximum size of the opening is 7 in. diameter or 7 in. by 7 in.

ANSI/NFPA 70, "National Electrical Code" (NEC), contains requirements for permissible installation and percentages of electrical conductor fill for conduits, cable trays and other electrical conductor raceways.

Authorities Having Jurisdiction should be consulted as to the particular requirements covering the installation and use of these Classified systems.

PENETRATING ITEMS**THROUGH-PENETRATION FIRESTOP SYSTEMS (XHEZ)**

When the penetrating item is indicated as being conduit, the conduit is intended for use as a raceway for electrical conductors in accordance with the NEC. Electrical conductors may be used without conduit only when permitted by and installed in accordance with the NEC, and when the conductors are specifically described in the firestop system. The maximum conductor size and the maximum number of conductors in the individual cables are specified in each system. All electrical conductors are to be coped unless indicated otherwise in the system.

When the penetrating item is indicated as being pipe, the pipe is intended for the transport of gases, liquids and the like. The maximum diameter, the minimum wall thickness and the specific material for conduit and pipes are specified in each system. All nonmetallic pipes are to be of the solid core type unless indicated otherwise in the system.

Further specifications for the various types of penetrating items may be found in the documents tabulated below:

Penetrating Item	Document
Electrical Metallic Tubing (EMT)	ANSI/UL 797
Intermediate Metal Conduit (IMC)	ANSI/UL 1242
Rigid Metal Conduit	ANSI/UL 6
Copper Tubing	ASTM B88
Copper Pipe	ASTM B42
Flexible Metal Conduit	ANSI/UL 1
Liquid Tight Flexible Nonmetallic Conduit	ANSI/UL 1660
Rigid Nonmetallic PVC Conduit	ANSI/UL 651
Electrical Nonmetallic Tubing (ENT)	ANSI/UL 1653
Cross-linked Polyethylene (PEX) Tubing	ANSI/ASTM D2737
Solid Core Polyvinyl Chloride (PVC) Pipe	ANSI/ASTM D1785 and ANSI/ASTM D2665
Cellular Core Polyvinyl Chloride (PVC) Pipe	ANSI/ASTM F891
Chlorinated Polyvinyl Chloride (CPVC) Pipe	ANSI/ASTM F442
Solid Core Acrylonitrile Butadiene Styrene (ABS) Pipe	ANSI/ASTM D1527 and ANSI/ASTM D2661
Cellular Core Acrylonitrile Butadiene Styrene (ABS) Pipe	ANSI/ASTM F628
Polybutylene (PB) Pipe	ASTM D3000
Polyvinylidene Fluoride (PVDF) Pipe	ANSI/ASTM F1673
Fiberglass Pipe	ANSI/ASTM D2997

Where the individual system specifies the penetrating item is to be rigidly supported on both sides of wall or floor, the support system should be designed based upon the premise the firestop system provides no support.

Where the penetrating item is indicated as a metallic pipe, conduit, tube, duct or cable, and the firestop system consists of a fill material (such as sealants, putty or mortar) and a packing material, the penetrant may pass through the opening in the wall or floor assembly at an angle, provided the annular space is maintained on both sides of the wall or floor assembly. In all other cases, except where otherwise indicated in the system, the penetrating item should penetrate the wall or floor assembly at a 90° angle.

Some systems do not include penetrating items. These firestop systems are intended to be used to seal openings where the penetrating items have been removed or where the penetrating items have not yet been installed.

FORMING MATERIALS

Forming materials specified for a firestop system are not to be removed after cure of the fill material, unless removal is specified in the description of the system.

FILL MATERIALS

When more than one fill, void or cavity material is specified under a single item number within a firestop system, it is intended that any single one of the materials may be used.

CONDUCTOR AMPACITY

Where indicated in the system, the ampacity reduction due to the firestop system has been determined in accordance with UL Subject 1712, "Outline of Investigation for Tests for Ampacity of Insulated Electrical Conductors Installed in Fire Protective Systems." If not specified in the individual system, the effect of the firestop system on the ampacity of electrical conductors has not been investigated.

NUMBERING SYSTEM

The systems are identified in this category by an alpha-alphanumeric identification system. The alpha components identify the type of assembly being penetrated and the numeric component identifies the type of penetrating item.

The first alpha component is an F, W or C. The F signifies a floor is being penetrated, the W signifies a wall is being penetrated, and C signifies either a floor or a wall is being penetrated.

The second alpha component may be any letter. The significance of the letter used is:

Letter	Description
A	Concrete floors with a minimum thickness less than or equal to 5 in.

THROUGH-PENETRATION FIRESTOP SYSTEMS (XHEZ)

Letter	Description
B	Concrete floors with a minimum thickness greater than 5 in.
C	Framed floors
D	Steel decks in marine vessels
E	Floor-ceiling assemblies consisting of concrete with membrane protection
F through I	Not used at present time
J	Concrete or masonry walls with a minimum thickness less than or equal to 8 in.
K	Concrete or masonry walls with a minimum thickness greater than 8 in.
L	Framed walls
M	Bulkheads in marine vessels
N	Composite panel walls
O through Z	Not used at present time

The numeric component uses sequential numbers to identify the penetrating item. The significance of the number used is:

No. Range	Description
0000-0999	No penetrating items
1000-1999	Metallic pipe, conduit or tubing
2000-2999	Nonmetallic pipe, conduit or tubing
3000-3999	Electrical cable
4000-4999	Cable trays with electrical cable
5000-5999	Insulated pipe
6000-6999	Miscellaneous electrical penetrants, such as busducts
7000-7999	Miscellaneous mechanical penetrants, such as air ducts
8000-8999	Groupings of penetrations, including any combination of items listed above
9000-9999	Not used at present time

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXRH).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1479 (ASTM E814-02), "Fire Tests of Through-Penetration Firestops."

UL MARK

Those materials identified by an (*) in the system description text are eligible to be produced under the Follow-Up Service Program of Underwriters Laboratories Inc. The Classification Mark of UL on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FILL, VOID OR CAVITY MATERIALS (XHHW)

USE AND INSTALLATION

This category covers fill, void or cavity materials, which are proprietary materials investigated for use in joint systems, perimeter fire-containment systems and firestop systems as detailed in UL's Fire Resistance Directory. Except as specified below, properties of the fill, void or cavity materials other than the capacity to provide a degree of fire resistance to openings provided in fire-resistive walls or floors have not been investigated.

These materials are intended for installation at a job site in accordance with the application instructions provided with the product and with the instructions specified in the individual joint system, perimeter fire-containment system or through-penetration firestop system.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

See Joint Systems (XHBN), Perimeter Fire-containment Systems (XHDG) and Through-penetration Firestop Systems (XHEZ).

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXRH).

REQUIREMENTS

The basic standards used to investigate the systems in which these products are installed are ANSI/UL 1479, "Fire Tests of Through-Penetration Firestops," ANSI/UL 2079, "Tests for Fire Resistance of Building Joint Systems," and ANSI/ASTM E2307-04, "Standard Test Method for Determining Fire Resistance of Perimeter Fire Barriers Using Intermediate-Scale, Multi-story Test Apparatus."

Where indicated in the individual Classifications, fill, void or cavity materials have also been investigated to ASTM E136- 04, "Standard Test Method for Behavior of Materials in a Vertical Tube Furnace at 750°C."

FILL, VOID OR CAVITY MATERIALS (XHHW)

405

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

For fill, void or cavity materials investigated for use in through-penetration firestop systems:

**FILL, VOID OR CAVITY MATERIAL
FOR USE IN THROUGH-PENETRATION FIRESTOP SYSTEMS
SEE UL FIRE RESISTANCE DIRECTORY**

Control No.

For fill, void or cavity materials investigated for use in joint systems:

**FILL, VOID OR CAVITY MATERIAL
FOR USE IN JOINT SYSTEMS
SEE UL FIRE RESISTANCE DIRECTORY**

Control No.

For fill, void or cavity materials investigated for use in perimeter fire-containment systems:

**FILL, VOID OR CAVITY MATERIAL
FOR USE IN PERIMETER FIRE CONTAINMENT SYSTEMS
SEE UL FIRE RESISTANCE DIRECTORY**

Control No.

For fill, void or cavity materials investigated for use in firestop systems, joint systems and/or perimeter fire-containment systems:

**FILL, VOID OR CAVITY MATERIAL
FOR USE IN THROUGH-PENETRATION FIRESTOP SYSTEMS
AND/OR
JOINT SYSTEMS AND/OR PERIMETER FIRE CONTAINMENT
SYSTEMS
SEE UL FIRE RESISTANCE DIRECTORY**

Control No.

Where applicable, the following statement may be added to any of the Classification Marks shown above:

**ALSO CLASSIFIED IN ACCORDANCE WITH ASTM E136- 04
STANDARD TEST METHOD FOR BEHAVIOR OF MATERIALS
IN A VERTICAL TUBE FURNACE AT 750°C**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIRESTOP DEVICES (XHJI)

USE AND INSTALLATION

This category covers firestop devices, which are factory-built products intended to provide a degree of fire resistance to openings in fire-resistive walls or floors to accommodate penetrating items, such as electrical cable, cable trays, conduit and pipe.

Firestop devices are intended to be installed in accordance with the instructions provided with the device and the instructions specified in the individual through-penetration firestop system. Classification of these firestop devices contemplates installation within a heated and air-conditioned environment, unless stated otherwise in the individual Classifications.

Properties of the firestop devices other than their capacity to provide a degree of fire resistance to openings provided in fire-resistive walls or floors have not been investigated. Some Classifications include the effect the firestop device has on the ampacity rating of electrical conductors.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

See Fire Resistance Ratings – ANSI/UL 263 (BXUV) and Through-penetration Firestop Systems (XHEZ).

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXRH).

REQUIREMENTS

The basic standard used to investigate the through-penetration firestop systems in which these products are installed is ANSI/UL 1479, "Fire Tests of Through-Penetration Firestops."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**FIRESTOP DEVICE

Control No.**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FORMING MATERIALS (XHJU)

USE AND INSTALLATION

This category covers forming materials investigated for use in firestop systems, joint systems and perimeter fire-containment systems. The forming materials are manufactured from proprietary materials, processed into the form of boards or sheets and formed into various sizes and shapes.

Properties of the forming materials other than their capacity to provide a degree of the fire resistance to openings provided in fire-resistive walls or floors have not been investigated.

These materials are used as a form and seal to prevent leakage during the installation and curing of some fill, void or cavity materials and should be installed in accordance with the instructions specified in the individual joint system, perimeter fire-containment system or through-penetration firestop system. After installation, forming materials are left in place and, together with the fill material, provide a degree of fire resistance for the opening.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

See Fire Resistance Ratings - ANSI/UL 263 (BXUV), Joint Systems (XHBN), Perimeter Fire-containment Systems (XHDG) and Through-penetration Firestop Systems (XHEZ).

JOINT SYSTEMS AND/OR PERIMETER FIRE CONTAINMENT SYSTEMS
SEE UL FIRE RESISTANCE DIRECTORY
Control No.**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

THROUGH-PENETRATING PRODUCTS (XHLY)

USE AND INSTALLATION

This category covers through-penetrating products that are proprietary products (cable, conduit, pipe and tubing) whose fire-resistive properties have been investigated for specific applications in which they pass through openings in fire-rated walls or floors, or both, within a building.

Unless otherwise specified, properties of the through-penetrating products other than their capacity to provide a degree of fire resistance to openings in fire-resistive walls or floors have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

RELATED PRODUCTS

For information on related products, see Fire Resistance Ratings - ANSI/UL 263 (BXUV) and Through-penetration Firestop Systems (XHEZ).

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXRH).

REQUIREMENTS

The basic standard used to investigate the through-penetration firestop systems in which these products are installed is ANSI/UL 1479, "Fire Tests of Through-Penetration Firestops."

Where indicated in the individual Classifications, products have also been investigated for heat and smoke release characteristics in accordance with UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces." Through-penetrating products and their accessories that have been investigated for mounting in air-handling spaces are specifically identified by markings on the product and in the individual Classifications.

Where indicated in the individual Classifications, products have also been investigated to determine their suitability for exposure to ultraviolet light in accordance with ANSI/UL 746C, "Polymeric Materials - Use in Electrical Equipment Evaluations."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. TIME-INDICATING AND -RECORDING APPLIANCES FOR USE IN HAZARDOUS LOCATIONS (XIAZ)

GENERAL

This category covers electric clocks and chart drives.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Clock for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**TIRES, ELECTRICALLY CONDUCTIVE RUBBER,
INDUSTRIAL, RELATING TO HAZARDOUS LOCATIONS
(XJCV)**

TIRES, ELECTRICALLY CONDUCTIVE RUBBER, INDUSTRIAL, RELATING TO HAZARDOUS LOCATIONS (XJCV)

GENERAL

This category covers solid industrial tires made of electrically-conductive rubber specially developed and compounded to have an electrical conductivity adequate to readily dissipate static electricity. The conductive-rubber tires are vulcanized to metal rims or wheels. They are intended for use on industrial trucks that may be operated in hazardous locations where static sparks would introduce a fire and explosion hazard.

In order for static charges to pass from equipment fitted with the tires, it is necessary that the various parts of the equipment be conductive, and electrically connected together, and that the equipment be operated on an adequately conductive surface or flooring (see Flooring, Electrically Conductive, Relating to Hazardous Locations [INFZ]).

Liquid gasoline and oil are injurious to rubber compounds, and impair the electrically-conductive properties of these tires. Accordingly, contact of the tires with liquid gasoline or oil, and the use of floor oils and oily sweeping compounds, should be avoided. Insulating floor waxes should not be used.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 583, "Electric-Battery-Powered Industrial Trucks," and UL 1067, "Electrically Conductive Equipment and Materials for Use in Flammable Anesthetizing Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electrically Conductive Rubber Industrial Tire Relating to Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TOOLS (XJXX)

SEMI-AUTOMATIC WOODWORKING EQUIPMENT (XKHS)

USE AND INSTALLATION

This category covers production and accessory equipment for attended or unattended fabrication or modification of material used in manufacturing products or subassemblies in industrialized or commercial applications. The equipment has a total connected power of 3.7 kW (5 hp) or greater or is rated three-phase. Equipment in this category is designed to be set up for specific manufacturing applications, such as cutting, drilling, planing, or other modification of materials of wood or plastic laminate. The equipment is intended to be installed in accordance with the National Electrical Code, NFPA 70 and Electrical Standard for Industrial Machinery, NFPA 79.

REBUILT EQUIPMENT

This category also covers rebuilt semi-automatic woodworking equipment that may or may not be rebuilt by the original manufacturer. Rebuilt semi-automatic woodworking equipment is factory rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned component parts. Rebuilt semi-automatic woodworking equipment is subject to the same requirements as new semi-automatic woodworking equipment.

SPECIAL CONSIDERATIONS

Devices included in this category are not intended for the handling of hazardous material. The use of some equipment involves certain inherent hazards related to the risk of injury that cannot be wholly eliminated by practical design features. Such hazards have been reduced to an acceptable degree in the Listed equipment.

RELATED EQUIPMENT

Self-sustaining production equipment designed to be programmed for the assembly of products or subassemblies in a specific manufacturing application, such as assembly of components, packaging, sorting, or counting of parts, and which only incorporates manufacturing processes involving heating or cooling, drying, or gluing of parts, is covered under Factory Automation Equipment (GPNY).

TOOLS (XJXX)

407

Semiautomatic Woodworking Equipment (XKHS)—Continued

Robotics and associated control equipment are covered under Robots and Robotic Equipment (TETZ). Industrial Control Panels are covered under their own category (NITW).

Equipment that may be used in residential applications is covered under Tools, Stationary (XKJU).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirement used to investigate products in this category is Subject 2385, "Outline of Investigation for Semi-automatic Woodworking Equipment".

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name, "Semi-automatic Woodworking Equipment" or other appropriate product name. For rebuilt semi-automatic woodworking equipment the product name is preceded by the word "Rebuilt," "Refurbished" or "Remanufactured."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TOOLS FOR USE IN HAZARDOUS LOCATIONS (XKVL)

PORTABLE ELECTRIC TOOLS FOR USE IN HAZARDOUS LOCATIONS (XKWH)

USE

This category covers cord-connected and battery-operated power tools intended for securing fasteners. This category does not cover tools such as drills, grinders, circular saws or other equipment that, under normal operation, may produce arcs, sparks or hot surfaces.

This category does not cover attachments such as grinding wheels, sanders, polishers or other attachments that may be offered by the manufacturer to perform operations other than intended by the design of the basic tool.

The load on certain tools varies within a wide range. Accordingly, the amp rating marked on such a tool may not be the maximum current that can be drawn by the tool under normal use conditions, but is rather an indication of the thermal capacity of the motor employed. It is indicative of the loading to which the tool may be continuously subjected without causing overheating.

The use of some tools involves certain inherent hazards related to the risk of injury that cannot be wholly eliminated by practical design features. Such hazards have been reduced to an acceptable degree in the Listed tools.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standards used to investigate products in this category are ANSI/UL 60745-1, "Hand-Held Motor-Operated Electric Tools – Safety – Part 1: General Requirements," and ANSI/UL 60745-2-2, "Hand-Held Motor-Operated Electric Tools – Safety – Part 2-2: Particular Requirements for Screwdrivers and Impact Wrenches."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Tool for Use in Hazardous Locations," "Portable Tool for Use in Hazardous Locations" or "Portable Electric Tool for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

408 TOOLS FOR USE IN HAZARDOUS LOCATIONS (XKVL)**Portable Electric Tools for Use in Hazardous Locations (XKWH)—Continued**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRADESHOW EQUIPMENT (XNRI)

This category covers equipment intended for indoor use for the purpose of illuminating, animating, activating, or displaying with respect to temporary expositions, exhibits, show conventions, meetings or assemblies. These units are for temporary construction and display at exposition events and are intended to be installed and used in accordance with Article 518 of ANSI/NFPA 70, "National Electrical Code." The requirements of the Authorities Having Jurisdiction should be consulted regarding use of these devices and equipment before installation.

EXHIBITION DISPLAY UNITS, ACCESSORIES (XNRU)**USE**

This category covers accessories consisting of equipment that is complete and is specifically and solely for use in the tradeshow industry as peripheral or related devices. This includes convention center cord sets.

PRODUCT MARKINGS

Convention center cord sets are surface marked "Parallel Convention Center Cable for Temporary Tradeshow Use Only."

ADDITIONAL INFORMATION

For additional information, see Tradeshow Equipment (XNRI) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate convention center cord sets are UL 2305, "Exhibition Display Units – Fabrication and Installation," and UL 817, "Cord Sets and Power-Supply Cords."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Exhibition Display Unit – Accessories."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EXHIBITION DISPLAY UNITS, CUSTOM (XNSA)**USE AND INSTALLATION**

This category covers devices consisting of custom-built panels, sections or complete exhibition display units.

Custom exhibition display units are uniquely designed for display at a particular exhibition, show, meeting or assembly. The unique construction design is intended to be used for a particular product, service or organization.

Custom exhibition display units are built partially or wholly on site.

SURFACE BURNING CHARACTERISTICS

The surface burning characteristics of building materials employed in these assemblies is judged to be no greater than that of ordinary lumber used in on-site construction. Finished surfaces are of materials having a flame spread rating of 200 or less and, unless otherwise marked, a smoke developed rating of 200 or less.

ADDITIONAL INFORMATION

For additional information, see Tradeshow Equipment (XNRI) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 2305, "Exhibition Display Units – Fabrication and Installation."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Exhibition Display Unit – Custom."

TRADESHOW EQUIPMENT (XNRI)**Exhibition Display Units, Custom (XNSA)—Continued**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

EXHIBITION DISPLAY UNITS, PORTABLE AND MODULAR (XNSN)**USE AND INSTALLATION**

This category covers portable tradeshow displays, hanging components and other exhibit assemblies that may be interconnected to form an exhibition display unit.

Portable exhibition display units are intended to be moved. They are hand carried and set up without tools and/or a ladder. They do not require trained personnel to setup.

Modular exhibition display units are systems consisting of a series of components that are tubular in design, and are mechanically connected together to form the supporting structure of an exhibition display unit or portion of a unit. A modular system uses a locking means of connection whereby the strength and integrity of the connection is maintained. Elements of these systems are intended to be used repeatedly in various configurations.

SURFACE BURNING CHARACTERISTICS

The surface burning characteristics of building materials employed in these assemblies are judged to be no greater than that of ordinary lumber used in on-site construction. Finished surfaces are of materials having a flame spread rating of 200 or less and, unless otherwise marked, a smoke developed rating of 200 or less.

ADDITIONAL INFORMATION

For additional information, see Tradeshow Equipment (XNRI) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 2305, "Exhibition Display Units – Fabrication and Installation."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Exhibition Display Unit."

EXHIBITION DISPLAY UNITS, REBUILT (XNST)**GENERAL**

This category covers rebuilt exhibition display units that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt exhibition display units are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt exhibition display units are subject to the same requirements as new exhibition display units.

RELATED PRODUCTS

See Exhibition Display Units, Custom (XNSA) and Exhibition Display Units, Portable and Modular (XNSN).

ADDITIONAL INFORMATION

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRAFFIC SIGNAL CABLE CLASSIFIED IN ACCORDANCE WITH IMSA SPECIFICATIONS (XNTL)

GENERAL

This category covers cable investigated in accordance with International Municipal Signal Association Inc. specifications. The cable is intended for installation as aerial cable or in underground conduit as part of a traffic signal system. This cable employs a color-code scheme that permits a conductor with green insulation to be used for other than grounding purposes. This cable has not been investigated for flammability. This cable is not suitable for use as a substitute for cable or wiring systems covered in ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products is as illustrated below:

TRAFFIC SIGNAL CABLE
CLASSIFIED BY UNDERWRITERS LABORATORIES INC.®
IN ACCORDANCE WITH IMSA SPECIFICATIONS XX-X
No.

In addition, the Classification Mark may include the UL symbol (as illustrated in the Introduction of this Directory).

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRAILING CABLE CLASSIFIED IN ACCORDANCE WITH DIN PUBLICATION DIN VDE 0250 PART 813 (XNUA)

GENERAL

This category covers trailing cable intended to provide power to the boom on shipyard container cranes. The cable consists of insulated conductors, ground conductors and ground check conductors twisted together with an overall jacket. The conductor stranding is intended to be in accordance with Class 5 DIN VDE 0295-1992, "Conductors of Cables, Wires and Flexible Cords for Power Installation." The cable is rated 0.6/1 kV to 20/35 kV.

This cable has not been investigated for use in accordance with ANSI/NFPA 70, "National Electrical Code."

PRODUCT MARKINGS

Trailing cable is marked with the cable construction code followed by the manufacturer's name or other identification and year of manufacture. The cable construction code consists of:

NTM@WOU-# % \$ — trailing cable with one rubber sheath, or

NTS@WOU-# % \$ — trailing cable with two rubber sheaths,

where @ is any number of the abbreviations below that designate the structural elements contained in the cable. The abbreviations are ordered as they appear from the inside to the outside of the cable:

K — rubber cross in the core of the cable

C — conductive metal casing over the stranded cores or between the inner and outer sheath

CG — conductive nonmetallic casing over the stranded cores or between the inner and outer sheath

CE — conductive metal casing over the insulation of the outer conductors

CGE — conductive nonmetallic casing over the insulation of the outer conductors

R — round wire armoring

RL — armoring consisting of round litz wire

/3 — protective conductor uniformly distributed in the interstices

TRAILING CABLE CLASSIFIED IN ACCORDANCE WITH DIN PUBLICATION DIN VDE 0250 PART 813 (XNUA)

409

/3E — protective conductor uniformly distributed over the insulation of the outer conductor

KON — concentric protective conductor between the inner and outer sheath

ST — control cores within the cable

FM — telecommunication lines within the cable

OL — monitoring conductor within the cable,

where # is "J" for a core with a green/yellow marking and "O" is a core without a green/yellow marking,

where % is the number and size of the conductors, and

where \$ is the rated voltage.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is DIN Publication DIN VDE 0250 Part 813-1985, "Insulated Power Cables – Trailing Cable."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

TRAILING CABLE
CLASSIFIED IN ACCORDANCE WITH
DIN PUBLICATION DIN VDE 0250 PART 813
No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFER SWITCHES FOR USE IN FIRE PUMP MOTOR CIRCUITS (XNVE)

GENERAL

This category covers separately mounted, open and enclosed automatic transfer switches intended for use in fire pump motor circuits, including associated control devices, with a maximum rating of 600 V ac.

These transfer switches are intended for use in fire pump motor circuits covered by ANSI/NFPA 20, "Standard for the Installation of Stationary Pumps for Fire Protection," and Article 695 of ANSI/NFPA 70, "National Electrical Code" (NEC).

Fire pump power transfer switches are automatic transfer switches that transfer a fire pump motor load from a normal supply to an alternate (on-site generated or second utility) supply in the event of failure of the normal supply, and automatically return the load to the normal supply when the normal supply is reestablished. No other loads, other than the fire pump motor, are intended to be connected to the fire pump power transfer switch.

If not marked to indicate that the alternate source is a second utility, the alternate source is considered to be an on-site generated supply. Such transfer switches include frequency sensing and sensing of at least one phase of the alternate (generator-set) source to enable transfer to the alternate source. Such transfer switches have a switching contact(s) to initiate the starting of an engine generator set. Such transfer switches may include a disconnect switch or an isolating switch for the alternate source (generator set). If it does, this transfer switch is equipped with pilot contacts for supervision and pilot contacts to override the engine start signal.

Additional sensing devices that may initiate or delay transfer have been investigated in accordance with the manufacturer's marked operating values.

The enclosure of an enclosed transfer switch has been investigated for its ability to protect against water dripping on the enclosure from the downward vertical.

Transfer switches investigated for their suitability for use as service equipment are marked "SUITABLE FOR USE AS SERVICE EQUIPMENT."

Transfer switches are required to be designed so that the load cannot remain simultaneously disconnected for both the normal and alternative sources when either or both sources are available, except that transfer switches marked "SUITABLE FOR USE AS SERVICE EQUIPMENT" are provided with accessible means to independently disconnect both the normal and alternate sources. Alarm pilot contacts are provided to supervise the position of these disconnects.

TRANSFER SWITCHES FOR USE IN FIRE PUMP MOTOR CIRCUITS (XNVE)

These transfer switches are marked with a short-circuit rating and are intended for connection to circuits in which the available fault current does not exceed the marked short-circuit rating.

These transfer switches may be marked to indicate that protection is intended to be provided by fuses or by an inverse time circuit breaker. If there is no marking of a protective device type, transfer switches are considered suitably protected by either type of device. Transfer switches may be marked with a maximum rating of protective device. If not marked with a rating, the transfer switches are considered suitably protected by a protective device of the maximum rating required by Article 695 of the NEC.

Transfer switches have been investigated for load switching and inrush capability and for a number of cycles of operation based on their intended use which includes scheduled test operations switching full load.

RELATED PRODUCTS

Fire pump controller assemblies with a transfer switch are covered under Pump Controllers, Fire (QYZS).

ADDITIONAL INFORMATION

For additional information, see Fire Protection Equipment (AAFP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1008, "Transfer Switch Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fire Pump Power Transfer Switch."

The Listing Mark is applied to the switch panel on transfer switches investigated without regard to the enclosure in which they are mounted. When the Listing Mark is applied to the enclosure of an enclosed transfer switch, it indicates the Listing of the complete enclosed assembly.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFORMERS (XNWX)

TRANSFORMERS, CLASS 2 AND CLASS 3 (XOKV)

GENERAL

This category covers transformers with secondary voltage limits of 30 V rms for Class 2 and 150 V rms for Class 3 in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC), and intended for connection to essentially sinusoidal supply sources.

These transformers are intended for use in Class 2 or Class 3 remote control and signal circuits in accordance with Article 725 of the NEC.

A Class 2 or Class 3 transformer that is inherently limited has an impedance within the transformer that limits the current output to a particular maximum value. It may or may not be provided with a thermostat or other temperature-sensitive device to limit its maximum temperature.

A Class 2 or Class 3 transformer that is not inherently limited does not have an impedance to limit the maximum current output to a specified value. The maximum power is limited by an overcurrent-protective device.

A Class 2 or Class 3 transformer that includes a separate current-limiting impedance, such as a resistor or positive temperature coefficient device (PTC), is covered by these requirements.

PRODUCT MARKINGS

A Class 2 or Class 3 transformer is marked "Class 2" or "Class 3," respectively.

Class 2 transformers with open circuit secondary voltages in excess of 15 V rms or 21.2 V peak but not in excess of 30 V rms or 42.4 V peak, are marked "Class 2 Not Wet, Class 3 Wet," to indicate that wet contact is likely. Class 3 wiring methods are intended to be used, in accordance with Article 725 of the NEC.

These transformers are legibly and permanently marked with the manufacturer's name, trade name or trademark; the date or other dating period of manufacture not exceeding any three consecutive months; a distinctive catalog number or the equivalent; and the electrical rating.

The electrical rating includes:

- The primary voltage
- Frequency
- The voltage and volt-ampere or amperes for each secondary winding

Transformers provided with an insulation system investigated to ANSI/UL 1446, "Systems of Insulating Materials – General," or intended for use in the United States, are marked "ISC-x-US," where:

TRANSFORMERS (XNWX)

Transformers, Class 2 and Class 3 (XOKV)—Continued

"ISC" stands for "Insulation System Class"

"x" is replaced with the rating of the insulation system (e.g., Class 130 (B) insulation)

"US" represents the country in which the transformer is intended to be used

Transformers provided with an insulation system investigated to ANSI/UL 1446 and CAN/CSA-C22.2 No. 0, "General Requirements – Canadian Electrical Code, Part II," or intended for use in the United States and Canada, are marked "ISC-x," where:

"ISC" stands for "Insulation System Class"

"x" is replaced with the rating of the insulation system (e.g., Class 130 (B) insulation)

Transformers are marked to indicate which terminals or leads are for primary and which are for secondary windings. Secondary winding connections are identified one from another.

A transformer with multiple secondary windings having an output exceeding 21.2 or 42.4 V peak is marked, where readily visible after installation, with the word "WARNING," and the following or equivalent: "Risk of electric shock or fire. Do not interconnect secondary windings."

A transformer is marked to indicate the proper replacement part and procedure for a required replaceable protective device.

A transformer rated less than 110 V and not intended for use on a 110-120 V circuit is marked "For use only on (intended voltage) circuits."

Where higher temperature-rated field wiring is required, the transformer is marked "Use wire rated for at least [75 or 90]C."

Transformers intended for installation with open wiring or concealed knob and tube wiring in accordance with Articles 320 and 324 of the NEC, are marked "Suitable for use in accordance with Articles 320 and 324 of the NEC."

Transformers intended for mounting in a conduit knockout and that have no means for maintaining a bonding path between the transformer and the equipment grounding conductor when the transformer is installed in a non-metallic box are marked "Install in Metal Box Only."

Unless marked, the fire resistance of secondary circuit wiring provided as part of the transformer has not been investigated for compliance with Section 725.8(B) of the NEC.

RELATED PRODUCTS

Direct-plug-in Class 2 transformers are covered under Direct-plug-in and Cord-connected Class 2 Power Units (EPBU).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1585, "Class 2 and Class 3 Transformers," or ANSI/UL 5085-1, "Low Voltage Transformers – Part 1: General Requirements," and ANSI/UL 5085-3, "Low Voltage Transformers – Part 3: Class 2 and Class 3 Transformers."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Class 2 Transformer," "Class 2 Not Wet, Class 3 Wet Transformer" or "Class 3 Transformer." The word "Transformer" may be abbreviated "XFMR," "XFRMR" or "XFORMER."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFORMERS, DIMMER (XOYT)

This listing covers dimmer type, air cooled, variable voltage autotransformers and reactors, intended for dimming portable electric lamps and electric lighting fixtures used in nonindustrial branch lighting circuits of not more than 120 v, and having overcurrent protection of not more than 20 amp. They are furnished in enclosures having means for conduit connection and may be provided with a control switch.

See Industrial Control Equipment, Miscellaneous Apparatus for listing of industrial type dimmers.

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic standards used to investigate products in this category are UL 506, "Specialty Transformers," and UL 508, "Electric Industrial Control Equipment."

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its

TRANSFORMERS (XNWX)

Transformers, Dimmer (XOYT)—Continued

Listing and Follow-Up Service. The Listing Mark for these products includes the name and/or symbol of Underwriters Laboratories Inc. (as illustrated in the Introduction of this Directory) together with the word "LISTED", a control number, and one of the following product names as appropriate: "Dimmer Transformer", "Tungsten Lamp Dimmer", "Fluorescent Lamp Dimmer", or other appropriate product name. The word "Transformer" may be replaced by the abbreviation "XFMR", "XFRMR" or "XFORMER".

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFORMERS, DISTRIBUTION, DRY TYPE, OVER 600 VOLTS (XPFS)

USE AND INSTALLATION

This category covers dry-type distribution transformers, including solid cast and resin encapsulated transformers rated 69 kV class or less, single- and three-phase.

Both the primary and secondary voltage ratings may be greater than 600 V. The transformers may be provided with surge arresters.

Transformers provided with forced-air (fan-cooled) ratings are provided with alarm contacts for remote indication of overtemperature.

These transformers are intended for installation in accordance with the requirements of NFPA 70, "National Electrical Code" (NEC).

Transformers having exposed live parts, such as at high voltage bushings, are intended for installation in places accessible only to qualified persons, as defined in the NEC.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1562, "Transformers, Distribution, Dry-Type – Over 600 Volts."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED", a control number, and the product name "Distribution Transformer." The word "Transformer" may be abbreviated "XFMR," "XFRMR" or "XFORMER."

The "Distribution Transformer" Listing Mark covers both the transformer and the enclosure.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFORMERS, DISTRIBUTION, LIQUID-FILLED TYPE, OVER 600 VOLTS (XPLH)

USE AND INSTALLATION

This category covers liquid-filled, distribution type, pad-mounted and substation type transformers, rated 69 kV class or less, single- and three-phase.

Both the primary and secondary voltage ratings may be greater than 600 V. The transformers may be provided with surge arresters.

Transformers provided with forced-air (fan-cooled) ratings are provided with alarm contacts for remote indication of overtemperature.

These transformers are intended for installation in accordance with the requirements of NFPA 70, "National Electrical Code" (NEC).

Transformers having exposed live parts, such as at high voltage bushings, are intended for installation in places accessible only to qualified persons, as defined in the NEC.

The type of liquid used is identified on the transformer nameplate. Additional information on the fluid used is provided in Material Safety Data Sheets (MSDS Sheets) available from the transformer manufacturer.

Transformers identified "FOR USE AS LESS-FLAMMABLE LIQUID-INSULATED TRANSFORMER IN ACCORDANCE WITH SEC. 450-23 OF THE NATIONAL ELECTRICAL CODE (NEC)" are provided with a UL Classified "Less-Flammable Liquid" that has a fire point not less than 300°C. These transformers are marked to identify the product name and flammability rating of the liquid which is provided, whether the liquid may evolve flammable gases when decomposed by an electric arc (as applicable),

TRANSFORMERS (XNWX)

411

Transformers, Distribution, Liquid-filled Type, Over 600 Volts (XPLH)—Continued

and are marked with all use restrictions provided for in the Classification of the liquid. See Transformer Fluids (EOVK) and Dielectric Mediums (EOUV) for additional information. Use restrictions may include information such as limits on the overcurrent protection to be used in the transformer primary.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/IEEE C57.12.00-2000, "Standard General Requirements for Liquid-Immersed Distribution, Power, and Regulating Transformers." Additional standards used to investigate pad-mounted types are ANSI/IEEE C57.12.22-1989, "Standard for Transformers – Pad-Mounted, Compartmental-Type, Self-Cooled, Three-Phase Distribution Transformers with High-Voltage Bushings, 2500 kVA and Smaller: High Voltage, 34,500 Grd/19,920 Volts and Below; Low-Voltage, 480 Volts and Below – Requirements," ANSI/IEEE C57.12.26-1993, "Standard for Transformers – Pad-Mounted, Compartmental-Type, Self-Cooled, Three-Phase Distribution Transformers for Use with Separable Insulated High-Voltage Connectors, 34,500 Grd/19,920 Volts and Below; 2500 kVA and Smaller" and ANSI/IEEE C57.12.28-1996, "Standard for Switchgear and Transformers, Pad-Mounted Equipment – Enclosure Integrity." Additional requirements used to investigate substation-type are contained in ANSI C57.12.13-1992, "Conformance Requirements for Liquid-Filled Transformers Used in Unit Installations, Including Unit Substations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED", a control number, and the product name "Liquid-Filled Distribution Transformer." The word "Transformer" may be abbreviated "XFMR," "XFRMR" or "XFORMER."

The "Liquid-Filled Distribution Transformer" Listing Mark covers both the transformer and the enclosure.

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated in accordance with standards or parts detailed below from standards of the National Fire Protection Association (NFPA). The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and the following marking:

**ALSO CLASSIFIED FOR USE AS LESS-FLAMMABLE LIQUID-INSULATED TRANSFORMER
IN ACCORDANCE WITH SEC. 450-23 OF THE NATIONAL
ELECTRICAL CODE (NEC)
AND MARKED USE RESTRICTIONS ON THE TRANSFORMER**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFORMERS, GENERAL PURPOSE (XPTQ)

USE

This category covers transformers of the compound filled, exposed core or open core, coil construction, general purpose and industrial control types, rated 600 V or less. Step-up, step-down, insulated and autotransformer types, as well as air-cooled reactors, are also included.

Open core and coil power transformers for use in industrial control equipment are identified as "Industrial Control Transformers."

These transformers have been investigated for use on sinusoidal supply circuits only. They have not been investigated for use where a significant nonsinusoidal content is present, such as that which may occur with uninterruptible power supplies, data processing equipment and solid-state motor speed controllers.

General purpose transformers are suitable for use in a maximum 25°C ambient unless otherwise marked. Industrial control transformers are suitable for use in a 40°C ambient.

A transformer intended for elevated voltage use is marked to indicate that one or more windings may be operated at an elevated voltage, in either an isolated or autotransformer mode, as appropriate. Such marking includes the limit of the elevated voltage, the current (amp) limits, and references as to where further connection detail may be found. Such further detail includes typical connection diagrams and methods of relating winding current to total load kVA. Elevated voltage is that situation in

Transformers, General Purpose (XPTQ)—Continued

which a voltage between a winding (including its subordinate parts such as terminals) and other conductive parts of the transformer exceeds the voltage of the winding.

Some transformers are marked to specify a minimum distance to a wall.

General purpose transformers are provided with leads, or with studs or terminal pads to which Listed pressure wire connectors can be factory or field installed to accommodate field wiring. Wire-binding screws or studs with cupped washers may be used for copper wire 10 AWG max.

Unless the equipment is marked otherwise, termination provisions are based on the use of 60°C wire for sizes 14-1 AWG, and 75°C wire for sizes 1/0 AWG and larger.

In cases where the nature of the construction of the transformer is such that special precautions beyond the requirements of ANSI/NFPA 70, "National Electrical Code," must be observed in installations or use, suitable special instructions are marked on the transformer.

PRODUCT MARKINGS

All transformers are marked with the following:

- The primary voltage (or voltages) and frequency
- Number of phases
- All secondary voltages
- The secondary capacity in amperes or volt-amperes

Transformers provided with an insulation system investigated to ANSI/UL 1446, "Systems of Insulating Materials – General," or intended for use in the United States, are marked "ISC-x-US," where:

"ISC" stands for "Insulation System Class"

"x" is replaced with the rating of the insulation system (e.g., Class 130 (B) insulation)

"US" represents the country in which the transformer is intended to be used

Transformers provided with an insulation system investigated to ANSI/UL 1446 and CAN/CSA-C22.2 No. 0, "General Requirements – Canadian Electrical Code, Part II," or intended for use in the United States and Canada, are marked "ISC-x," where:

"ISC" stands for "Insulation System Class"

"x" is replaced with the rating of the insulation system (e.g., Class 130 (B) insulation)

Autotransformers are marked "AUTOTRANSFORMER."

Distribution-system transformers are provided with a wiring diagram.

Transformers weighing more than 100 lbs (45 kg) are marked with their weight in pounds (kg).

Transformers rated 25 kVA or more are marked with the percent impedance.

Transformers are marked with the environmental enclosure Type number (Type 1, Type 2, Type 3R or Type 3RX).

RELATED PRODUCTS

Transformers of the air-cooled, dry, ventilated and nonventilated types are covered under Power and General Purpose Transformers, Dry Type (XQNX).

Reactors used for dimming, and variable voltage autotransformers are covered under Power Circuit and Motor-mounted Apparatus (NMTR) or, for nonindustrial types, Transformers, Dimmers (XOYT).

Voltage regulators are covered under Power Supplies, General Purpose (QQFU).

Swimming pool transformers are covered under Swimming Pool and Spa Transformers (WDGV).

Ballasts for mercury lamps and fluorescent lamps are covered under HID Ballasts (FLCR) and Fluorescent Ballasts (FKVS), respectively.

Ignition transformers are covered under Transformers, Ignition (XPZZ).

Liquid-filled transformers are covered under Transformers, Distribution, Liquid-filled Type, Over 600 V (XPLH).

Class 2 and 3 transformers are covered under Transformers, Class 2 and Class 3 (XOKV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 506, "Specialty Transformers," or ANSI/UL 5085-1, "Low Voltage Transformers – Part 1: General Requirements," and ANSI/UL 5085-2, "Low Voltage Transformers – Part 2: General Purpose Transformers."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "General Purpose Transformer," "Industrial Control Transformer," "Air Cooled Reactor," "Auto-Transformer," or other appropriate product name as shown in the individual Listings. The word "Transformer" may be abbreviated "XFMR," "XFRMR" or "XFORMER."

Transformers, General Purpose (XPTQ)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFORMERS, IGNITION (XPZZ)

This listing covers ignition transformers designed for use on gas or oil burning equipment where the acceptability of the combination has been determined by Underwriters Laboratories Inc. The transformers are designed for connection to supply circuits operating at not over 600 v, and unless otherwise indicated in the individual listings are of the air cooled, step-up type.

Interchangeable transformers Listed as Class 6, 10, 12, or 14 have been investigated to determine that their ignition characteristics are such that they may be interchanged with other Listed transformers of like class and secondary grounding on Listed oil or gas burners employing single spark gaps without further ignition performance test.

Noninterchangeable transformers are for specific applications or include ignition characteristics which preclude their interchangeability and their application to gas or oil burning equipment shall be the subject of special study for each case.

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic standard used to investigate products in this category is UL 506, "Specialty Transformers."

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Interchangeable Ignition Transformer," "Non-Interchangeable Ignition Transformer". A green background identifies the Listing Mark for interchangeable transformers; a red background identifies the Listing Mark for non-interchangeable transformer. The word "Transformer" may be abbreviated "XFMR," "XFRMR," or "XFORMER".

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POWER AND GENERAL-PURPOSE TRANSFORMERS, DRY TYPE (XQNX)**USE AND INSTALLATION**

This category covers transformers of the air-cooled, dry, ventilated and nonventilated types rated 600 V or less; 500 kVA or less single phase; and 1500 kVA or less three-phase. Step-up, step-down, insulated, and autotransformer types, as well as air-cooled reactors, are also included.

The transformers and reactors are provided with leads, or with studs or terminal pads to which Listed pressure wire connectors can be factory or field installed to accommodate field wiring. The adequacy of the wire-bending space, in accordance with Article 373 of ANSI/NFPA 70, "National Electrical Code" (NEC), has not been determined and should be investigated at the time of installation.

Unless the equipment is marked otherwise, termination provisions are based on the use of 60°C wire for sizes 14-1 AWG and 75°C wire for sizes 1/0 AWG and larger.

Unless otherwise marked, these transformers have not been investigated for use where a significant nonsinusoidal current is present. Examples of equipment that may draw nonsinusoidal currents are uninterruptible power supplies, electronic ballasts, data processing equipment and solid-state motor speed controllers.

K factor-rated transformers have not been investigated for use with harmonic loads where the rms current of any single harmonic higher than the tenth is greater than 1/h of the fundamental rms current.

The transformer ratings are based on installation in a maximum 40°C ambient unless otherwise marked.

Transformers with ventilating openings should be installed so that the ventilating openings are not blocked. Some transformers are marked to specify a minimum distance to a wall.

The suitability of the transformer circuit grounding, grounding electrode connections, and equipment grounding connections in accordance with Article 250 of the NEC should be determined by the Authority Having Jurisdiction at the time of installation.

TRANSFORMERS (XNWX)

Power and General-purpose Transformers, Dry Type
(XQNX)—Continued

In cases where the nature or construction of the transformer is such that special precautions beyond the requirements of the NEC must be observed in installations or use, suitable special instructions are marked on the transformer.

PRODUCT MARKINGS

All transformers are marked with the following:

1. A distinctive catalog or model number (or the equivalent)
2. The electrical ratings, which include the following:
 - a) Number of phases
 - b) Frequency(ies) in Hz
 - c) Primary voltage(s)
 - d) Secondary voltage(s)
 - e) Tap voltage(s)
 - f) kVA rating(s)
 - g) Secondary capacity in amperes and the elevated voltage limit (maximum voltage to ground) of the winding (for a transformer rated for elevated use)
3. The temperature class for the insulation system used
4. Their weight in pounds (kg)

Transformers investigated for use where significant nonsinusoidal current is present are marked "Suitable for nonsinusoidal current load with K factor not to exceed ____," where the blank is filled in with one of the standard K factor ratings of 4, 9, 13, 20, 30, 40 or 50. (The K factor specified is the summation of the per unit rms current at harmonic "h" squared times the harmonic order squared.)

If transformers are provided with a temperature sensor, the transformers are marked with the electrical rating of the temperature sensor.

Autotransformers are marked "AUTOTRANSFORMER."

Transformers rated 25 kVA or more are marked with the percent impedance.

Transformers provided with an enclosure are marked with the environmental type number(s).

RELATED PRODUCTS

Reactors used for dimming, and variable voltage autotransformers are covered under Power Circuit and Motor-mounted Apparatus (NMTR) or, for nonindustrial types, Transformers, Dimmers (XOYT).

Voltage regulators are covered under Power Supplies, General Purpose (QQFU).

Swimming pool transformers are covered under Swimming Pool and Spa Transformers (WDGV).

Ballasts for mercury lamps and fluorescent lamps are covered under HID Ballasts (FLCR) and Fluorescent Ballasts (FKVS), respectively.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1561, "Dry-Type General Purpose and Power Transformers."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Transformer," "Air-Cooled Power Transformer" or "Dry Type General Purpose and Power Transformer," or other appropriate product name as shown in the individual Listings. The word "Transformer" may be abbreviated "XFMR," "XFRMR" or "XFORMER."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFORMERS, TOY (XRBV)

GENERAL

This category covers direct plug-in or cord-connected portable, step-down transformers of the low-secondary-voltage type suitable for supplying current to electrically-operated toys or hobby sets.

ACCESSORIES

An accessory to a Listed toy or hobby transformer is provided with suitable markings and/or instructions detailing proper installation or assembly of the accessory with either a specific or generic Listed toy or hobby transformer specified in the markings or instructions. Such accessories serve to provide conditioning or control of the transformer output voltage, current or power.

ADDITIONAL INFORMATION

TRANSFORMERS (XNWX)

413

Transformers, Toy (XRBV)—Continued

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 697, "Toy Transformers".

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Toy Transformer," "Hobby Transformer," "Toy Transformer Accessory" or "Hobby Transformer Accessory."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFORMERS FOR USE IN
HAZARDOUS LOCATIONS (XPAF)TRANSFORMERS, GENERAL PURPOSE
FOR USE IN HAZARDOUS LOCATIONS
(XPJF)

GENERAL

This category covers transformers of the compound filled, exposed core or open core and coil construction (industrial control type) type, rated 600 V or less. Step-up, step-down, insulated, and autotransformer types, as well as air-cooled reactors, are also included. Autotransformers are so marked.

These transformers have been investigated for use on sinusoidal supply circuits only. They have not been investigated for use where a significant nonsinusoidal content is present such as that which may occur with uninterruptible power supplies, data processing equipment and solid-state motor-speed controllers.

General purpose transformers are provided with leads, or with studs or terminal pads to which Listed pressure wire connectors can be factory or field installed to accommodate field wiring. Wire binding screws or studs with cupped washers may be used for copper wire 10 AWG max.

PRODUCT MARKINGS

A transformer intended for elevated voltage use is marked to indicate that one or more windings may be operated at an elevated voltage, in either an isolated or autotransformer mode, as appropriate. Such marking includes the limit of the elevated voltage, the current (amp) limits, and references as to where further connection detail may be found. Such further detail includes typical connection diagrams and methods of relating winding current to total load kVA. Elevated voltage is that situation in which a voltage between a winding (including its subordinate parts such as terminals) and other conductive parts of the transformer exceeds the voltage of the winding.

Some transformers are marked to specify a minimum distance to a wall.

Unless the equipment is marked otherwise, termination provisions are based on the use of 60°C wire for size 14-1 AWG, and 75°C wire for size 1/0 AWG and larger.

In cases where the nature of the construction of the transformer is such that special precautions beyond the requirements of ANSI/NFPA 70, "National Electrical Code," must be observed in installations or use, suitable special instructions are marked on the transformer.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standards used to investigate products in this category are ANSI/UL 506, "Specialty Transformers," ANSI/UL 1012, "Power Units Other Than Class 2," and ANSI/UL 1561, "Dry-Type General Purpose and Power Transformers."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured

TRANSFORMERS FOR USE IN HAZARDOUS LOCATIONS (XPAF)

414

Transformers, General Purpose for Use in Hazardous Locations (XPAF)—Continued

under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "General Purpose Transformer for Use in Hazardous Locations," "Industrial Control Transformer for Use in Hazardous Locations," "Air Cooled Reactor for Use in Hazardous Locations," "Auto-Transformer for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings. The word "Transformer" may be abbreviated "XFMR," "XFRMR" or "XFORMER."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSFORMERS, DISTRIBUTION, LIQUID-FILLED TYPE, OVER 600 VOLTS FOR USE IN HAZARDOUS LOCATIONS (XPLP)

USE

This category covers liquid-filled, distribution type, pad-mounted and substation type transformers, 69 kV class or less, single- and three-phase.

Both the primary and secondary voltage ratings may be greater than 600 V. The transformers may be provided with surge arresters.

The transformers may be provided with fan-cooling accessories. The use of a fan-cooling accessory permits the transformer to experience temporary overloads without exceeding the maximum temperature rating of the transformer insulation system. Transformers equipped with a fan-cooling accessory are marked to indicate that they must be connected to an attended annunciator device and that provision must be made for automatic load shedding in the event of overtemperature.

The type of liquid used is identified on the transformer nameplate. Additional information on the fluid used is provided in Material Safety Data Sheets (MSDS Sheets) available from the transformer manufacturer.

These transformers are intended for installation in accordance with the requirements of ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/IEEE C57.12.00-1987, "Standard General Requirements for Liquid-Immersed Distribution, Power, and Regulating Transformers."

Additional standards used to investigate pad-mounted types are: ANSI/IEEE C57.12.22-1989, "Standard for Transformers – Pad-Mounted, Compartmental-Type, Self-Cooled, Three-Phase Distribution Transformers with High-Voltage Bushings, 2500 kVA and Smaller: High Voltage, 34,500 Grd/19,920 Volts and Below; Low-Voltage, 480 Volts and Below – Requirements"

ANSI/IEEE C57.12.26-1993, "Standard for Transformers – Pad-Mounted, Compartmental-Type, Self-Cooled, Three-Phase Distribution Transformers for Use with Separable Insulated High-Voltage Connectors, 34,500 Grd/19,920 Volts and Below; 2500 kVA and Smaller"

ANSI/IEEE C57.12.28-1999, "Standard for Switchgear and Transformers, Pad-Mounted Equipment – Enclosure Integrity"

Additional requirements used to investigate substation-type are contained in ANSI C57.12.13-1992, "Conformance Requirements for Liquid-Filled Transformers Used in Unit Installations, Including Unit Substations."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Liquid-filled Distribution Transformer for Use in Hazardous Locations." The word "Transformer" may be abbreviated "XFMR," "XFRMR" or "XFORMER."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSIENT VOLTAGE SURGE SUPPRESSORS (XUHT)

TRANSIENT VOLTAGE SURGE SUPPRESSORS (XUHT)

GENERAL

This category covers transient voltage surge suppressors intended to limit the maximum amplitude of transient voltage surges on power lines to specified values. They are not intended to function as surge arresters. All transient voltage surge suppressors including those subjected to type C1, C2 and C3 surge-testing waveforms are intended to be installed on the load side of the main service disconnect, in circuits not exceeding 600 V rms.

Listed suppressors have been tested to verify that the average of the transient voltage surges is limited to the suppressed voltage rating (SVR) marked on the product when subjected to a 1.2 by 50 microsecond 6 kV surge.

Cord-connected and direct plug-in transient voltage surge suppressors are not intended for use with medical, dental, or health care facilities equipment.

Listed suppressors that are additionally marked "Classified in Accordance with IEEE C62.41-1991, Recommended Practice" have been adjunct tested to verify that transient voltage surges do not exceed suppressed voltage ratings specified by the manufacturer when subjected to the "Standard Surge-Testing Waveforms" in ANSI/IEEE C62.41-1991, "IEEE Recommended Practice on Surge Voltages in Low-Voltage AC Power Circuits", using the test procedures specified in UL 1449 except as follows:

- The duty cycle portion of the testing is conducted at the full peak voltage and current values.
- The suppressed voltage rating (SVR) is equal to or greater than the highest suppressed voltage measured.
- The tests are conducted with minimum 6 in. of leads exiting from the enclosure, in accordance with the manufacturer's instructions, for all "hard wired" permanently connected devices.
- The suppressed voltage rating table, as determined in the Classification evaluation, is marked on or provided with the product.

The following information appears on individual Listing Information Pages available from the manufacturer:

Product Type — Identified as follows:

Product Type	Abbreviation
Permanently Connected	PC
Cord-Connected	CC
Direct Plug-In	DPI

Voltage Rating — Refers to the system operating power frequency voltage and number of phases.

Mode(s) — Refers to the pair of electrical connections where the SVR applies. The term "ALL" indicates that the SVR applies to all combinations of pairs of electrical connections.

SVR — Refers to the suppressed voltage rating of the device investigated to UL 1449.

The following information appears on or is provided with products that have been additionally Classified in accordance with IEEE C62.41-1991 as indicated on the individual Listing/Classification Information Pages:

Surge Testing Waveforms — For products which are "Classified in Accordance with IEEE C62.41-1991 Recommended Practice" the waveforms that are applied in testing, indicated in the table below, are in terms of "Location Categories" described in IEEE C62.41-1991.

The peak values of voltage and current for the standard surge-testing waveforms are as follows:

Location Category	Standard Waveform Peak Values	
	Ring Wave	Combination Wave
A1	2 kV/0.07 kA	N/A
A2	4 kV/0.13 kA	N/A
A3	6 kV/0.20 kA	N/A
B1	2 kV/0.17 kA	2 kV/1 kA
B2	4 kV/0.33 kA	4 kV/2 kA
B3	6 kV/0.50 kA	6 kV/3 kA
C1	N/A	6 kV/3 kA
C2	N/A	10 kV/5 kA
C3	N/A	20 kV/10 kA

The standard surge-testing waveforms are as follows:

"Standard 1.2/50 us - 8/20 us Combination Wave"
"Standard 0.5 us - 100 kHz Ring Wave"

Refer to IEEE C62.41-1991 for additional details on standard wave parameters and tolerances.

SVR — Under the "Adjunct Classification" heading, SVR refers to the Suppressed Voltage Rating for the associated surge-testing waveform.

Endurance — Where the number of surges is indicated, an energized sample was subjected to the specified number of surges of the specified waveform, with a minimum of 30 seconds between surges. The suppressed voltage measured following the final surge is required not to deviate from the "as-received" value by more than 10%. Endurance testing is performed in increments of 1000 applications. (e.g., 1000, 2000, 3000, 4000)

TRANSIENT VOLTAGE SURGE SUPPRESSORS (XUHT)

UNEVALUATED FACTORS

The effect of the suppressor on connected loads, the effect of the suppressor on harmonic distortion of the supply voltage and the adequacy of the suppression level to protect connected equipment from damage due to transient voltage surges has not been evaluated.

RELATED PRODUCTS

Surge arresters intended to afford protection against surge related damage to secondary distribution wiring systems and/or to equipment connected thereto and installed in accordance with Article 280 of ANSI/NFPA 70, "National Electrical Code," are covered under Surge Arresters, Lightning Protection (OWHX).

For cord-connected transient voltage surge suppressors employing cord sets provided with leakage current detection and interruption, see Cord Sets with Leakage Current Detection and Interruption (ELGN).

For cord-connected transient voltage surge suppression employing ground-fault circuit interrupters, see Ground-fault Circuit Interrupters (KCXS).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1449, "Transient Voltage Surge Suppressors."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Transient Voltage Surge Suppressor" (or "TVSS").

For products that are also Classified in accordance with IEEE C62.41-1991, the Classification Mark consists of the Listing Mark elements described above and the statement: "ALSO CLASSIFIED IN ACCORDANCE WITH IEEE C62.41-1991 RECOMMENDED PRACTICE."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSIENT VOLTAGE SURGE SUPPRESSOR/PANELBOARD EXTENSION MODULES CLASSIFIED FOR USE WITH SPECIFIED EQUIP. (XUPD)

This category covers transient voltage surge suppressors contained within panelboard extension enclosures. They have been investigated and found suitable for use with specific Listed panelboards in accordance with the details described on the Transient Voltage Surge Suppressor/Panelboard Extension Modules or as provided in the publication provided therewith.

For additional information on markings, see the Guide Information for Transient Voltage Surge Suppressors (XUHT) and Panelboards (QEUY).

A Transient Voltage Surge Suppressor/Panelboard Extension Modules that is Classified is marked where visible after installation with the statement:

"Classified for use only in specified panelboards. For catalog numbers (or equivalent) of specified panelboards, refer to Publication No. _____ provided with this Transient Voltage Surge Suppressor/Panelboard Extension Modules. If additional information is necessary, contact _____ (Classified Transient Voltage Surge Suppressor/Panelboard Extension Modules manufacturer's name)."

The referenced publication is a compatibility list which tabulates the company name, catalog number, number of poles and electrical ratings of the Classified Transient Voltage Surge Suppressor/Panelboard Extension Modules, in addition to the company name and catalog number of the applicable UL Listed panelboards in which the Classified Transient Voltage Surge Suppressor/Panelboard Extension Modules have been investigated. The compatibility list also details the maximum permissible voltage and maximum available short circuit current of the supply system to the panelboard. The Classified Transient Voltage Surge Suppressor/Panelboard Extension Modules is not suitable for the specified application if the system supply characteristics exceed the maximum values indicated in the compatibility list. One copy of the compatibility list is provided with each Transient Voltage Surge Suppressor/Panelboard Extension Modules.

Transient Voltage Surge Suppressor/Panelboard Extension Modules which are additionally marked "Classified in Accordance with IEEE C62.41-1991 Recommended Practice" have been adjunct tested to verify that transient

TRANSIENT VOLTAGE SURGE SUPPRESSOR/PANELBOARD EXTENSION MODULES CLASSIFIED FOR USE WITH SPECIFIED EQUIP. (XUPD)

415

voltage surges do not exceed suppressed voltage ratings specified by the manufacturer when subjected to the "Standard Surge-Testing Waveforms" in ANSI/IEEE C62.41-1991, IEEE Recommended Practices for Surge Voltages in Low-Voltage AC Power Circuits using the test procedures specified in UL 1449 except as follows:

- The duty cycle portion of the testing is conducted at the full peak voltage and current values.
- The suppressed voltage rating (SVR) is equal to or greater than the highest suppressed voltage measured.
- The tests are conducted with minimum 6 inches of leads exiting from the enclosure, in accordance with the manufacturer's instructions, for all "hard wired" permanently connected devices.
- The suppressed voltage rating table, as determined in the Classification evaluation, is marked on or provided with the product.

The following information appears on individual Classification Information Pages available from the manufacturer:

Product Type-Identified as follows:

Product Type	Abbreviation
Permanently connected	PC
Cord-connected	CC
Direct-plug-in	DPI

Voltage Rating — Refers to the system operating power frequency voltage and number of phases.

Mode(s) — Refers to the pair of electrical connections where the SVR applies. The term "ALL" indicates that the SVR applies to all combinations of pairs of electrical connections.

SVR — Refers to the suppressed voltage rating of the device investigated to UL 1449.

The following information appears on or is provided with products that have been additionally Classified in accordance with IEEE C62.41-1991 Recommended Practice, as indicated on the individual Listing/Classification Information Pages:

Surge Testing Waveforms — For products which are "Classified in Accordance with IEEE C62.41-1991 Recommended Practice" the waveforms that are applied in testing, indicated in the table below, are in terms of "Location Categories" described in IEEE C62.41-1991.

The peak values of voltage and current for the standard surge-testing waveforms are as follows:

Standard Waveform Peak Values

Location Category	Ring Wave	Combination Wave
A1	2 kV/0.07 kA	N/A
A2	4 kV/0.13 kA	N/A
A3	6 kV/0.20 kA	N/A
B1	2 kV/0.17 kA	2 kV/1 kA
B2	4 kV/0.33 kA	4 kV/2 kA
B3	6 kV/0.50 kA	6 kV/3 kA
C1	N/A	6 kV/3 kA
C2	N/A	10 kV/5 kA
C3	N/A	20 kV/10 kA

The standard surge-testing waveforms are as follows:

"Standard 1.2/50 us – 8/20 us Combination Wave"

"Standard 0.5 us – 100 kHz Ring Wave"

Refer to IEEE C62.41-1991 for additional details on standard wave parameters and tolerances.

SVR — Under the "Adjunct Classification" heading, SVR refers to the suppressed voltage rating for the associated surge-testing waveform.

Endurance — Where the number of surges is indicated, an energized sample was subjected to the specified number of surges of the specified waveform, with a minimum of 30 seconds between surges. The suppressed voltage measured following the final surge is required not to deviate from the "as-received" value by more than 10%. Endurance testing is performed in increments of 1000 applications. (e.g., 1000, 2000, 3000, 4000).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 1449, "Transient Voltage Surge Suppressors," and ANSI/UL 67, "Panelboards."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol and the word "CLASSIFIED"

**TRANSIENT VOLTAGE SURGE
SUPPRESSOR/PANELBOARD EXTENSION MODULES
CLASSIFIED FOR USE WITH SPECIFIED EQUIP. (XUPD)**

above the UL symbol (as illustrated in the Introduction of this Directory) on the front, visible surface of the transient voltage surge suppressor/panelboard extension module.

In addition, the Classification Mark for these products includes the product name "Transient Voltage Surge Suppressor/Panelboard Extension Modules," together with a control number on the side of the transient voltage surge suppressor/panelboard extension module.

Where indicated in the individual Classifications, the Classification Mark for products additionally investigated to IEEE C62.41-1991 will also include the statement "ALSO CLASSIFIED IN ACCORDANCE WITH IEEE C62.41-1991 RECOMMENDED PRACTICE."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRANSIT APPLICATION EQUIPMENT AND SYSTEMS (XUPY)

This category covers switches, controllers and other equipment intended for use in transit system applications.

POWER RECTIFIERS (XUSP)

GENERAL

This category covers power rectifiers having output voltage ratings up to 750 V dc and power ratings up to 5000 kW. These power rectifiers are intended for use in transit power systems where they are installed in areas that are protected from the elements and not accessible to unqualified personnel.

These power rectifiers are powered by transformers with low-voltage windings in configurations that allow the rectifiers to produce 6 or 12 pulse outputs. The input configuration is identified on the nameplate. The configurations are defined in the standards referenced below.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI C34.2-1968, "Practices and Requirements for Semiconductor Power Rectifiers," and NEMA R19-1968, "Silicon Rectifier Units for Transportation Power Supplies."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Rectifier."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SWITCHES, ISOLATING (XUTE)

USE AND INSTALLATION

This category covers single-pole switches intended to isolate sections of track as needed for maintenance or similar functions.

These switches may be open types or enclosed and may be either manually or motor operated.

Open-type switches are intended for installation in electrical enclosures in accordance with product markings and any accompanying instructions.

RATINGS

These switches are rated 6000 A and 1000 V dc maximum.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 98, "Enclosed and Dead-Front Switches," with the requirements adjusted for ratings not covered in the standard.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products

TRANSIT APPLICATION EQUIPMENT AND SYSTEMS (XUPY)

Switches, Isolating (XUTE)—Continued

includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Transit System Isolating Switch" or "Transit System Sectionalizing Switch."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRASH COMPACTORS (XUTS)

This category covers equipment intended to reduce the volume of trash by means of mechanical compaction.

COMMERCIAL TRASH COMPACTORS (XUUC)

USE AND INSTALLATION

This category covers commercial-use compactors for reducing the volume of trash by mechanical compaction prior to disposal. They may be provided with a facility to tie the compacted trash into bales. They are intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code." These compactors are motor operated and are provided with overcurrent or overheating protective devices.

Commercial-use compactors are intended to be installed, maintained and operated by competent personnel who are fully instructed concerning the hazards involved.

Horizontal-type compactors do not include the waste container or the feed hopper. These components are provided at the time of installation and are intended to be in accordance with ANSI Z245.30-1999, "Waste Containers – Safety Requirements," and ANSI Z245.2-2004, "Stationary Compactors – Safety Requirements for Installation, Maintenance and Operation."

RELATED PRODUCTS

Trash compactors for household use are covered under Household Trash Compactors (XUUM).

Paper shredders for home or office use are covered under Information Technology Equipment Including Electrical Business Equipment (NWGQ).

Waste disposers are covered under Waste Disposers (ZDHR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 73, "Motor-Operated Appliances."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Commercial Compactor," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

HOUSEHOLD TRASH COMPACTORS (XUUM)

GENERAL

This category covers household-use compactors for reducing the volume of trash by mechanical compaction prior to disposal. These compactors are intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code." These motor-operated compactors are rated 250 V or less and are provided with overcurrent or overheating protective devices.

RELATED PRODUCTS

Trash compactors for household use are covered under Commercial Trash Compactors (XUUC).

Paper shredders for home or office use are covered under Information Technology Equipment Including Electrical Business Equipment (NWGQ).

Waste disposers are covered under Waste Disposers (ZDHR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1086, "Household Trash Compactors."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRUCKS, INDUSTRIAL FOR USE IN HAZARDOUS LOCATIONS (XVHY)

Powered industrial trucks include fork trucks, tractors, motorized hand trucks, platform trucks, towing tractors and other specialized types powered by electric motors or internal combustion engines.

They have been classified with regard to specific hazards as indicated in the General Information for each of the following categories.

Except for compressed natural gas fueled industrial trucks, they are intended for use in accordance with the Standard of the National Fire Protection Association for type designations, areas of use, maintenance, and operation of Powered Industrial Trucks, NFPA 505. Compressed natural gas fueled industrial trucks are for use in designated areas where they have been judged acceptable by the Authority Having Jurisdiction.

TRUCKS, INDUSTRIAL, TYPE EX FOR USE IN HAZARDOUS LOCATIONS (XXGV)

GENERAL

This category covers electrical industrial riding or walking-type lift trucks, platform trucks, towing tractors, etc., with a storage battery as the source of power. These trucks and tractors are provided with safeguards to reduce the possibility of ignition of hazardous atmospheres by mechanical or friction sparks. Since such sparks can also be generated by the parts handled, pushed or towed by the classified equipment, suitable precautions should be taken to reduce the possibility of such sparks.

This category does not cover hauled or towed attachments or equipment that is not a part of the truck or tractor.

Classified storage batteries specified by the electric truck manufacturers are intended to be used with the trucks. The batteries are each provided with a receptacle and plug interlocked with a switch that does not permit insertion or withdrawal of the plug unless the switch is in the "off" position, or a receptacle with provision for locking the plug in the receptacle to deter removal by unauthorized persons. Normal levels of electrolytes should be maintained at all times and proper fuses used in the battery fuse enclosure.

At least two of the wheels on these trucks are electrically conductive. Liquid gasoline and oil is injurious to rubber compounds and impairs the electrically conductive properties of the tires. The use of floor oils and oily sweeping compounds should be avoided.

ADDITIONAL INFORMATION

For additional information, see Trucks, Industrial for Use in Hazardous Locations (XVHY) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 583, "Electric-Battery-Powered Industrial Trucks."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

TYPE EX INDUSTRIAL TRUCK
CLASS ____ GROUP ____ HAZARDOUS LOCATIONS ONLY
AS TO FIRE, ELECTRIC SHOCK AND EXPLOSION HAZARDS
No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss,

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

STORAGE BATTERIES, TRUCK, ELECTRIC FOR USE IN HAZARDOUS LOCATIONS (XXIY)

GENERAL

This category covers storage batteries intended for use with Type EX industrial trucks. They are provided with explosion-proof and/or dust-ignition-proof fuse enclosure and interlock switches to prevent insertion or withdrawal of the battery cable plug under load.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 583, "Electric-Battery-Powered Industrial Trucks."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

ELECTRIC TRUCK STORAGE BATTERY
AS TO FIRE, ELECTRIC SHOCK AND EXPLOSION HAZARDS ONLY
CLASS ____ GROUP ____ HAZARDOUS LOCATIONS
Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TRUCKS, INDUSTRIAL (XVHZ)

This category covers powered industrial trucks, which include fork trucks, tractors, motorized hand trucks, platform trucks, towing tractors and other specialized types powered by electric motors or internal combustion engines.

STORAGE BATTERIES, TRUCKS, ELECTRIC (XXHW)

USE AND INSTALLATION

This category covers Types E, EE and EO storage batteries intended for use in Types E, ES and EE industrial trucks where the installation and use is intended to be in accordance with the marking on the end product.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products (AAME).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 583, "Electric-Battery-Powered Industrial Trucks."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

STORAGE BATTERY TYPE * FOR USE IN INDUSTRIAL TRUCKS
AS TO FIRE AND ELECTRIC SHOCK HAZARD ONLY
Control No.

* E, EE or EO

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TUBING AND HOSE, ELECTRICALLY CONDUCTIVE, RELATING TO HAZARDOUS LOCATIONS (YDGZ)

USE

This category covers tubing and reinforced hose of electrically-conductive plastic or natural or synthetic rubber for conveying gases or vapors in flammable anesthetizing locations where it is necessary for safety to avoid accumulation of static electricity. Unless otherwise indicated with the product, they are intended for use with air of anesthetic-air mixtures at comparatively low pressure.

Tests indicate that this tubing and hose in lengths used in flammable anesthetizing locations is sufficiently electrically conductive to equalize electrostatic charges between the electrical conductors to which they are connected.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1067, "Electrically Conductive Equipment and Materials for Use in Flammable Anesthetizing Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electrically Conductive Hose Relating to Hazardous Locations" or "Electrically Conductive Tubing Relating to Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TUNNEL-DRILLING GUIDANCE SYSTEMS FOR USE IN HAZARDOUS LOCATIONS (YDUE)

USE AND INSTALLATION

This category covers tunnel-drilling guidance systems consisting of instruments for indication, monitoring and/or recording of level, direction and inclination of tunnel-drilling machines and the like.

Intrinsically safe systems have been investigated on the basis that all equipment connected to the system is Listed as part of the system unless otherwise indicated and is used as intended.

This equipment is intended to be installed in a "controlled area" as defined by ANSI Z136.1, "Safe Use of Lasers," where access is limited to trained operator and service personnel. This equipment is intended to be provided with a marking or installation instructions which state "To Be Installed Only in a Controlled Area," or similar wording.

With regard to laser radiation hazards, the final installation site location and compliance with final installation site location requirements have not been investigated. The United States Occupational and Safety Act (OSHA) requires the final installation site facility to be in compliance with ANSI Z136.1. ANSI Z136.1 requires the final installation site facility to employ a Laser Safety Officer (LSO) adequately trained in laser safety. It is the responsibility of the LSO to ensure this equipment is installed and operating in compliance with ANSI Z136.1. However, equipment covered under this category has been determined to incorporate all provisions for final installation site location requirements, for example, a remote interlock connector is required, and, equipment covered under this category has been determined to incorporate a remote interlock connector. It is the responsibility of the final installation site LSO to ensure the remote interlock connector is connected, operational, and functioning as required.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

Laser radiation hazards — 21CFR1010, "Performance Standards for Electronic Products: General," and 21CFR1040, "Performance Standards for Light-Emitting Products," or, as an alternative, the 21CFR1010 and

21CFR1040 parts utilizing CDRH Laser Notice 50 (LN50), or, as an alternative, 21CFR1010 and 21CFR1040 with an approved variance, by the Director of the CDRH, to the International Electrotechnical Commission, IEC 60825-1, with Amendment 1 and Amendment 2, "Safety of Laser Products."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Tunnel Drilling Guidance System for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNDERGROUND FEEDER AND BRANCH CIRCUIT CABLE (YDUX)

GENERAL

This category covers underground feeder and branch circuit cable, rated 600 V, in sizes 14 to 4/0 AWG inclusive, copper, and 12 to 4/0 AWG inclusive, aluminum or copper-clad aluminum, for single and multiple conductor cables. It is designated as Type UF cable and is intended for use in accordance with Article 340 of ANSI/NFPA 70, "National Electrical Code" (NEC).

Some multi-conductor cable is surface marked with the suffix "B" immediately following the type letters to indicate the usage of conductors employing 90°C rated insulation.

Such cable may also be installed as Nonmetallic-sheathed Cable, per Section 340.10(4) of the NEC. The ampacities of Type UF cable, with or without the suffix "B," are those of 60°C rated conductors as specified in the latest edition of the NEC.

Submersible Water Pump Cable — Indicates multi-conductor cable in which 2, 3 or 4 single-conductor Type UF cables are provided in a flat or twisted assembly. The cable is Listed in sizes from 14 AWG to 4/0 AWG inclusive, copper, and from 12 AWG to 4/0 AWG inclusive, aluminum or copper-clad aluminum. The cable is tag marked "For use within the well casing for wiring deep well water pumps where the cable is not subject to repetitive handling caused by frequent servicing of the pump units." The insulation may also be surface marked "Pump Cable." The cable may be directly buried in the earth in conjunction with this use.

This cable may employ copper, aluminum, or copper-clad aluminum conductors. Cable with copper-clad aluminum conductors is surface printed "AL (CU-CLAD)" or "Cu-Clad Al." Cable with aluminum conductors is surface printed "AL."

Cable employing compact-stranded copper conductors is so identified directly following the conductor size wherever it appears (surface, tag, carton or reel) by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors." For conductor termination information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

This cable may be terminated at boxes and other enclosures by using nonmetallic-sheathed cable connectors [see Nonmetallic-sheathed Cable Connectors (PXJV)].

Cable suitable for exposure to direct rays of the sun is indicated by tag marking and marking on the surface of the cable with the designation "Sunlight Resistant."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 493, "Thermoplastic-Insulated Underground Feeder and Branch-Circuit Cables."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Underground feeder cable that contains copper or copper-clad aluminum conductors has the product name "Underground Feeder Cable"; underground feeder cable that contains aluminum conductors has the product name "Aluminum Underground Feeder Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or

UNDERGROUND FEEDER AND BRANCH CIRCUIT CABLE (YDUX)

any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNINTERRUPTIBLE POWER SUPPLY EQUIPMENT (YEDU)

USE AND INSTALLATION

This category covers indoor and outdoor use uninterruptible power supply (UPS) equipment that may be stationary or fixed. This equipment is rated 600 V or less and is intended for use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

This category also covers large UPS equipment requiring field assembly of modules or subassemblies, which are appropriately marked as indicated below.

A UPS is used to provide alternating current power to a load for some period of time in the event of a utility power failure. In addition, it may provide a more constant voltage and frequency supply to the load, reducing the effects of utility voltage and frequency variations.

These products include the following equipment intended for use with a UPS: (1) battery supply modules with or without batteries, (2) remote status panels, (3) bypass switches, (4) maintenance bypass switches, (5) battery circuit disconnect switches, (6) rectifier and power conversion units, and (7) power distribution panels.

The investigation of UPS equipment does not include the effects on the load that may be caused by momentary disruption of alternating current power.

A UPS identified with an enclosure type designation or as "Rain tight" or "Rainproof" is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

Products suitable for use in computer rooms in accordance with ANSI/NFPA 75, "Standard for the Protection of Information Technology Equipment," are marked "Suitable for Computer Room Applications," or the equivalent.

This category does not cover a UPS intended as a component of a fire-protective or burglary-protective signaling system.

REBUILT PRODUCTS

This category also covers UPS equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt UPS equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt UPS equipment is subject to the same requirements as new UPS equipment.

RELATED PRODUCTS

UPS systems for use with professional medical and dental equipment are covered under Uninterruptible Power Supplies for Use in Health Care Facilities (KFFG).

Battery-powered emergency equipment for controlling lighting and/or power in accordance with Article 700 of the NEC is covered under Emergency Lighting and Power Equipment (FTBR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1778, "Uninterruptible Power Supply Equipment" (Second Edition), or ANSI/UL 1778, "Uninterruptible Power Systems" (Fourth Edition).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Uninterruptible Power Supply," "UPS Battery Supply," "UPS Status Panel," "UPS Transfer Switch," "UPS Inverter," "UPS Rectifier/Charger," "UPS Equipment Enclosure," "UPS Equipment Part," "UPS Equipment Subassembly," "UPS Equipment Accessory," "UPS Power Distribution Panel," or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MAINTENANCE SERVICE FOR UNINTERRUPTIBLE POWER SUPPLY SYSTEMS (YEET)

This category covers service companies Certificated as maintenance service providers for uninterruptible power supply (UPS) equipment in the field.

Service companies that are covered in the directory have demonstrated their capability for maintaining field installed UPS equipment in accordance with the requirements established by their internal maintenance documentation.

Each UPS system covered by a Certificate is required to be maintained by the service company responsible for issuing the Certificate. A UPS system is considered to be included in this program only if it is covered by a current Certificate.

The Certificate serves as evidence that the service company (1) is covered as a Maintenance Service Company for UPS Equipment; (2) is authorized to issue the Certificate for the serviced equipment as representation that the equipment is in compliance with requirements established by their internal documentation that has been reviewed by UL; and (3) is subject to UL's field countercheck program whereby periodic inspections are made of representative serviced equipment in the field and at the maintenance service company to verify correctness of the certificated practices.

The maintenance service Certificate indicates identification and location (address) of the serviced equipment, and the service center from which it was issued. Each Certificate also bears a unique serial number and the period of time covered by the Certificate.

Periodic quality audits at the central maintenance service company's location are conducted by UL to verify that the necessary documentation and records are in place for each service location. The Certificate of Underwriters Laboratories Inc. is the only method provided by UL to identify field installed equipment under its Certificated Maintenance and Follow-Up Service.

Appearance of a company's name in the Directory does not mean that all UPS systems serviced by that company are covered under the Certificated Maintenance Service. Only the systems for which a Certificate has been properly issued are covered under UL's Certificated Maintenance Service.

Underwriters Laboratories Inc. makes no representations or warranties, expressed or implied, that the UPS system will prevent any loss, or that the system will in all cases provide the protection for which it is installed or intended. The Certificate only evidences that UL conducts countercheck field inspections of representative serviced equipment. UL does not assume or undertake to discharge any liability of the maintenance service company or any other party. UL is not an insurer and assumes no liability for any loss which may result from failure of the equipment, incorrect certification, non-conformity with requirements, cancellation of the Certificate, or withdrawal of the company from UL's Directory prior to the expiration appearing on the Certificate. If servicing is found not in conformity with requirements, it shall be corrected or the Certificate is subject to cancellation.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNIT SUBSTATIONS (YEFR)

GENERAL

This category covers unit substations rated 600 V or less intended to be installed in accordance with the requirements of the National Electrical Code and in accordance with the installation instructions provided on the unit substation.

A unit substation consists of a transformer in combination with primary and/or secondary overcurrent protective devices or switching devices housed in a single enclosure.

Where in normal operation the load will continue for 3 hours or more, molded case circuit breakers and fuses should not be loaded to exceed 80 percent of their current rating.

Some unit substations are suitable for use as service equipment and are so marked. Such marking is part of the listing mark as noted below, or is an integral part of other required markings.

Listed unit substations are for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking shall be independent of any marking on terminal connectors and shall be on a wiring diagram or other readily visible location. If all terminals are suitable for use with aluminum conductors, the marking will indicate "Use copper or aluminum wire." A unit substation employing terminals for main or branch circuit units individually marked "Cu-A1" will be marked "Use copper-A1 wire" or "Use copper

wire only." The latter statement indicates that wiring space or other factors make the unit substation unsuitable for aluminum conductors.

Unless the unit substation is marked with both the size and temperature rating of wire to be used, the termination provisions are based on the use of 60°C ampacities for wire sizes 14-1 AWG and 75°C ampacities for wire 1/0 AWG and larger.

Unit substations have the secondary neutral bonded to the enclosure and have provision on the neutral for connection of a grounding conductor. A terminal is also provided on the enclosure near the line terminals for use with an equipment grounding conductor between the unit substation and the enclosure of equipment on the line side of the unit substation for use when a metallic conduit system is not provided.

The suitability of unit substations for use on high capacity circuits has not been investigated.

Unit substations are marked with enclosure type number 1, 2 or 3R described in Electrical Equipment for Use in Ordinary Locations (AALZ).

Unit substations marked with enclosure type 3RX provide the same level of protection as type 3R enclosures, and are provided with an additional level of corrosion protection for the enclosure.

A unit substation marked "Type 3R" may also be marked "Rainproof."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1062, "Unit Substations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Unit Substation."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNIT SUBSTATIONS OVER 600 VOLTS (YEFV)

USE AND INSTALLATION

This category covers three-phase articulated and integral unit substations for step-down operation. Articulated substations are rated through 10,000 kVA, at primary voltages of 601 V through 38 kV (nominal 35 kV). Integral substations are rated through 2500 kVA at primary voltages of 601 V through 38 kV.

Articulated unit substations consist of a transformer section(s) together with an input section(s), an output section(s), or both. Transition sections may also be provided. These unit substations are designed, coordinated and assembled as multiple self-enclosed pieces of equipment intended for connection in the field.

Integral unit substations consist of a transformer section(s) together with an input section(s), an output section(s), or both. Transition sections may also be provided. These unit substations are designed, coordinated and assembled as a single self-enclosed piece of equipment. Sections may be shipped separately.

An articulated unit substation may consist of several separately Listed pieces of equipment. Only those sections provided with unit substation Listing Marks have been investigated as part of an articulated unit substation. The suitability of other assemblies will need to be determined by the Authority Having Jurisdiction.

The transformer section(s) house the three-phase power transformer(s) for step-down operation. These unit substation transformers are ventilated dry-type or cast resin type.

The input sections may consist of a terminal chamber, metal-clad switchgear, or metal-enclosed interrupter switchgear.

The output sections may consist of metal-clad switchgear, metal-enclosed interrupter switchgear, a motor control center, molded-case circuit breaker equipment, fused switch equipment, a dead-front switchboard, a panelboard or similar types of distribution or control equipment.

A transition section may be located between a transformer section and an input section, between a transformer section and an output section, between different types of input sections, or between different types of output sections. Transition sections may be integral parts of two adjacent sections, an integral part of one of the sections, or a separate section.

The transformer ratings determine the kVA and voltage capabilities of the overall integral unit substation.

These unit substations are intended for installation in accordance with the requirements of ANSI/NFPA 70, "National Electrical Code," and in accordance with the installation instructions provided on the equipment.

PRODUCT MARKINGS

A master nameplate is mounted on an external surface of the enclosure and visible after normal installation of the equipment. This master nameplate includes the following information as a minimum: manufacturer's name and equipment identification number, kVA rating or ratings if force cooled, primary and secondary lightning impulse withstand voltage (BIL) ratings, primary and secondary voltage ratings, primary and secondary continuous current ratings, transformer design impedance, and total weight. If metal-clad switchgear or metal-enclosed interrupter switchgear is connected to the transformer primary, the nameplate also includes a short-time current carrying rating and momentary current rating.

Each section of the unit substation also has its own rating based on the requirements in standards applicable for that section of the equipment. These individual section ratings are coordinated to be equal to or greater than the rating of the unit substation.

The enclosure of the integral unit substation or the several enclosures of an articulated unit substation are marked to indicate the exposure category (A, B or C) for which it is intended. Enclosures marked "Category A" are intended to be installed in areas accessible to the unsupervised general public; enclosures marked "Category B" are intended to be installed in areas accessible to authorized personnel only; and enclosures marked "Category C" are intended to be installed in areas accessible to qualified personnel only.

An enclosure which has been investigated to determine it is rainproof is marked "Rainproof," "Outdoor" or "3R." The enclosure may be either non-ventilated or ventilated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate articulated unit substations in this category is ANSI/IEEE C37.121-1989, "Switchgear – Unit Substations – Requirements."

The basic standards used to investigate integral unit substations in this category are:

IEEE C37.20.2-1999, "IEEE Standard for Metal-Clad Switchgear"
ANSI/NEMA C37.55-2002, "Switchgear – Medium Voltage Metal-Clad Assemblies – Conformance Test Procedures"
ANSI/IEEE C37.20.3-2001, "IEEE Standard for Metal-Enclosed Interrupter Switchgear"
ANSI/NEMA C37.57-2003, "Switchgear – Metal-Enclosed Interrupter Switchgear Assemblies – Conformance Testing"
UL 1562, "Transformers, Distribution, Dry-Type – Over 600 Volts"
IEEE C57.12.00-2000, "IEEE Standard General Requirements for Liquid-Immersed Distribution, Power, and Regulating Transformers"

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, the product name "Unit Substation Section" and "____ of ____," where the first space is stamped with a number indicating the position (reading from left to right) that the section occupies in the series of sections constituting the unit substation, and the second space indicates the total number of sections which are provided as part of the unit substation.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VALVES, ELECTRIC FOR USE IN HAZARDOUS LOCATIONS (YTSX)

GENERAL

This category covers electrically operated valves (designated as general purpose valves or safety valves). Such valves that may be equipped with complementary or optional mechanical actuators are also covered under this category.

General purpose valves are intended to control the flow of fluids, but should not be depended upon to act as safety valves. They may be normally closed or normally open valves.

Safety valves are normally closed valves of the "On" and "Off" type, intended to be actuated by a safety control or an emergency device to prevent the unsafe delivery of fluids. They may also be used as general pur-

VALVES, ELECTRIC FOR USE IN HAZARDOUS LOCATIONS (YTSX)

pose valves. Multiple-port valves may be designated as safety valves only with respect to their normally closed port.

Unless otherwise indicated, these valves are intended for connection to rigid conduit in an ambient temperature normally prevailing in habitable spaces and for handling fluids at a temperature not exceeding 25°C (77°F).

Identification of the specific fluid(s) for which the valve is Listed, along with the fluid temperature and ambient temperature ratings, is (1) included in installation instructions, (2) shown on the smallest carton in which the valve is packaged, or (3) marked on the valve or on a tag attached to the valve.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is UL 429, "Electrically Operated Valves."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "General Purpose Valve for Hazardous Locations" or "Safety Valve for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VENDING MACHINES (YW XV)

GENERAL

This category covers commercial vending machines, which include coin-operated machines for vending nonrefrigerated food and beverages, general merchandise, etc.

This equipment may be either cord or permanently connected to the source of supply in accordance with ANSI/NFPA 70, "National Electrical Code."

Vending machines of certain types are designated for permanent connection to water supplies and sewer lines at the point of installation. Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

The burglary and theft protection features of these machines have not been investigated unless specifically indicated in the individual Listings.

PRODUCT MARKINGS

These products are marked with the manufacturer's name, model number and electrical rating.

These appliances are marked on or adjacent to the electrical rating plate with one of the following: "Suitable for Indoor Use Only," "Suitable for Protected Locations — See Installation Instructions" or "Suitable for Outdoor Use." Complete instructions appear on an appliance intended for use in a protected location, indicating the manufacturer's recommendations concerning the use or installation, or both, of any canopy, marquee, shelter, etc., that may be necessary for the protection of the appliance. The instructions may be located inside the appliance if they are accessible through the front door.

REBUILT PRODUCTS

This category also covers vending machines that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt vending machines are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt vending machines are subject to the same requirements as new vending machines.

RELATED PRODUCTS

Machines for vending refrigerated food and beverages are covered under Vending Machines, Refrigerated (SQMX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 751, "Vending Machines."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory)

VENDING MACHINES (YW XV)

421

together with the word "LISTED," a control number, and the product name "Vending Machine," or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VENTILATING EQUIPMENT FOR COMMERCIAL COOKING APPLIANCES (YXLT)

Ventilating equipment includes Exhaust Hoods With or Without Exhaust Dampers, Power Ventilators for Restaurant Exhaust Appliances, Grease Ducts, Grease Duct Enclosures, and Hood and Duct Accessories intended for installation in ventilating systems serving commercial cooking equipment. This equipment is intended for installation in accordance with the National Fire Protection Association Standard for the Installation of Equipment for the Removal of Smoke and Grease Laden Vapors from Commercial Cooking Equipment, NFPA 96, or other recognized codes or standards as indicated for the individual product categories.

In addition, Recirculating Ductless Hoods for Use with Specified Commercial Cooking Appliances are also included in this Section.

EXHAUST HOODS WITH EXHAUST DAMPERS (YXZR)

Exhaust hoods with exhaust dampers are intended to be installed over commercial cooking equipment. These hoods are provided with fire actuated exhaust dampers. They have been investigated to determine that they are capable of preventing the exhaust duct gas temperatures from exceeding 375 F and the passage of flame into the exhaust duct under conditions simulating a fire in the cooking area under a hood. Electrical components, if provided, are investigated as part of the Listing of the hood assembly.

Exhaust hoods with exhaust dampers may be provided with manually or automatically operated cleaning or washing systems. These systems are not investigated for grease extraction efficiency. These systems are not investigated for their suitability as fire extinguishing system units for the protection of grease removal devices and hoods, unless specifically indicated in the individual Listing and product markings on the hood.

Exhaust Hoods with exhaust dampers may be provided with sprinklers or automatic spray nozzle assemblies for protection of unlimited length of grease duct in accordance with NFPA 13. If provided, it shall be indicated in the individual Listing and product markings on the hood. The sprinklers or automatic spray nozzle assemblies intended for the protection of grease ducts are intended to be installed in accordance with NFPA 13, Standard for the Installation of Sprinkler System.

These devices are intended for installation in accordance with the National Fire Protection Association Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations, NFPA 96 and the National Electrical Code, NFPA 70.

All exhaust hoods with exhaust dampers are marked relative to minimum exhaust air flow and maximum supply air flow directed into the hood and/or out the bottom (if provided). Air flow rates are established under draft free laboratory conditions. Greater exhaust and/or lesser supply air flow rates may be required for each specific installation to obtain complete vapor and smoke removal.

Exhaust hoods provided with integral installed sprinklers or automatic spray nozzle assemblies for the protection of unlimited length of grease ducts are marked "Supplied With Factory Installed (Sprinklers) (Spray Nozzles) for the protection of unlimited length of Grease Duct having a maximum duct (diameter) (perimeter) of (inches) (feet). Connect to NFPA 13 sprinkler system water supply only".

Authorities having jurisdiction should be consulted before installation. For additional information, see Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

The basic standard used to investigate products in this category is UL 710, "Exhaust Hoods For Commercial Cooking Equipment".

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: (A) "Exhaust Hood With Exhaust Damper", (B) "Hood Assembly For Exhaust Hood With Exhaust

**VENTILATING EQUIPMENT FOR COMMERCIAL COOKING
APPLIANCES (YXLT)**

422

Exhaust Hoods with Exhaust Dampers (YXZR)—Continued

Damper For Use Only With (Company Name) Labeled Sub-Assembly For Exhaust Hood With Exhaust Damper Part No. ", (C) "Sub-Assembly For Exhaust Hood With Exhaust Damper, Part No. For Use Only With (Company Name) Labeled Hood Assembly For Exhaust Hood With Exhaust Damper".

"Exhaust Hoods With Exhaust Dampers" that are complete in one factory-built assembly bear a Listing Mark with a product name similar to (A).

"Exhaust Hoods With Exhaust Dampers" that consist of a hood assembly and one or more subassemblies have a Listing Mark with the product name Shown in (B) on the hood assembly and a Listing Mark with the product name Shown in (C) on each sub-assembly.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**POWER VENTILATORS FOR RESTAURANT
EXHAUST APPLIANCES (YZHW)**
GENERAL

This category covers power roof- and wall-mounted ventilators and proximity-type ventilators consisting of an impeller and motor in a housing. Roof- and wall-mounted ventilators have a weather-resistant housing and are supported by a weather-resistant steel base designed to fit, by means of a steel curb, over a roof- or wall-exhaust duct opening for venting restaurant cooking appliances.

These ventilators are designed for the removal of smoke and grease-laden vapors at an exhaust air temperature not exceeding the maximum temperature indicated in the individual Listings and on the Listed device.

Power ventilators for restaurant exhaust appliances are intended for installation in accordance with ANSI/NFPA 96, "Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations." Authorities Having Jurisdiction should be consulted to determine that these appliances are acceptable for use in any given location.

Proximity-type ventilators have an enclosure and are positioned adjacent to the cooking appliance that they serve.

RELATED PRODUCTS

Other types of power ventilators are covered under Ventilators, Power (ZACT).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 705, "Power Ventilators," in addition to the requirements contained in UL Subject 762, "Outline of Investigation for Power Roof Ventilators for Restaurant Exhaust Appliances."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Ventilator for Restaurant Exhaust Appliances."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VENTILATORS, POWER (ZACT)
GENERAL

This category covers roof- and wall-mounted power ventilators and duct fans consisting of an impeller and motor installed in a housing. Roof- and wall-mounted power ventilators have a weather-resistant housing and are supported by a weather-resistant base intended to fit, by means of a curb, over a wall or roof opening.

These ventilators are intended primarily for commercial or industrial use and are for the purpose of ventilation only. These ventilators consist of exhaust-type and makeup-air-type devices. Makeup-air-type ventilators equipped for evaporative cooling are covered under Humidifiers (AHIV).

Duct fans intended to move heated air are investigated to determine the effect of heated air on electrical components and are marked with the maximum temperature of the air.

Power ventilators intended for use where they will be exposed to weather are investigated to determine the effect of rain on electrical components.

VENTILATORS, POWER (ZACT)

These ventilators have not been investigated for installation in fire walls or from the standpoint of their effect on venting in case of fire. Their location should be determined after consultation with the Authority Having Jurisdiction.

RELATED PRODUCTS

Ventilators intended for the primary removal of grease-laden vapors and residues over restaurant cooking appliances are covered under Power Ventilators for Restaurant Exhaust Appliances (YZHW).

For other types of fans and blowers, see Fans, Electric (GPWW).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 705, "Power Ventilators."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Ventilator."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

INDUSTRIAL MATERIAL HANDLERS (ZAJZ)
USE

This category covers industrial material handlers intended for continuous movement of material-laden air.

This equipment is intended for exhausting, material conveying, pollution control and air circulation, and is Classified as to risk of electric shock and mechanical hazard only.

Industrial material handlers are intended to be installed in accordance with the installation instructions packaged with the equipment and ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Ventilators, Power (ZACT), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 705, "Power Ventilators."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

INDUSTRIAL MATERIAL HANDLER
AS TO ELECTRIC SHOCK AND MECHANICAL HAZARD ONLY
Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

**VENTILATORS, POWER FOR USE IN
HAZARDOUS LOCATIONS (ZANE)**
GENERAL

This category covers roof- and wall-mounted power ventilators and duct fans consisting of an impeller and motor installed in a housing. Roof- and wall-mounted power ventilators have a weather-resistant housing and are supported by a weather-resistant base intended to fit, usually by means of a curb, over a wall or roof opening. Power ventilators consist of an assembly of UL Listed, Classified and Recognized parts.

These ventilators are intended for industrial use and are for the purpose of ventilation only. These ventilators consist of exhaust type and makeup air type devices. Makeup air-type ventilators are not equipped for evaporative cooling.

Power ventilators intended for use where they will be exposed to weather are investigated to determine the effect of rain on electrical components.

VENTILATORS, POWER FOR USE IN HAZARDOUS LOCATIONS (ZANE)

These ventilators have not been investigated for installation in fire walls or from the standpoint of their effect on venting in case of fire. Their location should be determined after consultation with the Authority Having Jurisdiction.

These ventilators are not intended for the primary removal of grease-laden vapors and residues over restaurant cooking appliances.

Metallic impellers are constructed of medium brass or aluminum, with a hardness not over Rockwell B66. Belt-driven power ventilators are investigated for the potential risk of ignition from temperature as a result of belt slippage.

Duct fans intended to move heated air are investigated to determine the effect of heated air on electrical components and are marked with the maximum temperature of the air.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/UL 705, "Power Ventilators."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Ventilator for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

ELECTRICAL INDUSTRIAL VIBRATORS FOR USE IN HAZARDOUS LOCATIONS (ZBRX)

USE

This category covers devices designed to produce controlled vibration by electromagnetic means or motor-rotor eccentrics, and that have provisions for mounting to impart the vibrating motion to industrial material-handling equipment, such as sieves and hoppers.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 674, "Electric Motors and Generators for Use in Division 1 Hazardous (Classified) Locations," or UL Subject 1836, "Outline of Investigation for Electric Motors and Generators for Use in Class I, Division 2 and Class II, Division 2 Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Industrial Vibrator for Hazardous Locations," "Industrial Vibrator for Hazardous Locations" or "Industrial Vibrator-Motor for Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VIDEO AND AUDIO EQUIPMENT, PROFESSIONAL (ZCBy)

USE AND INSTALLATION

This category covers video and audio monitoring, processing, receiving, recording, and reproducing equipment and accessories intended for use and

VIDEO AND AUDIO EQUIPMENT, PROFESSIONAL (ZCBy)

423

maintenance by technically trained professional personnel in broadcast and recording studios, remote field locations, head end facilities, or similar controlled access locations.

Many of these units and systems require special installation such as a separate transformer, power supply, special grounding methods, special mounting, special cable construction, or interconnection between units by means of one or more of the wiring methods outlined in ANSI/NFPA 70, "National Electrical Code." Such features are covered in the manufacturer's installation instructions.

Information concerning field-wiring connections, mounting location, mounting method, clearances, servicing, and the like, are marked on the unit or specified in instructions accompanying the unit.

PRODUCT TYPES

Professional video and audio equipment includes video and audio tape recorders, editing, processing and amplification equipment, signal transmission equipment, television cameras, video monitors, and the like.

Accessory equipment includes wall-mounting brackets, console enclosures, battery packs, and racks intended for use with professional video and audio equipment.

RELATED PRODUCTS

For video tape recorders, video cameras and related accessories intended for household or commercial use, see Audio/Video Apparatus (AZSQ) and Audio and Video Equipment (AZUJ).

For television receivers, commercial and household video monitors and video products incorporating a cathode ray tube display, see Audio/Video Apparatus (AZSQ) and Audio and Video Equipment (AZUJ).

For household audio tape recorders and players, and related accessories, see Audio/Video Apparatus (AZSQ) and Audio and Video Equipment (AZUJ). For commercial audio and radio equipment, systems and accessories, see Commercial Audio and Radio Equipment, Systems and Accessories (AZJX), and also Audio/Video Apparatus (AZSQ). For commercial phonographs, tape playing and recording equipment, see Commercial Phonographs, Tape Playing and Recording Appliances and Accessories (AZQW) and Audio/Video Apparatus (AZSQ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1419, "Professional Video and Audio Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Professional Video Equipment," "Professional Audio Equipment" or "Professional Video Product," or other appropriate product name as shown in the individual Listings.

Equipment rack systems consist of an equipment rack and one or more audio or video components such as amplifiers, equalizers, VCRs and similar equipment. Each component installed in the rack that does not bear the UL Mark is identified by type and model number on a tag that is permanently attached to the rack. If all components installed in the rack bear the UL Listing Mark, the tag is not required.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

VISCOMETERS FOR USE IN HAZARDOUS LOCATIONS (ZCFV)

USE AND INSTALLATION

This category covers portable instruments for determining viscosities of fluids in locations where specified flammable gases or vapors may be present.

The flexible cord connected to the units should be frequently inspected and replaced when necessary.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these portable devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

VISCOMETERS FOR USE IN HAZARDOUS LOCATIONS (ZCFV)

424

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Viscometer for Use in Hazardous Locations."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WASTE DISPOSERS (ZDHR)

USE AND INSTALLATION

This category covers waste disposers intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

Commercial waste disposers, because of the volume of material handled and the manner in which they are utilized, do not necessarily incorporate the safeguards which are a part of the household type. Commercial units are intended to be utilized only by competent personnel who are fully instructed concerning the hazards involved.

RELATED PRODUCTS

For incinerator type waste disposers, see Incinerators, Special Type (NEGT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 430, "Waste Disposers."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Waste Disposer," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WASTE DISPOSERS, PULPER TYPE (ZDIB)

GENERAL

This category covers commercial pulper-type waste disposers that are intended to grind food waste, food-service products such as paper, cardboard, plastic utensils and wrapping materials, and general office waste.

The waste materials are ground in a chamber supplied with running water to produce a slurry, which is then conveyed to a waterpress assembly by an auger-type drive. Excess water is pressed out of the pulpy waste, and the waste water is discharged into a sanitary drain or recycled back to the grinding chamber. The de-watered pulp is disposed of in a waste container.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 430, "Waste Disposers."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pulper-type Waste Disposer," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WASTE DISPOSERS (ZDHR)

WASTE DISPOSERS, REPLACEMENT TYPE, HOUSEHOLD (ZDIF)

GENERAL

This category covers replacement waste disposers intended to replace specific manufacturers' Listed waste disposers (see ZDHR). They are intended for field installation using existing sink-mounting hardware.

These units are rated 150 V or less and are intended to convert primarily organic types of waste material to a form that can be accommodated by a soil pipe attached to household plumbing systems. These units are motor operated and are provided with overcurrent or overheating protective devices.

The performance and design of these units have been determined to comply with ANSI/ASSE 1008/ASHRAE FWD-2PR-1989, "Plumbing Requirements for Household Food Waste Disposer Units," when installed as intended with the appropriate sink-mounting hardware.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 430, "Waste Disposers."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

REPLACEMENT WASTE DISPOSER FOR USE WITH [identification of specified product] Control No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WASTE DISPOSERS, SINK MOUNTED (ZDII)

USE AND INSTALLATION

This category covers waste disposers for household or commercial use which are intended to convert primarily organic types of waste material to a form which can be accommodated by the soil pipe attached to plumbing systems. These units are motor operated and are provided with overcurrent or overheating protective devices. These products are intended for installation and use in accordance with ANSI/NFPA 70, "National Electrical Code."

The performance and design of household food waste disposers have been determined to comply with the latest edition of ANSI/ASSE 1008, "Plumbing Requirements for Household Food Waste Disposer Units," which covers household food waste disposers installed in a kitchen sink, supplied with water from the sink faucet, and discharged into the plumbing drainage system.

Commercial waste disposers having provisions for mounting to a 3-1/2 in. diameter sink flange or opening and to a 1-1/2 in. diameter or less trade size plumbing drain have also been determined to comply with ANSI/ASSE 1008.

RELATED PRODUCTS

For other types of waste disposers, see Waste Disposers, Pulper Type (ZDIB).

For replacement waste disposers, see Waste Disposers, Replacement Type, Household (ZDIF).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 430, "Waste Disposers."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Waste Disposer," or other appropriate product name as shown in the individual Listing.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss,

expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WELDING MACHINES (ZGLZ)

USE

This category covers portable and stationary transformer-type arc welding equipment rated 600 V or less. This equipment is intended to be installed in accordance with Article 630 of ANSI/NFPA 70, "National Electrical Code."

Some arc welding machines have a so-called "welding-range" involving an excess secondary-current output capacity beyond that indicated by the marked secondary rating on the machines. This excess capacity (generally not more than 150 percent of the marked output capacity) is usually supplied by means of one or more secondary taps in addition to the tap or taps intended for normal output current; and the higher currents thus available are intended to provide for heavier welding work, including the use of larger size electrodes. This excess capacity is somewhat analogous to the inherent overload capacity of motors and transformers, and it is not covered at present by any definite requirements and is not investigated by Underwriters Laboratories Inc. However, the abuse of this excess current capacity — the overloading of a welding machine, except for relatively short periods of time — may be hazardous and should receive careful consideration by all those concerned.

RELATED PRODUCTS

See Motor Generator Sets (PQYW).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 551, "Transformer-Type Arc-Welding Machines".

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Welding Machine," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WELDING MACHINE ACCESSORIES (ZGPU)

USE

This category covers products designed to be used with Listed welding machines, such as wire feeders and vacuum units for welding-smoke removal. This category also covers arc cutting equipment, such as arc cutting power supplies, for industrial applications. These products are intended for installation and use in accordance with ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Welding Machines (ZGLZ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 551, "Transformer Type Arc-Welding Machines".

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Welding Machine Accessory," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WHEELCHAIR LIFTS AND STAIRWAY CHAIRLIFTS (ZGUW)

425

WHEELCHAIR LIFTS AND STAIRWAY CHAIRLIFTS (ZGUW)

USE

This category covers permanently-connected vertical and inclined wheelchair platform lifts and inclined stairway chairlifts for use by the physically disabled in both commercial and private residence locations.

This category also covers indoor, cord-connected, inclined stairway chairlifts for use by the physically disabled in private residence locations.

This category also covers outdoor, cord-connected, vertical platform lifts for use by the physically disabled in commercial locations.

Cord-connected lifts are intended to be installed as stationary devices.

This category does not cover portable lifts.

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM).

REQUIREMENTS

The basic standards used to investigate products in this category are ASME A18.1-1999, "Safety Code for Platform Lifts and Stairway Chairlifts," ASME A17.5-1996, "Elevator and Escalator Electrical Equipment," and other UL requirements appropriate for the type of equipment involved.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Wheelchair Lift" or "Stairway Chairlift," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIND TURBINE GENERATING SYSTEMS (ZGXW)

This category covers wind turbine generating systems (WTGS) that produce ac or dc electric power from a wind-driven generator.

WTGS consist of one or more turbines (blades, hub, generator, drive train, support structure), control, power collection, power distribution and protection systems. Each subsystem of the overall assembly is marked with the assembly identifier. WTGS are designed for use in specific environmental conditions, including normal and extreme wind speeds, ambient temperature, humidity, rain, lightning and salinity, as defined in the manufacturer's design documentation, and are intended for installation, assembly and erection in accordance with the manufacturer's instructions and subject to approval by the Authority Having Jurisdiction, with respect to requirements in ANSI/NFPA 70, "National Electrical Code," model building code, mechanical code or an applicable building code of the local jurisdiction.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIND TURBINE GENERATING SYSTEM SUBASSEMBLIES (ZGZJ)

USE

This category covers subassemblies, such as blades, towers, generators, gear boxes, control panels and yaw drives, intended for field installation for use only with specific wind turbine generating systems.

PRODUCT MARKINGS

The correct combination of wind turbine generating systems and subassemblies is indicated by markings on or with the subassembly and/or the wind turbine generating system.

RELATED PRODUCTS

Equipment intended to provide a primary, secondary, or primary and secondary power source to nonspecific loads in parallel or separate from the utility is investigated to UL 1741, "Inverters, Converters, and Controllers for Use in Independent Power Systems," and covered under Static Inverters and Converters for Use in Independent Power Systems (QIKH). Examples of this equipment are Utility Interactive, Stand-alone, Multi-mode inverters or converters, and Interconnection System Equipment.

ADDITIONAL INFORMATION

Wind Turbine Generating System Subassemblies (ZGZJ)—Continued

For additional information, see Wind Turbine Generating Systems (ZGXW) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is IEC 61400-1, "Wind Turbines – Part 1: Design Requirements," or IEC 61400-2, "Wind Turbine Generator Systems – Part 2: Safety of Small Wind Turbines," or other applicable standard(s).

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT NAME]*
IN ACCORDANCE WITH +
Control No.

* WIND TURBINE GENERATOR or WIND TURBINE BLADE, or other appropriate product name as shown in the individual Classifications + IEC STANDARD 61400-1-[issue date] or IEC STANDARD 61400-2-[issue date], or other applicable standard(s)

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIND TURBINE TRAY CABLE (ZGZN)**GENERAL**

This category covers wind turbine tray cable intended for use in accordance with Article 336 of ANSI/NFPA 70, "National Electrical Code" (NEC). The cable consists of one or more pairs of thermocouple extension wire or two or more insulated conductors, with or without one or more grounding conductors, with or without one or more optical fiber members and covered with a nonmetallic jacket. A single grounding conductor may be insulated or bare and may be sectioned. Any additional grounding conductors are fully insulated and have a distinctive surface marking. The cable is rated 90 – 200°C dry and optionally rated 90°C wet, 1000 V.

The cable is Listed in conductor sizes 18 AWG to 1000 kcmil copper, or 12 AWG to 1000 kcmil aluminum or copper-clad aluminum. Conductor sizes within a cable may be mixed. Thermocouple extension conductors are Listed in sizes 24 to 12 AWG.

PRODUCT MARKINGS

Cable with copper-clad aluminum conductors is surfaced printed "AL (CU-CLAD)" or "Cu-clad AL."

Cable with aluminum conductors is surface printed "AL."

Cable employing compact-stranded copper conductors is so identified directly following the conductor size, wherever it appears (surface, tag, carton or reel), by "Compact Copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors bear the marking "Terminate with connectors identified for use with compact-stranded copper conductors." For termination information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The dry and wet temperature rating(s) of the cable is marked on the surface of the cable.

Cable investigated for use where exposed to direct rays of the sun is marked "Sunlight Resistant."

Cable consisting of thermocouple extension wire is surface marked "THCPL EXTN," "For thermocouple extension use only" or "Thermocouple extension wire only."

Cable surface marked "Oil Resistant I" (or "Oil Res I") is suitable for exposure to mineral oil at 60°C. Cable suitable for exposure to mineral oil at 75°C is surface marked "Oil Resistant II" (or "Oil Res II").

Cable that complies with the Limited Smoke Test requirements specified in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," is surface marked with the suffix "-LS."

Cable containing optical fiber members is identified with the suffix "-OF."

ADDITIONAL INFORMATION

For additional information, see Wind Turbine Generating Systems (ZGXW) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2277, "Outline of Investigation for Flexible Motor Supply Cable and Wind Turbine Tray Cable."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged,

Wind Turbine Tray Cable (ZGZN)—Continued

with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Wind Turbine Tray Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIRE (ZGZX)

This category covers insulated wire intended for installation and use in accordance with ANSI/NFPA 70, "National Electrical Code." Construction details are specified in the individual wire categories.

BUS DROP CABLE (ZIMX)**GENERAL**

This category covers multiple-conductor bus drop cable as described in Sec. 368.56(B) of ANSI/NFPA 70, "National Electrical Code" (NEC), and intended for use in accordance with Article 368 and other applicable parts of the NEC. The cable consists of three or four Type TW, THW, THHN and THWN, or XHHW, RHW and RHH conductors cabled together with a grounding conductor with an overall jacket. The cable is rated 600 V, 60, 75, 90 or 105°C.

PRODUCT MARKINGS

Cable marked "Oil Resistant 60C" is suitable for exposure to oil at 60°C. Cable marked "Oil Resistant 75C" is suitable for exposure to oil at 75°C.

Cable marked "Water Resistant" is suitable for immersion in water.

Cable marked "Outdoor" is suitable for installation outdoors.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 509, "Outline of Investigation for Bus Drop Cable."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Bus Drop Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FESTOON CABLE (ZIPF)**GENERAL**

This category covers single- and multiple-conductor festoon cable intended for use and installation in accordance with Article 610 of ANSI/NFPA 70, "National Electrical Code." The cable consists of one or more insulated conductors cabled together with an overall jacket. The cable is rated 600 V, 60, 75, 90 or 105°C.

PRODUCT MARKINGS

Cable marked "Oil Resistant 60C" is suitable for exposure to oil at 60°C. Cable marked "Oil Resistant 75C" is suitable for exposure to oil at 75°C.

Cable marked "Outdoor" or "Outdoor Use" is suitable for installation outdoors.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2273, "Outline of Investigation for Festoon Cables."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up

WIRE (ZGZX)

Festoon Cable (ZIPF)—Continued

Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Festoon Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FIXTURE WIRE (ZIPR)

GENERAL

This category covers fixture wire for use in accordance with Article 402 of ANSI/NFPA 70, "National Electrical Code."

All conductors are copper; however, fixture wire having a temperature rating higher than 90°C may employ nickel.

Thermoplastic compounds tend to stiffen at temperatures below -10°C (14°F) and care should be taken in handling at such temperatures.

Gasoline-resistant wire has been tested at 23°C when immersed in gasoline. It is considered inherently resistant to gasoline vapors within the limits of the temperature rating of the wire type.

Gasoline-resistant TFN or TFFN — Indicates a TFN and TFFN conductor with a jacket of extruded nylon suitable for exposure to mineral oil, and to liquid gasoline and gasoline vapors at ordinary ambient temperature. It is identified by tag marking and by printing on the insulation or nylon jacket with the designation "Type TFN (TFFN) Gasoline and Oil Resistant I" if suitable for exposure to mineral oil at 60°C, or "Type TFN (TFFN) Gasoline and Oil Resistant II" if suitable for exposure to mineral oil at 75°C.

Wire that complies with a special Vertical Flame Test is marked "VW-1."

Fixture wire is designated as follows:

60°C maximum operating temperature	Thermoplastic-insulated wire: 600 V, 18-16 AWG: Types TF, TFF
75°C maximum operating temperature	Thermoset-insulated, heat-resistant wire: 600 V, 18-16 AWG: Types RFH-2, FFH-2
90°C maximum operating temperature	Thermoplastic-insulated wire: 600 V, 18-16 AWG: Types TFN, TFFN Thermoset-insulated, heat-resistant wire: 600 V, 18-16 AWG: Types RFHH-2, RFHH-3
150°C maximum operating temperature	Silicone rubber-insulated wire: 300 V, 18 AWG: Type SFF-1 600 V, 18-14 AWG: Type SFF-2 Fluorinated ethylene propylene-insulated wire: 600 V, 18-14 AWG: Types PFF, PGFF Polytetrafluoroethylene-insulated wire: 600 V, 18-14 AWG: Type PTFF Cross-linked polyolefin-insulated wire: 300 V, 18-10 AWG: Types XF, XFF Ethylene tetrafluoroethylene-insulated wire: 600 V, 18-14 AWG: Types ZF, ZFF Silicone rubber-insulated wire: 300 V, 18 AWG: Type SF-1 600 V, 18-14 AWG: Type SF-2 Fluorinated ethylene propylene-insulated wire: 600 V, 18-14 AWG: Types PF, PGF Aromatic polyimide tape insulated wire: 300 V, 18-10 AWG: Types KF-1, KFF-1 600 V, 18-10 AWG: Types KF-2, KFF-2 Ethylene tetrafluoroethylene-insulated wire: 600 V, 18-14 AWG: Type ZHF Polytetrafluoroethylene-insulated wire: 600 V, 18-14 AWG: Type PTF
200°C maximum operating temperature	
250°C maximum operating temperature	

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 66, "Fixture Wire."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fixture Wire."

WIRE (ZGZX)

427

Fixture Wire (ZIPR)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLEXIBLE CORD (ZJCZ)

GENERAL

This category covers flexible cord constructed and Listed for use in accordance with Article 400 of ANSI/NFPA 70, "National Electrical Code" (NEC). All conductors are stranded copper.

Voltage Ratings

"Clock Cord" is rated 125 V.

Types C (14-10 AWG), PD (14-10 AWG), S, SO, SOO, SOW, SOOW, ST, STO, STOO, STW, STOW, STOOOW, SE, SEO, SEOO, SEW, SEOW and SEOOW are rated 600 V.

Types C (18-16 AWG), PD (18-16 AWG) and all other types are rated 300 V.

Conductor Sizes

The conductor size ranges are as specified in the NEC with the following exceptions:

Types XTW, 20-18 AWG; CXTW, 22-18 AWG; "Clock Cord," 20 AWG; and "Shaver Cord," 27 and 20 AWG.

SBST, 18, 17, 16 AWG.

Temperature Ratings

Types C, PD, SP-1, SP-2, SP-3, NISP-1, NISP-2, SRD, E, EN, ETP, ETT, TPT, TS, TST, SBST and "Shaver Cord" are rated 60°C.

Type SRDT is rated 60 or 90°C.

Types XTW and CXTW are rated 105°C.

Types SPE-1, SPE-2, SPE-3, SVE, SVEO, SVEOO, SJE, SJO, SJEOO, SJEOW, SJEOW, SJEOW, SE, SEO, SEOO, SEW, SEOW, SEOOW, HPD, HPN, HSJ, HSJO, HSJOO, HS, HSO and HSOO are rated 90 or 105°C.

"Clock Cord" is rated 60 or 105°C.

All other cord types are rated 60, 75, 90 or 105°C.

Cord Types or Characteristics Not Covered by the NEC

Type XTW is a parallel assembly of two conductors intended for use in decorative lighting equipment.

Type CXTW is a single conductor or twisted assembly of two conductors intended for use in decorative lighting equipment.

"Clock Cord," which has no Type designation, is similar to Type XTW except for conductor size.

"Shaver Cord," which has no Type designation, is similar to Type TPT except for the conductor configuration.

SBST is a round, jacketed cord intended for use in applications similar to an SVT cord.

Compatibility

Due to possible incompatibility, SPP or TPE material of a styrenic type is, in some cases, not suitable for use in cords where direct contact with PVC can occur. A separator is one acceptable means of avoiding direct contact. Other combinations of materials that could be incompatible, if any, are as yet undetected.

PRODUCT MARKINGS

All cords are surface printed with "UL" in a circle or parentheses, the type designation, temperature rating, voltage rating, flame rating, size and number of conductors.

Cords marked "For Mobile Home Use," "For Recreational Vehicle Use" or "For Mobile Home and Recreational Vehicle Use," followed by the current rating in amps, indicates suitability for use in mobile homes or recreational vehicles.

"W" indicates suitability for use outdoors and for immersion in water. The low-temperature rating for this cord is -40°C unless otherwise marked on the cord with optional ratings of -50, -60 or -70°C. The low-temperature ratings are determined by means of a bend test (not a suppleness test) at the given temperature. The cord may be additionally marked "Water Resistant" and/or "Outdoor."

"VW-1" indicates that the cord complies with a Vertical Flame Test.

Cord that has been investigated for leakage currents between the circuit conductor and the grounding conductor, and between the circuit conductor and the outer surface of the jacket, may have the values so marked on the cable jacket.

Cord investigated for mobile home use, recreational vehicle use, or mobile home and recreational vehicle use, or cord investigated for leakage current between conductors, may have the ampacity of the cord marked on the cord. In all other cases, the ampacity of the cord is not marked on the surface of the cord.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

Flexible Cord (ZJCZ)—Continued

The basic standard used to investigate products in this category is ANSI/UL 62, "Flexible Cord and Fixture Wire."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flexible Cord."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

FLEXIBLE MOTOR SUPPLY CABLE (ZJFH)**GENERAL**

This category covers flexible motor supply cable (flexible FVD servo cable) intended for use with variable frequency drives subjected to nonlinear power distortions in accordance with the applicable parts of ANSI/NFPA 70, "National Electrical Code" (NEC). The cable consists of two or more insulated conductors, with or without one or more grounding conductors, and covered with a nonmetallic jacket. A single grounding conductor may be insulated or bare and may be sectioned. Any additional grounding conductors are fully insulated and have a distinctive surface marking. The cable is rated 90°C, 1000 or 2000 V.

The cable is Listed in conductor sizes 18 AWG to 1000 kcmil copper. Conductor sizes within a cable may be mixed. Thermocouple extension conductors are Listed in sizes 24 to 12 AWG.

PRODUCT MARKINGS

The temperature rating of the cable, 90°C, is marked on the surface of the cable.

Cable investigated for use where exposed to direct rays of the sun is marked "Sunlight Resistant."

Cable consisting of thermocouple extension wire is surface marked "THCPL EXTN," "For thermocouple extension use only" or "Thermocouple extension wire only."

Cable surface marked "Oil Resistant I" (or "Oil Res I") is suitable for exposure to mineral oil at 60°C. Cable suitable for exposure to mineral oil at 75°C is surface marked "Oil Resistant II" (or "Oil Res II").

Cable that complies with the Limited Smoke Test requirements specified in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," is surface marked with the suffix "-LS."

Cable containing optical fiber members is identified with the suffix "-OF."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2277, "Outline of Investigation for Flexible Motor Supply Cable and Wind Turbine Tray Cable."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flexible Motor Supply Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

GAS-TUBE-SIGN CABLE (ZJQX)**USE AND INSTALLATION**

This category covers gas-tube-sign cable Listed as single conductor Type GTO-5 (5000 V), GTO-10 (10,000 V) or GTO-15 (15,000 V), in sizes 18–10 AWG copper. This cable is intended for use with gas-tube systems for signs, outline lighting, and interior lighting in accordance with ANSI/NFPA 70, "National Electrical Code," and UL 48, "Electric Signs."

PRODUCT MARKINGS

Cable that complies with the requirements for GTO cable employing an integral sleeve is surface marked "Integral Sleeve."

Gas-Tube-Sign Cable (ZJQX)—Continued

ADDITIONAL INFORMATION

For conductor terminal information and additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 814, "Gas-Tube-Sign Cable."

GTO cable identified and marked "Integral Sleeve" used in enclosure assemblies with other neon sign components has also been investigated to ANSI/UL 879, "Electric Sign Components."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," and the product name "Gas-Tube-Sign Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MACHINE-TOOL WIRE (ZKHZ)**GENERAL**

This category covers machine-tool wire and cable, which is all-thermoplastic Type MTW 600 V wire and cable for use as specified in ANSI/NFPA 70, "National Electrical Code," and NFPA 79, "Electrical Standard for Industrial Machinery." The finished wire or cable is flame retardant and suitable for use at 90°C (194°F) and lower temperatures in dry locations, and at 60°C (140°F) and lower temperatures where exposed to moisture, oil or coolants, that is, to cutting oils and the like.

The single-conductor constructions are:

- Construction A — All PVC-insulated
- Construction B — PVC-insulated with a nylon jacket

Both constructions are labeled in sizes 22 AWG to 1000 kcmil inclusive, stranded copper.

The multiple-conductor constructions consist of assemblies of these single-conductor constructions enclosed by a PVC jacket.

Single- and multiple-conductor wire and cable employing 16-10 AWG conductors having the stranding for flexing service are surface marked "flexing" or "Class K." This marking is optional for smaller conductors intended for flexing service.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1063, "Machine-Tool Wires and Cables."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Machine Tool Wire."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PENDANT CABLE (ZKKA)**USE**

This category covers multiple-conductor cable intended for use indoors and outdoors as vertical-drop cable from a crane or hoist down to a pendant push-button station, or as a control cable in a crane and hoist system in accordance with Article 610 of ANSI/NFPA 70, "National Electrical Code." The wire is rated 300 or 600 V, and 60, 75, 90 or 105°C.

PRODUCT MARKINGS

The cable is marked with the Listee's name, trade name or file number.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

WIRE (ZGZX)

Pendant Cable (ZKKA)—Continued

The basic requirements used to investigate products in this category are contained in UL Subject 2562, "Outline of Investigation for Pendant Cable."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pendant Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PHOTOVOLTAIC WIRE (ZKLA)

GENERAL

This category covers single-conductor, insulated and integrally or non-integrally jacketed, sunlight resistant, photovoltaic wire rated 90, 105, 125 or 150°C dry, and 90°C wet, 600, 1000 or 2000 V, intended for interconnection wiring of grounded and ungrounded photovoltaic power systems as described in Section 690.31(A) and other applicable parts of ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 4703, "Outline of Investigation for Photovoltaic Wire."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Photovoltaic Wire."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROCESSED WIRE (ZKLU)

GENERAL

This category covers Listed wire, flexible cord and cable, and Classified cable that has been subjected to processing subsequent to Labeling and identified as either processed wire or processed wire – respooled.

Listed wire, flexible cord and cable identified as "Listed Processed Wire" has been cut into certain lengths from which the insulation may be stripped from one or both ends. The stripped ends may be soldered or tinned and may have simple terminals of the eyelet, ring, open spade or quick-connect type attached by crimping, soldering or welding.

These lengths may be packaged for further processing. Single lengths of Listed processed wire and cable may be paralleled with other insulated wire and cable and may be held together by an open binder.

Products identified as "Listed Processed Wire – Respooled" are single, continuous lengths of Listed wire, flexible cord or cable cut from a longer length and coiled or placed on a spool or reel.

Products identified as "Classified Processed Wire" are Classified cable that has been cut into certain lengths from which the insulation may be stripped from one or both ends. These lengths may be packaged for further processing. Single lengths of Classified processed wire may be paralleled with other insulated cable and may be held together by an open binder.

Products identified as "Classified Processed Wire – Respooled" are single, continuous lengths of Classified cable cut from a long length and coiled or placed on a spool or reel.

The tag markings from the wire spooler reel (e.g., voltage, temperature, insulation thickness, usage) are provided on the processed wire tag attached to the product.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

WIRE (ZGZX)

429

Processed Wire (ZKLU)—Continued

The basic standards used to investigate products in this category are UL 62, "Flexible Cord and Fixture Wire," UL 66, "Fixture Wire," UL 83, "Thermoplastic-Insulated Wires and Cables," or UL 44, "Thermoset-Insulated Wires and Cables," and UL 486A-486B, "Wire Connectors," or UL 486C, "Splicing Wire Connectors."

UL MARK

The Listing or Classification Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing or Classification and Follow-Up Service. The Listing or Classification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED" or "CLASSIFIED" respectively, an control number, and the product name "Processed Wire" or "Processed Wire – Respooled."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

RECREATIONAL VEHICLE CABLE, LOW VOLTAGE (ZKRU)

GENERAL

This category covers single-conductor, multi-conductor parallel and jacketed flat, parallel or round multiple-conductor recreational vehicle cable rated 90°C or higher, intended for use in low-voltage circuits as described in Article 551 and other applicable parts of ANSI/NFPA 70, "National Electrical Code."

PRODUCT MARKINGS

Cable marked "Oil Resistant 60C" is suitable for exposure to oil at 60°C. Cable marked "Oil Resistant 75C" is suitable for exposure to oil at 75°C.

Cable marked "Outdoor" or "Outdoor Use" is suitable for installation outdoors.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2276, "Outline of Investigation for Recreational Vehicle Cable."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Recreational Vehicle Cable, Low Voltage."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

TELEPHONE SERVICE DROP WIRE (ZKSG)

USE

This category covers single-pair and multiple-pair telephone drop wire intended for use as overhead conductors that extend telephone circuits (1) from the last utility pole or other outdoor support to the protector(s) within the building or other structure served, and (2) between buildings or other structures on the premises served. This wire is intended for use in accordance with Article 800 of ANSI/NFPA 70, "National Electrical Code."

PRODUCT MARKINGS

The wire is marked with the Listee's name, trade name or file number.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 523, "Outline of Investigation for Telephone Service Drop Wire."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged,

Telephone Service Drop Wire (ZKSG)—Continued

with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Telephone Service Drop Wire."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

THERMOSET-INSULATED WIRE (ZKST)

GENERAL

This category covers thermoset-insulated wire and cable (tabulated below) which is flame retardant and rated 600 V, except for Types RHH, RHW and RHW-2 which may be rated 2000 V. The voltage rating is marked on the outer surface of the wire or cable.

PRODUCT MARKINGS

RHW — Indicates a single conductor having a thermoset insulation, with or without a nonmetallic covering, rated 75°C dry, 75°C wet.

RHW-2 — Indicates a single conductor with the same description as Type RHW, except that it is rated 90°C dry, 90°C wet.

RHH — Indicates a single conductor with the same description as Type RHW, except that it is rated 90°C dry only.

XHH — Indicates a single conductor having a cross-linked synthetic polymer insulation with no overall covering provided, rated 90°C dry.

XHHW — Indicates a single conductor with the same description as Type XHH, except that it is rated 90°C dry, 75°C wet.

XHHW-2 — Indicates a single conductor with the same description as Type XHH, except that it is rated 90°C dry, 90°C wet.

SA — Indicates a single conductor having thermosetting silicone rubber insulation and a nonmetallic covering rated 90°C dry, general use, 200°C dry, special applications.

SIS — Indicates a single conductor having thermosetting insulation with no overall covering provided rated 90°C dry, for switchboard wiring only.

D — Used as a suffix indicating a twin wire having two insulated conductors laid parallel under an outer nonmetallic covering.

M — Used as a suffix indicating a cable having two or more insulated single conductors twisted together under an outer nonmetallic covering.

This wire, in sizes mentioned below, may employ copper, aluminum, or copper-clad aluminum conductors. Wire with copper-clad aluminum conductors is surface printed "Cu-Clad Al" or "AL (CU-CLAD)." Wire with aluminum conductors is surface printed "AL."

In addition to the required AWG or kcmil size, the metric equivalent may be marked on the wire, e.g. "6 AWG (13.3 MM2)" or "13.3 MM2 (6 AWG)."

Types RHH, RHW, RHW-2, XHH, XHHW, XHHW-2 and SA are Listed in sizes 14 AWG through 2000 kcmil copper, and 12 AWG through 2000 kcmil aluminum or copper-clad aluminum. Type SIS is Listed in sizes 14 through 4/0 AWG copper, and 12 through 4/0 AWG aluminum or copper-clad aluminum.

Wire and cable employing compact-stranded copper conductors is so identified directly following the conductor size wherever it appears (surface, tag, carton or reel) by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors."

Wire bearing multiple type designations is suitable for the temperature associated with each use. For example, a wire marked "RHH or RHW" is suitable for 90°C in dry locations, and 75°C in wet locations.

Wire marked "gasoline resistant" has been tested at 23°C when immersed in gasoline. Wire marked "Oil Resistant I" and "Oil Resistant II" has been tested for immersion in mineral oil at 60°C and 75°C, respectively.

Wire and cable marked "Cable Tray Use" complies with a Vertical-Tray Flame Test. Wire and cable marked "Sunlight Resistant" complies with an artificial weathering test. The "Cable Tray Use" marking, with or without the "Sunlight Resistant" marking, pertains to single conductor sizes 4 through 1 AWG for grounding conductors only, single conductor sizes 1/0 AWG and larger, and all sizes of multiconductor Types RHH, RHW, RHW-2, XHH, XHHW and XHHW-2. Wire Types RHW, RHW-2, XHHW and XHHW-2 intended to be installed on a messenger may be marked "Sunlight Resistant" in all sizes.

Wire marked "VV-1" complies with a Vertical Flame Test; all others comply with a Horizontal Flame Test.

Wire that complies with the Limited Smoke Test requirements specified in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," is surface marked with the suffix "LS."

Thermoset-insulated Wire (ZKST)—Continued

Wire and cable marked "-40 C" complies with a cold impact test conducted at that temperature. This does not necessarily mean that the cable can be easily installed at that temperature. Different installation conditions and configurations require that care be taken when installing cable at low temperatures.

Submersible Water Pump Cable — Indicates multiconductor cable in which two, three or four Type RHW, RHW-2, XHHW or XHHW-2 conductors are provided in a flat or twisted assembly. The cable is Listed in sizes from 14 AWG through 500 kcmil copper, and from 12 AWG through 500 kcmil aluminum or copper-clad aluminum. The cable is tag marked "For use within the well casing for wiring deep-well water pumps where the cable is not subject to repetitive handling caused by frequent servicing of the pump units." The surface of the wire may also be marked "Pump Cable." The cable has not been investigated for direct burial in the earth unless the single conductors carry an additional "Type USE" or "Type USE-2" marking.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 44, "Thermoset-insulated Wires and Cables."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Thermoset-insulated wire that contains copper or copper-clad aluminum conductors has the product name "Insulated Wire"; thermoset-insulated wire that contains aluminum conductors has the product name "Insulated Aluminum Wire."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

THERMOPLASTIC-INSULATED WIRE (ZLGR)

USE

This category covers thermoplastic-insulated wire for use in accordance with Article 310 of ANSI/NFPA 70, "National Electrical Code."

PRODUCT TYPES

Thermoplastic-insulated wire is rated 600 V and is designated as follows: **TW** — Indicates a single conductor having flame-retardant, moisture-resistant thermoplastic insulation. The wire is rated 60°C wet or dry.

THHN — Indicates a single conductor having flame-retardant and heat-resistant thermoplastic insulation with a jacket of extruded nylon or equivalent material. The wire is rated 90°C dry only.

THW — Indicates a single conductor having flame-retardant, moisture- and heat-resistant thermoplastic insulation. The wire is rated 75°C wet or dry.

THW-2 — Same as THW except that the wire is rated 90°C wet or dry.

THHW — Indicates a single conductor having flame-retardant, moisture- and heat-resistant thermoplastic insulation. The wire is rated 90°C dry and 75°C wet.

THWN — Indicates a single conductor having flame-retardant, moisture- and heat-resistant thermoplastic insulation with a jacket of extruded nylon or equivalent material. The wire is rated 75°C wet or dry. THWN wire suitable for exposure to mineral oil and to liquid gasoline and gasoline vapors at ordinary ambient temperature is marked "Gasoline and Oil Resistant I" if suitable for exposure to mineral oil at 60°C, or "Gasoline and Oil Resistant II" if the compound is suitable for exposure to mineral oil at 75°C. Gasoline resistant wire has been tested at 23°C when immersed in gasoline. It is considered inherently resistant to gasoline vapors within the limits of the temperature rating.

THWN-2 — Same as THWN except that the wire is rated 90°C wet or dry.

FEP — Indicates a single copper conductor having flame-retardant and heat-resistant thermoplastic (fluorinated ethylene propylene) insulation. Type FEP wire is suitable for use at 90°C and lower temperatures in dry locations. It is also suitable for use in dry locations at 200°C and lower temperatures for special applications.

FEPB — Indicates a single copper conductor having flame-retardant and heat-resistant thermoplastic (fluorinated ethylene propylene) insulation with a glass braid. Type FEPB wire is suitable for general use at 90°C and lower temperatures in dry locations. It is also suitable for use in dry locations at 200°C and lower temperatures for special applications.

WIRE (ZGZX)

Thermoplastic-insulated Wire (ZLGR)—Continued

PFA — Indicates a single copper conductor having flame-retardant and heat-resistant thermoplastic (perfluoroalkoxy) insulation. Type PFA wire is suitable for use at 90°C and lower temperatures in dry locations. It is also suitable for use in dry locations at 200°C and lower for special applications.

PFAH — Indicates a single, nickel or nickel-coated copper conductor having flame-retardant and heat-resistant thermoplastic (perfluoroalkoxy) insulation. The PFAH is suitable for use at 250°C and lower temperatures only for leads within apparatus or within raceways connected to apparatus, in dry locations only.

TFE — Indicates a single, nickel-coated copper or nickel base alloy conductor having flame-retardant and heat-resistant thermoplastic (polytetrafluoroethylene) insulation. Type TFE wire is suitable for use at 250°C and lower temperatures in dry locations as leads within apparatus or within raceways connected to apparatus or as open wiring.

Z — Indicates a single copper conductor having flame-retardant and heat-resistant thermoplastic (ethylene tetrafluoroethylene) insulation. Type Z wire is suitable for use at 90°C and lower temperatures in dry locations. It is also suitable for use in dry locations at 150°C and lower temperatures for special applications.

ZW — Indicates a single copper conductor having flame-retardant and heat-resistant thermoplastic (ethylene tetrafluoroethylene) insulation. Type ZW wire is suitable for use in dry locations at 90°C or wet locations at 75°C. It is also suitable for use in dry locations at 150°C and lower temperatures for special applications.

ZW-2 — Same as ZW except that the wire is rated 90°C wet or dry.

TBS — Indicates a single conductor switchboard wire having thermoplastic insulation and a flame-retardant nonmetallic covering. Type TBS is suitable for use at 90°C and lower temperatures in dry locations.

PRODUCT MARKINGS

Types TW, THW, THW-2, THHN, THHW, THWN, THWN-2, PFA, PFAH and Z in sizes 4 to 1 AWG for grounding conductors only and in sizes 1/0 AWG and larger for circuit and grounding conductors that are marked "Cable Tray Use" or "CT" comply with a vertical-tray cable flame test. Wire so marked may additionally be marked "Sunlight Resistant" indicating compliance with an artificial weathering test.

Types TW, THW, THW-2, THHW, THWN and THWN-2 in all sizes that are marked "Sunlight Resistant" comply with an artificial weathering test.

Wire suitable for exposure to mineral oil is marked "Oil Resistant I" for 60°C oil resistance, or "Oil Resistant II" for 75°C oil resistance, on the surface of the wire. An Oil Resistant marking, by itself, does not include resistance to gasoline or similar light petroleum solvents.

Wire that complies with a special vertical flame test is surface marked "VW-1."

Constructions in this category that comply with a flame and smoke test (as described in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables") may have the additional marking "ST1" indicating "Limited Smoke." (Note: The suffix "-LS," added to the Type letters, has also been used to indicate Limited Smoke. Effective November 15, 2004, only "ST1" may be used.)

In place of three of the markings described above, the following multinational markings may be used:

"SR" in place of "Sunlight Resistant"

"PR" in place of "Oil Resistant"

"GR" in place of "Gasoline and Oil Resistant"

Submersible Pump Cable — Indicates multiconductor cable consisting of two or three flat or two to six twisted insulated conductors with or without an overall jacket. The cable is labeled in size 14 AWG to 500 kcmil copper, and 12 AWG to 500 kcmil aluminum or copper-clad aluminum. The cable is tag marked "For Wiring Only Between Equipment Located at Water Well Heads and Motors of Installed Deep-Well Submersible Water Pumps." The insulation is surface marked "Submersible Pump Cable." The cable has not been investigated for direct burial in the earth.

Wire, in sizes mentioned below, may employ copper or aluminum, or copper-clad aluminum conductors. Wire with copper-clad aluminum conductors is surface printed "AL (CU-CLAD)" or "Cu-Clad Al." Wire with aluminum conductors is surface printed "AL."

Wire and cable employing compact-stranded copper conductors is so identified directly following the conductor size, wherever it appears (surface, tag, carton or reel), by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for product employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors."

SIZE AND CONDUCTOR INFORMATION

Types TW, THW and THW-2 are Listed in sizes 14 AWG to 2000 kcmil copper and 12 AWG to 2000 kcmil aluminum or copper-clad aluminum.

Types THHN, THWN, THWN-2 and THHW are Listed in sizes 14 AWG to 1000 kcmil copper and 12 AWG to 1000 kcmil aluminum or copper-clad aluminum.

Types TA, TBS, PFA, PFAH and Z are Listed in sizes 14 to 4/0 AWG copper and 12 to 4/0 AWG aluminum or copper-clad aluminum.

WIRE (ZGZX)

431

Thermoplastic-insulated Wire (ZLGR)—Continued

Types ZW, ZW-2, FEP and FEPB are Listed in sizes 14 to 2 AWG copper and 12 to 2 AWG aluminum or copper-clad aluminum.

ADDITIONAL INFORMATION

For conductor termination information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 83, "Thermoplastic-insulated Wires and Cables."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Thermoplastic-insulated wire that contains copper or copper-clad aluminum conductors has the product name "Insulated Wire"; thermoplastic-insulated wire that contains aluminum conductors has the product name "Insulated Aluminum Wire."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

UNDERGROUND LOW-ENERGY CIRCUIT CABLE (ZLIA)

USE

This category covers single- and multiple-conductor cable intended for direct burial in accordance with ANSI/NFPA 70, "National Electrical Code." The wire is rated 30 V or 150 V and 60°C.

PRODUCT MARKINGS

The wire is marked with the Listee's name, trade name or file number.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1493, "Outline of Investigation for Underground Low-Energy Circuit Cable."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Underground Low-energy Circuit Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WELDING CABLE (ZMAY)

GENERAL

This category covers welding cable, which is a single-conductor cable intended for use in the secondary circuit of electric welders in accordance with Article 630, Part IV of ANSI/NFPA 70, "National Electrical Code." The conductors are flexible-stranded copper, 8 AWG through 250 kcmil, the individual strands of which are 34 through 30 AWG.

RATINGS

Welding cable is rated 60, 75 or 90°C and 100 or 600 V.

PRODUCT MARKINGS

The voltage and temperature ratings, if higher than 100 V and 60°C, respectively, are identified by printing on the surface of the insulation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1276, "Outline of Investigation for Welding Cable."

UL MARK

Welding Cable (ZMAY)—Continued

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel, or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Welding Cable."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIRE, SPECIAL PURPOSE (ZMHX)**GENERAL**

This category covers different wire and cable products, each intended for the particular application marked on the product, tag, carton or reel. Included in this category are:

Aircraft Ground Support Cable
 Battery Lead Wire
 Brake Control Cable
 Burglar Alarm Cable
 Cathodic Protection Cable
 Crane and Hoist Optical Fiber Cable
 DLO Cable
 Flexible Power Feed Cable
 Golf Course Sprinkler Wire
 Induction Heating Cable
 Inductive Detector Lead-in Cable
 Insulated Grounding Conductors
 Irrigation Machine Feeder Cable
 Low-ohmic Distribution Cable
 Litz Wire
 Marine Cable
 Mine Power Feeder Cable
 Mineral-insulated Metal-sheathed Control Cable
 Pendant Cable
 PVC-jacketed, Thermoplastic Polyolefin-jacketed and Thermoplastic CPE-jacketed Thermoset-insulated Wire
 Railroad Underground Power Cable
 RF Coaxial Cable
 SAE Wire Types TWP, GPT, HDT, TXL, GXL and SXL
 Satellite Antenna-Cable
 Shore Power Cable
 Slotted Coaxial Cable
 Solar Panel Wire
 Strobe Flash-head Cable
 Submersible Pump Cable (TPE or PE insulation)
 Surge Protection Cable
 Telephone Central Office Power Cable
 Tower and Case Wire
 Tracer Wire
 Track Wire
 Traction Power Cable
 Undercarpet Data Cable
 Underground Low-energy Circuit Cable
 Underground Signal Cable
 Vault Lacing Cable
 Wireless Antenna Interface Cable

PRODUCT MARKINGS

Information regarding installation, ampacity, etc., where appropriate, is included in the marking found on the tag, reel or carton.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are:

ANSI/UL 44, "Thermoset-Insulated Wires and Cables"
 ANSI/UL 62, "Flexible Cords and Cables"
 ANSI/UL 66, "Fixture Wire"
 ANSI/UL 83, "Thermoplastic-Insulated Wires and Cables"
 ANSI/UL 493, "Thermoplastic-Insulated Underground Feeder and Branch-Circuit Cables"
 ANSI/UL 854, "Service-Entrance Cables"
 ANSI/UL 1072, "Medium-Voltage Power Cables"
 UL 1309, "Marine Shipboard Cable"
 ANSI/UL 1581, "Reference Standard for Electrical Wires, Cables, and Flexible Cords"
 SAE 1128, "Surface Vehicle Standard"

Wire, Special Purpose (ZMHX)—Continued

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product identifier, such as "Tracer Wire." The term "Special Purpose Wire" is not used.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIRE CONNECTORS (ZMKQ)**CRIMP TOOLS CLASSIFIED FOR USE WITH SPECIFIED WIRE CONNECTORS (ZMLS)****USE**

This category covers crimp tools suitable for use with specific Listed Grounding and Bonding Equipment (KDER), Quick-connect Terminals (RFBW), Wire Connectors and Soldering Lugs (ZMVV) and Wire Connector Adapters (ZMOW) in accordance with the Classification Mark and a compatibility list provided with the tool.

The inside cover of the tool storage case or a permanently attached label to the tool itself contains a compatibility list that tabulates the company name and catalog number of the crimp tool and the company name, catalog number, wire size and number of crimps of the applicable Listed grounding and bonding connectors, quick-connect terminals, wire connectors and wire connector adapters for which the crimp tool has been investigated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1976, "Outline of Investigation for Crimp Tools for Use with Wire Connectors."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**CRIMP TOOL
 FOR USE WITH UL LISTED GROUNDING AND BONDING
 CONNECTORS,
 QUICK CONNECT TERMINALS, WIRE CONNECTORS
 AND/OR WIRE CONNECTOR ADAPTERS
 IDENTIFIED IN THE INSTRUCTIONS PROVIDED
 Control No.**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

MULTI-POLE SPLICING WIRE CONNECTORS (ZMNA)**USE AND INSTALLATION**

This category covers insulated multi-pole mating and nonmating splicing wire connectors intended for field wiring and factory wiring. Multi-pole splicing wire connectors are intended to facilitate the connection of hard-wired utilization equipment (e.g., prefabricated wiring assemblies, ceiling fans, smoke detectors, lighting products) to the branch-circuit conductors of buildings. They are multi-polarity devices used to connect to two or more branch-circuit conductors.

This category also covers luminaire disconnects, which are intended to facilitate replacement of the ballast within a luminaire. Branch-circuit conductors have not been investigated for termination directly to a luminaire disconnect.

Mating connectors consist of two separable mating members (usually consisting of a male/female connection) that can be readily engaged or disen-

WIRE CONNECTORS (ZMKQ)

Multi-pole Splicing Wire Connectors (ZMNA)—Continued

gaged without the use of tools. They are provided with a latching mechanism and are physically keyed to maintain correct polarity. Luminaire disconnects need not be provided with a latch or locking mechanism, and have not been investigated as latching or locking-type devices.

Nonmating connectors are single devices used to facilitate the direct connection to the branch-circuit conductors.

Multi-pole splicing wire connectors are not intended to be permanently mounted. They are floating in an outlet, junction box or within a piece of equipment, such as a luminaire.

These wire connectors are suitable for currents not exceeding the ampacity of insulated conductors or the rated ampacity of the connector.

These wire connectors are intended for use in installations covered by ANSI/NFPA 70, "National Electrical Code."

Reusability — These connectors have not been investigated for reusability, except for spring-action-type connectors without the one-time-use-only marking.

Make and break — These wire connectors have been subjected to 10 operations of making and breaking 150% of current.

Box fill — These wire connectors have not been investigated for volume (box fill) and their acceptance in this capacity should be determined by the Authority Having Jurisdiction.

Use of specific tools — A specific tool and die used to assemble a multi-pole splicing wire connector to a conductor is identified on the connector, or on or within the unit container of the connector. The identification consists of a catalog or type designation, color coding, die index number, or equivalent means.

Multiple crimping operations — The number of crimps necessary to make a connection using the specific tool is identified on the connector, or on or within the unit container of the connector. Absence of information implies a single crimp.

Conductor strip length — Multi-pole splicing wire connectors requiring a specific strip length have this information identified on the connector, or on or within the unit container of the connector, on an insulating cover, or on the tool or tool carrying case.

PRODUCT MARKINGS AND RATINGS

Wire size — Multi-pole splicing wire connectors are rated for copper conductors only. The wire size or wire range is marked on the connector, or on or within the unit container.

Multi-pole splicing wire connectors have not been investigated for use with aluminum conductors.

Multiple conductors — Multi-pole splicing wire connectors generally accommodate a single conductor under each clamping mechanism unless otherwise identified (e.g., the number of conductors located parenthetically in front of the wire size or range). Some connectors may have a single conductor wire range as well as a second multiple conductor wire range.

Wire stranding — Unless clearly marked "Solid," "SOL," "Stranded" or "STR" for a given wire size, wire range or wire combination, conductors in the range 10–30 AWG are both solid and stranded, and 6–8 AWG are for stranded wire only.

Stranded conductor Class — Multi-pole splicing wire connectors are rated for use with stranded Class B concentric, Class B compressed, Class C concentric copper conductors.

Strip length — Multi-pole splicing wire connectors are marked with an insulation strip length for the conductor before assembly to the wire connector.

Conductor material — Multi-pole splicing wire connectors are marked "CU" or "Copper Wire Only."

Ampacity level — Other than luminaire disconnects, multi-pole splicing wire connectors are suitable for currents not exceeding the ampacity of insulated conductors rated 90°C. Use of higher temperature-rated conductors is permitted, provided the ampacity levels continue to be based on the 90°C ratings.

Assigned ampere rating — A luminaire disconnect is marked with its assigned ampere rating.

Luminaire disconnect — Multi-pole splicing wire connectors are intended to hot disconnect a ballast within a luminaire and are marked "Luminaire Disconnect."

Insulation temperature rating (maximum operating temperature) — Insulated multi-pole splicing wire connectors are marked with an insulation temperature rating. Insulated connectors, insulating caps and insulating covers that have an insulation temperature greater than the connector ampacity level are marked "Temperature Rating of Insulating Material °C."

Voltage rating — Insulated multi-pole splicing wire connectors are marked with a voltage rating on the device or the unit container.

Flammability rating — Insulated multi-pole splicing wire connectors may be additionally marked with a flammability rating of V-2, V-1, V-0, VTM-2, VTM-1 or VTM-0.

Assigned torque rating — Multi-pole splicing wire connectors may be marked with an assigned torque value for which the connector was investigated.

WIRE CONNECTORS (ZMKQ)

433

Multi-pole Splicing Wire Connectors (ZMNA)—Continued

Circuit identification — Unless provided with color-coded integral lead wires, multi-pole splicing wire connectors are marked to identify each terminal with the intended conductor polarity (e.g., G, B, W, L1, L2). Color-coded integral lead wires may also be used for circuit identification. The ground terminal, if provided, is marked with the international symbol for ground or with "G," "GR," "GND," "Ground," "Grounding," or similar marking. An integral lead wire for grounding is color coded green.

One-time use — Multi-pole splicing wire connectors employing spring action-type terminations and intended for one-time use only are marked "One-Time Use Only – Do Not Reuse," or the equivalent.

Limited current interruption — Mating-type multi-pole splicing wire connectors are marked "Limited Number of Current Interrupting Operations," or the equivalent, to identify that the device has been investigated for a maximum of 10 make-and-break current operations.

Installation instructions — Multi-pole splicing wire connectors are marked "To be sold only with installation instructions."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 2459, "Insulated Multi-Pole Splicing Wire Connectors."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Multi-Pole Splicing Wire Connector" or "Luminaire Disconnect," or other appropriate product name as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIRE CONNECTOR ADAPTERS (ZMOW)

USE AND INSTALLATION

This category covers both wire connector adapters intended to be installed on the end of a conductor prior to its insertion and connection to Listed wire connectors, or to connectors within Listed equipment. Wire connector adapters are used to transition between an aluminum conductor and another wire connector or piece of equipment rated for copper conductors only. Wire connector adapters are also used to transition between a stranded conductor (copper or aluminum) to the solid pin on the adapter, essentially converting a stranded conductor to a solid conductor.

Wire connector adapters may be uninsulated, supplied with integral insulation, or have separable insulation in the form of insulating caps or covers.

Wire connector adapters are intended for use in installations covered by ANSI/NFPA 70, "National Electrical Code," and intended to be installed using the prescribed manufacturer's installation instructions and specified crimp tool.

PRODUCT MARKINGS AND RATINGS

Wire size — Wire connector adapters are rated for 30 AWG or larger copper conductors and/or 12 AWG or larger aluminum conductors. The wire size is marked on the adapter, or on or within the unit container.

Single conductors — Wire connector adapters accommodate a single conductor, unless otherwise noted in the installation instructions.

Wire stranding — Wire connector adapters are for stranded wire only.

Stranded conductor Class — Wire connector adapters are intended for use on the following strand configurations:

- Aluminum – Class B concentric, compressed, and unidirectional lay compact

- Copper – Class B concentric, Class B compressed, Class C concentric

Wire connector adapters additionally rated for use with compact copper conductors are additionally marked "For compact-stranded copper conductors" or equivalent on the wire connector adapter, or on or within the unit container.

Wire connector adapters additionally rated for use with other Class conductors, such as Class M, are marked with the additional class designation and number of strands.

Wire Connector Adapters (ZMOW)—Continued

Strip length — Some wire connector adapters or their unit containers are marked with a strip length for the conductor before assembly to the wire connector adapter.

Conductor material — Wire connector adapters or the unit containers are marked with the type of conductor material(s) as follows:

Marking (or equivalent)	For Use With
"CU"	Copper wire only
"AL"	Aluminum wire only
"AL-CU" or "CU-AL"	Copper or aluminum

Ampacity level rating:

A. **Equipment use** — Equipment wiring requirements may restrict the sizing, ampacity and temperature ratings of connected conductors. Equipment requirements may limit 90°C or higher rated conductors to 60 or 75°C ampacity in accordance with Electrical Equipment for Use in Ordinary Locations (AALZ).

B. **General use** — Wire connector adapters rated 75°C are intended for use at ampacities not greater than those for 75°C rated conductors, and wire connector adapters rated 90°C are for use at ampacities not greater than those for 90°C rated conductors. Wire connector adapters may be marked with "75C" or "90C" to represent these levels. Alternatively, these rating levels may be represented by a 7 or 9 associated with the marking "CU," "AL" or "AL-CU," e.g., "AL9," "AL9CU," "AL7CU," "CU7," "CU9." Wire connector adapters not marked with an ampacity number 7 or 9 have an assumed level per the following table. Use of higher temperature-rated conductors is not prohibited, provided the ampacity levels continue to be based on the 75 or 90°C ratings.

Wire connector adapters are rated and marked as follows:

Type of Wire Connector Adapter	Rated For	Wire Range	Temp Marking	Rating
Copper body	CU only	All	Need not be marked	90
Aluminum body	CU only	All	75 or 90	As marked@
Aluminum body	AL or AL-CU	All	75 or 90	As marked@

@ Wire connector adapters rated for 6 AWG or smaller conductors may have the markings on the adapter, the unit container, or on an information sheet packed in the unit container.

Insulation temperature rating (maximum operating temperature) — Insulated wire connector adapters, insulating caps and insulating covers have an insulation temperature rating marked on the device or the unit container. This rating does not exceed the 75 or 90°C temperature rating of the wire connector adapter.

Voltage rating — Uninsulated wire connector adapters are rated for general use in circuits up through 2000 V. Uninsulated wire connector adapters may be used in circuits over 2000 V up through 35,000 V where the effects of corona have been investigated in the end-use application. Uninsulated wire connector adapters are not marked with a voltage rating.

Insulated wire connector adapters, insulating caps and insulating covers have voltage ratings for which they have been found acceptable. The voltage rating is marked on the device or the unit container and may be stated as "300 volts maximum" or "600 volts maximum," or equivalent wording.

Flammability rating — Insulated wire connector adapters and insulating caps and covers may be additionally marked with a flammability rating of V-0, V-1, V-2, VTM-0, VTM-1, or VTM-2.

Insulating caps and covers — Wire connector adapters or the unit container are marked with the catalog number of the insulating caps and covers for which they are intended.

INSTALLATION INSTRUCTIONS

Use of specific tools — A specific tool and die used to assemble a wire connector adapter to a conductor is identified on the wire connector adapter, or on or within the unit container of the wire connector adapter. The identification consists of a catalog or type designation, color coding, die index number, or equivalent means. Color coding of the crimp barrel is common.

Multiple crimping operations — The number of crimps necessary to make a connection using the specific tool is identified on the wire connector adapter, or on or within the unit container of the wire connector adapter. Location and number of crimping points is commonly located on the crimp barrel of the wire connector adapter.

Conductor strip length — Wire connector adapters requiring a specific strip length have this information identified on the wire connector adapter, on or within the unit container of the wire connector adapter, on an insulating cover, or on the tool or tool carrying case. Strip length marking is optional for some constructions.

Preliminary preparation of conductor — Some wire connector adapters supply instructions for the preliminary preparation of conductors, such as use of conductor termination compound (antioxidant compound), on or within the unit container.

Conductor termination compound — Some wire connector adapters are shipped pre-filled with conductor termination compound (antioxidant com-

Wire Connector Adapters (ZMOW)—Continued

pound). For non-prefilled wire connector adapters, conductor termination compound may be used if recommended by the wire connector adapter manufacturer as preliminary preparation of the conductor. Wire brushing of the conductor may also be performed if recommended. Also see Conductor Termination Compounds (DVIW).

RELATED PRODUCTS

See Wire Connectors and Soldering Lugs (ZMVV) for additional information on wire connectors used in conjunction with the termination of wire connector adapters.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 486A-486B, "Wire Connectors."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Wire Connector Adapter."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIRE CONNECTORS AND SOLDERING LUGS (ZMVV)**USE**

This category covers wire connectors for use with all alloys of copper or aluminum conductors, or both, for the purpose of providing contact between current-carrying parts. Wire connectors may be uninsulated, supplied with integral insulation, or separable insulation in the form of insulating caps or covers.

Terminal connectors establish a connection between one or more conductors to a terminal plate or stud, or to any similar device by means of mechanical pressure. They are fixed in position.

Splicing wire connectors establish a connection between two or more conductors by means of mechanical pressure and are not intended to be permanently mounted. They are floating, such as a twist-on connector in an outlet box.

Insulating caps or covers are for general use when installed on specific connectors. Information covering use of the caps or cover on specific connectors appears on the unit containers in which the caps or covers are packaged.

Soldering lugs are terminal connectors designed for attachment to a conductor by means of solder (non-pressure).

Reusability — Wire connectors have not been investigated for reusability. Reusability should be determined by the installer and the Authority Having Jurisdiction.

Direct burial — Wire connectors have not been investigated for direct burial. See **RELATED PRODUCTS**.

Use in service equipment — Where wire connectors are used as a part of service equipment, dead-front switchboards, panelboards, meter sockets, enclosed switches, circuit breakers, etc., reference should be made to the General Information for those categories concerning the use of the wire connectors. When wire connectors suitable for use with aluminum conductors are employed in such equipment, the suitability for wiring with aluminum conductors of such equipment will be indicated by a marking on the equipment and is independent of any marking on the wire connector.

INSTALLATION

Wire connectors are intended for use in installations covered by ANSI/NFPA 70, "National Electrical Code" (NEC), and should be installed using the prescribed manufacturer's installation instructions.

Stacking of connectors (multiple connectors assembled using a single bolt, nut and washers) may be permitted where mechanical interference is reduced or eliminated with the use of offset tangs, stacking adapters, and the like. The surface contact area of the mounting tang should make complete contact with the mounting surface or the previously stacked connector tang.

PRODUCT MARKINGS AND RATINGS

Wire size and wire combinations — Wire connectors are rated for 30 AWG or larger copper conductors and/or 12 AWG or larger aluminum conductors. The wire size, wire range or wire combinations are marked on the connector, or on or within the unit container. Wire connectors additionally investigated for metric size conductors are marked with the metric wire sizes expressed in mm².

WIRE CONNECTORS (ZMKQ)

Wire Connectors and Soldering Lugs (ZMVV)—Continued

Multiple conductors — Connectors generally accommodate a single conductor under a clamping mechanism unless otherwise identified, such as with the number of conductors located parenthetically in front of the wire size or range. Some connectors may have a single conductor wire range as well as a second multiple conductor wire range. Some connectors, such as twist-on connectors, will have multiple conductors expressed in a list of wire combinations.

Parallel conductors — Connectors intended for paralleling of conductors are intended to be used in accordance with Clause 310.4 of the NEC. Parallel connectors may have multiple conductor clamping mechanisms, each accepting a single conductor or a singular clamping mechanism accepting multiple conductors.

Wire stranding — Unless clearly marked "Solid," "SOL," "Stranded" or "STR" for a given wire size, wire range or wire combination, conductors in the range 30-10 AWG are both solid and stranded, and 8 AWG and larger are for stranded wire only. Connectors additionally rated for metric conductor sizes are marked with the letter "r" for rigid solid and rigid stranded conductors, or the letter "f" for flexible conductors.

Stranded conductor Class — Connectors rated for use with stranded conductors are for the following strand configurations:

- Aluminum — Class B concentric, compressed, and unidirectional lay compact

- Copper — Class B concentric, Class B compressed, Class C concentric

Wire connectors additionally rated for use with compact copper conductors are additionally marked "For compact-stranded copper conductors" or equivalent on the connector, or on or within the unit container.

Wire connectors additionally rated for use with other Class conductors, such as Class M, are marked with the additional class designation and number of strands.

Strip length — Some connectors or their unit containers are marked with a strip length for the conductor before assembly to the wire connector.

Conductor material — Wire connectors or the unit containers are marked with the type of conductor material(s) as follows:

Marking (or equivalent)	For Use With
"CU"	Copper wire only
"AL"	Aluminum wire only
"AL-CU" or "CU-AL"	Copper to copper, aluminum to aluminum, and copper to aluminum but not intermixed or in direct physical contact
"AL-CU (intermixed — dry locations)"	Copper to copper, aluminum to aluminum, and copper to aluminum intermixed

Except as otherwise noted on or in the shipping carton, copper and aluminum conductors are not intended to be used in direct physical contact in the same connector. A wire connector for securing an aluminum wire in combination with a copper conductor, where physical contact occurs between the wires of different metals, is limited to dry locations only and is marked "AL-CU (intermixed — dry locations)."

Ampacity level rating:

- Equipment use** — Equipment wiring requirements may restrict the sizing, ampacity and temperature ratings of connected conductors. Equipment requirements may limit 90°C or higher rated conductors to 60 or 75°C ampacity in accordance with Electrical Equipment for Use in Ordinary Locations (AALZ).
- General use** — Connectors rated 75°C are intended for use at ampacities not greater than those for 75°C rated conductors, and connectors rated 90°C are for use at ampacities not greater than those for 90°C rated conductors. Connectors may be marked with "75C" or "90C" to represent these levels. Alternatively, these rating levels may be represented by a 7 or 9 associated with the marking "CU," "AL" or "AL-CU," e.g., "AL9," "AL9CU," "AL7CU," "CU7," "CU9." Connectors not marked with an ampacity number 7 or 9 have an assumed level per the following table. Use of higher temperature-rated conductors is not prohibited, provided the ampacity levels continue to be based on the 75 or 90°C ratings.

Connectors are rated and marked as follows:

Type of Connector	Rated For	Wire Range	Temp Marking	Rating
Terminal (CU body)	CU only	All	Not marked	90
Terminal (AL body)	CU only	All	75 or 90	As marked@
Terminal	AL or AL-CU	All	75 or 90	As marked@
Splicing wire	CU only	30-6	Not marked	90
Splicing wire (CU body)	CU only	4 and larger	Not marked	90
Splicing wire (AL body)	CU only	4 and larger	75 or 90	As marked
Splicing wire	AL or AL-CU	30-6	Not marked	75
Splicing wire	AL or AL-CU	4 and larger	75 or 90	As marked

WIRE CONNECTORS (ZMKQ)

435

Wire Connectors and Soldering Lugs (ZMVV)—Continued

@ Terminal connectors rated for 6 AWG or smaller conductors may have the markings on the connector, the unit container, or on an information sheet packed in the unit container.

Insulation temperature rating (maximum operating temperature) — Insulated connectors, insulating caps and insulating covers have an insulation temperature rating marked on the device or the unit container. Insulated connectors, insulating caps and insulating covers that have an insulation temperature greater than the connector ampacity level rating are marked "Temperature Rating of Insulating Material ____°C."

Voltage rating — Uninsulated wire connectors are rated for general use in circuits up through 2000 V. Uninsulated wire connectors may be used in circuits over 2000 V up through 35,000 V where the effects of corona have been investigated in the end-use application. Uninsulated wire connectors are not marked with a voltage rating.

Insulated wire connectors, insulating caps and insulating covers have voltage ratings for which they have been found acceptable. The voltage rating is marked on the device or the unit container and may be stated as "300 volts maximum," "600 volts maximum," or "600 volts maximum building wire, 1000 volts maximum, in signs or luminaires," or equivalent wording.

Flammability rating — Insulated connectors and insulating caps and covers may be additionally marked with a flammability rating of V-2 or VTM-2 or better.

Assigned torque rating — A connector or its unit container may be marked with an assigned torque value for which the connector was investigated.

INSTALLATION INSTRUCTIONS

Use of specific tools — A specific tool and die used to assemble a wire connector to a conductor is identified on the connector, or on or within the unit container of the connector. The identification consists of a catalog or type designation, color coding, die index number, or equivalent means. Color coding of the crimp barrel is common.

Multiple crimping operations — The number of crimps necessary to make a connection using the specific tool is identified on the connector, or on or within the unit container of the connector. Location and number of crimping points is commonly located on the crimp barrel of the connector.

Conductor strip length — Wire connectors requiring a specific strip length have this information identified on the connector, or on or within the unit container of the connector, on an insulating cover, or on the tool or tool carrying case. Strip length marking is optional for some constructions.

Preliminary preparation of conductor — Some wire connectors supply instructions for the preliminary preparation of conductors, such as use of conductor termination compound (antioxidant compound) or pre-twisting of conductors, on or within the unit container.

Pre-twisting — Some connectors may specify that conductors are to be pre-twisted before assembly onto the connector.

Conductor Termination Compound — Some connectors are shipped pre-filled with conductor termination compound (antioxidant compound). For non-pre-filled connectors, conductor termination compound may be used if recommended by the connector manufacturer as preliminary preparation of the conductor. Wire brushing of the conductor may also be performed if recommended. Also see Conductor Termination Compounds (DVIW).

RELATED PRODUCTS

Sealed wire connector systems intended for direct burial, below-grade use, or similar damp or wet locations are covered under Sealed Wire Connector Systems (ZMWQ).

Wire connector adapters installed on the end of a conductor prior to their subsequent connection to Listed wire connectors or to connectors used in Listed equipment are covered under Wire Connector Adapters (ZMOW).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 486A-486B, "Wire Connectors," and ANSI/UL 486C, "Splicing Wire Connectors."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Wire Connector," "Soldering Lug," "Terminal Connector," "Splicing Wire Connector," or other appropriate product name as shown in the individual Listings.

Wire Connectors and Soldering Lugs (ZMVV)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

SEALED WIRE CONNECTOR SYSTEMS (ZMWQ)**USE AND INSTALLATION**

This category covers sealed wire connector systems intended for wet or damp locations and other installations, such as direct burial, below grade, or above grade where protected from direct exposure to sunlight. These systems may also be used indoors or in dry locations.

Sealed wire connector systems are intended for use in installations covered by ANSI/NFPA 70, "National Electrical Code."

Sealed wire connector systems have not been investigated for direct exposure to sunlight. Additional performance considerations to show equivalency to the connected conductors should be considered for UV exposure.

This category covers a complete system or insulating caps, covers, resins, tubing and tapes that are part of the system for use with specific wire connectors where the seal is made at the conductor. Pressure wire connectors may or may not be provided with the system.

CONDUCTOR TYPES

Sealed wire connector systems are intended for use with Types USE, RHW, XHHW, RW90 EP, RW90 XLPE or TWU, 30 AWG through 2000 kcmil copper or aluminum conductors with currents not exceeding the ampacity of insulated conductors rated either 75 or 90°C and intended for use at 600 V or less.

When so marked, sealed wire connector systems may also be intended for use with conductors of single- or multiple-conductor underground feeder cable (Type UF), golf course sprinkler cable, underground low-energy cable, irrigation cable, or other cable with insulation acceptable for direct burial, below grade use, or wet locations.

PRODUCT MARKINGS AND RATINGS

Sealed wire connector systems are marked with the following:

1. catalog number
2. wire range
3. voltage rating
4. operating temperature rating
5. the statement "For Use in Wet or Damp Locations"
6. additional conductor types, if applicable

Sealed wire connector systems are marked with the following:

1. all required wire connector markings and assembly information (see ZMVV)
2. complete assembly instructions for the sealed wire connector system

Sealed wire connector systems not provided with a wire connector in the same unit container include a statement that the sealed wire connector system is intended to be used only with certified wire connectors and are marked with one or more of the following:

1. the catalog number of the specific wire connector intended to be used
2. the physical dimensions of a specific wire connector intended to be used, or
3. the minimum and maximum envelope dimensions of any wire connector intended to be used

A sealed wire connector system may additionally be marked "Direct Burial," "Raintight," "Watertight" or "Submersible," as applicable.

All markings are located on:

1. all parts that comprise the system,
2. the packaging carton,
3. the unit container, or
4. the information sheet provided in each unit container.

RELATED PRODUCTS

See Wire Connectors and Soldering Lugs (ZMVV) for additional information on wire connectors used within a sealed wire connector system.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 486D, "Sealed Wire Connector Systems."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sealed Wire Connector System."

Sealed Wire Connector Systems (ZMWQ)—Continued

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIRE CONNECTORS AND SOLDERING LUGS CLASSIFIED IN ACCORDANCE WITH IEC PUBLICATIONS (ZNKD)

This category covers products that have been investigated in accordance with IEC 60998-1 and IEC 60998-2-4, "Connecting Devices For Low Voltage Circuits Household and Similar Purposes, Particular Requirements for Twist-On Connecting Devices." These products may also be evaluated for and provided with the Listing Mark for Wire Connectors and Soldering Lugs (ZMVV).

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

LOOK FOR CLASSIFICATION MARK ON PRODUCT

The Classification Marking of Underwriters Laboratories Inc. on the product or unit container is the only method provided by Underwriters Laboratories Inc. to identify products manufactured under its Classification and Follow-Up Service.

For those products which are also Listed, the Classification Marking for these products includes the appropriate Listing Mark and the statement: "Also Classified by Underwriters Laboratories Inc. in accordance with IEC Publications 60998-1 and 60998-2-4."

For those products which are not Listed, the Classification Marking consists of a statement "Classified by Underwriters Laboratories Inc. in accordance with IEC Publications 60998-1 and 60998-2-4" and a control number. The Classification Marking may include the symbol UL in a circle in conjunction with the word "Classified".

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIRE, HEAT RESISTANT, FOR OVENS (ZNNA)**USE**

This category covers single- and multiple-conductor wire intended for use in dry locations in infrared ovens and similar other high-temperature applications. The wire is rated 300 or 600 V, and 105, 150, 200, 250, 350 or 450°C.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2563, "Outline of Investigation for Heat Resistant Wire."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Heat-resistant Wire."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIRED CABINETS (ZNXR)**USE AND INSTALLATION**

WIRED CABINETS (ZNXR)

This category covers wired cabinets, such as illuminated and nonilluminated jewelry, display and showcases.

Wired cabinets may be permanently connected or cord-and-plug connected. Cord-and-plug connected wired cabinets are limited to groups of not more than six sections coupled together by flexible cord and locking connectors, with one of the wired cabinet sections connected by a flexible cord and plug cap rated 15 or 20 A to a permanently-installed receptacle in the building structure.

Permanently-wired cabinets may be provided with convenience outlets for connection of equipment, such as POS (point-of-sale) equipment. Cord-and-plug connected wired cabinets may have receptacles installed for connection of factory-installed equipment, such as luminaries. These receptacles are not intended for powering additional equipment and are occupied by factory-installed equipment.

These products are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

RELATED PRODUCTS

Other commercial display cabinets are covered under Commercial Displays (IYMX).

Cabinets provided with or designed for use with refrigeration equipment are covered under Commercial Refrigerators and Freezers (SGKW).

Nonilluminated advertising displays are covered under Advertising Displays, Nonilluminated (AAVU).

Custom-built commercial products, such as ticket machines, electronic point-of-sale products, Internet communication stands and the like, are covered under Custom-built Kiosks (EMHH).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 65, "Wired Cabinets."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Wired Cabinet."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

POSITIONING DEVICES (ZODZ)

GENERAL

This category covers cable ties, cable tie mounts, and similar types of related hardware for field installation in accordance with ANSI/NFPA 70, "National Electrical Code." The investigation of these products includes consideration of the rated mechanical strength, maximum operating temperature, smoke and heat generation, corrosion resistance and weatherability characteristics as appropriate for the product.

MARKINGS

The product or the smallest unit package in which the product is shipped is marked with the product's maximum load and thermal ratings along with the company name and catalog designation.

Products covered under this category have not been evaluated for outdoor use unless marked "For Use Outdoors" or similar wording, in which case they have been found acceptable for both indoor and outdoor use.

Containers for those devices which have been investigated to determine their suitability for use in air handling areas are marked either "Suitable for use in air handling spaces in accordance with Sec 300.22(C) and (D) of the National Electrical Code" or "Suitable for use in air handling spaces in accordance with Sec 300.22(B), (C) and (D) of the National Electrical Code," as appropriate.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1565, "Positioning Devices."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit package in which the product is shipped with or without the UL symbol on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Positioning Device" or other appropriate product name as shown in the individual Listings.

POSITIONING DEVICES (ZODZ)

437

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIRE-PULLING COMPOUNDS (ZOKZ)

USE

This category covers wire-pulling compounds intended for use as lubricants in installing electrical wire and cable in conduit and other raceway. These compounds have been investigated to determine their compatibility with conductor insulation and coverings.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 267, "Outline of Investigation for Wire-Pulling Compounds."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Wire Pulling Compound."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

WIREWAY, AUXILIARY GUTTERS AND ASSOCIATED FITTINGS (ZOYX)

USE AND INSTALLATION

This category covers metallic and nonmetallic wireway, auxiliary gutters, and associated fittings for installation in accordance with Articles 366, 376, 378 and 645 of ANSI/NFPA 70, "National Electrical Code" (NEC).

Nonmetallic wireway installed in accordance with the product markings and manufacturer's instructions is suitable for use as equipment grounding conductors, and is Listed for grounding.

PRODUCT MARKINGS

Products investigated to determine that they are rain tight are marked "Raintight."

Nonmetallic products investigated to determine their suitability for exposure to sunlight are marked "Sunlight Resistant."

Nonmetallic products investigated to determine their suitability for use in an air-handling space in a location subject to Article 645 of the NEC are so rated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate metallic products in this category is ANSI/UL 870, "Wireways, Auxiliary Gutters and Associated Fittings."

The basic standards used to investigate nonmetallic products in this category are ANSI/UL 870 and ANSI/UL 5A, "Nonmetallic Surface Raceways and Fittings."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Wireway or Auxiliary Gutter," "Wireway," "Auxiliary Gutter," "Wireway or Auxiliary Gutter Fittings," "Wireway Fittings" or "Auxiliary Gutter Fittings."

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

X-RAY EQUIPMENT (ZQOR)**USE**

These products are portable, mobile, stationary, and fixed X-ray units or systems intended for medical, commercial or industrial use.

This equipment has been Classified as to electrical fire, shock, and mechanical hazards only incident to its use in ordinary locations.

INSTALLATION

The nature of X-ray equipment is such that it involves features of installation and use not ordinarily presented in utilization equipment. Such features are covered in the manufacturer's installation instructions. Installation must, if possible, be made in a room or compartment in which provision is made to prevent fire or injury to persons and must, in all cases, be in accordance with the manufacturer's installation instructions furnished with the equipment and the requirements of the Authorities Having Jurisdiction.

The individual units of a system may be designed to be interconnected by means of one or more of the wiring methods outlined in the National Electrical Code, NFPA 70 (NEC).

RELATED PRODUCTS

Equipment not covered includes, but is not limited to: X-ray equipment designed to operate on supply potentials of over 600 V, equipment incorporating unenclosed aerial conductors, separate devices such as tables, timers, etc., which are not limited in design to X-ray applications, and equipment which is not necessary for successful operation of X-ray equipment.

Equipment which has been Classified as to electrical fire, shock, and mechanical hazards incident to its use in hazardous locations as defined by the NEC is covered under X-ray Equipment for Use in Hazardous Locations (ZQRV).

Equipment used in X-ray procedures performed in ordinary locations, which does not affect the emission of electronic product radiation, is covered under X-ray Equipment Accessories (ZQVQ) and includes X-ray film illuminators, safe-lights, and viewers.

X-radiation safety and performance requirements are regulated under Public Law 90-602 and are enforced by the U.S. Department of Health, Education, and Welfare. Compliance with the applicable regulations under conditions of normal and abnormal operation has not been investigated by UL.

The basic standard used to investigate products in this category is UL 187, "X-ray Equipment."

LOOK FOR CLASSIFICATION MARK ON PRODUCT

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**X-RAY EQUIPMENT
WITH RESPECT TO ELECTRICAL FIRE,
SHOCK AND MECHANICAL HAZARDS ONLY**

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

X-RAY EQUIPMENT ACCESSORIES (ZQVQ)**USE**

This category covers portable and stationary accessory X-ray apparatus, such as X-ray film viewers and illuminators, which do not affect the emission of X-radiation or are used exclusively for the examination and handling of processed X-ray film.

Permanently installed X-ray film illuminators or viewers are intended for mounting in various positions, such as on or in walls, and are provided with means for connection to a supply source using one or more of the wiring methods outlined in ANSI/NFPA 70, "National Electrical Code."

This equipment has been investigated to determine incident to its use in unclassified (ordinary) locations.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 187, "X-Ray Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "X-Ray Equipment, Accessory" or "X-Ray Accessory," or the name of the specific type of product as shown in the individual Listings.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

Index of UL Product Categories Correlated to the 2008 NEC®

The Index of UL Product Categories Correlated to the 2008 NEC is intended to act merely as a tool for the User to identify potential UL Product Category Codes and their location in this publication. Locating the Product Category Code on the pages indicated will provide the User with the UL Guide Information for the applicable Category Code. This Correlation Index may not be a comprehensive list. There may be other UL Product Categories for which Listed products are covered that may be applicable to the Code Section. The User should independently confirm the applicability of the Product Category to the Code Section and verify that no other UL Product Categories apply to the installation. The installation of products for the Categories identified in this index are subject to the approval by the Authority Having Jurisdiction (AHJ).

Index of UL Product Categories Correlated to the 2005 NEC®

The Index of UL Product Categories Correlated to the 2005 NEC is intended to act merely as a tool for the User to identify potential UL Product Category Codes and their location in this publication. Locating the Product Category Code on the pages indicated will provide the User with the UL Guide Information for the applicable Category Code. This Correlation Index may not be a comprehensive list. There may be other UL Product Categories for which Listed products are covered that may be applicable to the Code Section. The User should independently confirm the applicability of the Product Category to the Code Section and verify that no other UL Product Categories apply to the installation. The installation of products for the Categories identified in this index are subject to the approval by the Authority Having Jurisdiction (AHJ).

Other UL Services

In addition to its Listing, Classification and Component Recognition Services, UL can provide manufacturers with a variety of related assessment, inspection and facility registration services.

Specialized Services

UL has specialized services and staff to assist customers and others with various product certification and information needs.

Local Engineering Services

UL's Local Engineering Services (LES) offices give customers access to UL engineers in their own local areas. In key centers around the U.S., UL operates LES offices that offer fast and convenient service. Customers can use these offices as quick sources of information or to receive on-site product investigations, Field Engineering Services or other engineering evaluations locally. The locations and addresses of these LES offices are listed at the back of the White Book.

Fact-Finding Investigations

In the interest of public safety, UL conducts Fact-Finding Investigations on an individual contract basis for manufacturers, trade associations, government agencies and others. Fact-Finding Investigations provide information or data that the sponsor can use, in seeking support for a proposed amendment to a nationally recognized installation code. These investigations result in a Fact-Finding Report. Contact a Customer Service Professional for referral to the appropriate engineering staff.

Research Services

UL also serves the interests of the public by conducting research investigations -- both for its own use and use by others -- on products or materials to help identify safety concerns and to assist in the development of appropriate safety requirements. This research is particularly useful when new technologies emerge or new safety concerns are explored. UL's research expertise and facilities are available to manufacturers, trade associations, government and other groups. Contact a Customer Service Professional for referral to the appropriate engineering staff.

Commercial Inspection and Testing Services

UL's trained field representatives and engineers, located throughout the U.S. and in many other countries, are available to perform specific inspections for AHJs, government officials, industry groups and others. UL's Commercial Inspection and Testing Services are available for retailers, manufacturers, importers and exporters who require their sources or vendors to have products inspected before shipment. These inspections include Factory Assessment Inspections, First Article Inspections and other inspections as specified by the retailer or manufacturer. For more information, call the UL CITS Staff at +1 847-664-2156, or fax to +1 847-509-6296 or e-mail cits@us.ul.com.

UL Information Services

UL's Technical Information Services

Manufacturers, AHJs and other groups look to UL as a uniquely broad and accessible source of technical information in areas such as product testing and certification, domestic and international standards, international compliance requirements, and quality system registration. UL provides a variety of technical information services.

Online Certifications Directory

UL's Online Certifications Directory of UL certified products can be accessed at www.ul.com/database.

The White Book and CDs

UL's printed Product Directories, the White Book and CDs are published annually. Order these by visiting <http://www.ul.com/info/uldirs.htm> or by contacting UL at (847) 664-3480 or fax (847) 509-6243.

Following are the distribution months for the White Book and CDs currently available from UL:

<u>Title</u>	<u>Month Distributed</u>
Building Materials, Fire Protection Equipment, Roofing Materials & Systems and Fire Resistance CD	February
Guide Information for Electrical Equipment - The White Book	June
Heating, Cooling, Ventilating & Cooking Equipment, Food Safety Equipment, Plumbing & Associated Products and Flammable & Combustible Liquids & Gases Equipment CD	October

UL's Website

Visit www.ul.com for information on UL's products and services. Topics include:

- UL Marks
- UL product testing and certification, facility registration, and related services
- Seminars
- Technical information resources, such as Standards (including access to the Standards Electronic Bulletin Board System) and UL's Online Certifications Directory
- UL news and activities, including the latest news releases
- Information for AHJs, consumers and retailers
- UL Standards CSDS
- UL Marking Guides

UL Standards Development Process – Potential Roles for AHJs

Background

Underwriters Laboratories Inc. (UL) is an independent, not-for-profit organization providing global conformity assessment programs and services. In addition to being the leader in product safety certification and conformity assessment services, UL is a world leader in standards development. Through more than a century of involvement in the standards and conformity assessment community, UL is recognized for its unrivaled technical expertise in the areas in which it develops standards. UL's Standards for Safety are used to investigate and certify products and systems. These standards are used by manufacturers to help design products and systems to meet the requirements for certification, by AHJs who reference the standards for products and systems used in their jurisdictions, by code development organizations that adopt and reference UL Standards for Safety, and by certification organizations that apply UL requirements for product evaluations.

Content/Scope of a UL Standard for Safety

UL Standards are typically identified as Standards for Safety and cover reasonably foreseeable risks associated with a product. Limitations applicable to the products covered by the standard are delineated in the Scope.

UL Standards are intended to:

- Identify the requirements used for the investigation of products and provide consistency in the application of these requirements.
- Provide guidance for the development of products by manufacturers.
- Provide requirements compatible with nationally recognized installation codes so that AHJs may judge their acceptability under installation codes. In addition, UL Standards may also be used by AHJs as a basis for judging material or equipment outside the scope of the document by reason of size, rating, one of a kind, or the like.

UL Standards are developed under a procedure that provides for participation, review, and comment from groups representing a broad range of interests including industry, government, insurance groups, consumers, other interested parties, and the general public. This procedure takes into consideration the needs and opinions of a wide variety of interests concerned with the subject matter of the standard.

The factors that impact UL's decision to develop a new standard or maintain existing standards include:

- Request for UL product certification in a new area;
- Request by an AHJ, government agency or consumer organization in which a new need is identified;
- Change in nationally recognized codes;
- Reports from the field pertaining to products currently in use;
- New technology not contemplated in current requirements; or
- Harmonization with regional or international standards.

Generally, UL standards are additionally recognized as American National Standards (ANSI).

Authorities Having Jurisdiction (AHJs) and Consumer Involvement

To promote a balance of input to its standards development process, UL has intensive recruitment and outreach programs to encourage AHJs and consumers to participate on Standards Technical Panels (STP). UL offers process training and funding for attendance at STP meetings. Contact the STP Project Manager (available at www.ulstandardsinfo.net) for more information in advance of a meeting.

Essential Elements of the STP Process for Consensus Standards

The UL standards development process for consensus standards is based on the essential elements of ANSI's standards development criteria. The process incorporates the following concepts:

Continuous maintenance and open participation

UL is continually open to input from the various users of UL Standards and other interested groups addressing particular issues. Input is provided by industry, consumer groups, insurance representatives, and government agencies, as well as by AHJs, trade associations, and advisory groups.

UL encourages interested parties to actively participate in UL's standards development process by becoming a member of a specific STP. UL strives to achieve balance among the interest categories on the STPs. All participation takes place electronically through the UL Collaborative Standards Development System (CSDS).

STP meetings are held when the STP Chair decides that there is a need to convene the consensus body either because there are proposals to discuss or comments to resolve. Meetings can also be considered if requested by STP members. STP meetings that result from proposals or are otherwise convened by UL are open. All STP meetings are posted on the UL CSDS.

In addition, UL solicits comments from UL's Standards subscribers and public review participants.

Anyone materially affected by a UL Standard is encouraged to submit proposals. The on-line Proposal Request Form is used to formally submit proposals for UL Standards using UL CSDS. In addition to providing rationale for the proposal, the proposed wording for the requirement is to be shown in legislative format.

Consensus body review and ballot

Proposals to develop or revise a standard are balloted to the STP, the consensus body. Proposals must reach consensus before UL publishes the requirements. Consensus is achieved when more than 50 percent of the STP returns a ballot and approval is granted by two-thirds of those voting minus abstentions, negatives without comment, and negatives based on material not covered by the ballot.

UL Standards and proposed revisions are balloted for a minimum of 30 days.

Public review

UL provides public notice of, and the opportunity to comment on, all proposals. UL notifies the public of its intent to develop a new standard, revise a standard, or publish approved requirements through notices in *ANSI Standards Action*.

Public review periods are typically 45 days and are done in parallel with the consensus body review and ballot phase.

Comment resolution and circulation of substantive changes

All comments received on proposals are given due consideration. Comments received during the consensus process can be handled one of four ways: (1) a response drafted by UL, (2) a response drafted based on discussions by the STP at a comment resolution meeting, (3) a response drafted by a task group, or (4) a response drafted by the original submitter of the proposal.

The disposition of comments is shared with participants, and substantive revisions to proposals resulting from the comments, along with continuing objections, are circulated to the STP and subscribers to give STP members the opportunity to change their vote. All comments are made available via UL CSDS.

A two-week circulation is provided for comments with no substantive changes. A four-week circulation is provided for comments that result in proposal revision.

Consensus is verified during this phase.

The submitter of a proposal that lacks consensus may withdraw the proposal at any time in the process. When a proposal is withdrawn, the STP will be notified, and the reason for withdrawal will be provided, when appropriate.

Opportunity for appeal

STP members and other participants with continuing objections have the right to appeal the STP approval of proposals prior to UL publishing the revisions.

Continuing objectors may appeal the decision of the STP on the basis of a procedural complaint. Technical decisions approved by the STP are not grounds for appeal and will not be heard.

All valid appeals will be heard through a standing Appeals Panel. Details on the process are available at www.ulstandardsinfonet.ul.com.

Publication of approved material

UL notifies STP members and provides public notice when proposals have completed the consensus process.

UL undergoes regular and extensive audits and has been awarded the right to be an ANSI Audited Designator. As such, UL does not need to submit its standards to the ANSI Board of Standards Review for approval; UL can self-declare and move approved materials directly to publication.

Roles of STP Members

There are no membership dues associated with STPs, and anyone interested in membership is encouraged to complete an STP application (refer to www.ulstandardsinfonet.ul.com or the STP application included on the Electrical Toolkit). The STP Chair appoints members to the STP based on completed applications and criteria outlined in UL's Approved Regulations Governing ANSI/UL Standards Technical Panels (<http://ulstandardsinfonet.ul.com/stp/regulations.html>). The role of an STP member is to fully participate in the consensus process by commenting and voting on proposals, helping to resolve comments, and submitting new proposals. Continued membership is contingent on active participation; however, meeting attendance is optional. STP members may also participate on task groups.

UL CSDS Participation

The UL CSDS affords subscribers to UL's Standards Service participation in the standards development process via on-line access to the latest proposals under consideration. This includes all stages of the proposal review and comment resolution process, as well as STP meeting reports, which include a summary of the discussions that took place at the STP meeting.

STP members have a complementary subscription to UL's Standards Service for the standards covered by the STP. STP members have an additional level of access to: any documents for preliminary review to obtain initial input on a concept, with or without specific proposals; agendas for STP meetings, which provide a description of the meeting topics, with rationale and impact statements for specific proposals, when appropriate; and a ballot feature, when appropriate, for specific proposals to issue or revise a UL Standard.

There is no paper distribution involved in UL's standards development process. All participation is through CSDS so participants must have access to a computer, e-mail, and the Internet.

UL Standards Publications

Standards for Safety Catalog – UL's Standards for Safety Catalog is available online at <http://ulstandardsinfonet.ul.com/catalog/stdscatframe.html>

To Order Standards Services

To order UL Standards, Standards Subscription Services and other Standards publications from the U.S. or Canada, call toll-free 1-888-UL33503 or 1-888-853-3503. Callers from other countries can dial Int+415-352-2168. Or fax at 888-853-3512. For more information on ordering UL Standards, visit <http://ulstandardsinfonet.ul.com>.

UL StandardsInfoNet

UL StandardsInfoNet – the Internet website for information on UL Standards activities.

UL StandardsInfoNet provides access to UL's current Standards for Safety Catalog and Product Index.

UL StandardsInfoNet provides up-to-date information pertaining to UL's various Standards activities, such as information about new editions, revisions, proposed Standards, Bulletins, and Outlines of Investigation; a list of UL Standards approved by ANSI and the DoD; UL/CSA and UL/IEC harmonized Standards; the scope of each Standard and Outline of Investigation; meeting announcements, and the like.

UL StandardsInfoNet can be accessed at no cost by setting your browser's URL to:
<http://ulstandardsinfonet.ul.com>.

Appendix A UL Marking Guides

UL has developed seven marking guides to assist AHJs and installers in understanding the meaning and location of markings on various UL Listed products. These products are intended to be installed in accordance with the NEC® and their UL Listing.

The following UL Marking Guides are included in this appendix:

1. Dead-front Switchboards
2. Electrical Heating and Cooling Equipment
3. Luminaires
4. Molded Case Circuit Breakers
5. Panelboards
6. Swimming Pool Equipment, Spas, Fountains and Hydromassage Bathtubs
7. Wire & Cable

The UL Guide Information for product categories referenced in the above marking guides is included within the UL White Book.

**Underwriters
Laboratories**

Dead-Front Switchboard Marking Guide

January 2009

Underwriters Laboratories Inc. developed the Dead-Front Switchboard Marking Guide to help electrical inspectors inspect switchboards used in ordinary locations, rated 600 volts or less.

This marking guide is not comprehensive; it covers those markings that have generated questions. Inspectors can find additional information on marking requirements in the guide information for Dead-Front Switchboards (WEVZ). This guide information is available in the UL White Book and online at www.ul.com. In addition, marking guides are available for Panelboards and Molded Case Circuit Breakers.

Complete information regarding the provision of markings and instructions for these switchboards is contained in the Standard for Switchboards, UL 891. References to the *National Electrical Code® (NEC®)* are to the 2008 edition.

UL Marking Guides are updated as necessary due to new product development, changes in the National Electrical Code®, or the need for clarification. To confirm the current status of any UL Marking Guide, please consult the Regulators page of the UL Web Site at <http://www.ul.com/regulators/>

Your comments or suggestions regarding this marking guide are welcome and appreciated. They should be sent to:

1. GENERAL INFORMATION

UL lists manufacturers of dead-front switchboards under the category of “Dead-Front Switchboards” (WEVZ) in the UL Electrical Construction Equipment Directory (Green Book) and online at [www.ul.com/ database](http://www.ul.com/database).

This Directory also contains names of manufacturers who are authorized to label equipment similar in appearance to dead-front switchboards under the following categories:

Circuit Breaker and Metal-Clad Switchgear — over 600 volts (DLAH)

Switchgear Assemblies, Metal Enclosed, Low-Voltage Power Circuit Breaker Type (WUTZ)

The evidence of Listing is the UL Listing Mark on the product. The Listing Mark for switchboards includes the name and/or symbol of Underwriters Laboratories Inc., together with the word “Listed,” a control number and one of the following product names as appropriate: “Dead-Front Switchboard Section,” “Switchboard Interior,” or “Switchboard Enclosure.”

The Listing Mark for Dead-Front Switchboard Sections contains the marking “_____ of _____,” in which the first space is marked with a number indicating the position that the section occupies in the series of sections which constitute the switchboard, and the second space is marked with the total number of sections (both Listed and non-Listed) in the switchboard. A single section switchboard is marked 1 of 1. The section on the left side when facing the front of the switchboard is marked as position one of the series.

A switchboard section mounted on top of one or more sections is marked _____ T where the blank is filled with the number of the initial section covered. A switchboard enclosure (pull section) may be included in the numbering sequence if it is located at either end of the switchboard. The pull section is included in the numbering sequence if located between switchboard sections.

A switchboard section omitting one side is marked to indicate the catalog number of a separate side panel that should be ordered, or the catalog numbers of stock sections to which it is intended to be connected.

The Listing Mark is applicable only to the section so marked; it does not cover other sections included in the complete switchboard. A switchboard may be shipped from the factory incorporating both Listed and non-Listed sections. The non-Listed sections have not been evaluated by UL.

The basic Standard used to investigate products in this category is the Standard for Switchboards, UL 891.

Switchboard markings may be molded, die-stamped, paint stenciled, stamped, etched metal that is permanently secured, or on a label secured by adhesive. Some markings may be located on a wiring diagram in a pocket on the switchboard.

2. GLOSSARY

ACCESSIBLE, FRONT - An enclosure in which all bus and device connections are accessible from the front. If necessary, a limited number of devices shall be permitted to be removed to achieve this accessibility.

ACCESSIBLE, REAR - An enclosure in which all incoming and outgoing cable or bus connections are accessible from the rear. Other connections shall be permitted to be front accessible.

AMPACITY - The current in amperes a conductor can carry continuously under the conditions of use without exceeding its temperature rating.

BARRIER - A partition for the insulation or isolation of electric circuits or electric arcs.

BONDING - The permanent joining of metallic parts to form an electrically conductive low impedance path that will assure electrical continuity and the capacity to conduct safely any current likely to be imposed.

BUS - A conductor, or group of conductors, that serves as a common connection for two or more circuits.

BUS, BRANCH — A bus that originates at a section bus and terminates in one or more overcurrent devices.

BUS, GROUND — A bus to which the equipment grounding conductors from individual pieces of equipment are connected and which, in turn, is connected to the grounding electrode conductor at one point. It provides a continuous ground in multiple equipment sections through which it passes. See Figure 2.1.

BUS, NEUTRAL — A bus having the appropriate number of terminals to provide for the connection of the neutral line and load conductors. See Figure 2.1.

BUS, SECTION — That portion of the bus structure that serves one or more overcurrent devices in the switchboard section and comprises that part of the bus between the supply bus and branch bus. See Figure 2.1.

BUS, SPLICE — A bus that electrically connects switchboard sections. See Figure 2.1.

BUS, SUPPLY — A bus that is intended primarily for conducting electric power from the source to the main section of a switchboard. See Figure 2.1.

BUS, THROUGH — A bus that extends through a switchboard section. It is sometimes called a horizontal, cross or main bus. See Figure 2.1.

CIRCUIT BREAKER - A device designed to open and close a circuit by non-automatic means, and to open the circuit automatically on a predetermined overcurrent, without injury to itself when properly applied within its rating.

CIRCUIT BREAKER, MOLDED CASE - A circuit breaker which is assembled as an integral unit in a supporting and enclosing housing of insulating material.

CONTINUOUS CURRENT - The amount of current a conductor, a device or a piece of equipment can carry continuously for an indefinite period of time without exceeding its allowable temperature rise.

CURRENT RATING - the designated maximum direct or alternating current in rms amperes at rated frequency that a device can carry continuously under specified conditions.

DEAD-FRONT SWITCHBOARD - A switchboard which has no exposed live parts on the front.

DEVICE - A component of an electrical system that is intended to carry or control, but not utilize, electrical energy.

DISCONNECTING MEANS – A device, or a group of devices, or other means by which the conductors of a circuit can be disconnected from their source of supply.

DOUBLE-ENDED SWITCHBOARD (Multiple Source) — A switchboard construction that provides for the connection of two supply sources, such as a utility service and an on-site generator. See Figures 2.2 and 2.3 for typical examples.

FUSE - A protective device which opens by the melting of a current-sensitive element during specified overcurrent conditions.

FUSIBLE SWITCH - A switch in which one or more poles have a fuse in series in a composite unit.

I^2t (AMPERE SQUARED SECONDS) - An expression related to the circuit energy as a result of current flow. The " I^2 " stands for the square of the effective (rms) let-through current and the " t " stands for the time of current flow in seconds. " I^2t " is a common expression for the circuit energy between the initiation of the fault current and the clearing of the circuit.

INTERLOCK - An electrical or mechanical component actuated by the operation of a device or other means, with which it is directly associated to govern succeeding operations of the same or allied devices.

INTERRUPTING RATING – The highest current at rated voltage that a device is intended to interrupt under standard test conditions.

MAIN DEVICE – A single device that disconnects all ungrounded conductors, other than control power conductors when used, from the supply bus. See Figure 2.1.

MAIN SECTION(S) – A portion of a switchboard where the main or service disconnect device(s) is located. The section shall also be permitted to contain utility meters or other instruments. Incoming line conductors may be terminated in this section. See figure 2.1.

NEUTRAL – Neutral refers to a conductor (when one exists) of a polyphase circuit or single-phase, 3-wire circuit which is intended to have a voltage such that the voltage differences

between it and each of the other

conductors are approximately equal in magnitude and are equally spaced in phase, such as:

- a) the center point of a wire connected system,
- b) the midpoint of a 3-wire, single phase system,
- c) the midpoint of one side of a delta connected system.

RATING - A designated limit of operating characteristics based on definite conditions.

SERVICE EQUIPMENT – The necessary equipment, usually consisting of a circuit breaker or switch and fuses, and their accessories, located near the point of entrance of supply conductors to a building or other structure, or an otherwise defined area, and intended to constitute the main control and means of cutoff of the supply.

SHORT-CIRCUIT CURRENT RATING – The maximum RMS available current to which a device can be connected. The rating is expressed in amperes and volts.

SWITCH - A device, manually operated, unless otherwise designated, for opening and closing or for changing the connection of a circuit.

SWITCHBOARD — A large single panel, structural frame or assembly of panels or structural frames on which may be mounted, on the face or back or both: switches, overcurrent, and other protective devices, buses, and instruments.

Note: Switchboards may be accessible from the rear as well as from the front and are not intended to be installed in cabinets.

SWITCHBOARD ENCLOSURE — An enclosure that encloses one or more switchboard sections or switchboard interiors, or provides auxiliary wiring space for an adjacent switchboard section.

SWITCHBOARD INTERIOR — The interior part of a switchboard intended to be installed in a switchboard enclosure to become the equivalent of a switchboard section.

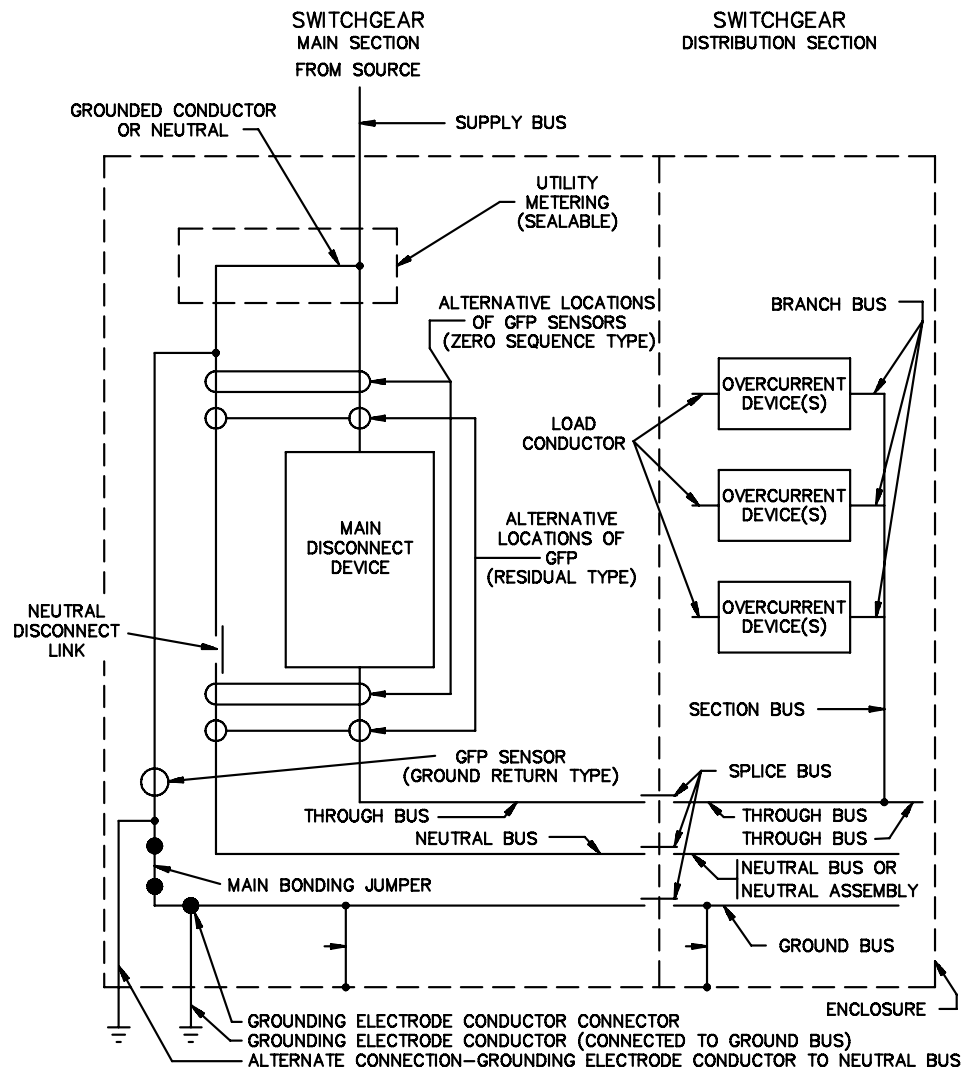

SWITCHBOARD SECTION — That portion of a switchboard that is prevented by the structural framework from being physically separated into smaller units.

Note: Framework that is welded or joined with steel rivets over 1/4 inch (6.4 mm) in diameter is considered to constitute a single section. However, framework that is joined with one-way (tamper-proof) bolts is not considered to constitute a single section. An assembly consisting of an enclosure and terminal blocks or bus bars is considered to be a switchboard section.

SYMMETRICAL CURRENT - Alternating current having no offset or transient component and, therefore, having a wave form essentially symmetrical about the zero axis. Symmetrical current is expressed in terms of rms A.

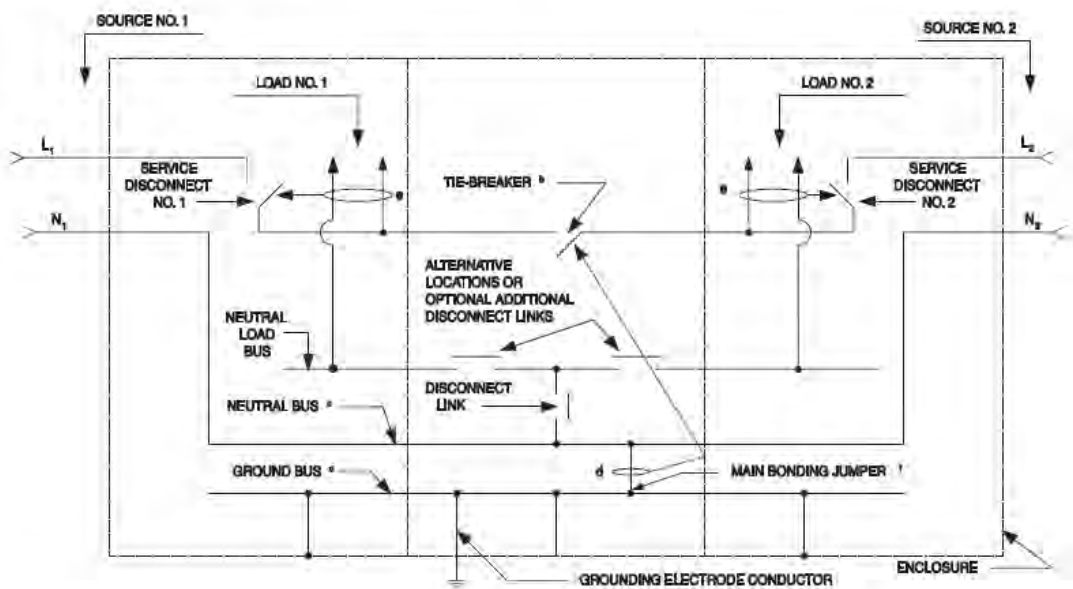

TAP – A terminal or provision for a terminal intended for field wiring that is located on the supply side of the service disconnecting means, for uses permitted by the installation rules of the country of installation.

FIGURE 2.1
TYPICAL DEAD-FRONT SWITCHBOARD LAYOUT

SC1177-3

FIGURE 2.2
TYPICAL DOUBLE-ENDED SWITCHBOARD^a

^a Other variations are possible.

^b Tie-breaker disconnect (not a circuit breaker marked “Line” and “Load,” nor a fused switch).

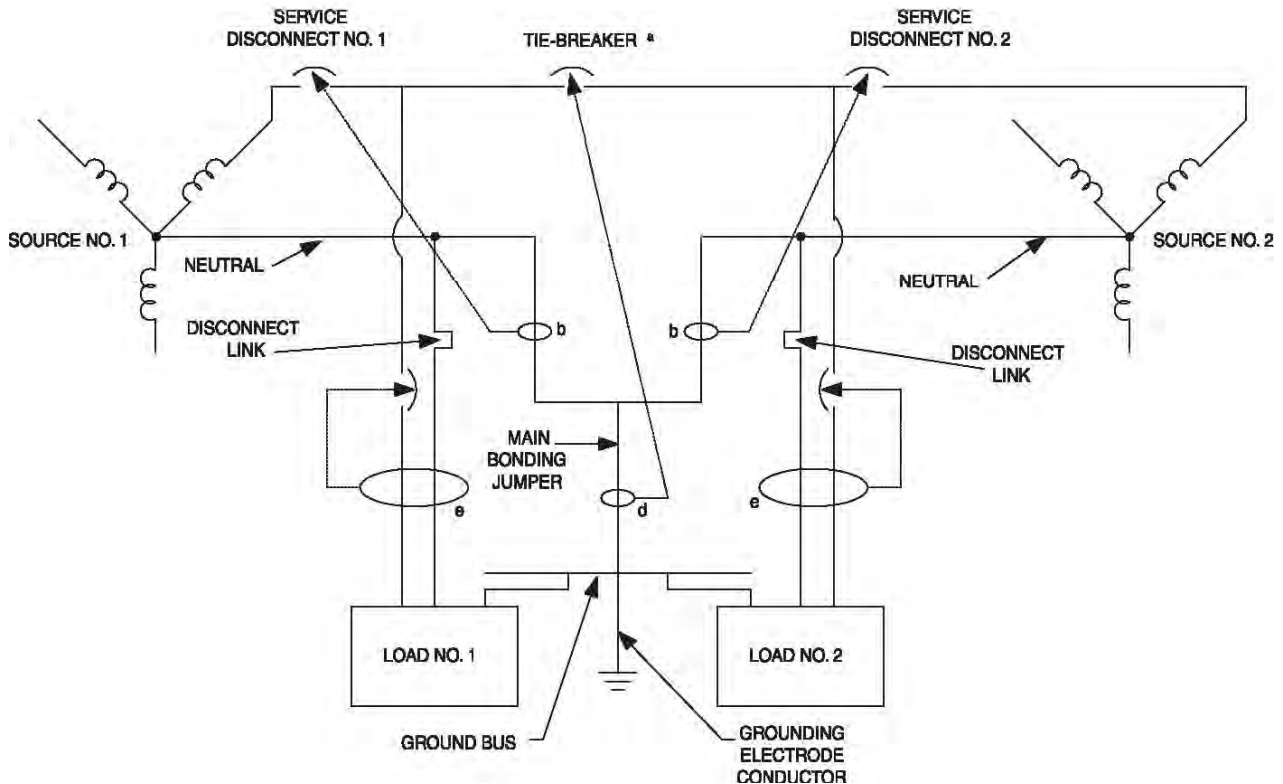

^c The neutral bus and ground bus may be combined if ground-return type ground-fault protection is not used and the sections are marked “Suitable only for use as service equipment.”

^d Ground-return type ground-fault protection sensor.

^e Zero sequence or residual type ground-fault protection sensor.

^f Size of main binding jumper based on largest service disconnect.

FIGURE 2.3
TYPICAL DOUBLE-ENDED SWITCHBOARD

^a Tie-breaker disconnect (not a circuit breaker marked “Line” and “Load,” nor a fused switch).

^b Additional ground-return type ground-fault protection sensors are utility interlocked with the sensor described in note d so as to function only when a fault current is also sensed by the sensor described in note d.

^c Size of main bonding jumper based on largest service disconnect.

^d Ground-return type ground-fault protection sensor.

^e Zero sequence or residual type ground-fault protection sensor.

3. ELECTRICAL RATINGS

General

The electrical rating includes voltage, current, frequency and short-circuit current ratings. An alternating current rating includes the number of phases, if other than single phase. Voltage ratings are followed by the symbol for alternating current and/or the symbol for direct current. See figure 3.1.

FIGURE 3.1
AC AND DC VOLTAGE SYMBOLS

A switchboard section or interior with provisions for connection to two or more supply sources is marked to indicate the current and voltage ratings for each supply source.

A switchboard section or interior with provision for connection to an external source of control circuit power, are marked to identify that purpose. The current and voltage ratings for the power source are marked or indicated on a wiring diagram.

Location

A switchboard section is marked with the electrical rating where it will be visible without removing any cover or trim.

A switchboard interior is marked with the electrical rating where it will be visible before or after a cover is installed.

A switchboard enclosure that is marked for use with a particular switchboard interior is marked with the electrical ratings of the switchboard interior, unless the switchboard interior rating will be visible, after installation, without removing any cover.

Voltage Rating

A switchboard section or interior is rated no more than 600 volts.

A switchboard section or interior may be marked with several alternative voltage ratings.

A switchboard section or interior that is designed for use on supply circuits involving two different voltages is marked with a combination voltage rating, e.g., 208Y/120, 480Y/277.

If a switchboard section or interior contains a transformer with a secondary circuit that leaves the section or interior, the transformer secondary voltage rating is marked.

Current Rating

Each switchboard section or interior is marked with the current rating of the supply bus and section bus; and, in addition, with the rating of the through or splice bus supplying the next section or interior, if the through or splice bus current rating is less than the current rating of the supply bus.

The adequacy of the supply, through, splice or section bus current rating with respect to the calculated load current (using the appropriate diversity factors in Article 220 of the *NEC®*) can only be determined at the time of final installation.

If the ampacities of the various phase bus bars, including the neutral bus bar, are not identical, the current rating markings of each bus bar and terminal are provided.

Short-Circuit Current Rating

Each switchboard section containing devices other than a transformer and associated wiring or interior is marked with the following information:

A. The words “Short-Circuit Current Rating” and the dc or rms symmetrical short-circuit current rating in amperes as noted in Table 3.1. If the switchboard section or interior contains meter mounting equipment other than that intended for use with current transformers, the phrase “Watt-hour meter not included in the short-circuit current rating” is also provided.

B. The maximum dc or rms voltage rating for each short-circuit current. (Since the ability of an overcurrent protection device to open on fault currents is affected by the voltage rating of the circuit, a switchboard may have several different short-circuit current ratings, each associated with a specific voltage rating.)

C. A statement that the short-circuit ratings are limited to the lowest short-circuit rating of (1) any switchboard section connected in series, (2) any installed circuit breaker or fused switch other than those located in a control circuit, (3) the short-circuit rating marked on the switchboard of any installed combination series-connected circuit breaker, or (4) any installed panelboard having a marked short-circuit rating.

D. A statement that additional or replacement devices –other than fuses – are to be of the same manufacturer, type designation, and equal or greater interrupting rating. This

may be accomplished by specific reference to the device if the interrupting rating of the device is not less than any marked short-circuit current rating of the switchboard. The ampere rating of the device is also included if the short-circuit rating varies with the ampere rating of the device. For a fuse, the class of fuses shall be specified.

E. If applicable, identification of the combination of the integral or remote main and branch circuit overcurrent devices that are required when applying the marked short-circuit current rating.

TABLE 3.1 RMS SYMMETRICAL OR DC SHORT-CIRCUIT CURRENT RATING

Amperes		
5,000	25,000	75,000
7,500	30,000	85,000
10,000	35,000	100,000
14,000	42,000	125,000
18,000	50,000	150,000
22,000	65,000	200,000

Figure 3.2 shows an example of a switchboard marking providing information for installation of circuit breakers having a lower interrupting rating than the short-circuit current rating of the switchboard. Circuit breakers are acceptable for use above their marked interrupting rating if used on the load side of a specific overcurrent device. (Blank spaces would be filled with appropriate information.)

FIGURE 3.2 SAMPLE SHORT-CIRCUIT CURRENT RATING

- A. The short-circuit current rating of this switchboard is equal to the lowest interrupting rating of any installed circuit breaker or fused switch, but not more than _____ rms symmetrical amperes at _____ volts, 3-phase, or _____ rms symmetrical amperes at _____ volts, single phase; and
- B. "The interrupting rating of a circuit breaker is 5,000 rms symmetrical amperes and for a fused switch is 10,000 rms symmetrical amperes", or as marked on the device, except for the following series combination ratings:

Load Side Circuit Breakers				Line Side Circuit Breakers			Interrupting Rating		
Mfr.	Type	Poles	Amp Rating	Mfg.	Type	Amp Rating	Symmet	Volts	Phases
							Amp rms	ac	

A load side circuit breaker may be a branch, sub-main, or an integral main used on the load side of a remote main. A line side circuit breaker of fused switch may be a sub-main, integral main, or a remote main. This series combination short-circuit current rating shall not exceed the interrupting rating of the line side circuit breaker of fused switch.

If the short-circuit current rating of a switchboard is dependent upon the use of a specific overcurrent device ahead of the switchboard, the switchboard is marked "When protected by _____ ampere maximum Class _____ fuse or _____ Type circuit breaker rated no more than _____ amperes, this switchboard is suitable for use on a circuit capable of delivering no more than _____ rms symmetrical amperes volts maximum." The second blank space is filled with the fuse type designation (CC, G, J, L, RK1 , RK5 or T). The third blank space is filled with the name of the circuit breaker manufacturer and the type designation.

The marking indicates only the type of overcurrent device(s) with which the switchboard has been tested.

4. PHASE IDENTIFICATION

Unless marked otherwise, the phase arrangement of the supply, through and section bus bars in a 3-phase switchboard, but not including the connections to meter sockets, is A, B, C from front to back, top to bottom, or left to right as viewed from the front of the switchboard section or interior.

5. SERVICE EQUIPMENT

Switchboards suitable for use as service equipment are provided with one of the following markings:

- A. "Suitable for use as service equipment" or
- B. "Suitable for use only as service equipment."

Additional wording that places limitations on the use of the switchboard when used as service equipment may be added to either of the markings above for specific constructions. Typical wording that may be added is "... when no more than six main disconnecting means are provided."

Unless otherwise indicated below, a switchboard that is marked for use as service equipment will contain from one to six service disconnecting means, service overcurrent protection, a neutral disconnecting link, a main bonding jumper and a grounding electrode conductor terminal.

The section or sections of a multi-section switchboard that contain the main bonding jumper, the grounding electrode conductor terminals and the neutral disconnecting means will be marked.

The main bonding jumper, the grounding electrode conductor terminal and the neutral disconnect link are identified by a marking or tag located on or adjacent to the part.

A switchboard marked per A or B above may also be used to provide the main control and means of cutoff for a separately derived system or a separate building.

Some ac rated switchboards incorporate neutrals that are factory bonded to the enclosure. Such switchboard are marked "Suitable only for use as service equipment."

If a switchboard section contains a service disconnect that serves as a main for a group of sections, the service overcurrent protection need not be provided if the section is marked "Suitable for use as service equipment for a second building if located on the load side of overcurrent protection not exceeding the switchboard supply current."

If a switchboard section or interior is marked "Suitable for use as service equipment" or "Suitable for use as service equipment when no more than six main disconnecting means are provided," the marking "Service disconnect" is provided in the form of pressure sensitive labels in an envelope or on a card with instructions to apply the labels near the disconnect handles if the equipment is used as service equipment. However, if the switchboard is intended for a particular installation in which it is known that it will be used as service equipment, the markings may be applied at the manufacturing location.

6. GROUND-FAULT PROTECTION

General

Switchboards provided with ground-fault protection are marked to indicate the circuit-main, feeder or branch-circuit that is so protected. If a marking on the ground-fault sensing or relaying equipment is not visible from the front of the switchboard with the cover removed, a separate marking, such as on the wiring diagram, is provided.

In a switchboard section or interior with ground-fault protection, the part of the neutral bus used for load terminations is marked with the following or equivalent statement: "Do not connect grounding conductors to these or any other neutral terminals; to do so will defeat ground-fault protection." This marking is placed on or adjacent to the neutral.

If components of a ground-fault protection system are located in two adjacent sections, a complete wiring diagram of both sections is secured to each of the sections.

If the control circuit for ground-fault protection is intended to be connected to an external source, the marking "External source connection for control circuit of ground-fault sensing and relaying equipment volts (ac or dc)" or equivalent is provided. If terminals for an external source for other types of control circuits are provided, they are similarly marked.

A switchboard section or interior (1) intended only for use as service equipment or (2) acceptable for use as service equipment and not provided with ground-fault protection is marked for a specific use as follows:

- A. For a section or interior rated 3-phase and 4-wire: "Suitable only for use as service equipment when supplying a continuous industrial process" or "Suitable for use as service equipment only if supplying a continuous industrial process."

- B. For a section or interior rated 3-phase and 3-wire, one of the markings specified in item A above plus the words "... or for systems where the neutral is not solidly grounded."
- C. For supplying a fire pump or for an alternate source for legally required standby service. The above limitations noted in the preceding paragraph are based on *NEC®* Section 230.95, Exceptions No.1 and No. 2.

Field Testing Information Sheets and Forms

To provide for system performance testing as required in the *NEC®* Section 230.95(c), each ground-fault relay and each apparatus incorporating a ground-fault relay or its functions that is intended for protection of a solidly grounded wye service rated more than 150 volts to ground but not exceeding 600 volts phase-to-phase is provided (1) with a test form and (2) with information sheets describing system testing instructions.

The test form includes spaces for the date the test was conducted and for the test results, and states that the form should be retained by those in charge of the building's electrical installation in order to be available to the authority having jurisdiction.

The information sheet instructions include the following items and basically prescribe only that information necessary to perform the tests. The instructions are separate from more elaborate test details that the manufacturer may wish to provide. The instructions specify that:

- A. The interconnected system shall be investigated in accordance with the switchboard manufacturer's detailed instructions, and that this investigation is to be undertaken by qualified personnel.
- B. The location of the sensors around the bus of the circuit to be protected shall be determined. This can be done visually, with knowledge of which bus is involved.
- C. The grounding points of the system shall be verified to determine that ground paths do not exist that would bypass the sensors. The use of high-voltage testers and resistance bridges may be suggested.
- D. The installed system is to be tested for correct response by the application of full-scale current into the equipment to duplicate a ground-fault condition, or by equivalent means such as by a simulated fault current generated by (1) a coil around the sensors or (2) a separate test winding in the sensors.
- E. The results of the test are to be recorded on the test form provided with the instructions.

7. TAPS

A tap, circuit, section or switchboard cannot be marked for emergency use. However, an automatic transfer switch may be marked for connection to an emergency source.

Some switchboards may have terminals or provisions for terminals, marked as taps, located on the supply side of the service disconnecting means. The suitability of these terminals as taps connected on the supply side of the service disconnect is intended to be determined in accordance with *NEC®* Sections 230.46, 230.82, 690.64(A), 701.11(E) and 705.12.

8. TERMINALS

Switchboard sections and interiors are for use only with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. **Such a marking is independent of any marking on terminal connectors** and is on a wiring diagram or other readily visible location.

A switchboard requiring access to field wiring terminals from the rear is marked on the front “Rear access required to make field connections.” The marking may be omitted if this statement is included in the conduit location instructions.

A wire terminal intended to secure more than one conductor in an opening is marked to indicate the number of conductors the terminal can accommodate. The marking is on the wire connector if visible, or in another visible location such as next to the terminal or on a wiring diagram.

If a pressure terminal connector provided in the switchboard section or interior for a field installed conductor requires the use of a special tool for securing the conductor, any necessary instructions for using the tool are provided. The instructions are located where readily visible, such as on the connector, on a wiring diagram, on a tag secured to the connector, or packaged with the terminal assembly kit.

If pressure terminal connectors are not provided on the equipment as shipped, the equipment is marked stating which pressure terminal connector or component terminal assemblies are for use with the equipment.

The terminal assembly packages have an identifying marking, wire size, and manufacturer's name, trademark or other descriptive marking by which the organization responsible for the product may be identified. The marking also includes the required tightening torque unless the value of tightening torque is included along with the switchboard markings.

Tightening Torque

A switchboard section or interior is marked to indicate the specific tightening torque in pound inches or pound-feet for each pressure wire connector (except those requiring a special crimping tool) in the switchboard that is intended for field wiring. If different connectors are used for line, load, neutral or ground, the specific torques that are to be applied to each connector are clearly indicated. A calibrated torque wrench should be used to torque the wire connector to the specified value. Under-torquing or over-torquing may produce overheating and/or cause damage to the conductor. The torque marking may be provided in a written format or pictorially. See Table 8. 1 for an example of a tightening torque marking.

The value of tightening torque for a field wiring terminal provided on a component such as a circuit breaker, switch or the like need not be marked on the switchboard section or interior.

A switchboard is marked in a location readily visible prior to being wired to indicate the required temperature rating of each field-installed conductor. This marking takes precedence over any device or component marking.

TABLE 8.1 EXAMPLE OF TIGHTENING TORQUE MARKING TIGHTENING TORQUE FOR WIRE CONNECTORS

Main Terminals		275 pound-inches (31.1 N • m)
Neutral Terminals	Main	275 pound-inches Large Branch
	Large Branch	Torque screw to applicable value shown in Column B of the table for
	Small Branch	Torque screw to applicable value shown in Column A of the table for the conductor size installed.
Equipment Grounding		
Terminals		For three No. 10 AWG solid copper conductors, torque screw to 45 pound inches (5.1 N•m). For all other wire combinations, torque screw to value shown in Column B of the table for the conductor size installed.
Small Hole		Torque screw to applicable value shown in Column A of the table for the conductor size installed.
Field-Installed Devices		Torque screw to value indicated on (or with) the device

TABLE 8.2 TIGHTENING TORQUE

Wire Size Installed in Connector		Tightening Torque		Tightening Torque	
AWG	(mm) ²	A		B	
		lb./in.	(N • m)	lb./in.	(N • m)
18–10	0.82–5.3	20	2.3	35	4.0
8	8.4	25	2.8	40	4.5
6–4	18.3–21.2	35	4.0	45	5.1
3	26.7	35	4.0	50	5.7
2	33.6	40	4.5	50	5.7
1–2/0	42.4–67.4	—	—	50	5.7

Conductor Temperature Ratings

A switchboard rated 110 amperes or less, or having any circuits for field wiring rated 110 amperes or less, is marked to indicate use of conductors sized for 60°C (140°F) ampacity for circuits rated 110 amperes or less, and conductors sized for 75°C (167°F) ampacity for circuits rated more than 110 amperes as specified in Table 310.16 of the *National Electrical Code®*. The marking may specify conductors sized for 75°C ampacity for circuits rated 110 amperes or less if any circuit breaker involved is marked 75°C or 60/75°C.

If the circuit breaker is to be installed in the field, the switchboard marking indicates that the circuit breaker is to be marked either 60/75°C (140/167°F) or 75°C (167°F) if conductors sized for 75°C ampacity are to be used.

A marking is provided near a terminal, such as “Use AWG 90°C (194°F) copper wire,” to indicate that 90°C (194°F) copper wire is to be used. UL determines the size of the conductor on the basis of 75°C (167°F) ampacity.

9. BRACING

If bracing is required to prevent the conductors from pulling out of the wire terminals under fault conditions, a marking is provided indicating the type of bracing to be added to supply conductors routed through the switchboard between the point of entry and the line terminals. The marking is located adjacent to the line terminals.

An example of a marking that satisfies this requirement is: "Wrap line cables together with minimal 3/8-inch nylon rope or rope having a minimum tensile strength of 2,000 pounds at (1) 6 inches and 12 inches from the line terminals with five wraps and (2) every additional 6 inches with five wraps or every 1 inch with one wrap." The drawing in Figure 9.1 may also be provided.

FIGURE 9.1
SECUREMENT OF CABLE

10. SYSTEM COORDINATION

NEC® Section 240.12 concerns electrical system coordination. UL does not evaluate switchboards to determine compliance with the *NEC*® Section 240.12, since it is not possible to

determine upstream and downstream system overcurrent devices that have been selected. It is the responsibility of the system design engineer to specify overcurrent devices for system coordination.

11. VOLTAGE DROP

NEC® Sections 210.19(A) and 215.2 concern voltage drop. UL does not evaluate switchboards to determine compliance with voltage drop considerations. It is the responsibility of the design engineer to address any voltage drop considerations in a switchboard system, as needed.

12. CONDUIT ENTRY

Unless indicated otherwise (as noted below), UL evaluates switchboards to determine compliance for the clearance of conductors and conduit entering into the bottom of a switchboard, per *NEC*® Section 408.5. Acceptability of other conduit entry/exit points can only be determined at the time of final installation.

In order to correlate with *NEC*® Section 408.5, if the minimum distance between the bottom of the enclosure and any bus bars is less than:

- A. 8 inches for insulated bus bars, their supports and other obstructions, or
- B. 10 inches for uninsulated bus bars,

then instructions and drawings showing the intended conduit or raceway locations are (1) supplied with the switchboard section or enclosure or (2) contained in the manufacturer's catalog (identified by the catalog number or other designation that appears on the switchboard).

13. ENCLOSURE TYPES

A switchboard section or enclosure is provided with a marking that is visible after installation that indicates the enclosure type designation(s). This marking helps inspection authorities to judge whether an enclosure is suitable for a specific environment as mentioned in *NEC* Section 110.3(A)(1). Enclosure type designations are coordinated with requirements in *NEC* Section 110.20.

14. MULTIPLE SOURCES

A switchboard intended to be connected to multiple sources shall be marked to indicate that both ends of a disconnecting means may be energized. The marking shall be provided on all covers that give access to the disconnecting means.

15. BARRIERS

In a switchboard section or interior marked as being suitable for use as service equipment, any uninsulated ungrounded bus bar or terminal on the line side of a service disconnect is isolated by

a barrier so that with every service disconnect in the off position, no uninsulated live part is exposed to inadvertent contact while servicing any load terminal, including a neutral load terminal, a branch circuit equipment grounding terminal or the neutral disconnect link. The barrier may contain ventilating openings.

16. FIELD INSTALLATION OF DEVICES

The UL Mark applies to the switchboard as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark is the manufacturer's declaration that the switchboard was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the switchboard or the continued validity of the UL certification mark unless the field modification(s) have been specifically investigated by UL. Unless UL investigates a modified switchboard, UL cannot indicate that the switchboard continues to meet UL's safety requirements.

The only exception for a field modification authorized by UL is when the switchboard has specific markings regarding field-installation of equipment. A switchboard enclosure or section intended to accommodate a field installed device is marked to indicate the manufacturer and the catalog number or equivalent of the device to be installed.

Additions to switchboards not marked for the field installation of such devices can be investigated under UL's Field Evaluation Service or Field Inspection Service.

Electrical Heating and Cooling Equipment Marking Guide

January 2009

Electrical Heating and Cooling
Equipment Marking Guide

Because of changes in installation codes, the increasing complexity of the equipment involved, and other factors, more and more markings are being used on electrical heating and cooling equipment.

In an effort to help installers, inspection authorities and other interested parties determine what markings are pertinent for safe and proper installation of electrical heating and cooling equipment, and to understand the significance of these markings, Underwriters Laboratories Inc. (UL) developed this Marking Guide in 1984. Periodic revisions have been made to this Marking Guide to reflect revised markings, and changes in the National Electrical Code®. The markings described in UL 1995 and UL 1996 are required on the various types of electrical heating and cooling equipment for proper and safe installations. Markings that apply only to servicing and operating the equipment, or markings placed on the equipment by the manufacturer that are not required by UL, are not covered in the Guide.

UL Marking Guides are updated as necessary due to new product development, changes in the National Electrical Code®, or the need for clarification. To confirm the current status of any UL Marking Guide, please consult the Regulators page of the UL Web Site at <http://www.ul.com/regulators/index.html>.

The adequacy of the markings described is determined as part of the investigation of equipment bearing the UL Listing Mark.

The Table of Contents lists the main headings and their page numbers. The Index gives an alphabetical list of the specific items and the section(s) number where information can be found. All references to the National Electrical Code® have been updated to the 2008 edition.

Let us know what you think of this Guide. Send your comments and suggestions to:

1. GENERAL INFORMATION

UL Standards for electrical heating and cooling equipment include requirements for the location, legibility and permanence of the markings described in this Guide. These requirements vary depending on the importance of the marking, environmental and use conditions, and a number of other factors. UL evaluates the reliability of an adhesive used to secure a marking. UL requires markings to be located where they will be visible after the equipment is installed; and affixed to a permanent unit part, or to a part that requires the use of a tool to remove and that must be in place for the unit to operate properly except for certain supplementary markings.

Normally, nameplate markings must be located where they can be read without using tools to partially disassemble the unit. Access to the nameplate of a unit designed for built-in installation may require removal of a panel or grill that gives access to the field wiring compartment.

2. LISTING MARKS

Section 110.3(A)(1) of the *National Electrical Code®(NEC®)* states that “suitability of equipment may be evidenced by listing or labeling.” Only units that bear a UL Listing Mark are UL Listed. For electrical heating and cooling equipment, the UL Mark that is required on the unit includes: the name and/or symbol of Underwriters Laboratories Inc.; the word “LISTED;” a UL control number; and the product or category name. Some Listed Heating and Cooling Equipment may contain a Listed Gas Heating Section. This will be identified on the unit by the *Gas-fired Listing* Mark that is provided either on the Listed heating and cooling equipment or on a Listed gas-fired heating section or portion of a Listed Unit. The Gas fired Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL symbol with the words “GAS-FIRED” above the UL symbol and the word “LISTED” below the UL symbol, the product identity, and a control number. If the product has been certified to ANSI Z21 or Z83 Series Standards, the Listing Mark will also include the appropriate standard designation.

Further explanations of the types of products covered in this Guide and additional information about installation and use are included in the UL *Electrical Appliance and Utilization Equipment Directory*. The products covered by this Guide are listed under a number of category codes, including, ABFY, ACVS, KMLW, KOHZ, LZFE, LZLZ, LZPU, SLSV and SROT. Product category codes are arranged alphabetically in the Directory.

3. COMPANY IDENTIFICATION

If there is a question on the design or construction of a unit, the identification of the organization responsible for the product is important. This is one of the basic markings required by *NEC®* Section 110.21.

UL requires that the responsible manufacturer or private labeler be identified on the unit nameplate by a company name, trade name or trademark. This company is also known as the "Listee" and is the name that appears in UL's published Directories. UL provides a list of the trade names and trademarks at the back of its *Electrical Appliance and Utilization Equipment Directory*.

4. MODEL IDENTIFICATION

The nameplate of every unit bearing a UL Listing Mark is required to include a distinctive model identification. This may be a "Model No.," "Type," "Cat. No.," "Part No.," or similar identification, and may consist of any combination of numbers and letters. The model designation is important when referencing the manufacturer's installation instructions or other published literature, and when contacting the manufacturer or UL with questions about the product. The model designation is also important for determining the acceptable use of "split-system" sections, or accessories (see "Split-Systems" and "Use of Accessories").

5. SPLIT-SYSTEMS

Many central cooling air conditioners and heat pumps are Listed as "split-systems." Such Listings are given to equipment for which two or more sections of the system have been evaluated together. Sections of systems are typically identified on the Listing Mark as "Section of Central Cooling Air Conditioner" or "Section of Heat Pump," but may be identified as another type of Listed product such as a "Fan Coil Unit" or an "Electrical Central Heating Furnace." These Listed combinations are identified in the UL *Electrical Appliance and Utilization Equipment Directory*. It is important to note that combinations of equipment not identified in UL's published Listings have not been evaluated by UL.

6. USE OF ACCESSORIES

UL evaluates accessories to determine their suitability for field installation and use with specific models of UL Listed equipment. Listed accessories bear a Listing Mark that includes the word "accessory" in the product or category name (see "Listing Marks"). The Listing Mark may indicate the specific equipment type with which the accessory is to be used (such as "Accessory for Heat Pump"). If the Listing Mark indicates "Air Conditioning Equipment Accessory," it is commonly designed for use on more than one type of heating or cooling equipment. In all cases, however, the accessory is Listed only for equipment marked (on wiring diagram, etc.) to indicate the permitted use of the specific accessory. Many Listed units are marked for use with more than one accessory. In some cases, the marking will indicate that if one accessory is used, another must be used in conjunction.

One common marking for accessories relates to the use of supplementary electric resistance heaters. Typically, such a marking will indicate the optional use of any one of a series of heater accessories. It will usually also specify some action to be taken by the installer to indicate which heater has been installed or that no heater has been installed. Failure of the installer to perform the specified action can be considered as noncompliance with *NEC*® Section 110.3(B). For example, the marking may state, "Any of the following heater accessories may be installed. Installer to check appropriate block" followed by a list of accessory model numbers and associated electrical ratings, including a line stating "none." To comply with *NEC*® Section 110.3(B), the installer must mark the appropriate block. The accuracy of this installer marking can be verified by examining the markings on the accessory.

For some accessory types, such as a compressor “hard start” kit, the intended mounting location within the unit may not be obvious. In such cases, the unit marking is required to indicate the intended mounting location.

A unit Listed for use with accessories requiring wiring connections to the unit will show these connections on an attached wiring diagram (see “Wiring Diagram”).

7. EXTERNAL LOADS OR LINE VOLTAGE SWITCHING DEVICES

A unit that provides a means for connecting an external load, such as a cooling tower, an evaporator blower motor, or a blower motor that circulates air across duct heaters, is marked to specify the maximum rating of each such load. These markings may also specify the minimum wire sizes to be used. Minimum wire size markings are required when the load is a motor connected to a multimotor or combination load circuit and the wire size normally adequate for carrying the load current would not be protected properly by an overcurrent device for the circuit.

A unit with a means of connecting a switching device in other than a Class 2 control circuit is marked with the minimum required ratings for each such device.

These markings are located in the unit where field wiring is to be connected to the remote load or switching device, or on the wiring diagram attached to the unit (see “Wiring Diagram”).

8. SUPPLEMENTARY OVERCURRENT PROTECTION

NEC® Section 424.22(C) permits supplementary overcurrent protective devices required for subdivided loads of resistance type heating elements in electric space heating equipment to be supplied as a separate assembly by the heater manufacturer. All units that require this supplementary overcurrent protection, but do not have the protective devices factory installed, are marked to identify the separate assembly available from the unit manufacturer. This information is marked on or adjacent to the nameplate containing the electrical ratings of the heating elements. The assembly has a separate UL Listing, and the common identification on its Listing Mark is “Control Panel for Specific Electric Space Heating Equipment.”

Other specific Listed separate assemblies such as a panelboard, however, may be referenced by the marking on the heating unit. In any case, the proper use of the separate assembly identified on the unit will provide compliance with *NEC*® Sections 424.22(B) and (C).

9. ELECTRICAL RATING, GENERAL

The nameplate for each Listed unit includes the appropriate electrical ratings. These ratings identify the required characteristics of each electrical circuit to be connected to the unit and also the load characteristics that the unit will impose on each circuit.

For a unit with a single motor as its only energy consuming component, the motor nameplate may provide the required electrical ratings if all ratings on the motor nameplate apply to its use in the unit, and the motor nameplate is visible as installed. If motor ratings are shown on the unit nameplate, they take precedence over the ratings on the motor nameplate.

10. VOLTAGE RATING

All equipment requiring connection to an electrical supply source is required to include the voltage rating of each source on the unit nameplate. The rating includes the voltage as either a single nominal value such as “230 V” or as a voltage range such as “220—240V.” Standard voltage ranges are 110—120, 200—208, 220—240, 254—277, 440—480 and 550—600. Units marked with a single nominal value within one of these voltage ranges can be connected properly to any voltage within the indicated range, but not to a different voltage. For example, a unit marked “230 volts” can be connected properly to a 240-volt supply source, but not to a 208-volt supply source.

Some equipment is marked for use on more than one voltage. Individual voltage ratings may be a single value or a range of values as indicated above, with each of the multiple ratings separated from the others by a slash (e.g., “208/240” or “220—240/440—480”) or by a separate line or column in a tabulation of ratings.

When inductive loads are involved, it is usually necessary to change some connections to make the equipment suitable for one of the voltage ratings. Instructions for these changes are usually indicated on the wiring diagram attached to the unit and typically involve at least a change in a control circuit transformer tap within the equipment.

If the inductive load is a motor, the instructions may appear on the motor itself, with a marking to indicate the voltage for which it is factory connected and how to reconnect it for another voltage.

Many motors and other components with dual voltage ratings, however, are used in equipment that is UL Listed for a single voltage only. When a unit is UL Listed for more than one voltage, this is indicated on the unit nameplate.

Some equipment showing two voltage ratings may be designated to have both voltages supplied from the same supply circuit. In such cases, the rating indicates the number of wires needed in the supply circuit (e.g., “120/240 V, 3W” or “120/240 V, 3ph, 4W”) or the number of wires will be indicated clearly on the wiring diagram attached to the unit.

Some equipment designed for connection to a 2-wire branch circuit nominally rated at 208 or 240 volts, may not be suitable for potentials exceeding 120 volts to ground. Such equipment is marked “Maximum Voltage to Ground 120” (or the equivalent) near the supply voltage rating.

11. FREQUENCY RATING

Some form of frequency rating is required with each marked voltage rating. This may be identified as “Cycles,” “Cycles per Second,” “Hertz” or an appropriate abbreviation. A unit or unit circuit for connection to direct current will be marked to indicate this suitability.

12. ELECTRICAL LOAD RATINGS

The unit nameplate indicates the electrical load on each supply circuit, other than a Class 2 control circuit, to which the unit is intended to be connected. These load ratings include any remote loads or accessories identified by markings on the unit (see “Remote Loads” and “Use of Accessories”). In general, the individual segments of this load rating are appropriately identified. Rather than individual ratings for each load segment, a single overall rating may be given:

- 1) When a unit does not include any motors rated at 1/8 horsepower or more; or
- 2) When a unit rated for single-phase alternating current includes a hermetic refrigerant motor-compressor and other loads, and its markings indicate a minimum circuit ampacity and maximum size of the overcurrent device of 15 amperes at 240 volts or less, or 20 amperes at 120 volts (see “Minimum Circuit Ampacity” and “Branch-Circuit, Short-Circuit and Ground-Fault Protection”).

For some units intended to be connected to two or more supply circuits, it may be necessary to consult the unit wiring diagram to determine which loads are connected to each circuit (see “Wiring Diagram”).

The load rating may be expressed in watts or kilowatts for resistance loads such as electric heaters and motors rated less than 1/8 horsepower. All other load ratings are expressed in amperes.

For hermetic refrigerant motor-compressors, the required individual segment rating is always given in rated-load amperes (RLA). Locked-rotor amperes (LRA) are also included but may be omitted for single-phase compressors with an RLA rating of 9 amperes or less at 115 volts, or 4.5 amperes or less at 230 volts.

Air conditioning liquid chillers with “star-delta” start centrifugal motor-compressors and not factory equipped with a controller or overload protection for that motor are marked with LRA ratings for both the star and delta connections (see “Remote Overload Protection for Motors”).

For all other motors, the required individual segment rating is expressed in amperes, full-load amperes, or an appropriate abbreviation. A locked-rotor current rating is not required.

A pilot duty (electromagnetic) load, or a resistance load of less than 1 ampere need not be identified separately on the unit nameplate. Also, a load such as a crankcase heater need not be identified separately if it is not energized concurrently with an identified larger load, such as a compressor motor. The unit nameplate ratings for motor loads may differ from the ratings on the motor nameplates. Unit nameplate ratings should be used for properly sizing the supply conductors, disconnect means, etc., since these ratings reflect the actual loads that will be imposed by operation of the motor in the unit.

Units with dual voltage ratings may also show dual-load ratings or a single-load rating representing the highest load imposed at either voltage. Dual-load ratings can be shown in tabular form or separated by a slash. For example, a motor rating of “120/240 V, 6.4/ 3.2 A” indicates the motor is rated 6.4 amperes at 120 volts and 3.2 amperes at 240 volts.

13. MOTOR HORSEPOWER RATINGS

In equipment where the selection of a properly rated remote controller or disconnect means is dependent on the horsepower rating of a motor, the horsepower rating is required to be included

in the unit nameplate (see “Electrical Rating, General”). It is not necessary that a horsepower rating be included on the unit nameplate for a hermetic refrigerant motor-compressor.

If the nameplate is marked with the disconnect size the horsepower is not required to be marked for the other motors.

A fan or blower motor rated at less than 1/8 horsepower when its ampere or wattage rating is included on the unit nameplate

14. BRANCH-CIRCUIT SELECTION CURRENT

The nameplate on a unit that includes a hermetic refrigerant motor-compressor may show branch-circuit selection current for the motor-compressor in accordance with *NEC*® Section 440.4(C). This rating may be identified by a suitable abbreviation and will always be equal to or higher than the motor-compressor RLA rating marked on the unit nameplate. The branch-circuit selection current rating for the motor-compressor is to be used instead of the rated-load amperes in determining appropriate ratings for externally mounted controllers and disconnecting means, branch-circuit conductors, and short-circuit and ground-fault protective devices for these conductors. A branch-circuit selection current rating is always included on the unit nameplate if the motor-compressor’s thermal protector or the protective system built into the unit permits a continuous current flow greater than 156 percent of the rated-load current for the motor-compressor, or the single overall ampere rating for the unit marked on the unit nameplate (see “Electrical Load Ratings”).

15. SUPPLY WIRE SIZE

According to *NEC*® Section 424.3(B), the ampacity of branch-circuit conductors supplying fixed electric space heating equipment consisting of resistance elements with or without a motor shall be not less than 125 percent of the total load connected to the circuit. Units incorporating fixed electric space heating means on the same circuit with a motor usually show the minimum required ampacity for the conductors supplying that circuit (see “Minimum Circuit Ampacity”). If a circuit supplying fixed electric space heater does not include a motor, the unit marking needs not to show a minimum circuit ampacity. The above noted *NEC*® requirement ordinarily applies to the proper sizing of the supply conductors for such a circuit.

NEC® Sections 424.22(D) and (E) indicate exceptions to the requirement for sizing such conductors based on 125 percent of the load. Units with fixed electric space heating loads arranged in accordance with these exceptions are marked with a minimum conductor size for each such circuit involved. Such markings are located on or adjacent to the unit nameplate. For other markings that specify minimum conductor size, see “Temperature Ratings of Field Installed Wiring” and “External Loads for High Voltage Switching Devices.”

16. MINIMUM CIRCUIT AMPACITY

In general, a unit designed to have more than one motor, or a motor with other loads, supplied from a single branch-circuit, must be marked to show the minimum required supply-circuit conductor ampacity for each circuit. There are two exceptions:

- 1) If the branch-circuit involved is to be rated 15 amperes, and the unit is marked “Use Only On A 15 Ampere Branch-Circuit;” and
- 2) If the unit is to be supplied through a remote control assembly specified on the unit nameplate, and the minimum ampacities are specified on that assembly.

These ampacity markings are in accordance with *NEC®* Section 430.7(D) and 440.4(B) and are computed in accordance with Section 430.24 and 440.33. Any remote loads identified by other markings on the equipment and supplied from the unit are included in these computations. The marking is on or adjacent to the unit nameplate and is usually identified as “Minimum Circuit Ampacity” or its abbreviation.

17. BRANCH-CIRCUIT, SHORT-CIRCUIT AND GROUND-FAULT PROTECTION

Units required to be marked with a minimum circuit ampacity (see “Minimum Circuit Ampacity”) are also required to show the maximum ampere rating of the short-circuit and ground-fault protective device for each applicable circuit. These markings also conform with *NEC®* Section 430.7(D). They are computed in accordance with Section 430.53 and take into account any remote loads used in the ampacity calculations. The branch-circuit, short-circuit and ground-fault protection marking is included on the same label as the ampacity marking and is typically identified as “Maximum Fuse Amps,” “Maximum Fuse or HACR Type Circuit Breaker Amps,” “Maximum Fuse or Circuit Breakers Amps,” “Maximum Overcurrent Protection Amps” or their suitable abbreviations.

There are several other situations when the maximum ampere rating of the short-circuit and ground-fault protective device must be marked on the unit, even though a marking for minimum circuit ampacity may not be required. Typical examples are overcurrent protection devices for separate high voltage control circuits or transformers in the unit. These markings are identified in the same manner as described above, but can be located on an attached wiring diagram (see “Wiring Diagram”) or adjacent to the terminals or leads to which the supply circuit wires are to be connected, rather than on or adjacent to the unit nameplate.

The markings for short-circuit and ground-fault protection always include some indication of the type of protection device as well as the maximum current rating. This is significant since the various types of devices recognized by the *NEC®* to provide this protection do not necessarily provide the same level of protection for all units. Briefly, if the marking indicates:

- 1) Only “Fuse,” then only fuses are to be used;
- 2) “HACR Type Circuit Breaker” and “Fuse,” then either fuses or circuit breakers marked “HACR Type” may be used; or
- 3) “Fuse or Circuit Breaker” or “Overcurrent Protection,” then fuses or any type of circuit breaker (including “HACR Type”) may be used.

In any case, the devices used should be covered by the *NEC®* to provide short-circuit and ground-fault protection.

The maximum rating and type of protective device specified in the marking described above are

those considered in the evaluation of the unit for Listing, and are intended to apply to the protective devices installed on the line side of the supply circuit conductors, not to protective devices factory installed in the unit.

18. BRANCH-CIRCUIT RATING

NEC®Section 424.3(A) indicates that branch circuits supplying two or more outlets for fixed electric space heating equipment shall be rated 15, 20, 25 or 30 amperes. Although this is rarely applicable to the type of equipment covered in this Guide, some units rated 16 amperes or less may not be suitable for connection to 20- or 30-ampere branch-circuits. Such units show the maximum rating of the branch-circuit to which they are to be connected. This marking will be on or adjacent to the unit nameplate, or near the area where supply wires are to be connected.

19. INTEGRAL OVERLOAD PROTECTION FOR MOTORS

Most electrical heating and cooling equipment includes appropriate overload protection for each motor in accordance with Part C of *NEC*®Article 430. In many cases, the unit or the individual motor is marked to indicate that this protection is provided. Even if there are no such markings, it can be assumed that adequate protection is provided for each motor unless the unit markings indicate the need for remote devices to provide such protection (see “Remote Overload Protection for Motors”).

A unit with a thermally protected hermetic refrigerant motor-compressor always includes a marking in accordance with *NEC*®Section 440.4(A) to indicate the type of thermal overload protection provided for each motor-compressor. A unit that uses thermal protection complying with *NEC*®Sections 440.52(A)(2) and (B)(2) is marked “Motor-Compressor Thermally Protected,” or an equivalent statement to reference the motor-compressor(s) involved, unless the motor-compressor itself is marked “Thermally Protected.” When protection is provided by an integral protective system in a unit, complying with *NEC*®Sections 440.52(A)(4) and (B)(4), the unit is marked “Motor-Compressor Thermally Protected System,” or an equivalent statement to reference the motor-compressor(s) involved.

A unit that includes a 3-phase motor and overload protection for that motor other than an overcurrent unit in each motor supply conductor will provide adequate primary single-phase failure protection when supplied by transformers connected wye-delta or delta-wye. Such a unit is marked to indicate that the motor is protected under primary single-phasing conditions.

20. REMOTE OVERLOAD PROTECTION FOR MOTORS

Some units evaluated to determine the adequacy of specific motor controllers (starters) to provide motor overload protection may be shipped from the factory without the controller installed. For these units, UL requires that the manufacturer provide the proper controller for remote mounting, and the unit must be marked to identify this controller. The marking includes the controller manufacturer’s name, the model designation and the rating of the overcurrent (heater) element to be used in the overload relay of the controller. This marking is located either where field wiring connections to the controller are to be made, or on the wiring diagram attached to the unit (see “Wiring Diagram”).

Some units that contain a continuous-duty single-speed blower motor rated over 1 horsepower as the only load on a supply circuit need not include overload protection for that motor when:

- 1) The motor is located where it will not be adversely affected by high ambient air temperatures during normal use of the unit; and,
- 2) Energization of any electric space heaters in the unit cannot occur without the blower operating.

These units are marked to indicate the need for providing a remote controller with overload protection devices rated or selected for compliance with the installation codes specified by the jurisdictional authority.

Most air conditioning liquid chillers that use a centrifugal motor-compressor are not factory equipped with a controller or overload protection for that motor. In this case, the unit nameplate will indicate that these components are not provided and designate the manufacturer's specifications for the components to be installed remotely. The specifications include the electrical rating of the required controller, the start sequencing, the overload protection trip current and the connections to the chiller electrical control system. If a current transformer is to be provided as part of the controller to provide a signal input circuit to the chiller control system, the specifications will also include requirements for the current transformer and any necessary shunting resistor.

21. CONNECTION TO NONMETAL ENCLOSED WIRING

Most UL Listed equipment is provided with knockouts or openings designed to accommodate properly sized conduit fittings for any of the appropriate types of wiring systems covered by the *NEC®*. Some units, however, are designed only for connection to a system other than metal-clad cable or conduit. These units are marked to indicate the appropriate type of system or systems to be used. This marking will be visible when power supply connections are being made.

22. EQUIPMENT GROUNDING CONNECTION

Except as indicated below, every unit is required to have a means for connecting the equipment grounding conductor for each circuit, other than a Class 2 control circuit, to which the unit is to be connected. If a wire binding screw is provided for this purpose, it will have a green colored head. A pigtail lead for this purpose will be green and may have yellow stripes. A pressure type wire connector will be marked "G," "Gr," "Ground," "Grounding," or the equivalent, on or near the connector, or will be identified on the unit wiring diagram. The grounding terminal may be

identified by the symbol ".

A unit that requires connection to a circuit with power supply conductors larger than No. 2 AWG does not have to be provided with means for connecting an equipment grounding conductor for that circuit. Such a unit may be grounded by an appropriate metallic raceway, but it will be marked "If This Unit Is Supplied By A Wiring System That, In Accordance With The National Electrical Code, Requires The Installation Of An Equipment Grounding Conductor Or Conductors, A Terminal Or Terminals For Connection Thereof Must Be Installed," or an equivalent statement.

23. FACTORY-PROVIDED WIRE CONNECTORS

Some units have pigtail leads for connection to supply or control circuit wiring when the unit is installed. To help provide a reliable splice, these leads are ordinarily no more than two wire sizes smaller than the minimum size copper conductor required by the *NEC* for the external circuit. When two or more pigtail leads are to be connected to the same external circuit conductor, each pigtail may be more than two wire sizes smaller, if a suitable reusable wire connector, such as a “wirenut,” is factory provided on the pigtails. If so, the unit is marked to indicate that the provided connector is to be used for field wiring splice connection.

Some units equipped with pigtail leads for splice connections to an external line voltage circuit have reusable wire connectors on these leads that may not be suitable for splicing to properly sized external circuit wiring. These wire connectors may be used, for example, to insulate lead ends, not necessarily used in every installation. Such units are marked to indicate that these wire connectors are not for field wiring connections.

Either type of marking described above will be located in the field wiring area where plainly visible during installation and inspection.

24. COPPER OR ALUMINUM WIRING

Units provided with terminals for field-connected wiring are marked to indicate the use of copper conductors only or whether aluminum and/or copper clad aluminum conductors may also be used. This marking is independent of any marking on the terminals and visible during unit installation and inspection after unit installation. Such a marking is typically located on a surface adjacent to the terminals or included on the attached unit wiring diagram. The conductor material(s) specified by the marking applies to the wires connected to the unit itself. Other conductor materials, however, may be used elsewhere in the circuits supplying the unit, provided that proper consideration is given to ampacities, splicing methods, etc.

25. TEMPERATURE RATING OF FIELD INSTALLED WIRING

For some equipment, the testing and construction are based on the use of wiring with 75°C insulation. However, most equipment, where ampacities of 100 or less are involved, is marked for use with 75°C rated conductors at 75°C ampacities. The use of wiring with 75°C insulation is necessary when conductor ampacities higher than 100 are required. When the use of wiring with insulation rated higher than 75°C (or 75°C) is required because of terminal or wiring compartment temperatures, the equipment must be marked to specify the minimum temperature rating (90°C) and the minimum conductor size of the wires unless the conductor size is to be based on the 75°C wire ampacity. Such markings are located adjacent to the field-wiring connection point or on an attached wiring diagram and are visible while making the connections and after they have been made. Some equipment is marked to indicate an area for locating field wiring and splices to prevent excessive insulation temperatures.

26. WIRING DIAGRAM

Most units have an attached wiring diagram. Such a diagram is required on a UL Listed unit when

the method of connection to the electrical supply is not obvious, or if it is necessary to electrically connect an accessory or other remote load to the unit. Also, such a diagram is always required on a duct heater and includes the proper external connections for interlocking with the blower motor to insure compliance with *NEC*® Section 424.63. Many of the other markings concerning proper field-wiring connections described elsewhere in this Guide may be included in this wiring diagram.

27. CONNECTION TO LOW VOLTAGE SUPPLY SOURCE

Some units require an external supply source for low -voltage control circuits. The required voltage rating of this source (typically 24 volts) will be identified on the unit wiring diagram (see “Wiring Diagram”) or by a marking adjacent to the terminals or leads to which the supply wires are to be connected. The minimum necessary capacity rating of the supply transformer will also be included in this marking unless it is less than 5 volt amperes. If the supply is required to be a limited energy type because of wiring or loads within the unit, the marking will also indicate this (e.g., “Class 2,” etc.).

28. EXTERNAL DEVICES AND/OR WIRING IN LOW VOLTAGE CIRCUITS

Many units are intended for connecting external low-voltage control circuit switching devices and wiring. If the power supply for such a circuit is part of the unit and the unit is marked Class 2 the circuit is a Class 2 control circuit per *NEC*® Article 725 and may be wired accordingly. If external to the unit, the type of supply source will determine the external wiring and components to be used as explained in Section 27.

If the type of unit transformer, the function of the control circuit or other items require that the circuit be treated as a Class 1 control circuit, the unit will be marked “Wire Per NEC Class 1” or the equivalent. This marking is located on the attached wiring diagram (see “Wiring Diagram”) or in the immediate vicinity of the terminals or leads provided for connection to the control circuit.

29. MULTIPLE CLASS 2 SUPPLIES

A unit with a built-in transformer that provides a Class 2 control circuit supply for connection to a heating/ cooling thermostat or an equivalent device will be marked to indicate that isolation shall be maintained between this circuit external to the unit and separate external Class 2 output circuits. This marking may be a part of the wiring diagram (see “Wiring Diagram”) that shows the proper wiring connections necessary to maintain this separation, or it may be a statement such as “Use Thermostat With Isolating Contacts To Prevent Interconnection Of Class 2 Outputs.” The statement may be located in the immediate area of the unit’s field-wiring Class 2 circuit connections, or on the unit wiring diagram.

A unit that contains two or more built-in transformers to supply separate external Class 2 control circuits is marked similarly to warn that separation must be maintained between these circuits external to the unit.

Failure to heed these markings can result in control circuits exceeding the limitations for Class 2 control circuits as defined in *NEC*® Article 725.

30. INSTALLATION CLEARANCES

Many types of units require clearances between the cabinet and attached duct work, and combustible materials. These clearances are required to be marked on the unit nameplate. The required clearances are given in inches.

Except units that show “Duct Heater” as the product identity with the Listing Mark, all equipment with electric resistance space heaters is marked with the required clearance even if the “clearance” is zero.

Duct heaters need to be marked only with required clearances that are greater than zero. All duct heaters rated 50 kilowatts or less, however, are required to be suitable for zero clearance installations.

Designated clearances other than zero are based on tests with uninsulated sheet metal ducts attached. Under these conditions, temperatures not higher than established maximum values have been measured on a wooden test enclosure, representing combustible construction, with the specified clearance (air) from the unit and ducts. When clearances are required between an attached outlet duct and combustible materials, the marking usually specifies the length of duct beyond the plenum or unit cabinet from which clearances must be maintained. If no distance is specified, the clearances need not be maintained from the portions of duct that are more than 6 feet from the plenum.

31. STATIC PRESSURE

The external static pressure imposed by the duct system attached to a unit can affect the unit air flow adversely. UL tests equipment at a high enough static pressure to take into account the effect of typically connected duct work; the minimum test static required is based on the rated heating and/or cooling capacity of the equipment. Tests on larger equipment require higher static pressures to account for the anticipated use of longer, more complex duct systems. Some units are marked to indicate the static pressure at which they were tested.

32. REFRIGERANT TYPE

Units employing a compressor with or without a refrigerant coil indicate the refrigerant to be used for field charging and the refrigerant used for any factory charge (see “Refrigerant Amount”). This designation is a number in accordance with ASHRAE Standard 34, or UL 2182, the Standard for Refrigerants, and is either prefixed or suffixed by the word “Refrigerant” or prefixed by the letter “R” or the trade name of the refrigerant. The use of a refrigerant type other than one designated in the marking is not covered by the UL Listing of the unit, except as noted in the section “Refrigerant Retrofit.” Units without a compressor need not be marked with the refrigerant type.

33. REFRIGERANT AMOUNT

The nameplate on a unit containing a refrigerant compressor is marked with information concerning the amount of refrigerant. For a self-contained unit with the full amount of refrigerant needed for proper operation of the system, the marking will state the factory refrigerant charge weight.

A unit requiring field charging that is a section of a complete system Listed by UL (see “Split-Systems”), or one that contains a complete refrigerant system is marked to show the correct refrigerant charge weight or how to determine the correct charge. The marking to show how to determine the correct charge may refer to other markings on the unit or to the installation instructions. In either case, the nameplate always includes a blank for the installer to mark the total system charge weight.

UL Listed units that do not contain the complete refrigerant systems and are not a section of a complete system Listed by UL, merely include a blank on the nameplate for the installer to mark the total system charge weight.

33A. REFRIGERANT RETROFIT

The information marked on the equipment nameplate relative to refrigerant type and amount of refrigerant is critical when equipment is to be evaluated using the installation requirements of ASHRAE 15, “Safety Code for Mechanical Refrigeration.” In these cases, the information in the ASHRAE standard, such as refrigerating system classification, table of allowable refrigerants and amounts, and system application requirements, is used to make calculations that ensure that the refrigerant type and amount are suitable for the application, the size of the room, the type of occupancy, etc.

In view of the national and international environmental protocol restrictions on the use of ozone-depleting chemicals and the increasing availability of alternative refrigerants, situations will arise in the field for which the equipment’s original refrigerant is retrofitted with another type of refrigerant. The amount of the new refrigerant may also change from the amount of original refrigerant used.

In some cases, the alternative refrigerant being retrofitted will not be included in the ASHRAE 15 standard. For the interim period, until such time as the ASHRAE standard can be revised, information (such as allowable amounts per cu. ft. of space) has been included in the UL Listing Report covering the equipment. This information may be obtained from the equipment manufacturer.

34. REFRIGERANT PRESSURE

A unit with refrigerant-containing components is marked to indicate the pressure for which the refrigerant system or any of its components were factory tested for leakage. Separate test pressures may be marked for the discharge (high) and suction (low) sides of the system. The pressure is identified as “Design Pressure” and appears on the unit nameplate.

These pressure markings are of little concern to installers or inspectors when the unit involved is one of the following:

- 1) A unit that is marked to indicate that it is factory charged (see “Refrigerant Amount”);
- 2) A unit serving as a section of a UL Listed system (see “Split-Systems”) charged with the correct refrigerant type and amount (see “Refrigerant Type” and “Refrigerant Amount”); and,
- 3) A unit containing a complete refrigerant system charged with the correct refrigerant type and amount.

For these types of units, the factory test pressure is adequate for the factory charge or the designated field charge.

For other types of units, the adequacy of the factory test pressure may need to be determined by measurements on the installed system.

A unit requiring connection to a remote condenser that is not part of a UL Listed system is also marked to specify the minimum design pressure of the remote condenser. To comply with this specification, the "Design Pressure" marked on the condenser should be at least as high as the minimum design pressure specified, and the condenser should be the type specified.

35. HEATING AND COOLING COILS

Equipment intended to employ water or steam as a heat exchange medium for the conditioned air is required to be marked with the fluid type(s) for which it has been evaluated. If a coil is for hot (or both hot and cold) water, the marking indicates the maximum permissible inlet water temperature. If the coil is for steam, or for water at a temperature exceeding 200°F, the marking indicates the maximum permissible pressure. If the coil is for cooling only, this information is marked. Such markings are generally located in the area where piping connections are made to the unit.

36. SUITABLE FOR OUTDOOR USE

A unit evaluated for outdoor installation is identified by a marking "Outdoor Use" or equivalent statement on or near the nameplate. These units are investigated for adequate corrosion protection and the ability of the enclosure to prevent accumulation of water, which could result in risk of electric shock or fire. Some equipment such as a through-the-wall unit, is marked to indicate that only a portion of the unit may be mounted outdoors. Equipment that is UL Listed for outdoor use is identified either by an appropriate footnote or by the designation of the Listed equipment (i.e., outdoor section) in UL's published Listings. A unit not marked as indicated above is UL Listed for indoor installation only.

37. MOUNTING POSITION

The intended mounting position of most units is obvious from their construction and/or position of their unit markings. For some equipment, particularly duct heaters, the mounting position is not obvious. Most duct heaters are suitable for mounting in either horizontal or vertical ducts. All duct heaters and some similar types of equipment are required to be marked with their acceptable mounting positions (e.g., "This Side Up In Horizontal Duct," "This Side Up In Vertical Duct," etc.). Other equipment, such as indoor air handlers, are often investigated and UL Listed for mounting in several positions (e.g., upflow, downflow, horizontal).

For some types of equipment, including all units incorporating electric resistance space heaters, it is particularly important that the unit be oriented properly, as to which side is up when mounted in the horizontal position.

Note that a unit suitable for mounting in any one of several positions sometimes may be properly installed with the markings located sideways or upside down. If there is any question concerning the mounting position of a UL Listed unit, and there are no markings on the unit to indicate that it

may be mounted in this position, consult the manufacturer's installation instructions. UL reviews the instructions packaged with the unit as part of its investigation.

38. AIR FLOW DIRECTION

For some duct heaters, proper operation of the temperature limiting devices is dependent on the direction of air flow across the heating elements. Such units are marked with an arrow and appropriate wording to indicate the proper direction of air flow.

39. AIR VELOCITY

Proper operation of electric resistance space heaters is dependent on the quantity of air moving past the elements. The adequacy of the air moving means is determined as part of the investigation of all central electric space heating equipment Listed with specific fans or blowers. This pertains to units with both heaters and blowers factory installed and to units marked to indicate the use of field-installed heater accessories (see "Use of Accessories").

Multispeed Blower Motors

Some units designed for field-installed heaters use a multispeed blower motor, and it may be necessary to adjust the fan speed when certain heaters are installed. Such equipment is marked to indicate the need for this change, and details showing how to accomplish it are included in markings, usually on the wiring diagram.

Large Commercial/Industrial Equipment

Some very large commercial and industrial type equipment with fixed electric space heating use belt-driven, adjustable speed blowers. The manufacturer's installation instructions include directions for setting the blower speed based on the external static pressure. UL verifies these instructions as part of its product investigations, and these instructions should be followed to assure adequate air flow.

Duct Heaters

One type of unit UL does not investigate for use with specific air moving equipment is a duct heater. *NEC*® Section 424.59 requires provision of uniform and adequate air flow over the face of the heating elements in a duct heater. Every duct heater is marked to indicate the minimum required air flow. This marking may include the specific minimum velocity, but in most cases, it will reference the installation instructions for details. The installation instructions typically include a chart or graph showing the minimum required air flow based on the heater kilowatt rating and the temperature of the air entering the heater. They also include directions for using the graph, and generally at least one example. The manufacturer's instructions, packaged with the heater, are reviewed as part of the UL investigation. It is important that they be followed, as also indicated in *NEC*® Section 424.66.

Minimum air velocities for duct heaters are usually specified in feet per minute, but may be specified in cubic feet per minute, if the duct heaters are to be installed only in a duct of the same size as the heater. The installation instructions should be consulted for any restrictions in this regard.

NEC® Section 424.59 states that the airflow shall be uniform as well as adequate. Another factor

that should not be overlooked is the fine print note in *NEC®* Section 424.59. Generally, an unobstructed straight run of duct at least 4 feet long on the inlet side of the heater is adequate to insure fairly uniform air flow across the duct area. Obstructions on the outlet side of the heater, however, can also affect uniformity of airflow. Published information for the duct heater category KOHZ in UL's *Electrical Appliance and Utilization Equipment Directory* offers some additional guidance.

40. INLET AIR TEMPERATURE

UL's investigation of most equipment is based on the assumption that the air entering an indoor unit is at normal room temperature. UL tests are conducted with inlet air temperatures of 80°F. Some indoor units are investigated and Listed for connection to duct systems where the air entering the unit is preheated by some other means. Since duct heaters are typically used in such installations, any unit identified as a "Duct Heater" as part of the Listing Mark is marked to indicate a maximum entering air temperature (see *NEC®* Section 424.60). For some duct heaters, this marking may reference the installation instructions that, as indicated elsewhere in this Guide, have been investigated as part of the Listing and should be consulted. Fan units may also be used in applications where the inlet air is preheated, and if tested to cover this application, will also be marked to indicate a maximum entering air temperature. If not so marked, a maximum entering air of 80°F is assumed. Use of equipment in systems that preheat inlet air to a temperature higher than its marked maximum inlet temperature, or 80°F if not marked, can result in overheating of wiring, electrical components and duct work.

41. DUCT CONNECTIONS

Units designed to be connected to a duct system for conditioned air are Listed for installation in accordance with the applicable portions of the National Fire Protection Association Standard for Installation of Air Conditioning and Ventilating Systems, NFPA 90A, and/or the Standard for Warm Air Heating and Air Conditioning Systems, NFPA 90B. Certain unit markings may limit the types of installations permitted by these Standards.

NFPA Standards 90A and 90B permit certain types of residential installations of nonheating equipment without a noncombustible duct or equivalent barrier beneath a bottom air discharge or return air opening in a unit. A unit that does not include a means of heating but requires such a barrier is marked "For Nonresidential Installation Only."

A unit not investigated for connection to a duct system as defined in these Standards, may be marked "This Unit Is Intended Only For Free-Air Discharge Or For Connection To A Duct Supplying Only One Room."

Certain types of equipment that cannot be properly installed with attached duct work in rooms having a ceiling height of 7-1/2 feet or less may be marked to indicate the minimum required ceiling height.

42. Short-Circuit Current Rating

NEC® Section 440.4(B), now requires that multimotor and combination-load equipment shall be provided with a visible nameplate marked with the short-circuit current rating, with the following exception:

Multimotor and combination-load equipment used in one and two family dwellings, cord and attachment plug connected equipment, or equipment supplied from a branch circuit protected at 60 amps or less shall not be required to be marked with a short-circuit current rating. All these types of markings described above are located on or adjacent to the unit nameplate.

Luminaires Marking Guide

January 2009

Luminaires
Marking Guide

Preface to the Eighth Edition

This eighth edition of the Luminaire Marking Guide contains updated information to make it easier to locate specific markings. The guide consists of 77 notes indexed by both luminaire type and subject matter. Each note describes a marking and briefly explains the meaning and terminology of the marking. This edition has been updated in accordance with the 2008 National Electrical Code (NEC) ® and UL Luminaire Standards revisions through September 17, 2008.

UL Marking Guides are updated as necessary due to new product development, changes in the National Electrical Code®, or the need for clarification. To confirm the current status of any UL Marking Guide, please consult the Regulators page of the UL Web Site at <http://www.ul.com/regulators/index.html>.

We welcome any comments or suggestions you may have regarding this new edition. Please direct your comments to:

ENVIRONMENTAL LOCATION MARKINGS

1. **DRY LOCATIONS** — A luminaire intended for use in a location not normally subject to dampness, but may include a location subject to temporary dampness, as in the case of a building under construction, provided ventilation is adequate to prevent an accumulation of moisture is marked “DRY LOCATIONS ONLY.”
2. **DAMP LOCATIONS** — Only luminaires marked “SUITABLE FOR DAMP LOCATIONS” or “SUITABLE FOR WET LOCATIONS” are intended to be installed in damp locations. A damp location is an exterior or interior location that is normally or periodically subject to condensation of moisture in, on, or adjacent to, electrical equipment, and includes partially protected locations.
3. **WET LOCATIONS** — Only luminaires marked “SUITABLE FOR WET LOCATIONS” are intended to be installed in wet locations. A wet location is a location in which water or other liquids may drip, splash or flow on or against electrical equipment. A luminaire marked “SUITABLE FOR WET LOCATIONS” may be additionally marked as specified below:
 - a. **Covered Ceiling Mount Only** — A wet locations luminaire marked “COVERED CEILING MOUNT ONLY” is intended for locations such as a vehicle washing area where the luminaire will not be subjected to water and precipitation from the back side. A ceiling mounted luminaire not identified for covered ceiling mount only is suitable for mounting in locations where it may be subjected to precipitation from the back side, such as under a metal grate-type catwalk.
 - b. **Less Than 1.2 M (4 Feet) Above Ground Level** — A wet locations wall or post mounted luminaire may be installed within 1.2 m (4 feet) of ground level if it is marked “SUITABLE FOR MOUNTING WITHIN 1.2 M (4 FEET) OF GROUND.” luminaires with this marking are intended to be subjected to water from lawn and garden sprinkler systems, but are not intended to be installed at or below ground level where they may be subjected to immersion in water.

Exception: A luminaire with an integral post (bollard type luminaire) needs to be so marked.
 - c. **Below Ground Level** — A wet locations recessed luminaire may be installed at or below ground level if it's marked “SUITABLE FOR GROUND-MOUNTED RECESSED.” A luminaire with this marking is intended to be subjected to infrequent immersion under water which may occur because of heavy precipitation. The luminaire is provided with instructions for its proper installation.
4. **INSTALLATION INSTRUCTIONS** — Installation instructions shall be provided for luminaires that require specific methods for sealing the mounting surface or specific fittings for supply connections.

RESTRICTED LOCATION MARKINGS

5. **OUTDOOR USE ONLY** — A fluorescent luminaire that is intended for outdoor use only is marked “OUTDOOR USE ONLY”. It is not required to have a Class P protected ballast.
6. **NOT FOR USE IN DWELLINGS** — An electric discharge luminaire that has a ballast with an output open circuit voltage greater than 1000V is marked “NOT FOR USE IN DWELLINGS”.

A luminaire marked for supply wire rated over 90°C is also marked “NOT FOR USE IN DWELLINGS.”

7. **WALL MOUNTING ONLY** — A luminaire that may be mounted only to a wall because of temperature, or other considerations, is marked “WALL MOUNT ONLY.”
8. **CEILING MOUNT ONLY** — track lighting luminaire assemblies intended for use with ceiling mounted track lighting systems only are marked “FOR USE WITH CEILING-MOUNTED TRACK ONLY.”
9. **NON-COMBUSTIBLE SURFACE ONLY** — A ceiling mounted or ground-mounted recess luminaire that is permitted to be mounted only to a noncombustible ceiling because of temperature or other considerations is marked “NONCOMBUSTIBLE SURFACE ONLY.”
10. **NON-FIRE-RATED RECESSED CEILINGS ONLY** — A recessed luminaire with a thermoplastic housing, or a housing with openings that exceed the maximum number or size permitted is marked “FOR USE IN NON-FIRE-RATED INSTALLATIONS ONLY.”
11. **FIRE RESISTANT CONSTRUCTION ONLY** — A recessed luminaire that produces a temperature rise greater than 65°C (117°F) on a mounting surface or recessed housing is marked “INSTALL IN BUILDINGS OF FIRE RESISTANT CONSTRUCTION - MOUNT ON NONCOMBUSTIBLE MATERIAL.”
12. **CONCRETE ONLY** — A recessed luminaire that is exempted from being thermally protected because it is intended for use only in a fire-resistant medium, such as concrete, is marked “FOR USE IN CONCRETE ONLY.”

PERMISSIVE LOCATION MARKINGS

13. **SUITABLE FOR USE IN POURED CONCRETE** — A recessed luminaire or track lighting system marked “SUITABLE FOR USE IN POURED CONCRETE” may be installed in poured concrete as well as in normal building materials.
14. **SUITABLE FOR USE IN SUSPENDED CEILINGS** — A recessed luminaire provided with means for mounting in a suspended ceiling may be installed in a suspended ceiling if marked “SUITABLE FOR SUSPENDED CEILINGS.”
15. **SUITABLE FOR UNDER CABINET MOUNTING** — A luminaire that is intended for mounting under a cabinet is marked “SUITABLE FOR UNDER-CABINET MOUNT.”

SPECIAL USE MARKINGS

16. **ELEVATED AMBIENT** — A luminaire intended for use in locations that experience a continuous elevated ambient temperature is marked “SUITABLE FOR OPERATION IN AMBIENT NOT EXCEEDING (___°C),” where the blank is filled in with the maximum ambient temperature.
17. **COMMERCIAL COOKING HOOD USE** — A luminaire intended for installation in non-residential occupancies in exhaust or hood ducts or hoods above cooking equipment, in accordance with the National Electrical Code and the Standard for Installation of Equipment for the Removal of Smoke and Grease-Laden Vapors from Commercial Cooking Equipment,

NFPA 96, is marked with the minimum temperature rating of the supply wiring, and with the wording "SUITABLE FOR USE WITHIN COMMERCIAL COOKING HOODS," or the equivalent, and "MOUNT A MINIMUM OF 1.2 M (4 FEET) ABOVE COOKING SURFACE." A recessed luminaire is additionally marked with the minimum acceptable spacing between the centers of adjacent units, the minimum spacing from the center of the luminaire to side building member, and the minimum spacing above the luminaire (see Item 55).

- 18. GERMICIDAL LAMP USE** — A luminaire intended for use with germicidal lamps is marked, "THIS LUMINAIRE IS DESIGNED FOR USE WITH GERMICIDAL LAMPS AND MUST BE INSTALLED IN COMPLIANCE WITH COMPETENT TECHNICAL DIRECTIONS SO THAT THE USER'S EYE AND BARE SKIN WILL NOT BE SUBJECTED TO INJURIOUS RAYS."
- 19. AIR HANDLING USE** — A luminaire for use with heating, ventilating, and air conditioning systems in accordance with the National Electrical Code and the Standard for Installation of Air-Conditioning and Ventilating Systems of Other than Residence Type, ANSI/NFPA 90A, is marked, "SUITABLE FOR AIR HANDLING USE." An air handling luminaire intended for cool air only is marked "COOLED AIR ONLY". If the luminaire is shipped without a light diffuser, the luminaire is marked "USE WITH LISTED LIGHT DIFFUSER". A plastic light diffuser or lens that depends on the luminaire for the provision of a frame and that is shipped separately from the luminaire is marked "USE WITH (manufacturer's name) (catalog designation) LUMINAIRE." For information on the use of air handling luminaires in fire rated constructions, refer to the design information section in the Fire Resistance Directory.
- 20. AIR HANDLING USE - EXCESSIVE OPENINGS** — A recessed luminaire intended for use as an air handling register and having a recessed housing with holes or openings that exceed the limits in size or number is marked "FOR NONCOMBUSTIBLE CEILING PLENUM ONLY." A recessed luminaire that is intended for optional use as an air handling register and having a recessed housing with holes or openings that exceed the limits in size or number that are closed off by a removable cover or knockout is marked "ONLY FOR USE IN CEILING PLENUM OF NONCOMBUSTIBLE CONSTRUCTION OR WITH AIR HANDLING PARTS THAT COVER VENT OPENINGS."

INSTALLATION MARKINGS

- 21. ADJUSTABLE MOUNTING POSITIONS** — A luminaire with adjustable or alternate mounting positions is marked to indicate the limits of adjustment or mounting positions necessary to comply with test requirements.
- 22. ORIENTATION** — If a luminaire that may be installed in more than one position has been evaluated for use only in one orientation, the luminaire is marked to indicate its proper orientation. This marking is typically provided on wet location and wall mount luminaires.
- 23. CHAIN OR HOOK SUSPENSION ONLY** — A luminaire with power supply cord that is not provided with hooks or chain is marked "FOR CHAIN OR HOOK SUSPENSION ONLY."
- 24. ADAPTOR PLATE** — A recessed luminaire with an opening for an adapter plate but not shipped with the plate is marked with the catalog number or similar product identifier of the intended adapter plate.

25. CABLE WIRING METHOD ONLY — A recessed luminaire with a wiring compartment (junction box) that is not suitable for pulling individual conductors into it and is intended for cable wiring methods only is marked “FOR CABLE USE ONLY - NOT FOR PULLING WIRES.”

26. PHOTOELECTRIC-CONTROLLED RECEPTACLE — A luminaire provided with a receptacle for a photoelectric-controlled switch but not shipped with the photoelectric-controlled switch or with a shorting or open circuit plug is marked “INSTALL PHOTOCONTROL OR SHORTING PLUG.”

27. REFLECTOR KITS — A reflector kit intended for installation in a fluorescent lighting luminaire sometime after the initial installation of the luminaire may consist of reflectors, electrical components and the like. A reflector kit that requires drilling or punching of holes into the luminaire is marked “WARNING — RISK OF FIRE OR ELECTRIC SHOCK. LUMINAIRE WIRING, BALLASTS, OR OTHER ELECTRICAL PARTS MAY

BE DAMAGED WHEN DRILLING FOR INSTALLATION OF REFLECTOR KIT HARDWARE.
CHECK FOR ENCLOSED WIRING AND COMPONENTS.”

28. CORRELATION MARKINGS FOR TRACK SYSTEMS — Track systems are composed of many individual sections. Each track section is marked “CAUTION — TO REDUCE THE RISK OF FIRE AND ELECTRIC SHOCK, USE ONLY LUMINAIRE ASSEMBLIES MARKED FOR USE WITH _____ TRACK.” The luminaire assemblies are marked “CAUTION — TO REDUCE THE RISK OF FIRE AND ELECTRIC SHOCK, USE ONLY WITH _____ TRACK.” The blank space is replaced by the manufacturer’s name and series number of the track.

29. NON-PENDANT — A track lighting system that is not intended to be pendant mounted is marked “DO NOT PENDANT MOUNT THIS TRACK SUCH AS BY STEMS OR WIRES.”

30. INTEGRAL TO SUSPENDED CEILINGS — A recessed track system intended to be an integral part of a building construction (for example, the recessed track is an integral part of a suspended ceiling grid) is marked “FOR USE IN _____.” The first blank is replaced by the name of the manufacturer making the building structural component. The second blank is replaced by the model number or other descriptive name of the building structural component.

31. CLIP MOUNT — A track lighting system may be provided with track sections that are intended to be secured to the building structure only by clips. These sections are marked “FOR CLIP MOUNTING ONLY.”

INSTALLATION INSTRUCTIONS

32. CIRCUIT DIAGRAM — luminaires are provided with instructions and a circuit diagram showing the proper method for making supply connections, including polarity and grounding, unless the luminaire carton is marked “THIS PRODUCT MUST BE INSTALLED IN ACCORDANCE WITH THE APPLICABLE INSTALLATION CODE BY A PERSON FAMILIAR WITH THE CONSTRUCTION AND OPERATION OF THE PRODUCT AND THE HAZARDS INVOLVED.”

33. POWER SUPPLY CORD — A luminaire having a power supply cord that is electrically unconnected or unassembled to the luminaire is provided with instructions for the correct field assembly, including a means of strain relief and a wiring diagram.

- 34. INSTALLATION INSTRUCTION FOR CONVERTIBLE INCANDESCENT RECESSED LUMINAIRE**— A convertible recessed incandescent luminaire housing (rough-in section) is provided with instructions that tell the installer to remove the peel-off label with the text described in note 64, for Type IC installations.
- 35. INSTALLATION INSTRUCTIONS FOR TRACK SYSTEMS** —Each smallest unit package or carton of track assemblies is provided with installation instructions that contain (a) a product description, (b) a statement identifying which track system is to be used with the individual part, and (c) instructions on how the part or parts are to be installed in relation to the track system. Each track section is provided with installation instructions that identify the track system series number or model name, and the model catalog number of the track. The installation instructions also specify the electrical ratings of the track system and identify the mounting means (pendant, surface, etc.), and the distance between mounting clips, screws, stems, etc. Additional instructions and limitations of the use of track lighting systems are specified in the Important Safety Instructions provided with each track section.
- 36. DRILL GUIDE FOR TRACK SYSTEMS** — Those track systems designed such that mounting holes in each track section are to be drilled out by the installer are provided with a drill guide in the center of each track section. The proper location of the mounting holes is to be included in the accompanying installation instructions for the track system.
- 37. CUT TRACK SECTIONS** — Only those track systems with track sections that may be cut to length in the field by the installer are provided with installation instructions that indicate the proper method of cutting.

SUPPLY MARKINGS

- 38. SUPPLY WIRE TEMPERATURE** — luminaires that require greater than 60 °C supply wire are marked “MIN ____ °C SUPPLY CONDUCTORS” for which blank space is replaced with the temperature.

Luminaires intended to be installed in a dwelling, connected to or over an outlet box, and marked for supply wire rated 75°C or 90°C are additionally marked on the luminaire and on the carton “CAUTION - RISK OF FIRE. CONSULT A QUALIFIED ELECTRICIAN TO ENSURE CORRECT BRANCH CIRCUIT CONDUCTOR,” or just the carton may be marked “CAUTION – RISK OF FIRE. THIS PRODUCT MUST BE INSTALLED IN ACCORDANCE WITH THE APPLICABLE INSTALLATION CODE BY A PERSON FAMILIAR WITH THE CONSTRUCTION AND OPERATION OF THE PRODUCT AND THE HAZARDS INVOLVED.”

Track lighting systems that require supply wire with minimum temperature ratings are marked “FOR SUPPLY CONNECTIONS, USE WIRE RATED FOR AT LEAST ____°C (____°F)” for which the “(____°F)” is optional and the blank space is replaced with the temperature.

- 39. PUSH LEADS INTO BOX** — Some surface-type wall mounted luminaires require the installer to push the supply leads into the outlet box to avoid contact with high luminaire temperatures, and are marked “PUSH CONDUCTORS INTO JUNCTION BOX”.
- 40. THROUGH CONDUCTORS IN A WIRING COMPARTMENT** — A luminaire that is suitable for use with through branch conductors is marked “MAXIMUM OF ____ NO. ____ AWG THROUGH BRANCH CIRCUIT CONDUCTORS SUITABLE FOR ____°C PERMITTED IN BOX.”

- 41. ACCESS REQUIRED** — A luminaire so constructed that the supply connections are accessible only from behind the luminaire is marked, “ACCESS ABOVE CEILING REQUIRED” or “ACCESS BEHIND WALL REQUIRED.”
- 42. RACEWAY** — A luminaire may also be intended for use as a raceway if marked “SUITABLE FOR USE AS A RACEWAY.”
- 43. PROPRIETARY WIRING SYSTEM** — A luminaire designed to be connected to a proprietary wiring system is marked with the following information:
- The name and part number of the proprietary system to which the luminaire is to be connected.
 - b. All cautionary or other markings required by the system.
- 44. REMOTE BALLAST** — A fluorescent or HID luminaire designed for use with a remote ballast is marked “USE BALLAST FOR ____ WATT ____ TYPE LAMP” where the blanks are filled with the lamp wattage and type, respectively. Additionally, a fluorescent luminaire designed for use with a remote ballast is marked “USE THERMALLY PROTECTED BALLAST FOR TYPE LAMP”.
- 45. “X” OR “T” TRACK CONNECTORS** — An “X” or “T” shaped intercept track connector (a) provided with breakaway ground tabs, (b) provided with a connector not prewired, or (c) intended for field rewiring and reconfiguration is marked “WARNING — RISK OF FIRE AND ELECTRICAL SHOCK. THIS PRODUCT REQUIRES PROPER FIELD WIRING AND IS INTENDED TO BE INSTALLED BY A QUALIFIED ELECTRICIAN ONLY.”
- 46. VOLTAGE OTHER THAN 120 V** — An incandescent luminaire designed for connection to other than a nominal 120 V supply is marked with its input voltage.
- 47. TRANSFORMER VOLTAGE** — A luminaire that employs a device (such as a transformer) that is designed to operate only at a specified voltage is marked with its input voltage.
- 48. A.C. ONLY** — A luminaire that employs a device (such as a transformer) for use only in an alternating-current circuit is marked “____ VOLTS ____ HERTZ” or “____ V ____ HZ” or “AC ONLY.”
- 49. BRANCH CIRCUIT GREATER THAN 20 A** — A recessed luminaire intended to be connected to a branch circuit in excess of 20 amperes is marked “CONNECT TO A BRANCH CIRCUIT SUPPLY RATED ____ AMPS MAX” where the indicated ratings are 30 or 40.
- 50. LINE VOLT-AMPERES** — Instead of the current in amperes, a fluorescent luminaire employing a high power-factor, reactor-type ballast or ballasts for bi-pin lamps (preheat or rapid start types) may be marked “FOR LINE VOLT-AMPERES, MULTIPLY TOTAL LAMP WATTAGE BY 1.5.” Similarly, a fluorescent luminaire employing a low-power-factor, reactor-type ballast or ballasts for bi-pin lamps may be marked “FOR LINE VOLTAMPERES, MULTIPLY TOTAL LAMP WATTAGE BY 2.5.” Instead of the current in amperes, a fluorescent luminaire employing single-pin lamps (instant start type) and a high-power-factor ballast or ballasts may be marked “FOR LINE VOLT-AMPERES, MULTIPLY THE TOTAL LENGTH OF ALL LAMPS IN INCHES BY ...” The multiplying factor may be “0.6,” “0.8,” “1.2” or “1.5.”
- 51. GROUND ID** — A luminaire and track system feed connector having a pressure wire terminal

for the connection of an equipment ground conductor is marked, adjacent to the terminal or screw, “G”, “GR”, “GRD”, “GND”, “GRND”, “GROUND”, or with the grounding symbol. A wire binding screw used to connect an equipment ground conductor is colored green or provided with a grounding abbreviation adjacent to the screw.

- 52. AIR HANDLING GROUNDING** — Recessed luminaires intended for installation only in environmental air handling spaces other than ducts or plenums that rely on a conductive connection to a metal-enclosed wiring system for equipment grounding are marked “INSTALL ONLY IN ENVIRONMENTAL AIR HANDLING SPACES WHERE A COMPLETE METAL ENCLOSED WIRING SYSTEM IS PROVIDED.”
- 53. NEUTRAL ID** — A luminaire and track system feed connector having a terminal for the connection of the neutral supply conductor is marked, adjacent to the terminal or screw, “N”, “NEUTRAL”, “W” or “WHITE”, or is colored white.
- 54. POLARIZED PLUG** — A luminaire with cord and a polarized attachment plug is marked “TO PREVENT ELECTRIC SHOCK, MATCH WIDE BLADE OF PLUG TO WIDE SLOT.”

RECESSED LUMINAIRE MARKINGS

- 55. CLEARANCE AND INSTALLATION** — Recessed luminaires may be installed in insulated or uninsulated ceilings (or walls when marked for wall mounting) depending on their type of Listing as follows:
- a. Suitable for Installation in Direct Contact with Insulation** — These luminaires are marked “TYPE IC,” or “INHERENTLY PROTECTED,” and may be installed where thermal insulation is placed in direct contact with the sides and top of the luminaire. They are protected against overheating by either thermal protection (See Note 58), or are inherently protected (See Note 59).
 - b. Suitable for Installation Only in Poured Concrete** — These luminaires are restricted to use only in a fire resistant medium such as concrete, and are marked “FOR USE IN CONCRETE ONLY.” An in-ground recessed luminaire may alternately be marked “SUITABLE FOR GROUND MOUNTED RECESSED ONLY”.
 - c. Luminaires Requiring Minimum Spacing from Thermal Insulation and Combustibles (Type Non-IC)** — luminaires that are NOT marked “TYPE IC,” “INHERENTLY PROTECTED,” are referred to as Type Non-IC Recessed luminaires. The luminaires are intended to be installed where minimum spacings are maintained between the luminaire and combustibles, side walls, and overhead building members, and may be identified by the spacing-to-thermal insulation marking as specified in Note 63. There are different purposes for the spacings. The minimum spacing to combustibles reduces the risk of the luminaire heat igniting combustibles. This spacing is always a minimum of ½ inch, unless the luminaire is marked: “INSTALL WITH MINIMUM SPACINGS BETWEEN (a) CENTER-TO-CENTER OF ADJACENT LUMINAIRES: ____ mm (____ in.); (b) TOP OF LUMINAIRE-TO-OVERHEAD BUILDING MEMBER: ____ mm (in); and (c) LUMINAIRE CENTER-TO-SIDE BUILDING MEMBER: ____ mm (in.).” The blank spaces will be replaced by the minimum distances required.
 - d. Suitable for Installation Only in Environmental Air Handling Spaces** — These luminaires are restricted for use only in an environmental air handling space and are

marked "INSTALL ONLY IN ENVIRONMENTAL AIR HANDLING SPACES WHERE A COMPLETE METAL ENCLOSED WIRING SYSTEM IS PROVIDED."

- 56. TYPE NON-IC** — Recessed luminaires that are NOT suitable for installation in direct contact with combustible materials or thermal insulation, including insulation installed over the top of the luminaire that entraps heat (Type Non-IC) are marked "DO NOT INSTALL INSULATION WITHIN 76 mm (3 in) OF ANY PART OF THE LUMINAIRE."
- 57. TYPE IC** — A luminaire marked "TYPE IC" may be installed where insulation and combustible materials are placed in direct contact with the sides and the top of the luminaire.
- 58. LIGHT BLINKING, THERMAL PROTECTION** — Recessed luminaires provided with thermal protection to sense overheating conditions are marked "BLINKING LIGHT OF THIS THERMALLY PROTECTED LUMINAIRE MAY INDICATE OVERHEATING" to alert the user of a potential overheating condition.
- 59. INHERENTLY PROTECTED** — luminaires that are intended for installation in direct contact with thermal insulation and combustible material, and are designed so that overheating conditions cannot be caused by overlampping or mislampping, are not thermally protected and are marked "INHERENTLY PROTECTED."
- 60. TRIM CORRELATION** — A recessed luminaire is marked "USE WITH (manufacturer's name) (catalog number) TRIMS ONLY." The trims are marked with the trim manufacturer's name and catalog number.
- 61. CONVERTIBLE INCANDESCENT RECESSED LUMINAIRE (TYPE IC/NON-TYPE IC)** — Convertible recessed incandescent luminaires can be installed in either insulated (Type IC) or non-insulated (noninsulated Type IC) applications. The Same luminaire housing (rough-in section) is used for both Type IC an Non-Type IC applications. The trim (finishing section) and light source determine the Type IC or Non-IC application of the luminaire. Convertible luminaires have been evaluated with respect to risk of fire by performance testing under conditions of misapplication of lamps or trims. Installation instructions are provided that tell the installer to remove the marking relating to spacing to thermal installation when the luminaire is installed as intended as a Type IC luminaire in an insulated ceiling application. (See note 34).
- 62. CONVERTIBLE (TYPE NON-IC/IC) TRIM IDENTIFICATION** — The trim (finishing section) for a convertible recessed incandescent luminaire is provided with correlation markings which identify the trim/ luminaire (finishing/rough-in section) combinations that are suitable for either Type IC or Non-Type IC installation.
- 63. ROUGH-IN AND FINISHING SECTIONS** — Some recessed luminaires are intended to be installed in two parts. The Rough-In Section usually consists of the plaster frame and junction box, and is marked "ROUGH-IN SECTION FOR USE WITH FINISHING SECTION _____", or ROUGH-IN SECTION ____ FOR CONVERTIBLE RECESSED LUMINAIRE." The blanks are replaced by catalog numbers or series designations. The Finishing Section usually consists of the recessed housing and trim; it is marked with the manufacturer's identification and catalogue number. A convertible recessed luminaire trim/finishing section is also marked "FINISHING-SECTION FOR USE WITH ROUGH-IN SECTION _____." The blanks are replaced by the catalog number or series designations. If a light diffuser is not provided, an additional marking on the finishing section indicates that the luminaire must not be

used with a light diffuser.

- 64. RECESSED TRACK FOR RECESSED LUMINAIRE ASSEMBLIES** — A recessed track channel for recessed luminaire assemblies and intended for installation in a wall or ceiling cavity where thermal insulation is spaced at least 3 inches away from the recessed channel is marked “WARNING — RISK OF FIRE. DO NOT INSTALL INSULATION WITHIN 3 INCHES OF RECESSED CHANNEL IN SUCH A MANNER TO ENTRAP HEAT” or equivalent. In addition, a recessed track channel for recessed luminaire assemblies is marked “NOTICE — THERMALLY PROTECTED TRACK (OR LUMINAIRES). BLINKING LIGHTING MAY INDICATE INSULATION TOO CLOSE TO TRACK (OR OTHER CONDITION CAUSING OVERHEATING)”.
- 65. RECESSED LUMINAIRE ASSEMBLIES** — A recessed luminaire assembly intended for use with a recessed track system is marked with its minimum spacing to adjacent assemblies.

USER MARKINGS

- 66. LAMP REPLACEMENT MARKINGS** — Incandescent and HID type luminaires and track lighting luminaire assemblies are required to be marked with lamp replacement markings. This marking may be used in combination with the trim correlation marking in recessed luminaires (See Note 72). Generally, most fluorescent luminaires are not provided with lamp replacement markings (See Note 67 for compact fluorescent lamps). The lamp replacement marking for incandescent luminaires will state, “CAUTION - RISK OF FIRE. MAX ____ W(ATTS) TYPE ____”, where the blanks are filled in with lamp type and wattage, and may include the word “SHIELDED” if intended for use with a tungsten-halogen lamp which has an integral shield. HID-type luminaires are provided with a lamp replacement marking identifying the replacement lamp wattage and ANSI designation.
- 67. COMPACT FLUORESCENT LAMPS** — luminaires that employ a compact fluorescent lamp with a ballast that is not Class P are marked with the following or equivalent: “USE ONLY ____ TYPE ____ WATT LAMPS. “
- 68. HID LAMP WITH NO ANSI DESIGNATION** — An HID luminaire with a ballast designed to operate a lamp that does not have an ANSI designation is marked “USE MAX ____ WATTS TYPE ____ ONLY” and, if applicable, “USE ____ VOLT LAMPS.”
- 69. DOUBLE-ENDED LAMPS** — A luminaire that employs a double-ended tungsten halogen or HID lamp without an interlock switch is marked “CAUTION — RISK OF SHOCK. DISCONNECT POWER BEFORE SERVICING.” In addition, if the end contact may be energized and accessible during removal of the lamp, the luminaire is additionally marked “CAUTION — RISK OF ELECTRIC SHOCK. INSERT LAMP IN THIS LAMPHOLDER FIRST,” unless provided with an interlock switch. A track lighting luminaire is marked “NOT FOR USE IN DWELLINGS” and “CAUTION — RISK OF ELECTRIC SHOCK. REMOVE FROM TRACK BEFORE RELAMPING.”
- 70. TUNGSTEN HALOGEN LAMPS** — An incandescent luminaire with a tungsten halogen lamp and that does not have a lamp containment barrier is marked “CAUTION — RISK OF FIRE. MAX ____ WATTS TYPE ____ SHIELDED” or “CAUTION – RISK OF FIRE. MAX ____ WATTS

TYPE ____ USE LAMP MARKED “SUITABLE FOR IS IN OPEN LUMINAIRES”.

- 71. METAL HALIDE LAMPS** — HID luminaires with Metal Halide (MH) lamps may be provided with a marking if the lamp enclosure is either: not provided or is inadequate for containing lamp particles. The marking is “CAUTION — RISK OF FIRE. DO NOT INSTALL A LAMP IDENTIFIED FOR USE ONLY IN ENCLOSED LUMINAIRES.” A luminaire with a lamp containment barrier that is removed during user maintenance is marked “KEEP PROTECTIVE BARRIER IN PLACE.” A luminaire with a UV attenuation barrier that is removed during user maintenance is marked “CAUTION – RISK OF PERSONAL INJURY. UV LIGHT SOURCE KEEP PROTECTIVE BARRIER IN PLACE”.
- 72. RECESSED LUMINAIRE LAMP REPLACEMENT MARKINGS** — Recessed luminaire housing or rough-in section may employ a marking system where the lamp replacement marking is dependent upon the trim or finishing section used. A luminaire housing is marked “USE ONLY WITH [Manufacturer] [Catalog Number] TRIMS”. A rough-in section is marked “ROUGH-IN SECTION FOR USE WITH FINISHING SECTION ____”. The blanks are filled in with manufacturer and trim or finishing section number as appropriate. All recessed luminaires are marked for lamp replacement “CAUTION – RISK OF FIRE. MAX ____ WATTS ____ TYPE”. A recessed luminaire that requires a different lamp wattage or type for an alternate trim or finishing section is marked “CAUTION – RISK OF FIRE” and a table specifying the trim or finishing section and the maximum lamp wattage and type permitted for use with it. Alternately the lamp replacement information can be included on the trim or finishing section. The lamp replacement markings can be concealed providing the trim or finishing section must be removed for relamping or it is additionally marked where visible during relamping “SEE OTHER (BACK) SIDE FOR RELAMPING INFORMATION.”
- 73. CLASSIFIED TRIMS** — A trim intended for field installation in specified incandescent recessed luminaires is provided with a lamp replacement marking (See Note 72) and identifies the luminaire for which the trim is suitable.
- 74. ADJACENT COMBUSTIBLES** — A track lighting luminaire assembly that produces a temperature greater than 90°C (194°F) on any exterior surface is marked “CAUTION — HOT SURFACE. KEEP AWAY FROM CURTAINS AND OTHER COMBUSTIBLES.”
- 75. PHOTOELECTRIC-CONTROLLED SWITCH** — A luminaire with a single-pole photoelectric controlled switch that is designed for connection to a line-to-line branch circuit is marked “CAUTION — RISK OF ELECTRIC SHOCK. DISCONNECT POWER BEFORE SERVICING.”
- 76. CONVENIENCE RECEPTACLE** — A luminaire provided with a convenience receptacle is marked “MAX__ W(ATTs)” or “MAX ____ A(MPS)” for its maximum load rating.
- 77. FUSEHOLDER** — A luminaire provided with a fuseholder is marked “MAX ____ A(MPS) with its fuse replacement rating.

Molded Case Circuit Breakers Marking Guide

January 2009

Copyright © 2009 Underwriters Laboratories Inc.®
104-01/2009

UL has developed the Molded-Case Circuit Breaker Marking Guide to assist AHJs and installers in understanding the meaning and location of markings on MCCBs. These circuit breakers are intended to be installed in accordance with the NEC and their listing. These markings are required by UL 489, and are part of the listing.

Underwriters Laboratories Inc. has developed the **Molded-Case Circuit Breaker Marking Guide** from the requirements in the Tenth Edition of UL 489, the Standard for Safety for Molded-Case Circuit Breakers, Molded-Case Switches, and Circuit-Breaker Enclosures, and its revisions through June 30, 2006. The Guide includes requirements for products under the categories Circuit Breaker Adapters (DHWZ), Accessories (DIHS), Circuit Breaker and Secondary Surge Arresters (DIMV), Circuit Breaker and Transient Voltage Surge Suppressor (DIPJ), Current Limiters (DIRW), Circuit Breakers for Use in Communications Equipment (DITT), Molded-Case Circuit Breakers (DIVQ), Combination Type Arc-Fault Circuit Interrupters (AWAH), Branch Feeder Type Arc-Fault Circuit Interrupters (AVZQ), Circuit Breakers With Equipment Ground Fault Protection (DIYA), Fused Circuit Breakers (DIYV), Circuit Breaker and Ground Fault Circuit Interrupters (DKUY), and Circuit Protectors (DLBX).

UL Marking Guides are updated as necessary due to new product development, changes in the National Electrical Code®, or the need for clarification. To confirm the current status of any UL Marking Guide, please consult the Regulators page of the UL Web Site at <http://www.ul.com/regulators/index.html>.

References to the *National Electrical Code*® are to the 2008 Edition.

We welcome any comments or suggestions you may have regarding this edition. Please direct your comments to:

47.	Remotely Operated Circuit Breaker	14

MOLDED CASE CIRCUIT BREAKERS ALSO LISTED AS COMBINATION TYPE ARC-FAULT CIRCUIT INTERRUPTERS

Guide (CCN) Designation: AWAH

Listing Mark Wording: Combination Arc Fault Circuit Interrupter" (or "Combination AFCI").

89.	Device Identifier	18
90.	"TEST" Function	18
91.	Instructions	18
92.	General Markings	18

MOLDED CASE CIRCUIT BREAKERS ALSO LISTED AS BRANCH/FEEDER TYPE ARC FAULT CIRCUIT INTERRUPTERS

Guide (CCN) Designation: AVZQ

Listing Mark Wording: "Branch/Feeder Arc Fault Circuit Interrupter" (or "Branch/Feeder AFCI").

93.	Device Identifier	18
94.	"TEST" Function	18
95.	Instructions	18
96.	General Markings	18

CIRCUIT BREAKERS/GROUND FAULT PROTECTION

Guide (CCN) Designation: DIYA

Listing Mark Wording: Circuit Breaker With Equipment Ground Fault Protection

57.	"Test" Function	15
58.	Trip Level Marking	15
59.	Instructions	15
60.	Terminal Identification	15
61.	Use Marking	15
62.	General Markings	15

CLASSIFIED MOLDED CASE CIRCUIT BREAKERS FOR USE IN SPECIFIED EQUIPMENT

Guide (CCN) Designation: DIXF

Classification Mark Wording: Underwriters Laboratories Inc. Classified Circuit Breaker

97. Classified Only and Compatibility List.....	19
98. Classified and Listed Compatibility List.....	19
99. Compatibility List.....	19
100. Device Identifier.....	19
101. General Markings.....	19

FUSED CIRCUIT BREAKER

Guide (CCN) Designation: DIYV

Listing Mark Wording: Fused Circuit Breaker or Fused Circuit-Breaker Frame

48. Line and Load Identification	14
49. Identification of Fuses	14
50. No Open Fuse Tripping	14
51. General Markings	14

CIRCUIT BREAKER/GROUND FAULT CIRCUIT INTERRUPTER

Guide (CCN) Designation: DKUY

Listing Mark Wording: Circuit Breaker and Ground Fault Circuit Interrupter or “CB and GFCI”

52. “Test” Function	14
53. “Class A” Marking	14
54. Instructions	14
55. Terminal Identification	14
56. General Markings	14

CIRCUIT PROTECTORS

Guide (CCN) Designation DLBX

Listing Mark Wording: Circuit Protector

81. Manufacturer’s Name	17
82. Voltage Rating	17
83. Ampere Rating	17
84. Reset Instructions	17

GENERAL

1. **Type Designation**—All circuit breakers are marked with their type designation. Normally, this marking also includes a catalog number, because most often the location of additional suffix letters and/or numbers in the catalog number provide additional information on ratings. If the full catalog number is marked, the type designation marking is optional.
2. **Manufacturer's Name** — All circuit breakers are marked with a name, trademark or other recognized means for identifying the organization responsible for the device. Usually, this is the manufacturer—for other references, the marking guide indicates the manufacturer's name.
3. **Voltage Rating** — All circuit breakers are marked with a voltage rating, including: 60, 125, 125/250, 160, 250, 500 and 600 volts for dc; and 120, 127, 120/240, 240, 277, 347, 480Y/277, 480, 600Y/347 and 600 volts for ac. All circuit breakers are marked with the symbols  for AC,  for DC, or both, as applicable. For ac voltage ratings other than 60 Hz, the frequency is marked. Additional wording may be provided.

Circuit breakers for use in Communications Equipment may also carry ratings of 30, 65 or 80 Volts dc.

Two-pole independent-trip breakers and single-pole breakers with handle ties that are rated 120/240 V ac have been investigated for use in line-to-line single-phase circuits or line-to-line lighting and appliance branch circuits connected to 3-phase, 4-wire systems, provided the systems have a grounded neutral and the voltage to ground does not exceed 120 V.

Two-pole independent-trip breakers and single-pole breakers with handle ties that are rated 125/250 V dc have been investigated for use in line-to-line connected 3-wire dc circuits supplied from a system with a grounded neutral, where the voltage to ground does not exceed 125 V.

Two-pole independent-trip breakers and single-pole breakers with handle ties that are rated 125/250 V (both ac and dc) have been investigated for use in accordance with either of the above two paragraphs, as applicable.

Two- and three-pole common-trip breakers rated 120/240V ac are intended for use on 1-phase, 3-wire circuits, where the voltage to ground does not exceed 120 V.

Two- and three-pole common-trip breakers rated 125/250 V or 125/250 V dc are intended for use on 1-phase and dc, 3-wire circuits, where the voltage to ground does not exceed 125 V.

Circuit breakers with a single voltage rating are intended for use in circuits where the circuit voltage and the voltage to ground do not exceed the voltage rating of the breaker.

“Slant (or slash)-rated” breakers with a rating such as 480Y/277 V are intended for use in circuits where the circuit voltage does not exceed the higher of the two voltages and the voltage to ground does not exceed the lower of the two voltages.

Based on the preceding paragraphs, “slant-rated” breakers (120/240, 208Y/120 V, etc., as opposed to 240, 480 V, etc.) are not intended for use on “slant-rated” delta systems. For example, a 3-pole,

120/240 V breaker is not intended for use on a 240/120 V, 3-phase, 4-wire, delta system, because on the high leg, the voltage to neutral is 208 V. In this instance, a 3-pole, 240 V breaker should be used.

4. **Ampere Rating** — All circuit breakers are marked with a current rating. For breakers rated 100 A or less, this marking is required to be on the handle or the escutcheon area of the breaker. If the marking is placed on the handle of the breaker, the numerical value alone is adequate.
5. **Line and Load Identification** — A circuit breaker may or may not be marked “Line” and “Load.” If it does not have this marking, it is acceptable for reverse connection. A breaker with interchangeable trip units is marked “Line” and “Load,” unless there is no risk of electric shock when changing the trip unit.

POSITION INDICATION

6. **On and Off (Open and Closed)** — All circuit breakers are marked to indicate whether they are open or closed. This marking is visible without removing the trim or cover. However, if the breaker is enclosed, it may be necessary to open a hinged cover or door.
7. **Trip and Reset** — If a circuit breaker handle takes an intermediate position when tripped, the breaker is marked to indicate it is tripped. Instructions for resetting the breaker are also required to be marked. These markings are optional if they already appear on the receiving device, for example the panelboard.
8. **Electrical Operation (On and Off)** — If the “On” and “Off” markings are not readily visible when an electrical operator is installed, the markings appear on the electrical operator.
9. **Electrical Operation (Trip and Reset)** — The electrical operator may also indicate the “Tripped” position of the circuit breaker.

INTERCHANGEABLE TRIP UNITS

10. **Manufacturer’s Name** — All interchangeable trip units are marked with the manufacturer’s name, trademark or other recognized means for identifying the manufacturer.
11. **Ampere Rating** — All interchangeable trip units are marked with their ampere rating. The numerical value alone is sufficient, if the word “amperes” or an appropriate abbreviation appears on the cover next to the trip unit.
12. **Frame Designation** — All interchangeable trip units are marked with the frames for which they are intended, unless the instructions provided with the trip units instruct the user on the proper use of the trip units.
13. **Magnetic Settings** — All interchangeable trip units are marked with the minimum and maximum settings for the adjustable magnetic tripping values.

INTERRUPTING RATINGS

- 14. Ratings** — All circuit breakers with an interrupting rating other than 5000 A are marked with their interrupting rating. If the breaker is not marked with an interrupting rating, the interrupting rating for the breaker is 5000 A. The marking includes the words “Interrupting Rating” or “Current Interrupting Rating” and may include “Maximum RMS Symmetrical,” or an abbreviation. If the interrupting rating includes more than one current and associated voltage rating, all values of voltage and corresponding interrupting rating are marked. If more than one interrupting rating is marked, all ratings appear together. No asymmetrical voltage rating may be marked on the breaker. If the marked interrupting rating of the breaker exceeds the marked short circuit rating of the end-use equipment, such as a panelboard, in which the breaker is installed, the interrupting rating of the overall combination is still considered to be the lesser rating marked on the end-use equipment.

TERMINATIONS

- 15. Cu-Al Wire** — All circuit breakers are marked to identify the type of wire for which they are suitable. The marking includes the words “Copper” and/or “Aluminum” or an abbreviation. If the breaker is intended for use with a copper wire only or an aluminum wire only, the marking includes the word “Only.” A breaker intended for use with No. 10-14 AWG solid wire only is marked “No. 10-14 AWG Solid,” or an equivalent wording.
- 16. Small Size Wire** — Circuit breakers rated less than 15A that have been found acceptable for use with 16 or 18 AWG solid wire are so marked. This marking may be included in the marked wire range noted in
- 17. Tightening Torque** — All circuit breakers are marked with their rated tightening torque for all terminals intended for field wiring. This is a nominal value. If the torque is dependent on wire size, the marking indicates the range of tightening torques for each wire size.
- 18. Maximum Wire Size** — If the terminals of a circuit breaker will not accept the next larger wire size than required for the breaker rating, the breaker or the terminal is marked to indicate the maximum wire size.
- 19. Multiple Conductor Connectors** — If the terminals of a circuit breaker are acceptable for use with multiple connections in one hole, and the breaker is intended for this type of use, the breaker is marked to indicate the proper multiple connections. This is uncommon for breakers—ordinarily, the terminals are suitable for only one wire per hole.
- 20. 60/75°C Wire** — All circuit breakers rated 125 A or less are marked for use with 60° C, 60/75°C or 75°C only wire. This marking indicates the proper wire size for termination in accordance with Table 310.16 of the NEC [®]. It is acceptable to use wire with a higher insulation rating if the ampacity is based on the wire temperature rating marked on the breaker. For breakers rated more than 125 A, the proper wire temperature rating is 75°C and it is optional for the breaker to bear this marking.
- 21. Separately Shipped Connectors** — If the wire connectors are not provided with the circuit breaker when shipped from the manufacturer, the breaker is marked to indicate the proper connectors or connector terminal kit for the breaker. The terminal kit indicates the manufacturer’s name or trademark and proper wire size.

- 22. Cable Connection Only** — A circuit breaker rated more than 4000 A and intended for cable connections only is marked accordingly.
- 23. Bus Bar Sizes** — A circuit breaker intended for use with bus bars other than 1000 A/in.² is marked to indicate the minimum size bus bar to which it should be connected. If not marked, the proper bus bar sizes for termination are based on the table shown below:

Circuit Breaker Frame Size, A	Bus Bars per Terminal	
	Number	Size, in.
1600	2	1/4 X 3
2000	2	1/4 X 4
2500	2	1/4 X 5
	or 4	1/4 X 2-1/2
3000	4	1/4 X 4
4000	4	1/4 X 5
5000	6	1/4 X 5
6000	6	1/4 X 6

ADJUSTABLE TRIP

- 24. Instantaneous Trip** — All circuit breakers with an adjustable instantaneous tripping means are marked to indicate at least the minimum and maximum trip settings. This marking can either be in amperes or a percentage of the breaker's ampere rating. If it is an interchangeable trip unit, the marking may be on the trip unit.
- 25. Type A and Type B** — A Type A adjustable circuit breaker can be repeatedly field adjusted for all changeable characteristics. A Type B adjustable circuit breaker — once set to a particular continuous current rating — cannot be adjusted to a higher value. The Type A breaker is marked with a single ampere rating and percentage, or similar markings, or with current markings for each continuous current adjustment setting. The Type B breaker can be marked with the ampere rating to which it is set. The ampere marking is to be applied by the installer at the time the breaker is set. The notations —Type A and Type B—are not required to be marked on the breaker. They are designations used to determine how to evaluate the breakers.
- 26. Adjustable Controls** — Each control of an adjustable circuit breaker is marked to indicate its function and setting points.

SPECIAL MARKINGS

- 27. Non-Conducting Enclosure** — A circuit breaker not intended for use in a metal enclosure is marked "Suitable for use in a non-conducting enclosure only."
- 28. Ventilated Enclosure** — A circuit breaker for use in a ventilated enclosure is marked to identify the enclosure or to indicate the proper enclosure size, and location and size of the ventilating openings.

29. **40°C** — A thermal-magnetic circuit breaker that is suitable for use in ambients up to 40°C is marked “40°C.” Circuit breakers with electronic type trip units are not affected by the ambient temperature and are not required to be marked to indicate the suitability. These devices may be used in 40°C ambients unless marked 25°C.
30. **Current Limiting** — A circuit breaker that meets UL requirements for current limiting is marked “Current Limiting.” The breaker is also marked with the peak current (I_p) and I^2t let-through and related frequency, or to reference a publication available from the manufacturer with this same information. These let-through current curves indicate the let-through currents versus prospective fault current across the range from the threshold level, where the breaker starts to exhibit current limiting characteristics, to the maximum interrupting rating, with at least one intermediate point also indicated. UL’s definition of a current limiting breaker is one that does not use a fusible element and, when operating within its current limiting range, limits the let-through I^2t to less than the I^2t of a 1/2-cycle wave of the available symmetrical current.
31. **Class CTL** — Circuit breakers for Class CTL panelboards or assemblies are marked “Class CTL” or “CTL.” A Class CTL breaker, because of its size or configuration in conjunction with the physical means provided in Class CTL panelboards, prevents more circuit breaker poles from being installed than the number for which the assembly is designed and rated. A Class CTL panelboard is a circuit limited lighting and appliance panelboard. Both “half-sized” and “full-sized” breakers may be marked “Class CTL.”
32. **“Delta”** — A delta breaker is a 3-pole — 3-phase circuit breaker intended to have two poles connected to a bus structure and a third pole isolated, and is marked “For Replacement Use Only.”
33. **2-Pole — 3-Phase Rated** — A 2-pole circuit breaker marked “1-Phase — 3-Phase” or “1Ø — 3Ø” may be used on 3-phase, corner-grounded delta circuits, or on single-phase circuits.
34. **3-Pole — 1-Phase Rated** — 3-pole circuit breakers are suitable for use on 1-phase or 3-phase systems, unless marked to indicate use on 1-phase systems, such as, “For 1-phase connections, use two outside poles,” or an equivalent statement. A 3-pole breaker used in place of a 2-pole breaker on a 3-phase system, such as a 2-pole breaker used in a branch circuit that is actually two legs of a 3-phase system, is acceptable without the 3-pole breaker being specifically marked.
35. **4-Pole — 3-Phase Rated** — 4-pole circuit breakers are suitable for use on 3-phase systems where a switched neutral is required. The fourth pole is provided either without overcurrent protection or with overcurrent protection of 50 or 100 percent of the other poles. The fourth (neutral) pole of a 4-pole circuit breaker is marked “Protection — % I_n ”. The percentage indicated is 0, 50 or 100.
36. **Multi-Wire Circuit** — A multi-pole circuit breaker intended for use in a multi-wire circuit only is marked with a combination voltage rating only, such as 480Y/277 V ac, provided a 3-pole breaker intended only for use in a single-phase multi-wire circuit includes in its marked voltage rating the term “1-phase” or an equivalent.
37. **DC Rated 3-Pole** — A 3-pole circuit breaker rated 250 V dc or less is acceptable for use in DC voltage systems, when marked to indicate its DC voltage rating and it is necessary to use two of the poles to control the circuit. Three-pole breakers rated more than 250 V dc are intended

to be connected with all three poles in series and are marked with a wiring diagram indicating that all three poles should be wired in series.

38. **100 Percent Continuous Rated** — Unless otherwise marked for continuous use at 100 percent of its current rating, a circuit breaker is intended for use at no more than 80 percent of its rated current where in normal operation the load will continue for three hours or more. A breaker with a frame size of 250 A or more, or a multi-pole breaker of any current rating greater than 250 V, may be marked to indicate it is suitable for continuous use at 100 percent of its current rating. The marking is “Suitable for continuous operation at 100 percent of rating only if used in a circuit breaker enclosure Type _____ or in a cubicle space _____ by _____ by _____ inches” or an equivalent statement. This type of breaker may also be marked to indicate it is to be used with wire sized for a 75°C conductor with 90°C insulation and used with 90°C wire connectors.
39. **“SWD”** — A circuit breaker rated 15 or 20 A, 347 V ac or less, may be marked “SWD” and is suitable for switching fluorescent lighting loads on a regular basis.
40. **Non-Time Delay** — A circuit breaker rated 30 A or less, 250 V or less, may be marked “Non-Time Delay” or an equivalent statement, signifying that the breaker will trip in less than 12 seconds when carrying 200 percent of its rated current. The word “instantaneous” is not used.
41. **Independent Trip** — A 2-pole circuit breaker that does not have an internal common trip feature is marked “Independent Trip” or “No Common Trip.” An external handle tie alone does not qualify as a common trip mechanism — a breaker of this type is marked to indicate it is an independent trip breaker.
42. **Special Characteristics** — If the proper operation of a circuit breaker depends on a special characteristic, such as polarity or position, the breaker is marked to indicate this characteristic. If this includes a barrier, shield or similar member, the breaker is marked with all the necessary information. If it is necessary to replace a part, such as a barrier or shield, the marking also includes replacement instructions.
43. **For Replacement Not CTL** — The marking “For replacement use only not CTL assemblies” appears on breakers that do not have means to prevent their installation in Class CTL assemblies. These breakers are intended for replacement in older assemblies still in service, which pre-dates the Class CTL requirements for circuit breakers and panelboards.
44. **Special Purpose Not General** — Circuit breakers marked “Special purpose not for general use” have special features limiting their suitability to specific applications. Instructions are provided by the manufacturer detailing these applications.
45. **HACR Type** — A circuit breaker that has been found acceptable for use in heating, air-conditioning and refrigeration equipment comprising group motor installations is marked “HACR Type” in conjunction with the UL Mark. This marking alone, however, does not indicate the acceptability of the circuit breaker in these installations. For an acceptable installation, the end-use equipment must be marked to indicate that “HACR Type” circuit breakers may be used for branch circuit overcurrent protection. The NEC permits the use of any inverse-time type circuit breaker in heating, air-conditioning and refrigeration equipment comprising group motor installations.

46. **“HID”** — A circuit breaker rated 50 A maximum, 480 V or less, and intended to switch high intensity discharge (HID) lighting loads on a regular basis is marked “HID.”
47. **Remotely Operated Circuit Breaker**—A circuit breaker that can be opened remotely, as by a utility, for purposes of shedding loads. These circuit breakers are marked “Remotely Operated” and are provided with a separate label marked: “Remotely-operated circuit breaker installed in this equipment” with instructions for attaching the label to the equipment.

FUSED CIRCUIT BREAKERS

48. **Line and Load Identification** — All fused circuit breakers are marked “Line” and “Load.” The “Load” marking is on the same side of the contacts as the fuses or high-fault protectors.
49. **Identification of Fuses** — All fused circuit breakers are marked to indicate the fuses or high-fault protectors with which they are to be used.
50. **No Open Fuse Tripping** — Any fused circuit breaker that does not trip automatically on clearing of one or more of the fuses or high-fault protectors is marked “Open Fuse Tripping Not Provided,” or an equivalent statement.
51. **General Markings** — These circuit breakers are marked as outlined for all breakers. See Items 1-4, 6-7, 14-23, 29-36, 39-42, 45-46 and 72-75.

CIRCUIT BREAKER/GROUND FAULT CIRCUIT INTERRUPTER

52. **“Test” Function** — The “Test” switch on a circuit breaker and ground fault circuit interrupter (CB/ GFCI) is marked to identify its purpose. When the test switch is depressed, a current simulating a ground fault is caused to flow and this should cause the internal mechanism to function to trip the breaker.
53. **“Class A” Marking** — All CB/GFCIs are marked “Class A,” indicating that the CB/GFCI has a ground fault trip threshold of 6mA maximum.
54. **Instructions** — All CB/GFCIs are provided with: instructions for the installer, including instructions on the proper use of the supervisory (test) circuit; and the need to test the device at least once a month. Also included in a marking on the CB/GFCI, or in literature supplied with the CB/GFCI, is information indicating that the user is not protected if contact is made with more than one circuit conductor.
55. **Terminal Identification** — At least three of the four terminals of a single-pole CB/GFCI and all but one of the terminals of a multipole CB/GFCI are identified. The terminals to the grounded conductor are white; the terminals for the ungrounded conductors are a contrasting color. The color green cannot be used.
56. **General Markings** — These circuit breakers are also marked as outlined for all breakers. See Items 1-7, 14-20, 29, 31, 39-43, and 72-75.

CIRCUIT BREAKER/EQUIPMENT GROUND FAULT PROTECTION

- 57. **“Test” Function** — The “Test” button on a circuit breaker with equipment ground fault protection (CB/ EGFP) is marked to identify its purpose. When the test button is depressed, a current simulating a ground fault is caused to flow and this should cause the internal mechanism to function to trip the breaker.
- 58. **Trip Level Marking** — All CB/EGFPs are marked to indicate the ground fault trip threshold of the device, in milliamperes.
- 59. **Instructions** — All CB/EGFPs are provided with instructions for the installer.
- 60. **Terminal Identification** — All but one of a CB/EGFPs terminals are identified. The terminals to the grounded conductor are white or gray; the terminals for ungrounded conductors are a contrasting color. The color green cannot be used.
- 61. **Use Marking** – A CB/EGFP shall be marked “Equipment Protection Only”
- 62. **General Markings** — These circuit breakers are also marked as outlined for all breakers. See Items 1-7, 14-20, 29, 31, 39-43 and 72-75.

CIRCUIT BREAKER/SECONDARY SURGE ARRESTERS

- 63. **Surge Voltage Rating** — These devices are marked with a surge arrester voltage rating.
- 64. **General Markings** — These circuit breakers are also marked as outlined for all circuit breakers. See Items 1-7, 14-21, 29, 31, 39-43, and 45.

CIRCUIT BREAKER/TRANSIENT VOLTAGE SURGE SUPPRESSOR

- 65. **Suppression Voltage Rating** — These devices are marked with a suppression voltage rating.
- 66. **General Markings** — These circuit breakers are also marked as outlined for all circuit breakers. See Items 1-7, 14-21, 29, 31, 39-43, and 45.

CURRENT LIMITERS (ACCESSORY HIGH-FAULT PROTECTORS)

- 67. **Type Designation** - All current limiters are marked with their type designation.
- 68. **Manufacturer’s Name** - All current limiters are marked with the manufacturer’s name, trademark, or other recognized means for identifying the manufacturer.
- 69. **Terminations** - All current limiters are marked with their wire termination information. See Item 15-22.

- 70. Circuit Breaker** - All current limiters are marked to indicate the circuit breakers with which they are to be used.
- 71. Interrupting Rating** — All current limiters are marked to indicate their interrupting rating for which the current limiter and corresponding circuit breaker were investigated. The marking includes the words “Interrupting Rating” or “Current Interrupting Rating” and may include “Maximum RMS Symmetrical,” or an abbreviation. If the interrupting rating includes more than one current and associated voltage rating, all values of voltage and corresponding interrupting rating are marked. If more than one interrupting rating is marked, all ratings appear together.

ACCESSORIES

- 72. Ratings** — All circuit breakers provided with accessories are marked to identify the accessories installed. This includes the accessory type, electrical ratings and proper connections, if the connections are not obvious. The electrical ratings include the voltage rating, and ac or the frequency in Hertz, dc, or both, as appropriate for all accessories. For alarm and auxiliary switches, the marking also includes either an ampere or pilot-duty rating. For shunt trip accessories, over- and under-voltage trip accessories and electrical operators, the marking also includes either an ampere or VA rating.
- 73. Shunt Trip** — A circuit breaker provided with a shunt trip accessory intended for use with ground fault sensing and relaying equipment is marked to indicate the specific equipment with which it is to be used. As an option, it may be marked to indicate the voltage and frequency, or dc, of the tripping circuit; the rated tripping current at rated voltage; and “Suitable for Ground Fault Protection when combined with Class 1 (or manufacturer and catalog number) Ground Fault Sensing and Relaying Equipment,” or an equivalent statement.
- 74. Separately Shipped** — If a circuit breaker and accessory are shipped separately, the accessory is marked to indicate the manufacturer's name or trademark, catalog number and electrical ratings. Where there is no space for a permanent marking on the accessory, it is marked with some type of identification that references a removable tag or other type of alternate marking. Instructions are furnished with the accessory indicating the specific breakers with which it is to be used. A marking label indicating the installed accessory and its connections is furnished with the accessory, along with instructions indicating that the label should be attached to the breaker when installed. Installation and wiring instructions are also provided unless the proper installation is obvious.
- 75. External Dropping Resistor** — A circuit breaker is marked to indicate when an external dropping resistor is intended to be used between the line terminals of the breaker and the line terminals of an under-voltage trip device. The marking also includes the manufacturer's name, catalog number and the resistor's electrical ratings.

CIRCUIT BREAKER ADAPTERS

- 76. **Type Designation** — All circuit breaker adapters are marked with their Type designation.
- 77. **Manufacturer's Name** — All circuit breaker adapters are marked with the manufacturer's name, trademark or other recognized means for identifying the manufacturer.
- 78. **Terminations** — All circuit breaker adapters are marked with their wire termination information. See Items 15-22.
- 79. **Circuit Breaker** — All circuit breaker adapters are marked to indicate the breakers with which they are to be used.
- 80. **Instructions** — All circuit breaker adapters are provided with installation instructions to guide the installer. A marking label indicating the adapter that has been installed is also furnished, along with instructions that the label should be attached to the breaker when installed.

CIRCUIT PROTECTORS

Circuit protectors are designed for installation in standard Edison base fuseholders and intended to provide overcurrent protection for services and branch circuits. They are not provided with manual "On" and "Off" switches, but do have a trip-free manual reset to reclose the circuit after automatic opening from overload or short circuit. They are suitable for use on circuits where the available fault current does not exceed 5000 A RMS symmetrical.

- 81. **Manufacturer's Name** — All circuit protectors are marked with the manufacturer's name, trademark or other recognized means for identifying the manufacturer.
- 82. **Voltage Rating** — All circuit protectors are marked with a voltage rating.
- 83. **Ampere Rating** — All circuit protectors are marked with a current rating.
- 84. **Reset Instructions** — All circuit protectors are marked with instructions for resetting the protector after it has tripped.

CIRCUIT BREAKERS FOR USE IN COMMUNICATIONS EQUIPMENT

- 85. **Ambient Operating Temperature** — Some circuit breakers for use in communications equipment have been investigated for use in ambient air at temperatures greater than 40°C. These circuit breakers are marked with either the intended operating ambient temperature or a range of temperatures.
- 86. **Wire Insulation Temperature Rating** — Circuit breakers for use in communications equipment that have been investigated for use in ambient temperatures greater than 40°C and that require use with wire having insulation temperature ratings greater than 75°C are marked with the temperature rating of the wire that should be connected to it. The ampacity of the wire should be as specified for 75°C.

- 87. **Same Polarity** — Circuit breakers for use in communications equipment that have accessories are marked “SAME POLARITY” when that is required to maintain spacings between the primary circuit and the accessory circuit.
- 88. **General Markings** — These circuit breakers are also marked as outlined for breakers. See items 1-7, and 14-21.

MOLDED CASE CIRCUIT BREAKERS ALSO LISTED AS COMBINATION TYPE ARC-FAULT CIRCUIT INTERRUPTERS

- 89. **Device Identifier** — These devices are marked with words “Combination Arc-Fault Circuit Interrupter” or “Combination AFCI” where visible with a dead-front removed while the device is installed so that the device will not be mistaken for a circuit breaker and GFCI.
- 90. **“TEST” Function** — The “TEST” switch on an arc-fault circuit interrupter is marked to identify its purpose. When the test switch is depressed, a signal that simulates an arc such that the arc detection circuit or software is caused to detect the simulated arc and this should cause the mechanism to function to trip the breaker.
- 91. **Instructions** — Combination Arc-Fault Circuit Interrupters are provided with installation instructions that tell the user the proper method of installing the device.
- 92. **General Markings** — These circuit breakers are also marked as outlined for all breakers. See items 1-7, 14-21, 29, 31, 39-43, and 47.

MOLDED CASE CIRCUIT BREAKERS ALSO LISTED AS BRANCH/FEEDER TYPE ARC FAULT CIRCUIT INTERRUPTERS

- 93. **Device Identifier** — These devices are marked with words “Branch/Feeder Arc-Fault Circuit Interrupter” or “Branch/Feeder AFCI” where visible with a dead-front removed while the device is installed so that the device will not be mistaken for a circuit breaker and GFCI.
- 94. **“TEST” Function** — The “TEST” switch on an arc-fault circuit interrupter is marked to identify its purpose. When the test switch is depressed, a signal that simulates an arc such that the arc detection circuit or software is caused to detect the simulated arc and this should cause the mechanism to function to trip the breaker.
- 95. **Instructions** — All arc-fault circuit interrupters are provided with instructions for the installer and user, including wiring instructions, correct operation and test instructions.
- 96. **General Markings** — These devices are also marked as outlined for all breakers. See 1-7, 14-21, 29, 31, 39-43 and 47.

CLASSIFIED MOLDED CASE CIRCUIT BREAKERS FOR USE IN SPECIFIED EQUIPMENT

97. **Classified Only and Compatibility List** - A circuit breaker that is Classified only is marked on the side with the statement:

"Classified for use only in specified panelboards where the available short-circuit current is 10 kA, 120/240 volts ac or less. Do not use in equipment connected to circuits having an available system short-circuit current in excess of 10 kA, 120/240 volts ac. For catalog numbers (or equivalent) of specified panelboards, refer to Publication No. _____ provided with this circuit breaker. If additional information is necessary, contact [Classified circuit breaker manufacturer's name]."

98. **Classified and Listed Compatibility List** - A circuit breaker that is both Classified and Listed is marked on the side with the statement:

"This circuit breaker is Listed for use in circuit breaker enclosures and panelboards intended and marked for its use. This circuit breaker is Classified for use, where the available short-circuit current is 10 kA, 120/240 V ac or less, in the compatible panelboards shown in Publication No. _____ provided with this circuit breaker. When used as a Classified circuit breaker, do not use in equipment connected to circuits having an available system short-circuit current in excess of 10 kA, 120/240 V ac. If additional information is necessary, contact [Classified circuit breaker manufacturer's name]."

99. **Compatibility List** - The referenced publication is a compatibility list which tabulates the company name, catalog number, number of poles and electrical ratings of the Classified circuit breaker, in addition to the company name and catalog number of the applicable UL Listed panelboards, and corresponding UL Listed circuit breakers in place of which the Classified circuit breaker has been investigated. The compatibility list also details the maximum permissible voltage and maximum available short circuit current of the supply system to the panelboard. The Classified circuit breaker is not suitable for the specified application if the system supply characteristics exceed the maximum values indicated in the compatibility list. One copy of the compatibility list is provided with each circuit breaker.

100. **Classification and Listing Mark** - Circuit breakers that are both Classified and Listed have markings as above, with the addition of the Listing Mark, located on the side of the circuit breaker.

The following mark:  appears on the front, visible surface of the circuit breaker.

101. **General Markings**- These circuit breakers are also marked as outlined for all breakers. See items 1-7, 14-21, 39-41, 43-44, 49-52, 54-57, 59 and 61.

LOCATION

General — All circuit breaker markings are assigned a location code indicating where a marking is to be applied on the breaker. The location codes are assigned a letter A through K, with A being the highest order and K the lowest. At the manufacturer's option, a higher order location code may be used for a marking.

Location Codes — The location codes are:

- A. The marking is visible without removing the trim or cover.
- B. The marking is visible without disassembling the device, when the trim or enclosure cover is removed, and may be visible with the trim or cover in place.
- C. The marking may be on any convenient location except the rear of the breaker.
- D. The marking need only be visible after removal of the CB frame cover, or the equivalent.
- E. The "TRIPPED" or "RESET" markings are not required on the breaker if the receiving device is so marked.
- F. For electrically operated breakers, the "ON" and "OFF" markings are not required on the breaker if the electrical operator is so marked.
- G. The "part replacement" marking does not need to be visible when the removable part is installed.
- H. The marking is visible when the wire connector is in place.
- I. The fuse or protector identification is to be visible when the cover over the fuse or protector compartment is removed.
- J. The marking or information may be shipped with the breaker.
- K. For breakers 1-1/2 inches wide per pole or less, the marking may be located at any convenient location except the rear of the breaker.

CIRCUIT BREAKER MARKINGS

The following gives the marking and associated location category.

General

Type Designation	B
Manufacturer's Name	B
Voltage Rating	B
Ampere Rating (more than 100 A)	B
Ampere Rating (100 A or less)	A
Line and Load Identification	B

Position Indication

Panelboards Marking Guide

January 2009

66

Panelboards are no longer a simple assembly of switches, fuses and circuit breakers for single ampere and voltage systems. Today, there are panelboards for a variety of electrical supply systems with overcurrent protections for many short-circuit capabilities. This has resulted in a complex marking system. Underwriters Laboratories developed the Panelboard Marking Guide to help electrical inspectors determine the meaning and reasons for today's complex panelboard markings. This booklet contains explanations of markings on panelboard nameplates, wiring diagrams and enclosures for panelboards used in ordinary locations, rated 600 volts or less. The term "panelboard" used in this booklet also applies to modular panelboards unless otherwise noted.

The Table of Contents lists the main headings and their page numbers. The Index gives an alphabetical list of specific items and the section numbers where information about them can be found. This marking guide is not comprehensive; it covers those markings that have generated questions. Inspectors can find additional information on marking requirements in the guide information for Panelboards (QEUY) and Modular Panelboards (QFOF). This guide information is available in the UL White Book and online at www.ul.com. In addition, marking guides are available for Switchboards and Molded Case Circuit Breakers. Complete information regarding the provision of markings and instructions for these panelboards is contained in the Standard for Panelboards, UL 67. Unless otherwise noted, references to the *National Electrical Code*® (NEC) are to the 2008 edition.

Revisions to the 2008 edition of the NEC resulted in panelboards no longer being classified as "Lighting and Appliance Branch-Circuit Panelboards" and "Power Panelboards", and the 2008 NEC no longer limits the number of overcurrent devices in a lighting and appliance branch-circuit panelboard to 42 circuits. Requirements in UL 67 permit manufacturers to identify "Class CTL" panelboards as those with a physical means to prevent the installation of more than 42 overcurrent devices (or if fewer than 42, that number for which the panelboard was designed and rated). Since existing optional requirements, and legacy products continue to be utilized based on NEC requirements that were part of the 2005 and earlier editions, multiple references in this marking guide identify the earlier edition of the NEC as being the relevant NEC requirement.

UL Marking Guides are updated as necessary due to new product development, changes in the National Electrical Code®, or the need for clarification. To confirm the current status of any UL Marking Guide, please consult the Regulators page of the UL Web Site at <http://www.ul.com/regulators/index.html>.

Your comments or suggestions regarding this marking guide are welcome and appreciated. They should be sent to:

GENERAL INFORMATION

1. UL includes manufacturers of ordinary location panelboards under the category “Panelboards (QEUY)” and modular panelboards under the category “Modular Panelboards (QFOF)” in the UL White Book and online at www.ul.com.

The evidence of Listing is the Listing Mark on the product. The Listing Mark for panelboards includes the name and/or symbol of Underwriters Laboratories Inc., together with the word “Listed,” a control number, and one of the following product names as appropriate: “Panelboard,” “Enclosed Panelboard,” and “Marine, Enclosed Panelboard For Use on Vessels Over 65 Feet.” The product name may include the wording “Class CTL” or “Suitable For Use As Service Equipment” where appropriate. The product name “Enclosed Panelboard” covers both the panel and enclosure with which it is provided.

The product names for modular panelboards are “Panelboard Module” and “Panelboard Accessory Module.”

The basic Standard used to investigate products in these categories is the Standard for Panelboards, UL 67. In addition, each accessory module in a modular panelboard system is investigated in accordance with the applicable UL Standard.

Panelboard markings may be molded, die-stamped, paint-stenciled, stamped, etched in metal that is permanently secured, or printed on a label secured by adhesive and located so that it will not be covered when the units are installed. Some markings may be located on a wiring diagram in a pocket within the panelboard.

GLOSSARY

Ampacity - The current in amperes a conductor can carry continuously under the conditions of use without exceeding its temperature rating.

Bonding - The permanent joining of metallic parts to form an electrical conductive path that ensures electrical continuity and the capacity to conduct safely any current likely to be imposed.

Bonding Jumper - A reliable conductor to ensure the required electrical conductivity between metal parts required to be electrically connected.

Bonding Screw - A screw that is used as a bonding jumper.

Cabinet - An enclosure designed for either surface mounting or flush mounting and is provided with a frame, mat, or trim in which a swinging door or doors are or can be hung.

Cartridge Fuse - A fuse consisting of a current-responsive element inside a fuse body with contacts on both ends.

Circuit Breaker - A device designed to open and close a circuit by nonautomatic means, and to open the circuit automatically on a predetermined overcurrent without damage to itself when

properly applied within its rating.

Class CTL Panelboard - A panelboard that has physical means to prevent the installation of more than 42 overcurrent devices, or if fewer than 42, that number for which the panelboard was designed and rated. Note - When properly installed, Class CTL panelboards will comply with the Lighting and Appliance Branch-Circuit Panelboard requirements in previous editions of the National Electrical Code.

Continuous Duty - Operation at a substantially constant load for an indefinitely long time.

Current-Limiting Device (AC) - An overcurrent protective device that, when interrupting currents in its current-limiting range, will reduce the current flowing in the faulted circuit to a magnitude substantially less than that obtainable in the same circuit if the device were replaced with a solid conductor having a comparable impedance.

Current Rating - The designated maximum direct or alternating current in rms A at rated frequency that a device can carry continuously under specified conditions.

Cutout Box - An enclosure designed for surface mounting that has swinging doors or covers secured directly to and telescoping with the walls of the box proper.

Device - A unit of an electrical system that is intended to carry or control, but not utilize, electrical energy.

Enclosed Panelboard - An assembly of buses and connections, overcurrent devices, and control apparatus with or without switches, or other equipment, installed in a suitable cabinet, cutout box, or enclosure suitable for a panelboard application.

Enclosure - A surrounding case constructed to provide a degree of protection to personnel against incidental contact with the enclosed equipment and to provide a degree of protection to the enclosed equipment against specified environmental conditions.

Filler Plate - A plate intended to close an opening that would otherwise be closed by the subsequent installation of a circuit breaker or other device.

Flush-Mounted (Type) - A device designed to be set into and secured to a flat surface, with a minimal front projection.

Frame Size - A term applied to a group of molded case circuit breakers of similar physical configuration. Frame size is expressed in amperes and corresponds to the largest ampere rating available in the group. The same frame size designation may be applied to more than one group of circuit breakers.

Fuse - A non-resettable protective device which opens a circuit during specified overcurrent conditions by means of a current responsive element or elements.

Fuse Clips - The contacts of the fuseholder that support the fuse and connect the fuse terminals with the circuit.

Fusible Switch - A switch in which one or more poles have a fuse in series in a composite unit.

Fuseholder - An assembly of a base, fuse clips, and necessary insulation for the mounting and connecting of a fuse into a circuit.

Ground-Fault Protection of Equipment - A system intended to provide protection of equipment from damaging line-to-ground fault currents by operating to cause a disconnecting means to open all ungrounded conductors of the faulted circuit. This protection is provided at current levels less than those required to protect conductors from damage through the operation of a supply circuit overcurrent device.

Grounded Conductor - A system or circuit conductor that is intentionally grounded.

I^2t (Ampere Squared Seconds) - An expression related to the circuit energy as a result of current flow. The " I^2 " stands for the square of the effective (rms) let-through current and the " t " stands for the time of current flow in seconds. " I^2t " is a common expression for the circuit energy between the initiation of the fault current and the clearing of the circuit.

Interrupting Rating - The highest current at rated voltage that a device is intended to interrupt under standard test conditions.

Knockout - A portion of the wall of an enclosure so fashioned that it is capable of being readily removed by a hammer, screw driver, and pliers at the time of installation in order to provide an opening or hole for the attachment of a raceway, cable, or fitting.

Lighting and Appliance Branch Circuit Panelboard - A lighting and appliance branch circuit panelboard is one having more than 10 percent of its overcurrent devices protecting lighting and appliance branch circuits. Such circuits have a connection to the neutral of the panelboard and overcurrent protection of 30 A or less in one or more conductors.

Mains (Main Terminals) - The terminals, or main device, provided for the connection of the main incoming line conductors.

Neutral (Assembly); Solid Neutral - An assembly consisting of enough terminals to provide for the connection of the grounded (neutral) line and load conductors. When used as a component of service equipment, the neutral also includes the following: a) a means for making the required bonding connection between the neutral and the enclosure; and b) a terminal for the grounding electrode conductor.

Neutral Conductor - A conductor that is connected to the midpoint of a three-wire single-phase system, the center point of a wye-connected three-phase system, or the midpoint of one side of a delta-connected three-phase system. Note: The neutral conductor is the grounded conductor.

Overcurrent Protective Device - An individual fuse or circuit breaker pole.

Panelboard - A single panel or a group of panel units designed for assembly in the form of a single panel; includes buses, automatic overcurrent devices, and may be equipped with switches for the control of light, heat, or power circuits; designed to be placed in a cabinet or cutout box placed in or

against a wall or partition and accessible only from the front.

Plug Fuse - A screw-in type fuse for use in an Edison base type fuseholder.

Power Panelboard - A power panelboard is one having 10 percent or fewer of its overcurrent devices protecting lighting and appliance branch circuits.

Pressure Wire Connector - A reusable connector into which the conductor (wire) is secured by mechanical pressure applied by an integral screw, cone, or other mechanical parts.

Pullout Switch - A switch, enclosed or nonenclosed, that is operated to open a circuit by manually separating the movable contact from the stationary contact, and is operated to close a circuit by manually reconnecting the movable contact and the stationary contact.

Service - The conductors and equipment for delivering electric energy from the serving utility to the wiring system of the premises served.

Service Equipment - The necessary equipment, usually consisting of a circuit breaker(s) or switch(es) and fuse(s), and their accessories, connected to the load end of service conductors to a building or other structure, or an otherwise designated area, and intended to constitute the main control and cutoff of the supply.

Short-Circuit-Current Rating - The maximum rms available current to which a device can be connected. The rating is expressed in amperes and volts.

Switch - A device, manually operated, unless otherwise designated, for opening and closing or for changing the connection of a circuit.

Symmetrical Current - Alternating current having no offset or transient component and, therefore, having a wave form essentially symmetrical about the zero axis. Symmetrical current is expressed in terms of rms A.

COMPANY IDENTIFICATION

2. If there is a question on the design or construction of a panelboard, the identification of the organization responsible for the product is important. This is one of the basic markings required by Section 110.21 of the National Electrical Code® (NEC).

For manufacturers who produce panelboards at more than one factory, UL also requires a distinctive marking to identify the factory at which the panelboard was made. This information is generally found on the UL Listing label. It enables the manufacturer to pinpoint problems and take immediate action.

3. UL requires the manufacturer's identification be visible without disturbing interior parts and factory or field installed wiring. Whether the marking appears on an inside wall of the enclosure or on the side of a barrier, the manufacturer's identification must be located near the front edge of the box or barrier.

CATALOG DESIGNATION

4. Panelboards are marked with a Cat. No., a general type designation or other distinctive marking identifying the particular panelboard construction. Additional designations are provided on modular panelboards.

ELECTRICAL RATING

5. UL requires that the basic electrical rating markings be visible without disturbing wiring or other interior parts. Electrical rating information includes voltage and ampere ratings. For alternating current ratings, the information includes the number of phases, if other than single phase, and the frequency, if other than 50 or 60 hertz.

VOLTAGE RATING

6. The basic voltage rating markings must be visible without disturbing wiring and other interior parts. A panelboard designed and intended for use only on a supply circuit involving two different potentials (for example, 120/240 volts, three-wire; or 208Y/120 volts, three-phase, four-wire) is so marked.

In many cases, however, the basic voltage rating marking — for example, 480 volts, 3-phase — indicates that the panelboard is suitable for various supply systems (such as 208Y/120 volts, 3-phase, 4-wire; 120/240 volts, 3-wire; 240/120 volts, 3-phase, 4-wire delta, etc.). These voltage ratings may be shown on a wiring diagram affixed to the panelboard or its enclosure.

7. A single-phase, 3-wire panelboard is not permitted to be marked with a 120/240 volt, 3-phase, 4-wire delta rating. 3-wire panelboards should not be used for this system. The use of a delta breaker to adapt a 3-wire panelboard to the system has been prohibited by Section 408.36(C) of the NEC.

Although delta breakers could be used properly in 3-wire, split-bus panelboards, they were being misused in 3-wire panelboards with a single main disconnect.

Misusing delta breakers in this manner allows voltage to backfeed through the delta breaker load when the panelboard main disconnect is opened. This allows voltage to be present on the main bus bars when none is expected.

CURRENT RATING

8. The current rating of a panelboard is the maximum continuous current that can be supplied through the main terminals.

Unless the assembly, including the overcurrent device(s) are marked for use at 100 percent of their current rating, overcurrent protection devices should not be loaded continuously to more than 80

percent of their rating if nuisance opening of the overcurrent device is to be avoided.

9. The current rating of a panelboard may be supplemented by one or more reduced ratings, each applicable under specified conditions.

For example, a manufacturer may wish to provide terminals suitable for both copper or aluminum wire but space in the panelboard may not be sufficient for terminals and wire bending space. In this case, the ampere rating is reduced to compensate for the size of aluminum wire that can be used. Sometimes there is a need for a lighting and appliance panelboard with a main circuit breaker to have a current rating less than the normally required rating of the panelboard. In this case, the marked current rating is followed by the words “Maximum — See main circuit breaker rating.” This does not apply to panelboards having a main fused switch. Such panelboards are not provided with fuses when stocked. Lower rated fuses within the same case size, however, can be installed later.

10. A lighting and appliance panelboard marked as suitable for use as service equipment is limited to two main disconnects. To prevent overloading, the current rating of such panelboards shall equal the combined current ratings of the two disconnects as required by Section 408.36(A) of the NEC (2005 Edition). Where main disconnects are not provided with the panelboard, the NEC requires that main overcurrent protection be provided in the feeder circuit supplying the panelboard.

11. If the ampacities of the ungrounded (main) bus bars and the grounded (neutral) bus bars are not identical, the current rating markings of the panelboard are required to show the ampacity of each bus bar.

While it is unusual for the phase bars to be of different ampacities, the neutral can be a reduced size according to Section 220.61 of the *NEC*.

Because neutrals are often fabricated from connector bars with unusual shapes, in most cases it is not possible to judge ampacity from physical dimensions. UL conducts a temperature test on the assembly to determine ampacity.

12. If a panelboard employs a snap switch rated 30 amperes or less in any branch circuit, it cannot be rated more than 200 amperes unless there is a supply side overcurrent protection at 200 amperes or less within the panelboard. This requirement assumes that panelboards rated 200 amperes or less will be installed with overcurrent protection in accordance with Section 408.36(A) of the *NEC*.

Section 408.36(A) of the *NEC* was adopted years ago when snap switch panelboards were common and short circuit problems were caused by small electrical spacings between live parts and the ground within snap switches. It should be noted that this Section does not apply to snap switches rated over 30 amperes or to switches or circuit breakers that have larger electrical spacings and are suitable for use as service disconnects.

SHORT-CIRCUIT CURRENT RATINGS

13. A panelboard is required to be marked with the phrase “Short-Circuit Current Rating” and the rating in rms symmetrical amperes. This phrase indicates that (1) that the overcurrent devices are capable of opening the circuit under fault conditions; and (2) the panelboard bus structure will

withstand the magnetic forces generated by fault current passing through it. These markings are provided to ensure proper installation with respect to Section 110.10 of the NEC.

Also, switches and circuit breakers under switching operations must be capable of closing in on a fault of the magnitude indicated. In addition, they must open satisfactorily on lesser faults of such magnitude that the opening of the overcurrent feature is delayed.

The letters “rms” stand for root-mean-square. This is the value that would be read on an ordinary ammeter. Symmetrical means that the marked current value on the panelboard is the steady-state value of the fault current the panelboard can withstand without extensive damage.

14. Since the ability of an overcurrent protection device to open on fault currents is affected by the voltage rating of the circuit, a panelboard may have several short-circuit current ratings, each associated with a specific voltage rating.

15. Panelboards that contain watt-hour meters other than those intended for use with current transformers are additionally marked with the phrase “Watt-hour meter not included in the short-circuit current rating” since the meters are not evaluated during the performance of the short-circuit current test.

16. Many panelboards are designed to accept various types of circuit breakers or fused switches with different interrupting ratings. Some of these ratings may be less than the panelboard ratings. Panelboards are required to be marked to indicate that the short-circuit current rating is limited to the lowest interrupting capacity of any device installed in the panelboard.

Some panelboards may be marked to indicate one or more short-circuit current ratings which are dependent on the use of specific integral or remote main overcurrent protective devices. An example of such a marking is: “When protected by _____ ampere maximum Class _____ fuse or (Manufacturer’s name and type designation) circuit breaker rated not more than _____ amperes, this panelboard is suitable for use on a circuit capable of delivering not more than _____ rms symmetrical amperes, _____ volts maximum,” or an equivalent statement.

Some panelboards are marked for installation of circuit breakers having a lower interrupting rating than the panelboard short-circuit-current rating. The circuit breakers are acceptable for use above their marked interrupting rating if used on the load side of a specific overcurrent device. In such cases, the panelboard is marked as follows (the blank spaces would be filled with the appropriate information):

1. The short-circuit current rating of this panelboard is equal to the lowest interrupting rating of any installed circuit breaker or fused switch, but not more than _____ rms symmetrical amperes at _____ volts, 3-phase, or _____ rms symmetrical amperes at _____ volts, single-phase; and
2. The interrupting rating of a circuit breaker is 5,000 rms symmetrical amperes and for a fused switch is 10,000 rms symmetrical amperes, or as marked on the device, except for the following series combination ratings:

Load Side Circuit Breakers	Line Side Circuit Breakers	Interrupting Rating
Mfr. Type Poles Amp Rating	Mfr. Type Amp Rating	Symmet. Amp rms Volts ac Phases
Load Side Circuit Breakers	Line Side Circuit Breakers	Interrupting Rating

A load side circuit breaker may be a branch, sub-main, or an integral main used on the load side of a remote main. A line side circuit breaker or fused switch may be a sub-main, integral main, or a remote main. This series combination interrupting rating shall not exceed that of the line side circuit breaker or fused switch.

17. There are other markings that identify special conditions when a short-circuit current rating is applicable. These markings must be followed whenever overcurrent devices are added or replaced.

SUITABLE FOR USE AS SERVICE EQUIPMENT

18. These are the basic requirements that a panelboard rated 600 volts or less must meet in order to be used as service equipment:

- A. Service disconnecting means must be provided.
- B. Each service disconnect provided must have a switching feature that disconnects all conductors from the service-entrance conductors and that is suitable for use as a service disconnect. There is one exception: the neutral service conductor can be disconnected by removing the wires from the pressure wire connectors on the service neutral bus as noted in Section 230.75 of the *NEC*.

In general, snap, toggle or similar switches, are not acceptable because their internal electrical spacings are too small. The exception in Section 225.36 of the *NEC* for branch circuit switches used to disconnect garages and out buildings on residential property does not apply to the service disconnects in a panelboard.

Circuit breakers, either molded case, fused, or in combination with ground fault circuit interrupters, are suitable for use as service disconnects. Other devices that are used to protect individual circuits, circuits within equipment or appliances, or circuit protectors without on and off features, are not suitable for use as service disconnects.

The removal of a plug or cartridge fuse from its fuseholder, while serving to de-energize the circuit, does not provide service disconnection. Panelboard switches, pullout switches and some industrial control switches are suitable as service disconnects. Note that pullout switches, while they serve as a fuse puller, do have switchblades and contact jaws and are tested as switches.

- C. Overcurrent protection suitable as branch or feeder protection must be provided for

service conductors. Miscellaneous, miniature and micro fuses, thermal cutouts, relays and other supplementary overcurrent protection are not acceptable.

- D. The number of service disconnects and overcurrent devices must conform to the *NEC*, Section 230.71.
- E. As required in Section 230.95 of the *NEC*, Panelboards rated for use on solidly grounded wye electrical services of more than 150 volts to ground must provide ground fault protection for each service disconnect rated 1000 amperes, or more. An exception is covered under Item 53.
- F. There must be provision for connecting a grounded service conductor and a grounding-electrode conductor. If there is a neutral bus, a means to bond the panelboard enclosure or mounting pan to the neutral bus is required unless the bus is mounted in electrical contact with the enclosure or pan.

19. In general, the grounding-electrode connection in service equipment is required to be made to the grounded service conductor at the neutral bar. However, Section 250.24(A)(4) of the *NEC* permits this connection to be made to the equipment grounding terminal bar, provided the main bonding jumper is a wire or a bus bar and is installed from the neutral bar to the equipment grounding terminal bar. If in a panelboard suitable for use as service equipment, the main bonding jumper wire or bus bar is provided for field installation, instructions are marked on the panelboard for proper installation of the jumper.

20. A panelboard with the neutral insulated from the enclosure may be marked "Suitable for use as service equipment when not more than six main disconnecting means are provided" when the following conditions are met:

- A. There must be at least one combination of switching units that can be mounted to occupy all available space for switching units; and, whether by using handle ties or similar devices, not more than six main disconnects will result (including factory-installed disconnects).

***See Item 23 for lighting and appliance panelboards.**

- B. With this combination of switching units, no more than six overcurrent-protective devices will be connected to each ungrounded service conductor.

Note that a panelboard marked "Suitable for use as service equipment when not more than six main disconnecting means are provided" may permit some combinations of switching units varying in ampere ratings and physical size that would exceed the six disconnect rule on a completely filled panelboard. The six disconnect rule can be exceeded if handle-ties are not installed where needed.

Panelboards marked as noted above and used as service equipment must have the neutral bonded to the enclosure as required by Section 408.3(C) of the *NEC*. These panelboards are provided with means to accomplish this bonding. When the panelboard is not used as service equipment, the neutral bonding means must not be installed. This would violate Section 250.24(A)(5) of the *NEC* and would constitute a fire hazard as

noted in Item 50 of this Marking Guide.

21. A panelboard with the neutral factory-bonded to the enclosure is marked "Suitable only for use as service equipment. Install no more than six main disconnecting means."

22. Some panelboards may have the required number of handles and service overcurrent devices, when the maximum number of the smallest units are installed and used without handles ties or similar devices. These panelboards may have the shorter marking "Suitable for use as service equipment" or "Suitable only for use as service equipment." The shorter marking is suitable for Class CTL (circuit limited) lighting and appliance panelboards since they cannot have more than two main overcurrent protective devices as specified in Section 408.36(A) of the 2005 NEC.

23. Class CTL lighting and appliance panelboards without main overcurrent protection usually are not marked suitable for service equipment use. Such panelboards, with not more than 10 percent of their overcurrent devices rated 30 amperes or less, however, may be suitable for use as service equipment. They are marked "Suitable for use as service equipment when not more than six main disconnecting means are provided and when not used as a lighting and appliance branch-circuit panelboard; see Section 408.34 of the 2005 NEC."

24. A panelboard intended for service equipment use must have the marking "Service Disconnects" near the switch or circuit breaker handles. If this is not done in the factory, pressure sensitive labels must be provided. This marking identifies the service disconnects when branch disconnects are also present. This is required by Section 230.70(B) of the NEC.

CABINETS AND ENCLOSURES

25. Panelboards are installed in cabinets, cutout boxes, or within compartments of other equipment, such as deadfront switchboards. Some panelboards are shipped from the factory in an enclosure designed for their use. When they are, the manufacturer is permitted to place the UL Listing Mark "Enclosed Panelboard" with or without additional modifying phrases on the assembly or use a "Panelboard" Listing Mark with or without additional modifying phrases with an "Electric Cabinet Box" Listing Mark and an "Electric Cabinet Front" Listing Mark.

26. Except for the panelboards intended for service equipment use discussed in Item 27, it is the responsibility of the installer to match a panelboard with an enclosure that is suitable in size and construction. The enclosure must meet the requirements of the NEC including wiring space, wire bending space, and environmental conditions.

27. Because of the importance of grounding and bonding at service locations, UL requires that a panelboard marked as suitable for use as service equipment be identified with a particular box. Unless the panelboard cannot readily be removed from the box in which it is shipped from the factory, UL also requires that the panelboard marking identify the box or boxes with which it is intended to be used.

28. The suitability of an enclosure for environmental conditions for which it has been investigated is indicated by an enclosure type designation. One or more of the type designations indicated on the following pages are marked inside or outside the panelboard enclosure. This marking helps inspection authorities to judge whether an enclosure is suitable for a specific environment as mentioned in Section 110.3(A)(1) of the NEC. Enclosure type designations are coordinated with

requirements in Section 110.20 of the NEC

***See page 13 for Enclosure Types.**

An enclosed panelboard marked with an enclosure designation of Type 3, 3S, 4, 4X, 6 or 6P may additionally be marked “Raintight” or “Rainproof.” An enclosed panelboard marked with an enclosure designation of Type 3R may additionally be marked “Rainproof.”

Some enclosed panelboards have a semi-flush enclosure which has a flange extending from the sidewalls. This type of enclosure is intended to be mounted such that the front portion of the enclosure projects out of the wall and the rear portion extends within the wall in which it is mounted. These panelboards are marked with instructions regarding the proper overlap or flashing to be provided in the installation.

29. For some panelboards, it is intended that unused openings in the enclosure be closed by filler plates. These panelboards are marked with the catalog number of the filler plates to be used, and the manufacturer is required to have the plates available. Use of the filler plates facilitates compliance with Sections 110.12(A) and 408.7 of the NEC, which requires unused openings in cabinets, equipment housings, etc., to be effectively closed.

ENCLOSURE TYPES

Type	Number Intended Use and Description
1	Indoor use primarily to provide a degree of protection against limited amounts of falling dirt.
2	Indoor use primarily to provide a degree of protection against limited amounts of falling water and dirt.
3	Outdoor use primarily to provide a degree of protection against windblown dust, rain, sleet and damage from external ice formation.
3R	Outdoor use primarily to provide a degree of protection against rain, sleet and damage from external ice formation.
3S	Outdoor use primarily to provide a degree of protection against windblown dust, rain and sleet; external mechanisms remain operable while ice laden.
4	Indoor or outdoor use primarily to provide a degree of protection against splashing water, windblown dust and rain, hose-directed water, and damage from external ice formation.
4X	Indoor or outdoor use primarily to provide a degree of protection against splashing water, corrosion, windblown dust and rain, hose-directed water, and damage from external ice formation.
5	Indoor use primarily to provide a degree of protection against settling airborne dust, falling dirt and dripping non-corrosive liquids.
6	Indoor or outdoor use primarily to provide a degree of protection against hose-directed water, the entry of water during occasional temporary submersion at a limited depth, and damage from external ice formation.
6P	Indoor or outdoor use primarily to provide a degree of protection against hose-directed water, the entry of water during prolonged submersion at a limited depth, and damage from external ice formation.
12, 12K	Indoor use primarily to provide a degree of protection against circulating dust, falling dirt and dripping non-corrosive liquids.
13	Indoor use primarily to provide a degree of protection against dust and spraying of water, oil and non-corrosive coolants.

PANELBOARDS WITH OVER 42 OVERCURRENT PROTECTIVE DEVICES - OPTIONAL MARKING

30. A marking may be applied by the manufacturer to indicate compliance with Section 408.34 of the 2005 NEC. This marking indicates that “Lighting or appliance branch circuits are not to be supplied directly through more than 10 percent of the branch circuit overcurrent protective devices.”

If applied, this marking is required to be readily visible after the panelboard has been installed and is intended to alert the installer and inspection authorities that the panelboard does not meet the requirements for lighting and appliance panelboards as described in the 2005 NEC.

COPPER OR ALUMINUM WIRING

31. Panelboards intended for use with aluminum wire require special consideration. First, panelboard wire connectors must be recognized for use with aluminum wire. Second, the size of the enclosure must be increased because aluminum wire is larger than copper wire of the same ampacity. This requires more cross sectional area for the wiring gutters and more wire bending space at terminals and where wires enter the enclosure. Third, the larger wiring terminals may make it necessary to check through-air electrical spacings between adjacent terminals of opposite polarity.

32. Because of these considerations, UL requires the wiring diagram or nameplate to be marked to indicate the use of copper and/or aluminum wire if the symbol “AL” appears on any part that is intended for use in the panelboard. It may be necessary to remove a cover, front or trim to see the marking.

33. If the panelboard has not been evaluated for use with aluminum wire, the marking will read “Use Copper Wire Only.”

34. If the wiring terminals and other factors have been evaluated for use with copper and aluminum wire, the panelboard is required to be marked “Use Copper or Aluminum Wire.”

35. If only some terminals have been evaluated for use with aluminum and copper wire with the remainder acceptable for use with copper wire only, the panelboard is required to be marked “Use copper wire only, except at terminals...” Variations of this marking are also permitted if the terminals that have been evaluated for use with aluminum wire are identified.

TEMPERATURE RATING OF INSTALLED CONDUCTORS

36. In general, the testing and construction of panelboards are based on the use of 60°C ampacities for wire size Nos. 14–1 AWG and 75°C ampacities for wire size Nos. 1/0 AWG and larger, taken from Table 310.16 of the NEC, with no adjustment made for correction factors. Panelboards are marked to indicate temperature ratings and sizes of conductors that can be used.

If the equipment is normally intended for wire sizes within the range 14–1 AWG but is marked 75°C only or 60/ 75°C, it means that the 75°C wire may be used at full 75°C ampacity.

Higher temperature rated conductors than specified may be used if the size is based on the preceding statements. When the connection is made to a circuit breaker or switch unit within the equipment, such a unit must also be marked for the temperature rating of the conductor.

37. Single-phase, 3-wire panelboards may be marked for use with reduced wire sizes as indicated in Section 310.15(B)(6) and Table 310.15(B)(6) of the NEC, when installed as residential service equipment.

A panelboard not having facilities for the normal size wire may have an ampere rating that is based solely on use in accordance with the requirement. In this case, the panelboard must be marked to indicate that the rating is applicable only if the panelboard is installed as single-phase, 3-wire residential service equipment. For example, a panelboard rated “200 ampere maximum— see main circuit rating” could be designed for an enclosure that provides 6 inches of wire bending space suitable for 2/0 AWG in accordance with Table 312.6(B) of the *NEC*. The panelboard would then have to be marked to indicate that the 200 ampere rating applies only if the panelboard is installed as single-phase, 3-wire residential service equipment. With a 175 ampere or smaller main breaker installed, the panelboard could be installed elsewhere since bending space would be adequate for the wire sizes required by Table 310.16.

FIELD INSTALLED UNITS OR EQUIPMENT

38. A panelboard to which a unit, such as a circuit breaker, switch, or the like, may be added in the field is required to be marked to identify the units that can be added. Units made by different manufacturers or of a different style are not identical in all details and therefore may not be interchangeable.

Plug-in clips and blades must be matched if poor connections and overheating are to be avoided. Additionally, over-surface and through-air electrical spacings, between live parts of opposite polarity and to grounded metal, often depend on the proper mating of units and the bases into which they are plugged or bolted.

39. Panelboards are usually provided with the required main line and neutral terminals. The overcurrent protection units are furnished with required load terminals. However, if the pressure wire connectors are not provided on the panelboard when shipped, the panelboard is required to be marked stating which pressure wire connectors or component terminal kits are acceptable for use with the panelboard.

A main terminal kit consisting of individual wire connectors or an assembly of terminals, bus connectors and means for bolting or plugging, is required to be marked with the manufacturer's identification and catalog designation. If this is not done, the carton is required to be marked. A separate feed-through terminal kit requires similar marking and, if a separate enclosure is required for its use, this too must be marked and provided with instructions for its use.

40. If a panelboard is intended to be used in a certain box or boxes and neutral terminals are mounted in that box, both the panelboard and the box are required to be marked. These markings must indicate that each shall be used with the other unless the panelboard and box are shipped together from the factory. Some column type panelboards have the neutrals mounted in a separately listed junction box. In this case, correlating markings on each device are required.

41. Some panelboards have multiple voltage ratings, some of which require the use of a neutral while others do not. In this case, the neutral is not required to be mounted in place at the factory. Markings on the neutral assembly and panelboard, however, are required to correlate the two devices and provide instructions for installing the neutral.

42. A panelboard that has space for the installation of additional branch circuit switches, circuit breakers or fuseholders may be shipped from the factory without the necessary branch-circuit bus bars. In this case, the panelboard must be marked to indicate the catalog number or the equivalent of the bus bar kit that is to be used when the unit is installed.

A panelboard supplied with branch-circuit bus bars for adding a branch-circuit unit is required to be marked on a wiring diagram, on the branch-circuit bus bar or in some other location. This marking indicates the ampacity of the bus bar, unless its ampacity is equal to or greater than the maximum current rating of any unit to be connected to the panelboard.

- A. Markings on panelboards that employ plug-in units require the use of a hold-down kit when the units are back-fed and field installed supply conductors are terminated on the plug-in unit. The marking indicates: "Back-fed _____ requires hold-down kit Cat. No. _____ " or the equivalent. An identification of the applicable back-fed unit is specified in the first blank - for example, circuit breaker, fused switch, or terminal kit; and the catalog number of the required hold-down kit is specified in the second blank.

MODULAR PANELBOARDS

43. A modular panelboard system includes the following types of modules: an enclosed panelboard or a column- type panelboard, and one or more accessory modules such as termination boxes, enclosed switches, or circuit breaker enclosures. Each module of the system has one or more openings in one or more sides of the enclosure for bus bar connections, or terminals for field wiring connections to other related modules. Typical applications for these modular systems include apartment houses and strip malls. Panelboard modules used in these modular panelboard systems are labeled "Panelboard Module" and all other system modules are labeled "Panelboard Accessory Module."

A panelboard module to which another panelboard accessory module — such as a termination box, enclosed switch, circuit breaker enclosure or the like — may be added in the field is required to be marked to identify the panelboard accessory modules that can be added unless the entire modular panelboard system is marked with a common series designation. In this case, the series designation is marked on the panelboard module and each panelboard accessory module.

CLASS CTL PANELBOARDS

44. Section 408.34 of the 2005 NEC defines a lighting and appliance panelboard as a panelboard having more than 10 percent of its overcurrent devices rated 30 amperes or less, for which neutral connections are provided. Once a panelboard is classified as a lighting and appliance branch-circuit panelboard, certain limitations are placed on the number of overcurrent devices that may be installed.

Section 408.35 of the 2005 *NEC* states that physical means shall be provided to prevent the installation of more overcurrent devices than the number for which the panelboard was designed, rated and approved. In no case shall the number exceed 42 (other than those provided for in the mains) in any one cabinet or cutout box. This has the effect of limiting the number of circuits in a lighting and appliance branch-circuit panelboard.

Using this concept, UL adopted the term “Class CTL” (a contraction of “Circuit Limiting”) to help electrical inspectors approve installations of lighting and appliance panelboards. Panelboards classified as lighting and appliance branch-circuit panelboards may be marked “Class CTL Panelboard” before they leave the factory.

45. Some panelboards that have more than 42 branch- circuit overcurrent protective devices and neutral terminals have space for field installation of extra units. This could mean more than 10 percent of the overcurrent devices will be rated 30 amperes or less when the panelboard is completely filled. In order to prevent misapplications, specific markings are permitted on panelboards of this design. See Item 30 for details.

46. If more than one size unit is intended for use in a lighting and appliance branch-circuit panelboard (such as a full-size and half-size circuit breaker), the smaller unit is required to be marked “Class CTL” or “CTL.” The larger may also be so marked.

Since space is limited on these units, the marking may not be visible after the unit is installed. The CTL Unit marking is of significance only in those areas where the older style non-CTL, half-size, twin, and similar units are still available to the installer.

IDENTIFICATION OF PHASE ARRANGEMENT AND THREE-PHASE, FOUR-WIRE DELTA SYSTEMS

47. Section 408.3(E) of the NEC specifies the required phase arrangement for 3-phase buses. This Section also notes that the B-phase shall be that having the higher voltage to ground on a 4-wire delta system. This Section does allow other busbar arrangements for addition to existing installations so long as the arrangement is marked. Section 110.15 of the NEC requires markings to identify the B-phase as the higher voltage to ground on a 4-wire delta connected system when the midpoint of one phase is grounded.

Accordingly, UL requires that panelboards with other than an A-B-C bus bar arrangement be marked to indicate the bus bar arrangement. Also, UL requires that panelboards intended for a 240/120 volt, 3-phase, 4-wire, delta system be marked to identify the different bus bars with reference to the voltage between them. However, if a panelboard is intended for use only on this

system, the main bus bar having the higher voltage to ground may be identified by an orange marking or by tagging. Such a panelboard must be marked to indicate the necessary voltage rating of the device for each branch-circuit position.

B-phase is 208 volts to ground while the A- and C-phases are only 120 volts to ground. Some circuit breakers, like single-pole breakers for use with handle ties rated 120-240 volts, should not be connected to the phase that is 208 volts to ground. Also, fuse holders for plug fuses should not be connected where the voltage to ground exceeds 150 volts.

Generally, the B-phase is used only in conjunction with either the A- or C-phase for a 240 volt single phase branch circuit or with both the A- and C-phase for a 3-phase branch circuit. Circuit breakers or cartridge fuses rated for straight 240 volt systems are suitable for this use.

48. The NEC requirements in Section 408.3(E) do not cover 3-phase panelboards having two buses and a neutral and intended for use on a 240 volt, 3-phase, 3-wire grounded B phase system. In these panelboards, the neutral is connected to the grounded B-phase. UL requires a phase arrangement of A-, C-, with the neutral as the B-phase.

FACTORY BONDED NEUTRALS

49. Some panelboards are intended only for service equipment use on an AC system requiring grounding of the system (see Items 18-21 under "Suitable for Use as Service Equipment"). These panelboards may have the enclosure bonded to the neutral at the factory. This eliminates the need for a neutral insulating support base.

It is difficult to check for unintentional grounds on the installed building wiring when the neutral is mounted directly on the enclosure. Therefore, some manufacturers provide an insulating liner under the neutral to permit use of a megger or similar resistance measurement instrument. However, this does not provide the electrical spacings required for the neutral if the panelboard is used away from the service as a feeder or branch-circuit panelboard. These panelboards are required to be marked "Bonded Neutral — Remove bonding device for test purposes only" or an equivalent marking.

50. Most installers recognize the importance of bonding the neutral to the enclosure at the service. Many do not realize, however, that it is just as important to omit the bonding and provide a fully insulated neutral when the panelboard is used in non-service applications

If neutrals are bonded at distribution points on the load side of the service disconnecting means, the neutral currents take parallel paths through neutral conductors and the grounding conductor (which may include metal raceways). If neutral conductors open, the full neutral current flows over the grounding conductor system (which may include metal raceways). As a result of this loss of the neutral connection, steel raceway joints and box connections overheat, creating a potential fire hazard.

EQUIPMENT GROUNDING TERMINAL BAR

51. Section 408.40 of the NEC requires the installation and use of a terminal bar for equipment grounding conductors for panelboards used with non-metallic raceway or cable, or where separate equipment grounding conductors are provided. This terminal bar may be installed on the panelboard or its enclosure. A terminal bar assembly kit must include instructions for installation and panelboard or enclosure markings.

Unless it employs a wire-binding screw, markings must show all acceptable wire sizes and wire combinations for each terminal. A panelboard for use without equipment grounding conductors is not required to provide for a grounding terminal bar. In this case, however, the panelboard must be marked to limit its use to installations in which equipment is grounded by connection to metal raceway or metallic cable sheaths.

52. The equipment grounding terminal or terminal assembly in a panelboard is identified by one of the following methods:

- The terminal assembly or the heads of the terminal screws being green;
- Marking adjacent to the terminal or on the wiring diagram indicating “Equipment Grounding Terminal” or equivalent wording; or
- Marking of the grounding symbol (see below) adjacent to the terminal or on the wiring diagram along with “Equipment Grounding Terminal” or other words defining the symbol. The symbol may be used without the additional wording if markings provided with the Panelboard define the symbol.

GROUNDING SYMBOL
(IEC417, Symbol 5019)

GROUND-FAULT PROTECTION OF EQUIPMENT

53. In accordance with Section 230.95 of the NEC, a panelboard marked for use as service equipment for 3-phase, 4-wire solidly grounded wye-connected services rated in excess of 150 volts to ground but not exceeding 600 volts phase-to-phase shall be provided with ground-fault protection for each service disconnecting means rated 1000 amperes or more.

Exception No.1 for Section 230.95 of the *NEC* indicates that this does not apply to service disconnects for a continuous industrial process, where a non-orderly shutdown introduces additional or increased fire and shock hazards.

In accordance with this Exception, UL permits a Listed panelboard marked for service equipment use and rated for use on solidly grounded wye-connected electrical services of more than 150 volts to ground to omit ground-fault protection if the panelboard is marked "Suitable For Use As Service Equipment Only When Supplying A Continuous Industrial Process." This shortened wording is not intended to circumvent the need for a judgment. Inspectors concerned about the hazards of a non-orderly shutdown decide whether or not ground-fault protection is needed.

54. In some panelboards, only a shunt trip service disconnect is provided. In this case, the marking on the panelboards gives the manufacturer's name and the catalog number of the ground-fault protection equipment with instructions covering its interconnections.

55. Panelboards provided with ground-fault protection are required to be marked to indicate the circuit-main, feeder, or branch-circuit that is so protected. If a marking on the ground-fault sensing or relaying equipment is not visible from the front of the panelboard with its cover removed, a separate marking, such as on the wiring diagram, is required.

56. If a transformer providing control voltage for ground-fault protection is connected to the line side of the main disconnect, this disconnect may be identified as the "main." In this case, the panelboard is required to be marked "Danger — this main does not disconnect control and instrument circuits" adjacent to the main disconnect.

57. In a panelboard with ground-fault protection, the part of the neutral bus used for load terminations is required to be marked "WARNING — Do not connect grounding conductors to these or any other neutral terminals, to do so will defeat ground-fault protection." This marking must be placed on or adjacent to the neutral.

MAXIMUM SIZE FUSEHOLDERS OR CIRCUIT BREAKERS

58. If the ampacity of a branch bus bar or wire is less than the maximum current rating of any fuse accommodated by a fuseholder it supplies, or if it is less than the current rating of any trip unit (including rating plugs) of an interchangeable trip circuit breaker that it supplies, UL requires a clear and permanent marking, plainly visible when the fuse or trip unit is being replaced. This prevents the use of a fuse, trip unit, or rating plug having more ampacity than a bus bar or wire.

59. A panelboard with branch-circuit bus bars that permit adding a branch-circuit unit, circuit breaker, switch, or fuseholder requires markings on the wiring diagram, the branch-circuit bus bars, or some other location. Markings indicate the ampacity of the bus. This marking is not required if the ampacity of the bus bar is not less than a) the maximum current rating of any unit to be connected to it; or b) the current rating of the panelboard.

PANELBOARDS WITH PROVISIONS FOR WATT-HOUR METERS

60. Separate meter sockets are required to be marked with a continuous ampere rating. In some cases, meter sockets also may have a maximum use (intermittent) ampere rating of not more than 125 percent of the continuous ampere rating. Similar markings are required for any meter mounting base in a panelboard. The continuous ampere rating may be less than the circuit that contains the meter mounting base. This means that, for example, a 125 ampere panelboard can have a meter mounting base rated "125 Amps (100 Amps Continuous)." Some inspectors may judge that a

continuous duty meter socket is not needed because of a panelboard's load diversity. Continuous duty sockets can be required when load and environmental conditions would cause overheating in panelboards.

61. If the socket jaws of meter mounting bases are mounted on terminals intended for field wiring, the panelboard is required to be marked to indicate the maximum torque to be applied to these terminals.

CIRCUIT BREAKER TRIP INDICATION

62. If the handle of a circuit breaker, or a simple extension of that handle, assumes other than the off position when the breaker trips, the trip position of the handle is required to be indicated. The method for resetting the breaker is also a required panelboard marking.

63. Marking the tripped position is not required for a separate, external operating handle that is not part of the circuit breaker. Such a handle may remain in the on position when the breaker trips. These constructions may be encountered in panelboards Listed for use in hazardous locations where operating springs in the circuit breaker mechanism do not provide sufficient tension to operate external handles.

WIRING TERMINALS

64. Section 110.14 of the NEC, states that terminals for more than one conductor must be identified. In all cases, marking is required to identify the combinations and sizes of conductors for each terminal. Marking is not required where conductors in parallel are secured by a single wiring terminal having individual holes and set screws for each conductor.

Where conductors in parallel are secured at a terminal (one connector with one or more barrels or multiple individual wire connectors) of an enclosed panelboard and where the connectors will accommodate more than one combination of conductors (size and number) that will have the required ampacity, the wiring diagram will state the number and size of wires for which the terminal is acceptable unless the wiring space is suitable for all combinations of conductors that have the required ampacity.

65. Tightening torque is marked for all panelboard terminals (other than wire binding screws) except when installed units have their own marking.

66. UL requires that an individual terminal be provided for the connection of each branch-circuit neutral conductor and, with one exception, that the number of individual terminals be not less than 75 percent of the total number of individual fuseholder or circuit-breaker poles capable of being installed in the panelboard. Under the exception, the number of terminals may be reduced to 50 percent if the panelboard is marked to indicate the maximum number of circuits and the need to use multipole branch-circuit units to limit the number of terminals to a specified number.

MAIN OR MAIN DISCONNECT

67. Except for a panelboard that has the "Service Disconnect(s)" identified, a switch or circuit

breaker that controls all load circuits from the panelboard, other than a feed-through circuit, is required to be marked “Main” and no other switching device is permitted to have this marking. If two or more switches or circuit breakers control all load circuits, other than a feed-through circuit, they are required to be marked “Main Disconnect” either on or adjacent to each unit if there are other switches or circuit breakers in the panelboard.

WIRE BENDING SPACE

68. A panelboard constructed in accordance with Exception No. 3 of Section 408.55 of the NEC is required to be marked by means of a diagram that shows and specifies the method of wiring that shall be used to accomplish the 90-degree bend.

69. Minimum wire bending space requirements for panelboards rated for use with aluminum conductors are based on the use of compact stranded conductors made from AA-8000 series electrical grade aluminum alloy. See NEC Section 310.14.

ACCESSIBLE ONLY TO QUALIFIED PERSONS

70. Section 240.40 of the *NEC* requires a disconnecting means on the supply side of cartridge fuses where the fuses are accessible to other than qualified persons. Section 408.38 requires all panelboards to be deadfront unless they are accessible only to qualified persons. UL requires such panelboards to be marked “This panelboard shall be located where accessible only to qualified persons.”

INVESTIGATED FOR USE IN OPTIONAL STANDBY SYSTEMS

71. Panelboards may be constructed with interlocked switching devices or designed for use with interlock kits that have been investigated for use in optional standby systems in accordance with Article 702 of the NEC. Panelboards shipped with factory installed interlocked switching devices that have been investigated for use in optional standby systems are marked “Suitable for use in accordance with Article 702 of the National Electrical Code ANSI/NFPA 70;” panelboards available for use with field installable assemblies that have been investigated for use in optional standby systems are marked “Suitable for use in accordance with Article 702 of the National Electrical Code ANSI/NFPA 70 when provided with interlock kit Cat. No. ____.”

Swimming Pool Equipment, Spas, Fountains and Hydromassage Bathtubs Marking Guide

April 2008

Swimming Pool Equipment, Spas,
Fountains and Hydromassage Bathtubs
Marking Guide

The growing popularity of home swimming and related activities has led to an increase in the number of swimming pools, spas, hot tubs and hydromassage bathtubs in use. Each of these products has different UL markings and different installation requirements. The different installation requirements are part of Article 680 of the National Electrical Code® (NEC), as well as other mechanical, fuel gas, building and plumbing codes. The different construction and marking requirements are included in the UL and other Standards covering these products.

UL Marking Guides are updated as necessary due to new product development, changes in the National Electrical Code®, or the need for clarification. To confirm the current status of any UL Marking Guide, please consult the Regulators page of the UL Web Site at <http://www.ul.com/regulators/index.html>.

This Marking Guide is intended to explain the markings associated with each type of equipment and to provide guidance on how equipment markings relate to the type of product being installed.

Your comments or suggestions are welcome and appreciated. They should be sent to:

	UL Guide Information	

1. INTRODUCTION

1.1. WHO SHOULD USE THIS GUIDE

This Guide is intended to assist installers, contractors and inspection authorities in determining the suitability of UL Listed and Classified swimming pool, spa, hydromassage bathtub and fountain products for use in specific installations.

The product markings listed in this Guide do not include every possible marking that could be provided either on a product or in its installation or operating instructions. The purpose of providing these markings is to indicate the type of text and the location of markings that address features that may be critical in determining if the product is installed correctly, with respect to the risk of fire and electric shock, and for compliance with applicable requirements in the National Electrical Code® (NEC), NFPA 70, and model building, plumbing, mechanical and fuel gas codes.

1.2. HOW TO USE THIS GUIDE

This Guide is organized by the types of installations that may be encountered. The Table of Contents indicates the types of installations covered in this Guide. Sections of this Guide identify types of products involved in the various installations, product names used with UL Listing Marks, and special markings associated with construction or installation features.

In several places, this Guide indicates that a product is intended or is suitable for specific uses. It is important to note that these uses are determined by the manufacturer of the product. UL's requirements and its evaluations are based on these manufacturer-determined uses.

2. PERMANENTLY INSTALLED SWIMMING POOLS

2.1. GENERAL

This section covers UL Listed equipment that is wired and plumbed at the installation site for the construction of a swimming pool permanently installed in the ground or above the ground. The suitability of the interconnection of various components, as well as the supply connection is determined by the authority having jurisdiction. UL evaluates and Lists all electrical and mechanical components of these pools. This includes water heaters, pumps, luminaires, water treatment equipment such as ozone generators and chlorinators, junction boxes, transformers, potting compounds, pool cover operators, pool covers, pool alarms, and controls, as well as some pre-packaged assemblies of components referred to as equipment assemblies or "Skid Packs." Equipment assemblies are usually intended for heated spas installed in the ground, but units without heaters are also suitable for small swimming pools permanently installed in the ground.

2.2. CONTROLS

General. These Listings cover units intended for the control of equipment used with swimming pools, spas or hot tubs. They typically consist of combinations of motor controllers and timers. Some may also have temperature-regulating circuits.

Listing Mark. The UL Listing Mark for these products includes a product name such as "Spa Controller," "Swimming Pool Controller" or other similar product name.

Field Installation. UL Listed controls are intended for permanent connection to the electrical supply system and are intended to be mounted at a minimum of 5 feet from the inside walls of a swimming pool or spa. Some units have ground-fault circuit interrupter (GFCI)-protected convenience receptacles and are intended for mounting at a minimum of 10 feet away. These Listed products are suitable for both indoor and outdoor use, unless they are marked "For Indoor Use Only."

Terminals On Load Side of GFCI Controls. A control with terminals on the load side of a ground-fault circuit interrupter (GFCI), provided to protect the field-installed conductors of an underwater lighting circuit, is marked to indicate that the field-installed conductors shall not occupy conduit, boxes or enclosures with the conductors of other circuits unless all other conductors are also on the load side of a GFCI.

Enclosures Intended For Direct Connection to a Wet-Niche or No-Niche Luminaire. Controls intended for such use are marked "Suitable for direct conduit connection to a wet-niche or no-niche luminaire" or equivalent where visible after installation. Conduit termination locations suitable for such use are specifically identified.

2.3. JUNCTION BOXES

General. Products Listed under this category are suitable for use at the supply end of conduit that extends directly to the forming shell of a wet-niche luminaire or the mounting bracket of a no-niche luminaire in a pool, spa, or fountain. These junction boxes are also suitable for use as underwater junction boxes for fountains and decorative pools.

Listing Mark. The UL Listing Mark for these units includes the product name "Swimming Pool Junction Box."

Field Installation. Swimming pool and spa luminaire junction boxes are provided with the means of independent termination for the equipment grounding conductors inside the box. Each termination for an equipment grounding conductor will accommodate one conductor in the range of No. 16 to No. 12 AWG. A junction box marked "Suitable for Use With a Low-Voltage Luminaire" has equipment grounding conductor terminations suitable for the range of No. 16 to No. 10 AWG. Junction boxes are also provided with means to terminate No. 8 AWG supplementary equipment grounding conductors for use where the wet-niche or no-niche luminaire is installed using non-metallic conduit. A junction box and cover combination with a volume of 100 cubic inches or less is marked with its volume in cubic inches. Installation instructions indicate the flexible cord type and conductor size or the range of cord diameter to be used with an installed strain relief device. If the strain relief means is to be field-installed, complete installation instructions are provided.

2.4. LUMINAIRES (See App. A—Figs. 1, 2, 4, 5)

Listing Mark. Underwater swimming pool luminaires come in six basic types as described below. Luminaires suitable for swimming pool and spa equipment are identified by a Listing Mark with one of these luminaire type designations, along with text to indicate they are suitable for swimming pools. The Listing Marks of these products include one of the following product names as appropriate:

"Dry-Niche Underwater Luminaire For Swimming Pool,"
"Mounting Bracket For No-Niche Luminaire, "

“No-Niche Underwater Luminaire For Swimming Pool,”
“Housing For Wet-Niche Luminaire,”
“Wet-Niche Underwater Luminaire For Swimming Pool,”
“Underwater Luminaire for Aboveground Non-Storable Swimming Pools,” “Convertible Underwater Luminaire for Aboveground Swimming Pools,” or
“Fiber-Optic Underwater Luminaire for Swimming Pools.”

Luminaires intended for fountains or other vessels not intended to accommodate the complete or partial immersion of persons have a different identification. These luminaires are identified as “Submersible Luminaires.” A typical Listing Mark would be “Dry-Niche Submersible Luminaire”. Luminaires with only this type of Listing Mark or product name have not been evaluated for swimming pool or spa installations. Some luminaires have been evaluated for use as both a swimming pool or spa luminaire and a submersible luminaire. Luminaires suitable for both uses bear Listing Marks identifying both uses.

Field Installation:

Dry-Niche Luminaires. These luminaires are intended for permanent installation only in the wall of a swimming pool or a field-fabricated spa, unless accompanying installation instructions describe the option of installation in the bottom of the pool or spa. These luminaires are intended to be installed with the top of the lens not less than 18 inches below the normal water level, unless otherwise marked. They are designed for servicing from the rear through a passageway behind the pool or spa wall, or, if mounted in the bottom of the pool or spa, in a tunnel underneath the pool or spa. When the luminaire is properly installed in a housing or “niche,” no water should enter the niche.

Wet-Niche Luminaires. These luminaires are intended for permanent installation only in the wall of a swimming pool or field-fabricated spa, unless accompanying installation instructions describe the additional option of installation in the bottom of the pool or spa. These luminaires are also intended to be installed with the top of the lens not less than 18 inches below the normal water level, unless otherwise marked. These luminaires are intended for installation in permanently installed luminaire housings (forming shells) in which the luminaire will be completely surrounded by water in the normal installation. These luminaires are marked to indicate the proper luminaire housing or housings with which they are to be used, and the luminaire housings are marked to indicate the luminaire or luminaires with which the housing is to be used. These luminaires are provided with a factory-installed, permanently attached flexible cord that extends at least 12 feet outside the luminaire enclosure. This permits the luminaire to be removed from the luminaire housing and lifted to the pool or spa deck for servicing without lowering the water level or disconnecting the luminaire from the branch-circuit conductors. Luminaire housings that are intended to be used with luminaires provided with a No. 12 AWG or larger, Type SJ, SJT or SJTO flexible cord are marked for use with 3/4-inch or larger conduit. It is not intended that conduit reducers and conduit with a trade size less than the size accommodated by the threaded hub of the luminaire (fixture) housing be used.

No-Niche Luminaires. These luminaires are intended for permanent installation only in the wall of a swimming pool or a field-fabricated spa, unless accompanying installation instructions describe the option of installation in the bottom of the pool or spa. These luminaire are also intended to be installed with the top of the lens not less than 18 inches below the normal water level, unless otherwise marked. In addition, these luminaires are intended to be mounted to a bracket that is permanently secured in or on the wall where the

luminaire will be completely surrounded by water. These luminaires, like wet-niche types, are provided with a factory-installed, permanently attached flexible cord that extends at least 12 feet outside the luminaire enclosure. The luminaires are marked with an identification of the mounting brackets for which they are suitable. The mounting brackets are also marked with an identification of the luminaires for which they are suitable.

Convertible Underwater Luminaires For Aboveground Swimming Pools. These luminaires are initially configured as underwater luminaires for aboveground storable swimming use (see Storable Swimming Pool section). They include provisions for the one-time field conversion of the luminaires to underwater luminaires for aboveground non-storable swimming pool use. Once converted, these luminaires are not suitable for modification back to their original configurations.

Fiber-Optic Underwater Luminaires. These luminaires consist of a lamp/electrical enclosure that is intended to be permanently mounted not less than 5 feet from the pool or spa wall and has a fiber-optic element and associated fittings to transmit the light to the pool or spa. The lamp/electrical enclosure is intended to be installed above the level at which water splashed from the pool or spa or from another source may collect.

Metal Conduit Only. A swimming pool luminaire housing (forming shell) for a wet-niche luminaire and a mounting bracket for a no-niche luminaire that is not provided with a grounding terminal for the supplemental No. 8 AWG grounding conductor that is required when non-metallic conduit is used is marked “CAUTION — For proper grounding use only with metal conduit.”

Orientation, Luminaire. A swimming pool luminaire that depends on its location or position to function correctly is marked to indicate the way it is to be installed or used, unless the position is obvious.

Orientation, Luminaire Housing and Mounting Bracket. If orientation of a swimming pool luminaire housing (forming shell) or mounting bracket is relied upon to orient the luminaire in a position necessary for its intended performance, the luminaire housing or mounting bracket is marked to indicate the position in which it is to be installed.

Underwater Luminaires for Aboveground Non-Storable Swimming Pools. These luminaires are intended only for permanent installation through or on the wall of an aboveground non-storable pool. They are intended to be installed with the top of the lens not less than 8 nor more than 10 inches below the top of the pool wall, unless the luminaire is otherwise marked. They are intended to be permanently connected to the supply with conduit. They may — for installation, maintenance or servicing — employ a maximum 5 feet length of jacketed flexible cord permanently connected between integral components of the luminaire. The installation instructions accompanying a luminaire with a non-enclosed flexible cord describe the method of proper routing and securement of the flexible cord and the method for installation of any guards or structural members to reduce the likelihood of unacceptable stress being imposed on the flexible cord.

Salt Water Use. Luminaires that are suitable for use only in fresh water are marked “Fresh Water Only.” These are intended for swimming pools filled with tap or well water. Luminaires that are suitable for use in either fresh or salt water are marked “Salt Water or Fresh Water.” These luminaires are suitable for use in swimming pools filled with tap, well or sea water, as well as tap or well water that has been salt-treated for pools with chlorine or

bromine generators.

Submerge Before Lighting. Luminaires that have been investigated for operation only in contact with water are marked “CAUTION — To reduce the risk of electric shock, submerge before lighting,” and such a marking must be visible after installation of the luminaire.

Special Markings:

One-Time Thermal Protection. Swimming pool luminaires employing a one-time operation, thermal sensitive device are marked “Out of water operation (for longer than 3 min.) will permanently disable luminaire.” Words in parentheses are optional.

Inoperable Out of Water. Swimming pool luminaires designed to be inoperable when **not** submerged are marked “This luminaire will not light out of water.”

2.5. POTTING COMPOUNDS

General. This Listing covers compounds intended to encapsulate the grounding and bonding conductor splices or terminations in swimming pool and spa equipment such as luminaires, luminaire housings (forming shells) and junction boxes where the splices or termination may be exposed to salt-free pool or fountain water and sunlight for varying lengths of time, including continuous exposure.

These potting compounds are also suitable for use to II underwater junction boxes. The container or package is marked to identify that they have been evaluated for adhering to stainless steel, copper alloy, and any other materials, if applicable.

Listing Mark. The Listing Mark of Underwriters Laboratories is provided on the smallest unit container in which the product is packaged. The UL Listing Mark includes the product name “Swimming Pool, Fountain and Spa Equipment Conductor Splice Potting Compound.” Any of the three locations — “swimming pool,” “fountain” or “spa equipment” — may be omitted. As the markings on the smallest unit container are the means by which the authority having jurisdiction determines if the product is UL Listed, the unit container should be retained at the site.

2.6. PUMPS

General. UL Listed pumps include those intended for permanent plumbing for use with permanently installed pools and spas, as well as portable units intended for use with storable pools.

A pump with means for permanent wiring connections or a 3-foot exible cord and plug, suitable for permanently installed pools is marked:

“This Pump is for Use with Permanently Installed Pools Only — Do Not Use with Storable Pools. A permanently installed pool is constructed in or on the ground or in a building such that it cannot be readily disassembled for storage. A storable pool is constructed so that it may be readily disassembled for storage and reassembled to its original integrity.”

Only pumps with this marking should be used with permanently installed pools.

Listing Mark. UL Listing Marks with the product names “Swimming Pool Pump,” “Spa Pump,” or “Swimming Pool or Spa Pump” indicate units suitable for use with swimming pools and spas. A unit for which the name includes “Spa Pump” has also, in addition to the swimming pool pump requirements, been evaluated for use with heated (122°F) water.

Field Installation:

Ground-Fault Protection. All cord-and-plug-connected pumps are intended to be connected to a circuit protected by a GFCI and are so marked. Each unit is provided with the following marking or equivalent: “WARNING — Risk of electric shock. Connect only to a grounding type receptacle protected by a ground- fault circuit interrupter (GFCI).”

Supply Connection. Unless constructed as indicated below, pumps intended for permanent plumbing connection are provided with means for permanent wiring connections.

Pumps intended for permanent plumbing connection and location at a minimum of 5 feet from the inside walls of a pool or spa may be provided with a 3-foot cord terminating in a grounding-type attachment plug that is the locking type.

Pumps intended for permanent plumbing connection and location at least 10 feet from the inside walls of a pool or spa may be provided with a 3-foot power supply cord with an attachment plug that is *not* the locking type. These units are marked “CAUTION — To reduce the risk of electric shock, install at least 10 feet from the inside walls of a pool. Do not use an extension cord.”

Pumps supplied with a minimum 25-foot cord and attachment plug are intended for use with storable pools only and are so marked. These pumps are not suitable for permanently installed pools (in-ground and aboveground non-storable).

2.7. TRANSFORMERS

General. Products Listed in this category are enclosed transformers that are the two-winding type and have a grounded metal shield between the primary and secondary windings. They are intended to supply luminaires in fountains, swimming pools, and spas in accordance with Article 680 of the **NEC®**. The primary rating is 120 volts and the maximum secondary rating is 15 V rms and 1 kVA.

Listing Mark. The UL Listing Mark for these units includes by the product names “Fountain Transformer,” “Swimming Pool Transformer,” “Spa Transformer,” or “Fountain, Swimming Pool or Spa Transformer.”

Special Markings:

Swimming Pool Junction Box Use. Unless marked otherwise, these transformers are not suitable for connection to a conduit which extends directly to a wet-niche or no-niche luminaire. Transformers not suitable for this use are to be used with a swimming pool junction box.

2.8. WATER HEATERS

Listing Mark. The UL Listing Mark with the product name “Swimming Pool Heater” or “Spa Heater” indicates suitability for use with permanently installed pools. Gas- or oil- fired units are identified by the product names “Gas-Fired Swimming Pool Heater” and “Oil-Fired Swimming Pool Heater”.

Field Installation:

Flow Rate. If a heater is marked with a minimum required water circulation capacity (flow rate), the swimming pool must have pumps with at least that capacity and circuit interlocks that permit heater operation only when the water is being circulated. This flow rate would either be marked on the circulating pump or provided in literature accompanying the pump.

Leakage Current Collectors (Electrical Heaters). If leakage current collectors are not integral to the heater but are provided for field installation, the installation and grounding of the collectors must be exactly as indicated in the installation instructions.

The heater grounding conductor and the leakage current collector grounding conductors should be the same size or larger than the power supply conductors and not smaller than No. 12 AWG.

Outdoor Use. Only heaters marked “Outdoor Use” are suitable for installation outdoors.

Special Markings:

Shutoff Valve. If the heater installation instructions indicate use of a shutoff valve, the heater is marked with its maximum working pressure. The heater is marked to indicate it should be used with a pressure relief valve certified as complying with requirements of either (1) the ASME or (2) ANSI Z21.22, Relief Valves and Automatic Gas Shutoff Devices for Hot Water Supply Systems. The heater is also marked to indicate that the pressure relief valve shall have a marked maximum set pressure not to exceed the marked maximum working pressure of the water heater and that the valve inlet should be able to accommodate a 3/4-inch or larger trade size pipe.

2.9. HEAT PUMPS

Listing Mark. The UL Listing Mark with a product name “Swimming Pool Heat Pump,” “Spa Heat Pump,” or “Swimming Pool and Spa Heat Pump” indicates suitability for use with permanently installed pools.

Field Installation:

Outdoor Use. Only heat pumps marked “For Outdoor Use” or the equivalent are suitable for installation outdoors.

2.10. WATER TREATMENT EQUIPMENT

General. Most water treatment equipment is Listed in the category “Water Treatment Equipment” (WDLC). This category includes chlorinators, ozone generators, ion generators and similar equipment intended to sanitize water in pools, spas and hot tubs. It also includes equipment designed to monitor water chemistry in pools, spas and hot tubs. This monitoring equipment may also have the capability of adding chemicals to the water to adjust water chemistry. Ozone generators may also be Classified in the category “Ozone Generators” (WCKA).

The ability of this equipment to sanitize pool and spa water has not been determined. Equipment that has been evaluated for sanitation is Classified in accordance with the requirements of the National Sanitation Foundation Standard Number 50 and can be located under the category (WCNZ) Pool and Spa Equipment Classified in accordance with NSF Standard Number 50”.

Listing Mark. The UL Listing Mark for water treatment equipment other than ozone generators includes the product name “Swimming Pool Chlorinator,” “Spa Chlorinator,” “Swimming Pool and Spa Chlorinator,” or other appropriate product name.

Unique Hazard Considerations. Hazards related to the chemicals generated from chlorinators, brominators, or ion generators are not evaluated by UL as part of Listing or Classification investigations.

2.11. OZONE GENERATORS

Listed Units. Physiological effects of the ozone output of UL Listed units marked “For Outdoor Use Only” have not been evaluated. Listed units marked for indoor use have been evaluated in a standard room installation to determine if any ozone emitted from a test tank is within established limits. Listed units are evaluated to determine that no ozone is emitted from unintended locations of the unit during normal use or abnormal operation such as a blocked output or no flow through a venturi. The Listing Mark for these units has the product identity “Ozone Generator.”

Classified Units. Physiological effects of the ozone output of Classified units have not been evaluated. Classified units are evaluated to determine that no ozone is emitted from unintended locations of the unit in normal use or abnormal operation such as a blocked output or no flow through a venturi.

Classified units are identified by the following Classification Marking on the product:

“OZONE GENERATOR
CLASSIFIED BY UNDERWRITERS LABORATORIES INC.
WITH RESPECT TO RISKS OF ELECTRIC SHOCK,
FIRE AND MECHANICAL INJURY ONLY”

Installation. Ozone generators are not intended for field installation under the skirt of a spa or hot tub, unless the spa is specifically marked for this use.

3. MOTORIZED POOL COVER OPERATORS

3.1. GENERAL

Motorized pool cover operators are covered by the product category “Swimming Pool and Spa Cover Operators, Electric” (WDDJ). They are evaluated for fire, electric shock and mechanical hazards only. Some motorized pool cover operators may incorporate pool covers Classified under the category “Covers For Swimming Pools and Spas” (WBAH). Unless Classified as a power safety cover under the category “Covers For Swimming Pools and Spas,” (WBAH), a cover provided with the operator has not been evaluated as a safety cover.

3.2. LISTING MARK

The UL Listing Mark for these products includes the product name “Swimming Pool Cover Operator,” “Spa Cover Operator” or “Pool Cover Operator.”

4. STORABLE SWIMMING POOLS

4.1. GENERAL

Equipment Listed for use with storable pools includes pumps, Luminaires (Lighting (Fixtures)) and water treatment equipment. This equipment is Listed under the product categories of “Pumps” (WCSX) and “Luminaires and Forming Shells” (WBDT), and “Water Treatment Equipment”(WDLC).

4.2. LUMINAIRES (See App. A–Fig. 3)

General. Underwater luminaires for aboveground storable swimming pools are intended for temporary installation only through or on the wall of an aboveground storable pool. UL considers a storable pool to be one that is constructed above the ground and is capable of holding water to a maximum depth of 42 in. (1.07m). These luminaires are intended to be installed with the top of the lens not less than 8 nor more than 10 inches below the top of the pool wall unless the luminaire is otherwise marked. These luminaires are provided with a minimum of 25 feet of jacketed flexible cord, which is intended to be routed away from the pool to the transformer or ground- fault circuit interrupter assembly. The transformer or GFCI assembly is intended to be temporarily mounted to a building or structure and is provided with a minimum 3-foot/ maximum 6-foot power supply cord for connection to the supply source.

Listing Mark. The UL Listing Mark for these products includes the product name “Underwater Luminaire for Aboveground Storable Swimming Pool.”

4.3. PUMPS

Listing Mark. Pumps suitable for this application have a Listing Mark with the product name “Swimming Pool Pump” or “Swimming Pool Pump or Spa Pump.”

Storable Pools Only. The type of pump suitable for use with storable pools has a 25-foot flexible cord and attachment plug. It is marked:

“This Pump is for Use with Storable Pools Only — Do Not Use with Permanently Installed Pools. A storable pool is constructed so that it may be readily disassembled for storage and reassembled to its original integrity. A permanently installed pool is constructed in or on the ground or in a building such that it cannot be readily disassembled for storage.

Field Installation:

Double Insulation. Pumps with a minimum 25-foot supply cord are double insulated and have inaccessible metal parts grounded with the equipment-grounding conductor terminated at the attachment plug. These pumps do not have a bonding connector.

Ground-Fault Protection. These units are intended for connection to circuits protected by ground-fault circuit interrupters and are marked “WARNING — Risk of electric shock. Connect only to a grounding type receptacle protected by a ground-fault circuit interrupter (GFCI).”

4.4. WATER TREATMENT EQUIPMENT

General. UL Listed chlorinators or brominators, as well as Listed or Classified ozone generators, may be used with this equipment. Their limitations are specified in the section titled “PERMANENTLY INSTALLED SWIMMING POOLS.”

5. FIELD CONSTRUCTED SPAS

5.1. GENERAL

This section covers field constructed spas or hot tubs in which separately Listed equipment is plumbed and wired in the field. This equipment includes heaters, blowers, pumps, controls, water treatment equipment, luminaires, heat pumps, transformers and suction fittings. Each is intended to be installed in accordance with the *National Electrical Code®*, NFPA 70, and model building, plumbing, mechanical, fuel gas codes, manufacture's instructions, and with provisions detailed in the section following.

A group of the above components may be pre-packaged in a Listed equipment assembly. These assemblies are designed for installation with a field-supplied tub.

5.2. BLOWERS

General. UL Listed blowers are intended for both indoor and outdoor use, unless marked otherwise. Unless otherwise indicated in the installation instructions, blowers should be mounted at least 12 inches above the over flow of a spa or hot tub.

5.3. CONTROLLERS

These are identical to and should be used with the same limitations as those previously specified under "PERMANENTLY INSTALLED SWIMMING POOLS."

5.4. LUMINAIRES

Luminaires used in this installation are the same as those previously detailed under "PERMANENTLY INSTALLED SWIMMING POOLS."

5.5. PUMPS

Pumps in this application are essentially identical to those previously discussed under "PERMANENTLY INSTALLED SWIMMING POOLS." The one exception is the product name accompanying the UL Listing Mark should indicate if the pump is either a "Spa Pump" or "Swimming Pool or Spa Pump." A pump with a Listing Mark indicating only "Swimming Pool Pump" has not been investigated for use with maximum 50° C (122°F) water.

5.6. SUCTION FITTINGS

General. These units are intended to be provided at all the intake ports of the spa. They have been evaluated to determine that they would not pose a hair entrapment danger when operated at or below their marked flow rates. The maximum flow through the suction fitting should not exceed the marked maximum flow rate of the suction fitting.

5.7. WATER HEATERS

Water heaters can be used with the same limitations described in "PERMANENTLY INSTALLED SWIMMING POOLS."

5.8. WATER TREATMENT EQUIPMENT

Water treatment equipment can be used in this type of installation in accordance with the limitations previously detailed for water treatment equipment under "PERMANENTLY INSTALLED SWIMMING POOLS."

5.9. EQUIPMENT ASSEMBLIES

General. Equipment assemblies (“Skid Packs”) are pre-packaged combinations of equipment such as pumps, filters, heaters, blowers, luminaires, and controls. They are intended to be permanently plumbed to a field supplied spa or hot tub using non-metallic piping only. They are designed for indoor or outdoor use and are intended to be installed at least 5 feet from the inside walls of a spa or hot tub.

UL Listed equipment assemblies have not been evaluated for below-grade installation and are not suitable for use within an outer enclosure, or under the skirt of a spa or hot tub, unless so marked.

Listed equipment assemblies that contain a gas- red water heater have not been evaluated for (1) indoor use, (2) use within an outer enclosure, or (3) use under the skirt of a spa or hot tub, unless so marked.

Some equipment assemblies do not contain a heater and, therefore, do not have a water temperature regulating control or water temperature limiting control. Units of this design are intended to have a water heater, a temperature regulating control, and a temperature limiting control provided in the final installation.

Listing Mark. The UL Listing Marks for these products include the following product names, as appropriate:

“Equipment Assembly for Spa/Hot Tub,”
“Hot Tub Equipment Assembly,” or
“Spa Equipment Assembly.”

Field Installation:

GFCI Protection. Cord-connected equipment assemblies have GFCI protection provided. Convertible equipment assemblies have protection provided in the 120-volt configuration. They are protected in the 240-volt configuration, unless marked “Connect To A Circuit Protected By A GFCI When Connected In The 240-volt Mode” or the equivalent. Permanently connected equipment assemblies may or may not have integral GFCI protection. If not, the installation instructions indicate the unit should be connected to a circuit protected by a GFCI. If integral GFCI protection is provided, it protects all circuits.

Disconnecting Means. A convertible or permanently connected unit may be additionally provided with an integral disconnecting means not intended to substitute for that required by NEC® section 680-12.

Suction Fittings. To reduce the risk of hair and body entrapment, equipment assemblies are intended for use with a UL Listed suction fitting, the flow rate of which meets or exceeds the flow rate marked on the equipment assembly. Each equipment assembly is marked with “WARNING — PREVENT DROWNING”

1. Supervise children at all times. 2. Attach spa cover after each use. Install a suction fitting with a marked flow rate of not less than ____ gallons per minute.” In this case, the ____ is filled in by the manufacturer with the gallons per minute flow rate of the assembly.

Supply Connection. These units may be designed for either permanent wiring or

connection with a flexible cord and plug. They may also be designed for field convertibility from a 120-volt cord connected configuration to a 240-volt permanently wired configuration only. The electrical rating includes the minimum supply conductor ampacity and the ampere rating of the supply conductor overcurrent protective device.

Underwater Lighting Circuit. Equipment assemblies that have terminals on the load side of a ground-fault circuit interrupter, which protects field-installed conductors of an underwater lighting circuit, are specially marked. The markings indicate that the field-installed conductors shall not occupy conduit, boxes or enclosures with conductors of other circuits, unless all other conductors are also on the load side of a ground-fault circuit interrupter. Suitable segregation or isolation of the circuits is maintained within the equipment.

Special Markings:

Multiple Disconnects. If more than one disconnect switch is required to disconnect all power to a unit, the unit is marked — in a place readily visible to service personnel prior to disconnecting the main supply for the unit — with the word “WARNING” and the following or equivalent, “PREVENT ELECTROCUTION — Disconnect all supply connections before servicing. This appliance has _____ supply connections.”

6. SELF-CONTAINED SPAS

6.1. GENERAL

This section covers self-contained spas for aboveground use, for household or commercial use, and for indoor and outdoor use, unless marked otherwise. Spas are not designed or intended to be drained after each use. They are intended for installation in accordance with Article 680 of the *National Electrical Code®*, NFPA 70 and model building, plumbing, mechanical, fuel gas codes, and the manufacturer’s installation instructions.

Units come in three basic designs:

1. Most units are shipped completely assembled from the factory and require only supply connection in the field.
3. Some units, referred to as “Knockdown” spas, are types for which a spa shell, equipment assembly and skirt are shipped separately. The shell and equipment assembly are plumbed at the factory and connected together in the field with threaded unions.
4. Additional units, referred to as “Modular” spas, are similar to “Knockdown” units except they are plumbed in the field. All parts are provided and pre-cut, if needed, and accompany applicable instructions and accessories such as polyvinyl chloride (PVC) solvent. They are intended for assembly by untrained users and the suitability of all interconnections and wiring is to be determined by authorities having jurisdiction.

“Modular” or “Knockdown” designs are accompanied by detailed assembly instructions and have identifying markings on each sub-assembly. The names or model numbers are specified in the assembly instructions so the user can correctly assemble the unit and the inspection authority can determine that the unit was assembled using the correct parts.

6.2. LISTING MARK

The UL Listing Mark includes the product name “Self-Contained Spa.”

6.3. FIELD INSTALLATION:

Branch-Circuit Protection. A permanently-wired spa intended to be protected by a branch-circuit overcurrent device rated less than the maximum rating of the branch-circuit overcurrent device permitted by the NEC® is marked to indicate the maximum rating of the branch-circuit overcurrent device for which the unit has been investigated and found acceptable. The electrical rating includes the minimum supply conductor ampacity and the ampere rating of the supply conductor overcurrent protective device.

Gas-Fired Heaters. Self-contained spas may be provided with gas fired heaters. Spas with gas-fired heaters are intended for permanent wiring and permanent installation, and unless otherwise marked, are intended for outdoor use only.

Options. The installation instructions of self-contained spas may indicate options such as lighting kits, blowers, additional pumps or ozone generators. These option kits are only to be used in spas with installation instructions that indicate the spas are factory-wired to accommodate them.

Supply Connection. Self-contained spas may be cord-connected, convertible or permanently wired. A convertible spa is shipped from the factory with a power supply cord but is designed for field conversion to a permanently wired configuration, either 120-volt, 240-volt or both. Once a convertible spa is converted to permanently wired, it is not intended to be returned to a cord-connected configuration.

Ground-Fault Protection. Cord-connected spas have GFCI protection provided. Convertible spas have protection provided in the 120-volt configuration. They are also protected in the 240-volt configuration, unless marked “Connect To A Circuit Protected By A GFCI When Connected In the 240-volt Mode,” or equivalent. Permanently connected spas may or may not have integral GFCI protection. If not, the installation instructions indicate the unit should be connected to a circuit protected by a GFCI. If integral GFCI protection is provided, it protects both 120-volt and 240-volt circuits.

6.4. SPECIAL MARKINGS:

Spa Caution Marking. To help reduce the risk of electric shock from other electrical appliances used near the spa, each unit is marked “WARNING” — Risk of Electrical Shock. Do not permit any electrical appliance (such as a light, telephone, radio, or television) within 5 feet of this spa.”

7. HYDROMASSAGE BATHTUBS

7.1. GENERAL

This section includes UL Listed indoor hydromassage bathtubs (whirlpool bathtubs) for residential or commercial use. They are intended for permanent connection to the building plumbing. The hydromassage bathtub consists of a drainable tub and a water or air pump, and may include other equipment such as a luminaire, control, air blower, heater or suction fittings. These units are intended to be drained after each use. These units are not intended to be field assemblies of Listed parts. Although they may include a Listed swimming pool or spa pump, the entire unit — consisting of shell, pump and any other related electrical components — is evaluated and Listed as a complete appliance. The pump is not intended to be installed away from the tub.

7.2. LISTING MARK

These Listings appear in the Electrical Appliance and Utilization Equipment Directory (Orange Book and online at www.ul.com/database). The Listing Mark for this category contains the product name “Hydromassage Bathtub.” The Listing mark for heaters intended to be installed after the bathtub leaves the factory contains the product name “Hydromassage Bathtub Accessory”.

7.3. PLUMBING ASSESSMENT

UL Listed hydromassage bathtubs may also be Classified to either the water retention requirements or all requirements of ASME/ANSI A112.19.7M - +. The combined Listing Mark/Classification marking consists of the Listing Mark described at the beginning of this section and the following marking: “Also Classified by Underwriters Laboratories Inc. in accordance with “*,” where “*” is one of the statements detailed below:

1. “ANSI A112.19M - +”
2. “Water Retention Test requirement from ANSI A112.19.7M - +”

+ issue date of Standard or latest addendum.

7.4. FIELD INSTALLATION:

Supply Connection. Most units are intended for permanent connection to the branch circuit. Bathtubs may be provided with a factory- installed maximum three-foot length of jacketed flexible cord terminating in an attachment plug.

Branch-Circuit Protection. A unit intended to be protected by a branch-circuit overcurrent device rated less than the maximum rating of the branch-circuit overcurrent device permitted by the NEC® is marked to indicate the maximum rating of the branch-circuit overcurrent device for which the unit has been investigated and found acceptable.

Factory Configuration Information. Each hydromassage bathtub is provided with a marking on the wiring diagram, in the installation instructions or on a separate configuration sheet, to identify the factory-installed components of the unit. These components include pumps, controls, heaters, luminaires, and supply cords. The configuration marking and the installation instructions are intended to be available during installation and inspection.

Ground-Fault Protection. Whether they are permanently wired or use a cord and plug, these units are intended to be protected by a ground-fault circuit interrupter. Each unit is plainly marked with the following or equivalent statement: “Connect only to a circuit protected by a ground-fault circuit interrupter (GFCI).”

Multiple Supply Sources. A hydromassage bathtub may have provision for a maximum of two supply sources. If the unit is cord-connected, each single source must be an individual branch circuit rated not more than 20 amperes. Units requiring more than one disconnect switch to disconnect all power are provided with a marking warning to this effect.

Options. Hydromassage bathtubs may have option kits indicated in the installation instructions. These typically include blowers, heaters or luminaire assemblies. Hydromassage bathtubs intended for heaters to be installed after the bathtub leaves the factory are factory configured with a fitting to be removed and replaced by the heater. These units are marked “Suitable for Field-Installed Heater Accessory” and “Use only Accessory Heaters Marked for Use With This Bathtub.” Bathtubs not factory-configured for

a field-installed heater are marked "Not Suitable for Field-Installed Heater."

8. FOUNTAINS

8.1. GENERAL

This section covers fountains with UL Listed equipment assembled and connected in the field. Electrical products for use in fountains are Listed under the following categories: "Pumps, Motor-Operated Water" (REUZ), "Plumbing Accessories" (QMTX) and "Submersible Luminaires (Fixtures)" (IFEV), "Pumps" (WCSX) and "Industrial Control Panels" (NITW).

8.2. SUBMERSIBLE LUMINAIRES

General. Products Listed in this category include submersible luminaires and submersible junction boxes. Submersible luminaires for use in fountains are not suitable for use in vessels intended for partial or complete immersions of persons.

Listing Mark. UL Listed submersible luminaires and junction boxes for use in fountains have a Listing Mark with the product names:

"Mounting Bracket for No-Niche Luminaire (Fixture),"
"Housing for Wet-Niche Luminaire (Fixture),"
"Submersible Luminaire (Fixture) Wet-Niche Type,"
"Submersible Luminaire (Fixture) Dry-Niche Type,"
"Submersible Luminaire (Fixture) No-Niche Type,"
"Submersible Luminaire (Fixture) Special Use," or
"Submersible Junction Box."

Field Installation:

Dry-Niche Submersible Luminaire. This luminaire type is intended for permanent installation only in the wall of built-in fountains, unless accompanying installation instructions describe additional option of installation in the bottom of the fountain. These luminaires are designed for servicing from the rear through a passageway behind the fountain wall or, if mounted in the bottom of the fountain, in a tunnel underneath the fountain. For the purposes of installation, maintenance or servicing, the luminaire may include a factory-installed length of flexible cord terminating in an attachment plug. A receptacle outlet assembly for connection of the attachment plug to the branch-circuit may be provided as an integral part of the niche included with the luminaire.

Wet-Niche Submersible Luminaire. These luminaires are intended to be installed in the wall of built-in fountains, unless accompanying installation instructions describe additional option of installation in the bottom of the fountains. They are intended for installation in a permanently installed luminaire housing (forming shell) in which the luminaire will be completely surrounded by water. These luminaires are marked to indicate the proper luminaire housing or housings with which they are to be used. Luminaire housings are marked to indicate the luminaire or luminaires with which the luminaire housings are to be used. These luminaires are provided with a factory-installed, permanently attached flexible cord that extends at least 12 feet outside the luminaire enclosure to permit the luminaire to be removed from the luminaire housing and lifted to the fountain deck for servicing without lowering the water level or disconnecting the branch-circuit conductors. Luminaires with longer cords are available for installations with a junction box or splice enclosure located

where a longer cord is necessary to permit luminaire removal from the luminaire housing and placement on the deck for servicing.

No-Niche Submersible Luminaire. These luminaires are intended to be installed on the walls of built-in fountains, unless accompanying installation instructions describe the additional option of installation in the bottom of the fountains. These luminaires are to be mounted to a bracket (luminaire housing) and permanently secured in or on the wall, with the luminaire completely surrounded by water. These luminaires are provided with a factory-installed, permanently attached flexible cord that extends at least 12 feet outside the luminaire enclosure. The cord is intended to function similarly to those provided with a wet-niche type luminaire.

Submersible Luminaire Special Use Type. These luminaires are intended to rest directly on the fountain floor or on other surfaces within the perimeter of the fountain. The luminaires are provided with a permanently attached flexible cord intended to terminate in a submersible junction box or to be routed out of the fountain through conduit to a junction box.

Metal Conduit Only. A submersible luminaire housing (forming shell) that does not have a grounding terminal is marked "CAUTION — For proper grounding use only with metal conduit."

Orientation, Luminaire. A submersible luminaire that depends on its location or position to function correctly is marked to indicate the way it is to be installed or used, unless the position is obvious.

Orientation, Luminaire Housing and Mounting Bracket. If a submersible luminaire housing (forming shell) is relied upon to orient the luminaire in a position that is necessary for its intended performance, the luminaire housing or mounting bracket is marked to indicate the position in which it is to be installed.

Submerge Before Lighting. Luminaires that have been investigated for operation while submerged under water are marked "Submerge Before Lighting" or the equivalent, and such a marking must be visible after installation of the luminaire. +

8.3. SUBMERSIBLE PUMPS

These are UL Listed under the product categories of "Plumbing Accessories" (QMTX) or "Pumps, Motor-Operated Water" (REUZ). The Listing Mark product name is "Submersible Pump" or equivalent. These pumps have not been investigated for use with or in proximity to swimming pools or spas.

9. COVERS FOR SWIMMING POOLS AND SPAS

9.1. GENERAL

This section covers swimming pool and spa safety covers, including both manually and power-operated types. Also included are special-purpose covers such as energy conservation or solar energy covers.

Manual safety covers are intended to impede access to the contained body of water. They are provided with means for removing significant levels of collected surface water.

Power safety covers are barriers that can be placed over the water area and are removed with a motorized mechanism. They are intended to impede access to the contained body of water. A power safety cover includes an operator that is Listed under the category “Swimming Pool and Spa Cover Operators, Electric” (WDDJ).

Other types of covers such as energy conservation or solar energy covers are not intended to impede access to the contained body of water. Such covers are marked “This Is Not A Safety Cover.”

9.2. CLASSIFICATION MARKING

The Classification marking for these products includes the names “Manual Safety Cover,” “Power Safety Cover” or “Pool Cover.”

- B. No. 8 AWG insulated supplemental equipment grounding conductor where nonmetallic conduit used.
- C. No. 8 AWG solid bonding conductor to pool common bonding grid.

APPENDIX B UL GUIDE INFORMATION

ARCHITECTURAL AND FLOATING FOUNTAINS (AWEG)

USE AND INSTALLATION

This category covers electrical equipment systems intended for installation in accordance with Article 680 (Part V) and Article 682 of ANSI/NFPA 70, "National Electrical Code." Equipment may consist of pumps (including submersible pumps), lights, control panels, and timers. Equipment may also include wind sensors, light detectors, freeze prevention equipment, and the like. These systems may be submersible or intended for remote installation. Systems suitable for outdoor use are so marked.

RELATED PRODUCTS

Similar portable equipment is covered under Fountains, Small Decorative (IQRW). Control panels for use with equipment intended for water-play fountains and water playground areas, swimming pools and spas, or fountains with water in common with swimming pools are covered under Controls (WAWU).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 778, "Motor-Operated Water Pumps," UL 676, "Underwater Lighting Fixtures," and UL 508A, "Industrial Control Panels."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Architectural Fountain," "Floating Fountain" or "Floating Fountain Equipment," or other appropriate product name as shown in the individual Listings.

SUBMERSIBLE LUMINAIRES (IFEV)

USE

This category covers submersible luminaires intended for installation in accordance with Article 680 of ANSI/NFPA 70, "National Electrical Code," in fountains and similar water-containing vessels not intended to accommodate the complete or partial immersion of persons. For Listings of luminaires intended for use in swimming pools, spas, hot tubs and other vessels intended to accommodate persons, see Luminaires and Forming Shells (WBDT).

This category also covers submersible junction boxes intended for use with submersible

luminaires and other submersible fountain equipment.

Luminaires investigated for operation only while submersed in water are marked “Submerge Before Lighting,” or with equivalent wording, and such marking is visible after installation of the luminaire.

Submersible luminaires have been investigated for both outdoor and indoor use.

Dry-niche Submersible Luminaire — These luminaires are intended for permanent installation only in the wall of a fountain unless accompanying installation instructions describe the additional option of installation in the bottom of the fountain. These luminaires are designed for servicing from the rear in a passageway behind the fountain wall or, if mounted in the bottom of the fountain, in a tunnel underneath the fountain. For purposes of installation, maintenance or servicing, the luminaire may consist of two separable parts. One part includes a factory-installed length of flexible cord terminating in an attachment plug, and the second part includes a receptacle for the attachment plug and a splice compartment in which the branch circuit conductors are connected.

Wet-niche Submersible Luminaire — These luminaires are intended to be installed only in the wall of a fountain unless accompanying installation instructions describe the additional option of installation in the bottom of the fountain. These luminaires are intended for installation in a permanently installed luminaire housing (forming shell) in which the luminaire will be completely surrounded by water. These luminaires are marked to indicate the proper housings with which they are to be used, and the luminaire housings are marked to indicate the luminaires with which the housings are to be used. These luminaires are provided with a factory-installed, permanently attached exible cord with an exposed length of not less than 12 ft. The exible cord is con ned in the luminaire housing by the luminaire and permits the luminaire to be removed from the luminaire housing and to be lifted to the fountain deck for servicing without lowering the water level or disconnecting the luminaire from the branch circuit conductors. Luminaires with longer cords are available for installations where the junction box or splice enclosure is so located that a 12 ft long cord will not permit luminaire removal from the luminaire housing and placement on the deck for servicing. To reduce the risk of product damage, any cord length in excess of that necessary for servicing should be trimmed from the supply end rather than stored in the luminaire housing.

Forming Shell (Housing) for Wet-niche Submersible Luminaires — These are structures designed to support a mating wet-niche luminaire, for mounting in a fountain structure. Forming shells are designed to require the supply end of the conduit connected to the forming shell to be directly connected to a Listed swimming pool junction box (see WCEZ. This forming shell-connected conduit may alternatively be connected directly to other equipment (such as Swimming Pool and Spa Transformers (WDGV), Ground-fault Circuit Interrupters (KCXS), Panelboards (QEUY), or pool or spa control equipment) only when such other equipment has been investigated for this use, as indicated by the marking “Suitable for direct conduit connection to a wet-niche or no-niche luminaire,” or the equivalent.

No-niche Submersible Luminaire — These luminaires are intended to be installed only on the walls of a fountain unless accompanying installation instructions describe the additional option of installation on the bottom of the fountain. These luminaires are mounted to a bracket permanently secured in or on the wall or bottom with the luminaire completely surrounded by water. These luminaires are provided with a factory-installed, permanently attached flexible cord with an exposed length of not less than 12 ft that is confined by the luminaire and fountain wall or bottom.

The flexible cord permits the luminaire to be removed from the mounting bracket and to be lifted to the fountain deck for servicing without lowering the water level or disconnecting the luminaire from the branch circuit conductors. Luminaires with longer cords are available for installations where the junction box or splice enclosure is so located that a 12 ft long cord will not permit luminaire removal from the mounting bracket and placement on the deck for servicing. To reduce the risk of product damage, any cord length in excess of that necessary for servicing should be trimmed from the supply end rather than stored between the luminaire and fountain wall.

Mounting Brackets for No-niche Submersible Luminaires — These are structures designed to support a mating no-niche luminaire, for mounting in or on a fountain structure. Mounting brackets are designed to require the supply end of the conduit connected to the mounting bracket to be directly connected to a Listed swimming pool junction box (see WCEZ). The information provided above about alternate supply-end termination of conduit connected to forming shells also applies to supply-end termination of conduit connected to the mounting brackets of no-niche luminaires.

Special Use Submersible Luminaire — These luminaires are intended to rest directly on the fountain floor or may be otherwise located in the fountain. The luminaires are provided with a permanently attached exposed flexible cord intended to be routed into a submersible junction box, or the luminaires have other means for permanent connection to the supply circuit.

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 676, “Luminaires and Submersible Junction Boxes.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Mounting Bracket for No-Niche Luminaire,” “Housing for Wet-Niche Luminaire,” “Wet-Niche Submersible Luminaire,” “Dry Niche Submersible Luminaire,” “No-Niche Submersible Luminaire,” “Special Use Submersible Luminaire” or “Submersible Junction Box,” or other appropriate product name as shown in the individual Listings. Alternatively, the luminaires may be designated “Submersible Luminaire, (Wet-) (Dry-) (No-) Niche Type,” as appropriate.

HYDROMASSAGE BATHTUBS (NCHX)

USE AND INSTALLATION

This category covers indoor hydromassage bathtubs (also known as whirlpool baths) rated 250 V or less, for residential and commercial use, for permanent connection to the building plumbing, and intended for installation and use in accordance with Article 680 of ANSI/NFPA 70, “National Electrical Code.” They are intended for either permanent connection to the electrical supply or are provided from the factory with a maximum 3 ft. type SJ or equivalent service cord terminating

in a grounding type attachment plug. A hydromassage bathtub may have provision for a maximum of two supply sources.

A hydromassage bathtub consists of a drainable tub, a recirculating pump and optional equipment such as lights, a heater, a control and an air blower. A bathtub may also be provided with an air-blower and no recirculating pump or with an integral shower unit.

This category also covers heaters intended to be installed after a hydromassage bathtub leaves the factory. These field-installed heaters are Listed as hydromassage bathtub accessories. They are provided with markings on the heater and on the heater packaging to indicate the hydromassage bathtub models with which they are suitable.

Hydromassage bathtubs and hydromassage bathtub accessory heaters are intended to be protected by a ground-fault circuit interrupter.

Double Insulation — Hydromassage bathtubs may utilize double insulated pumps. These pumps are marked “Double Insulated” or “Double Insulation.” Double insulated pumps intended for permanent connection to the supply may or may not have provision to terminate an equipment grounding conductor. Cord-connected double insulated pumps may be provided with a power supply cord terminating in a nongrounding type attachment plug. Double insulated pumps are not provided with a pressure wire connector for equipotential bonding.

The physiological effect of using this equipment has not been determined. The suction fittings used in these hydromassage bathtubs have been investigated with respect to body and hair entrapment in accordance with ASME/ANSI A112.19.8M-1987. INSTRUCTIONS/MARKINGS

Factory Configuration Information — Each hydromassage bathtub is provided with a marking on the wiring diagram, in the installation instructions or on a separate configuration sheet, to identify the factory-installed components of the unit. These components include pumps, controls, heaters, luminaires, and supply cords. This configuration marking and the installation instructions are intended to be available during installation and inspection.

Field-installed Options — Field-installed options that have been investigated and found to be suitable for addition to the unit are specified in the installation instructions. Hydromassage bathtubs intended for accessory heaters to be installed in the field are factory configured with fittings for this purpose. These bathtubs are marked “Suitable for Field-Installed Heater Accessory” and “Use only Accessory Heaters Marked for Use with This Bathtub.”

RELATED PRODUCTS

Portable hydromassage equipment is covered under Personal Hygiene and Health Care Appliances (QGRZ). This category does not cover hydrotherapy tubs used in health care facilities. For professional equipment, see Medical and Dental Equipment, Professional (KFBQ) under Health Care Facilities Equipment (KEVQ). For prefabricated steam baths and showers, see Prefabricated Assemblies, Sections and Units (QQXX). For sauna and steam bath heating equipment, see Heaters, Sauna and

Steam Bath (KPJV). Self-contained spas and hot tubs are covered under Self-contained Spas (WCZW).

For unjetted plastic bathtubs, shower stalls, and the like tested in accordance with the

applicable ANSI Z124 series standards, see Plastic Plumbing Fixtures (QNNP).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1795, “Hydromassage Bathtubs.”

ADJUNCT SERVICES

Underwriters Laboratories Inc. (UL) provides a service for the Classification of hydromassage bathtubs that not only meet the appropriate requirements of UL but also have been investigated in accordance with Standards or parts detailed below. These products are intended for installation and use in accordance with the applicable model plumbing code.

1. 1. ASME/ANSI A112.19.7M-+, “Requirements for Whirlpool Bathtub Appliances”
2. 2. Water retention test requirement from ASME/ANSI A112.19.7M-+

+ Issue date of standard or latest addendum

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Hydromassage Bathtub” or “Hydromassage Bathtub Accessory.”

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated in accordance with standards or parts detailed below from the American National Standards Institute (ANSI). The combined Listing/ Classification Mark consists of the Listing Mark elements detailed above and the following marking: “ALSO CLASSIFIED IN ACCORDANCE WITH *,” where “*” is one of the texts detailed below:

1. 1. ASME/ANSI A112.19.7M-+
2. 2. WATER RETENTION TEST REQUIREMENT FROM ASME/ANSI A112.19.7M-+

+ Issue date of standard or latest addendum

PLUMBING ACCESSORIES (QMTX)

GENERAL

This category covers plumbing accessories connected to or used with plumbing in commercial locations or residential occupancies, including irrigation equipment, sprinkler controls, water controls located in kitchens and bathrooms, electric faucets, toilet-flushing systems, lawn sprinklers, plumbing controls, hydromassage chairs and pedicure spas.

Products suitable for outdoor use and those for use with heated liquids are so marked.

These products have not been investigated with respect to the effect of their use with corrosive liquids or aqueous solutions containing corrosive materials.

REBUILT PRODUCTS

This category also covers plumbing accessories that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt plumbing accessories are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt plumbing accessories are subject to the same requirements as new plumbing accessories.

RELATED PRODUCTS

Similar equipment intended for use in hospitals or medical offices in connection with patient treatment is covered under Medical and Dental Equipment, Professional (KFBQ).

Similar equipment for use with or in proximity to swimming pools or spas is covered under Swimming Pool and Spa Equipment (WABX).

Products and materials investigated for contact with drinking water are Classified to ANSI/NSF 61 and are covered under Drinking Water System Components (FDNP).

Plumbing fixture fittings investigated to ASME A112.18.1, ASSE 1014 and ASSE 1025 are covered under Plumbing Fixture Fittings (QNSQ).

Pumps are covered under Pumps, Electrically Operated, Liquid (REUZ).

See also Pumping Equipment for Fire Service (QVUT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1951, "Electric Plumbing Accessories."

ADJUNCT SERVICES

Underwriters Laboratories Inc. (UL) also provides a service for the Classification of plumbing accessories that not only meet the appropriate requirements of UL but have also been investigated in accordance with the following standards:

1. ANSI/ASME A112.19.7M, "Requirements for Whirlpool Bathtub Appliances."
3. Water retention test requirement from ANSI/ASME A112.19.7M.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Faucet" or "Lawn Sprinkler Control," or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt" precedes the product name.

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated in accordance with standards or parts detailed below from standards of the American National Standards Institute (ANSI). The combined Listing/Classification Mark consists of the Listing Mark elements detailed above along with the following:

"ALSO CLASSIFIED IN ACCORDANCE WITH *," where "*" is one of the texts detailed below.

1. ANSI/ASME A112.19.7M-+

2. WATER RETENTION TEST REQUIREMENT FROM ANSI/ASME A112.19.7M-

+

+ Issue date of standard or latest addendum

PUMPS, ELECTRICALLY OPERATED, LIQUID (REUZ)

USE

This category covers submersible and nonsubmersible pumps intended for household, commercial or industrial use, including pumps for fountains, circulation, sewage, effluent, wells, irrigation, building sites (contractor type), sumps and general utility.

The liquids for which a pump has been investigated are marked on the unit or are included in the installation instructions provided with the unit, unless the pump is obviously intended for use with water only, such as an irrigation pump.

Pumps suitable for outdoor use and those for use with heated water are so marked.

REBUILT PRODUCTS

This category also covers submersible and nonsubmersible pumps that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt submersible and nonsubmersible pumps are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt submersible and nonsubmersible pumps are subject to the same requirements as new submersible and nonsubmersible pumps.

RELATED PRODUCTS

Equipment covered under this category has not been investigated for use in hazardous (classified) locations as defined in ANSI/NFPA 70, "National Electrical Code." Reference to the Hazardous Locations Equipment Directory should be made for equipment that has been investigated for use in hazardous (classified) locations.

The products covered in this category have not been investigated with regard to the effect of their use with combustible or flammable liquids, corrosive liquids, or aqueous solutions containing corrosive materials. Such pumps are covered under Flammable Liquid Pumps (RBQR) and Power-operated Pumps (RBOG).

Similar equipment intended for use in hospital or medical offices in connection with patient treatment is covered under Medical and Dental Equipment, Professional (KFBQ).

These pumps have not been investigated for use with or in proximity to swimming pools or spas. Such pumps are covered under Swimming Pool and Spa Equipment, Pumps (WCSX).

Pumping equipment for re service is covered under the category of the same title (QVUT).

Pumps covered in this category have not been investigated for contact with drinking water.

Pumps that have been investigated only for contact with drinking water are Classified in accordance with the requirements of ANSI/NSF 61, "Drinking Water System Components - Health Effects" and are covered under Drinking Water System Components (FDNP).

For evaporative cooler pumps, see Evaporative Cooler Retro t Pumps (AGIS).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 778, "Motor-Operated Water Pumps."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sump Pump," "Water Circulating Pump" or "Sewage Pump," or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

WATER TREATMENT EQUIPMENT (WDLC)

USE AND INSTALLATION

This category covers chlorinators, brominators, ozone generators, ion generators, and similar equipment intended to sanitize water in pools, spas and hot tubs. This category also covers equipment designed to monitor water chemistry in pools, spas and hot tubs, with or without the capability of adding chemicals to the water to adjust water chemistry. These products are intended for installation in accordance with Article 680 of ANSI/NFPA 70, "National Electrical Code."

These products are acceptable for both indoor and outdoor use unless marked otherwise. They are provided with an accessible pressure-wire connector for equipotential bonding during installation.

UNEVALUATED FACTORS

The ability of this equipment to sanitize pool and spa water has not been investigated.

RELATED PRODUCTS

Equipment investigated for sanitation is covered under Pool and Spa Equipment Classified in Accordance with NSF 50 (WCNZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 1081, "Swimming Pool Pumps, Filters, and Chlorinators," and UL 1563, "Electric Spas, Equipment Assemblies, and Associated Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Swimming Pool Chlorinator", "Spa Chlorinator" or "Swimming Pool and Spa Chlorinator," or other appropriate product name as shown in the individual Listings.

SWIMMING POOL AND SPA EQUIPMENT (WABX)

USE

This category covers equipment for use with swimming pools, decorative pools, wading pools, therapeutic pools, and hot tubs and spas in accordance with Article 680 of NFPA 70, "National Electrical Code" (NEC).

This category also covers self-contained hot tubs and spas as well as cord-connected portable appliances for use with aboveground storable swimming pools, hot tubs and spas.

Information concerning the suitability of the equipment for use indoors or outdoors is given in the General Information Section for each individual category.

RELATED PRODUCTS

Ground-fault circuit interrupters intended for use with swimming pool equipment are covered under Ground-fault Circuit Interrupters (KCXS).

Suction fittings are covered under Swimming Pool and Spa Suction Fittings (WEBS).
Fountains covered by Article 680, Part E, of the NEC are covered under Architectural and Floating Fountains (AWEG).

Speakers intended for installation underwater in swimming pools are covered under Speakers (UEAY).

BLOWERS (WAGN)

USE AND INSTALLATION

This category covers equipment intended to introduce pressurized air into spas and hot tubs to

create a hydromassage effect. They are intended for installation in accordance with Article 680 of the National Electrical Code, NFPA 70.

Products Listed in this category are acceptable for both indoor and outdoor use unless marked otherwise. They are provided with an accessible pressure wire connector for equipotential bonding during installation.

To avoid water contacting live electrical parts, these products are to be installed in accordance with the manufacturer's instructions and permanently mounted at least 12 inches above the over flow level of the spa or hot tub.

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1563, "Electric Spas, Equipment Assemblies, and Associated Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of the Directory) together with the word "LISTED," a control number, and one of the following product names, as appropriate: "Spa Blower," "Hot Tub Blower" or "Spa/Hot Tub Blower."

CONTROLS (WAWU)

USE

This category covers controllers, timers, temperature-regulating equipment, etc., for control of equipment intended for use with swimming pools, hot tubs and spas. This category also covers control panels for use with equipment intended for water-play fountains and water playground areas, swimming pools and spas, or fountains with water in common with swimming pools.

These products are acceptable for both indoor and outdoor use unless marked "For Indoor Use Only."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1563, "Electric Spas, Equipment Assemblies, and Associated Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Spa Controller" or "Swimming Pool Controller," or other appropriate product name as shown in the individual Listings.

COVERS FOR SWIMMING POOLS AND SPAS (WBAH)

This category includes covers for use with swimming pools, spas and hot tubs. These covers have been evaluated in accordance with the American Society for Testing and Materials Standard ASTM F1346, "Standard Performance Specification for Safety Covers and Labeling Requirements for All Covers for Swimming Pools, Spas and Hot Tubs".

This category includes manual safety covers and power safety covers, as well as covers of other than the safety type, as defined in the ASTM F1346 Standard.

INSTALLATION

The ability of the manual or power safety cover to perform its intended function is dependent upon proper installation. Therefore, Authorities Having Jurisdiction should be consulted. Installation should be performed by a qualified installer using the manufacturer's instructions.

MANUAL SAFETY COVERS

A manual safety cover is a barrier that is manually placed over the water. It is intended to impede access to the contained body of water. It is provided with a means for removing significant levels of collected surface water.

POWER SAFETY COVERS

A power safety cover is a barrier that can be placed over the water area and removed with a motorized mechanism. It is intended to impede access to the contained body of water. It is provided with a means for removing significant levels of collected surface water. A power safety cover includes an operator that is Listed under Swimming Pool and Spa Cover Operators, Electric (WDDJ).

OTHER COVERS

A cover of other than the safety type, such as an energy conservation or a solar energy cover, is a cover that has been evaluated in accordance with only the materials, manufacture and labeling requirements of the ASTM Standard. Covers of this type are not intended to impede access to the contained body of water. Such covers are marked "This Is Not A Safety Cover."

The Classification Marking of Underwriters Laboratories Inc. (shown below) on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Marking for these products (shown below) includes the name and/or symbol of Underwriters Laboratories Inc. (as illustrated in the Introduction of this Directory) together with the word "CLASSIFIED", a control number, and one of the following product names as appropriate: "Manual Safety Cover", "Power Safety Cover", or "Pool Cover".

UNDERWRITERS LABORATORIES INC.
In Accordance With
ASTM F 1346-(Issue Date)
(control number)**

LUMINAIRES AND FORMING SHELLS (WBDT)

USE

This category covers luminaires and forming shells for installation in accordance with Article 680 of ANSI/NFPA 70, "National Electrical Code" (NEC).

PRODUCT MARKINGS

Luminaires suitable for use only in fresh water are marked "Fresh Water Only." Luminaires suitable for use in either fresh or salt water are marked "Salt Water or Fresh Water." Luminaires investigated for operation only in contact with water are marked "CAUTION To reduce the risk of electric shock submerge before lighting" or the equivalent, and such marking is visible after installation. Additional markings for specific types of luminaires are described below.

PRODUCT TYPES AND INSTALLATION

Dry-niche Underwater Luminaires for Swimming Pools and Spas — These luminaires have been investigated for permanent installation only in the wall of a swimming pool or field-fabricated spa unless accompanying installation instructions indicate suitability for installation in the bottom of a pool or spa. These luminaires have been investigated for installation with the top of the lens not less than 450 mm (18 in.) below the normal water level unless otherwise marked. These luminaires are designed for servicing from the rear in a passageway behind the pool or spa wall or, if mounted in the bottom of a pool or spa, in a tunnel underneath the pool or spa. The luminaire may include (1) a factory-installed length of flexible cord terminating in an attachment plug and (2) an attachment plug receptacle for connection of the branch-circuit conductors.

Wet-niche Underwater Luminaires for Swimming Pools and Spas — These luminaires, with the mating forming shell (luminaire housing), have been investigated for installation only in the wall of a swimming pool or field-fabricated spa unless accompanying installation instructions indicate suitability for installation in the bottom of a pool or spa. These luminaires have been investigated for installation with the top of the lens not less than 450 mm (18 in.) below the normal water level unless otherwise marked. These luminaires have been investigated for installation in a permanently installed forming shell (luminaire housing) in which the luminaire will be completely surrounded by water. These luminaires are marked to indicate the proper forming shells with which they have been investigated for use. Mismatching a wet-niche luminaire and forming shell can increase the risk of electric shock or injury to users. These luminaires are provided with a factory installed, permanently attached flexible cord with an exposed length of not less than 3.6 m (12 ft). The flexible cord is confined in the forming shell by the luminaire and permits the luminaire to be removed from the forming shell and to be lifted to the pool or spa deck for servicing without lowering the water level or disconnecting the luminaire from the branch-circuit conductors. Luminaires with longer cords are available for installations where the junction box or splice enclosure is so located that a 3.6 m (12 ft) long cord will not permit luminaire removal from the forming shell and placement on the deck for servicing. To reduce the risk of product damage, any cord length in excess of that necessary for servicing should be trimmed from the supply end rather than stored in the forming shell.

Forming Shell (Housing) for Wet-niche Underwater Luminaires for Swimming Pools and Spas — These are structures designed to support a mating wet-niche luminaire, for mounting in a pool structure. Forming shells are marked to indicate the luminaires with which the forming shells have been investigated for use. Mismatching a wet-niche luminaire and forming shell can

increase the risk of electric shock or injury to users. Forming shells are designed to require the supply end of the conduit connected to the forming shell to be directly connected to a Listed swimming pool junction box (see WCEZ). This forming shell-connected conduit may alternatively be connected directly to other equipment (such as Swimming Pool and Spa Transformers (WDGV), Ground-Fault Circuit Interrupters (KCXS), Panelboards (QEUY), or pool or spa control equipment) only when such other equipment has been investigated for this use, as indicated by the marking "Suitable for direct conduit connection to a wet-niche or no-niche luminaire," or the equivalent.

No-niche Underwater Luminaires for Swimming Pools and Spas — These luminaires have been investigated for installation only on the walls of a swimming pool or field-fabricated spa unless accompanying installation instructions indicate suitability for installation in the bottom of a pool or spa. These luminaires have been investigated for installation with the top of the lens not less than 450 mm (18 in.) below the normal water level unless otherwise marked. These luminaires have been investigated for mounting to a bracket permanently secured in or on the pool or spa wall or bottom where the luminaire will be completely surrounded by water. These luminaires are provided with a factory installed, permanently attached flexible cord with an exposed length of not less than 3.6 m (12 ft). The flexible cord is confined by the luminaire and pool wall or bottom and permits the luminaire to be removed from the mounting bracket and to be lifted to the pool or spa deck for servicing without lowering the water level or disconnecting the luminaire from the branch-circuit conductors. The information provided above for wet-niche luminaires regarding the availability of luminaires with longer flexible cords and the need to trim excess cord from the supply end also applies to no-niche luminaires.

Mounting Brackets for No-niche Underwater Luminaires for Swimming Pools and Spas — These are structures designed to support a mating no-niche luminaire, for mounting in or on a pool structure. Mounting brackets are marked to indicate the luminaires with which the mounting brackets have been investigated for use. Mismatching a no-niche luminaire and mounting bracket can increase the risk of electric shock or injury to users. Mounting brackets are designed to require the supply end of the conduit connected to the mounting bracket to be directly connected to a Listed swimming pool junction box (see WCEZ). The information provided above about alternate supply-end termination of conduit connected to forming shells also applies for supply-end termination of conduit connected to the mounting brackets of no-niche luminaires.

Underwater Luminaires for Aboveground Storable Swimming Pools — These luminaires are a type of through-wall lighting assembly as described in Article 680 of the NEC. They have been investigated for use with an aboveground storable pool (a pool that is constructed on or above the ground and is capable of holding water to a maximum depth of 1.0 m (42 in.), or a pool with nonmetallic, molded polymeric walls regardless of dimension). They include all three of the following factory-provided parts:

1. Lamp assembly for temporary installation on or through the wall of an aboveground pool
2. Transformer or ground-fault circuit interrupter assembly provided with a 0.9 m - 1.8 m (3 - 6 ft) power supply cord for connection to a source of supply and for temporary mounting away from the pool (the remote assembly)
3. Jacketed flexible cord of not less than 7.6 m (25 ft) in length connecting the lamp assembly and the remote assembly

These luminaires have been investigated for installation with the top of the lens not less than 200 mm (8 in.) below the top of the pool. A hole through the pool wall may be required for luminaire installation. Unless otherwise indicated in the luminaire's installation instructions, the luminaire

design has been investigated for the lower edge of any hole that a luminaire installer must cut in the pool wall to be no more than 360 mm (14 in.) below the top of the pool wall. The pool wall manufacturer may provide, at a greater depth, a properly sized hole or a reinforced wall section designed for field-cutting a properly sized hole for a luminaire or plumbing fitting. Unless otherwise marked for a maximum installation depth, these luminaires have been investigated for installation in such a hole at a greater depth where the pool installation instructions provide for the hole placement and usage.

Underwater Luminaires for Aboveground Nonstorable Swimming Pools — These luminaires are a type of through-wall lighting assembly as described in Article 680 of the NEC. They have been investigated for permanent installation through or on the wall of an aboveground nonstorable pool. The information provided above for underwater luminaires for aboveground storable swimming pools regarding installation depth and using an existing hole or cutting a new hole for installation also applies to underwater luminaires for aboveground nonstorable swimming pools.

Convertible Underwater Luminaires for Aboveground Swimming Pools — These luminaires are initially configured as an underwater luminaire for aboveground storable swimming pool for use as described above. They include provisions for the one-time field conversion of the luminaire to an underwater luminaire for aboveground nonstorable swimming pool for use as described above. Once converted, these luminaires are not suitable for being modified back to their original configuration.

Fiber Optic Luminaires for Swimming Pools and Spas — These luminaires consist of a lamp/electrical enclosure that has been investigated for permanent mounting not less than 1.5 m (5 ft) from the pool or spa wall and a fiber optic element and associated fittings to transmit the light to the pool or spa. The lamp/electrical enclosure has been investigated for installation above the level at which water splashed from the pool or spa or from another source may collect.

SUPPLY CIRCUIT CURRENT RATING

An underwater luminaire for aboveground storable swimming pools has been investigated for connection to the branch circuit specified in the NEC for receptacles having a blade configuration corresponding to the blade configuration of the luminaire attachment plug. For all other luminaires, unless marked to identify a permitted greater or required lower maximum supply circuit current rating, a luminaire with a voltage and current rating shown in the table below has been investigated for installation on a supply circuit rated not more than as specified in the table. A luminaire with a voltage or current rating not covered by the table is marked to identify the maximum supply circuit current rating for its installation.

**Maximum Current Rating for Supply Circuit
(Except as Specified in Preceding Paragraph)**

Luminaire Voltage Rating	Luminaire Current Rating	Max Current Rating for Luminaire Supply Circuit
15 V ac or less	25 A or less	25 A
110 V ac - 120 V ac	16 A or less	20 A
110 V ac - 120 V ac	More than 16 A, not more than 24 A	30 A

RELATED PRODUCTS

See Submersible Luminaires (IFEV) for underwater luminaires intended for use in fountains and similar water-containing vessels not intended to accommodate the complete or partial immersion of persons.

See Swimming Pool Junction Boxes (WCEZ) for junction boxes intended for use with wet-niche luminaires and their forming shells. See Swimming Pool and Spa Transformers (WDGV) for transformers for use to supply swimming pool and spa luminaires. See Potting Compounds (WCRY) for compounds for the user to encapsulate grounding and bonding conductor splices in swimming pool, spa or fountain equipment, including luminaires, forming shells and junction boxes.

ADDITIONAL INFORMATION

For additional information, see Swimming Pool and Spa Equipment (WABX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 676, "Underwater Luminaires and Submersible Junction Boxes."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate:

- "Dry-niche Underwater Luminaire for Swimming Pool"
- "Wet-niche Underwater Luminaire for Swimming Pool"
- "Forming Shell (or Housing) for Wet-niche Luminaire"
- "No-niche Underwater Luminaire for Swimming Pool"
- "Mounting Bracket for No-niche Luminaire"
- "Underwater Luminaire for Aboveground Storable Swimming Pool"
- "Underwater Luminaire for Aboveground Nonstorable Swimming Pool"
- "Convertible Underwater Luminaire for Aboveground Swimming Pool"
- "Fiber Optic Luminaire for Swimming Pool"

HEATERS (WBRR)

USE

This category covers heaters intended for permanent installation in or adjacent to swimming pools or spas.

These products have not been investigated for outdoor use unless they are marked "For Outdoor Use," or equivalent, in which case they are acceptable for both outdoor and indoor use.

RELATED PRODUCTS

Heaters intended for use with hydromassage bathtubs are covered under Hydromassage Bathtubs (NCHX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1261, "Electric Water Heaters for Pools and Tubs."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Swimming Pool Heater" or "Spa Heater."

HOT TUB AND SPA EQUIPMENT ASSEMBLIES (WBYQ)

USE AND INSTALLATION

This category covers equipment assemblies intended for use with non-self-contained spas and hot tubs, rated 250 V or less, for household or commercial use indoors, outdoors, or both. This category also covers equipment assemblies that do not contain a water heater and do not contain a water temperature-regulating control or a water temperature-limiting control. A water heater, a temperature-regulating control and a temperature-limiting control should be provided in the final installation and their adequacy determined by the Authority Having Jurisdiction. Equipment assemblies may be cord-and-plug connected, convertible, or permanently wired. Convertible equipment assemblies are shipped from the factory with a power-supply cord but designed for field conversion to a permanently-wired configuration, for 120 V, 240 V, or either rating. Once a convertible equipment assembly is converted to permanently wired, it is not intended to be returned to a cord-connected configuration.

Equipment assemblies are prepackaged combinations of various components, such as pumps, filters, heaters, blowers, lights and controls, and are designed for use with field-supplied tubs. Equipment assemblies are designed for installation and use in accordance with Article 680 of ANSI/NFPA 70, "National Electrical Code." Equipment assemblies should be installed at least 5 feet from the inside walls of a spa or hot tub and be connected by nonmetallic pipe only. Equipment assemblies have not been investigated for below-grade installation.

Equipment assemblies have not been investigated for use within an outer enclosure or under the skirt of a spa or hot tub unless so marked.

Equipment assemblies that contain a gas-fired water heater have not been investigated for indoor use, for use within an outer enclosure, or for use under the skirt of a spa or hot tub unless so marked.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1563, "Electric Spas, Equipment Assemblies, and Associated Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Equipment Assembly for Spa/Hot Tub," "Hot Tub Equipment Assembly" or "Spa Equipment Assembly."

JUNCTION BOXES (WCEZ)

USE

This category covers junction boxes intended for use with underwater swimming pool and spa luminaires. The boxes are acceptable for both outdoor and indoor use.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1241, "Junction Boxes for Swimming Pool Luminaires."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Swimming Pool Junction Box."

OIL-FIRED SWIMMING POOL AND SPA HEATERS (LSHW)

USE

This category covers oil-fired appliances intended for indoor or outdoor use for heating non-potable water stored at atmospheric pressure, such as water in swimming pools, spas, hot tubs and similar applications.

INSTALLATION

These heaters are intended to be installed in accordance with the markings on the appliance and in the installation instructions provided with the appliance, including (as applicable) markings and

instructions pertaining to clearances, closet installation, types of adjacent surfaces and proper vent installation, and the following as applicable:

- the current edition of NFPA 31, "Standard for the Installation of Oil-Burning Equipment,"
- the current edition of ANSI/NFPA 70, "National Electrical Code" (including Article 680),
- local codes.

RELATED PRODUCTS

See Gas-fired Swimming Pool and Spa Heaters (LSEV).

ADDITIONAL INFORMATION

For additional information, see Heating Appliances (KTCR) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 726, "Oil-Fired Boiler Assemblies."

In addition, oil-fired spa heaters are investigated to UL 1563, "Electric Spas, Equipment Assemblies, and Associated Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Oil-fired Swimming Pool Heater" or "Oil-fired Spa Heater."

OZONE GENERATORS (WCKA)

USE AND INSTALLATION

This category covers ozone generators rated 600 V or less and intended for use in the treatment of nonpotable water in swimming pools, and in spas and hot tubs of other than the self-contained type.

These products have been found suitable for use in wet and damp locations as well as dry locations unless marked "For Use in Dry Locations Only."

These products have been investigated with respect to risk of electric shock, fire and mechanical injury only.

Ozone generators involve features of installation and use not ordinarily present in electrical utilization equipment. Such features are covered in the manufacturer's installation instructions. The installation is intended to be in accordance with the manufacturer's instructions furnished with the equipment and the requirements of the Authorities Having Jurisdiction.

Maximum ozone threshold limit recommendations are set by the American Conference of Governmental Industrial Hygienists as found in 21CFR801.415, "Maximum Acceptable Level of Ozone." Compliance with the applicable regulations under conditions of normal and abnormal operation has not been investigated.

ADDITIONAL INFORMATION

For additional information, see Swimming Pool and Spa Equipment (WABX), Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1563, "Electric Spas, Equipment Assemblies and Associated Equipment."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

OZONE GENERATOR
WITH RESPECT TO RISK OF ELECTRIC SHOCK,
FIRE AND MECHANICAL INJURY ONLY
Control No.

**POOL AND SPA EQUIPMENT
CLASSIFIED IN ACCORDANCE WITH NSF 50
(WCNZ)**

USE

This category covers pool and spa equipment, such as filters, centrifugal pumps, surface skimmers, ozone generators, chemical feeding equipment, chlorinators and other units installed in water circulation and filtration systems of pools, spas and hot tubs.

RELATED PRODUCTS

Some products covered under this category may also be Listed under Water Treatment Equipment (WDLC), Swimming Pool and Spa Equipment, Miscellaneous (WDUT) or Pumps (WCSX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is NSF/ANSI 50, "Circulation System Components and Related Materials for Swimming Pools, Spas/Hot Tubs."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED"

above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY*]
IN ACCORDANCE WITH NSF/ANSI 50-[issue date]
Control No.

* SWIMMING POOL FILTER, OZONE GENERATOR, SPA CHLORINATOR or other appropriate product name as shown in the individual Classifications

For those products which are also Listed or Classified by Underwriters Laboratories Inc. under another category, the marking includes the appropriate Listing or Classification Mark and the statement "ALSO CLASSIFIED IN ACCORDANCE WITH NSF/ANSI 50-[issue date]."

POTTING COMPOUNDS (WCRY)

USE

This category covers compounds intended to be used to encapsulate grounding and bonding conductor splices or terminations in swimming pool, spa or fountain equipment such as fixtures, fixture housings, and junction boxes where the splices or terminations may be exposed to salt-free swimming pool or fountain water and sunlight for varying lengths of time, including continuous exposure. This category also covers potting compounds used to fill underwater junction boxes.

These compounds have been investigated for their resistance to the deteriorating effects of salt-free swimming pool and fountain water and ultraviolet light. They have also been investigated for their ability to adhere to typical metals, such as copper alloy, stainless steel and to plastic. The container or package is marked to identify the materials to which the compound has been determined to suitably adhere.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 676A, "Outline of Investigation for Potting Compounds for Swimming Pool, Fountain, and Spa Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Swimming Pool, Fountain and Spa Equipment Conductor Splice Potting Compound" (any of the locations may be omitted).

PUMPS (WCSX)

GENERAL

This category covers pumps for circulating the water in swimming pools, hot tubs and spas. These products are intended for installation in accordance with Article 680 of ANSI/NFPA 70, "National Electrical Code."

These products are acceptable for both outdoor and indoor use unless marked otherwise, and have been investigated for use with either permanently-installed pools or storable pools.

Pumps investigated for permanently-installed pools are so identified and are additionally marked "Do Not Use With Storable Pools." Permanently-installed pool pumps are intended to be permanently connected to the water circulation system and they may be permanently wired or provided with a 3-ft nondetachable power-supply cord terminating in a grounding-type attachment plug. The attachment plug may be of the locking or nonlocking type. Units provided with locking-type attachment plugs are intended to be installed at least 5 ft from the inside walls of the pool and are marked accordingly. Units provided with a nonlocking-type attachment plug are intended to be installed at least 10 ft from the inside walls of the pool and are marked accordingly. Permanently-installed pool pumps are provided with an accessible pressure-wire connector for equipotential bonding.

Pumps investigated for storable pools are so identified and are additionally marked "Do Not Use With Permanently Installed Pools." Storable pool pumps are intended to be connected to a water circulation system constructed so that the pump may be readily disassembled from the system for storage and future reassembly to its original integrity. Storable pool pumps are provided with a minimum 25-ft nondetachable power-supply cord terminating in a grounding-type attachment plug, are double insulated, have no accessible grounded metal parts, have inaccessible noncurrent-carrying metal parts connected to the grounding conductor of the supply cord, and do not have an equipotential bonding connector. These pumps may be provided with integral filters. The suitability of the filters to clean water has not been determined.

REBUILT PRODUCTS

This category also covers pumps that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt pumps are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt pumps are subject to the same requirements as new pumps.

RELATED PRODUCTS

Filters investigated to NSF/ANSI 50, "Circulation System Components and Related Materials for Swimming Pools, Spas/Hot Tubs," are covered under Swimming Pool and Spa Equipment Classified in Accordance with NSF 50 (WCNZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1081, "Swimming Pool Pumps, Filters, and Chlorinators."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Swimming Pool Pump," "Spa Pump" or "Swimming Pool or Spa Pump," or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

SELF-CONTAINED SPAS (WCZW)

USE AND INSTALLATION

This category covers self-contained spas for aboveground use, for household or commercial use, and for both indoor and outdoor use, unless marked otherwise. These spas are not designed or intended to have the water drained after each use. They are intended for installation in accordance with Article 680 of ANSI/NFPA 70, "National Electrical Code."

A self-contained spa is a continuous-duty appliance in which all control, water-heating and water-circulating equipment is an integral part of the product, located entirely under the spa skirt.

Self-contained spas may be cord connected, convertible, or permanently wired. A convertible spa is shipped from the factory with a power-supply cord but is designed for field conversion to a permanently-wired configuration, either 120 V, 240 V, or both. Once a convertible spa is converted to permanently wired, it is not intended to be returned to a cord-connected configuration.

Self-contained spas may be provided with electric or gas heaters. Spas with gas heaters are intended for permanent wiring and permanent installation, and are intended for outdoor use only.

Each spa is provided with a marking on the wiring diagram in the field-wiring compartment or in the installation instructions or on a separate configuration sheet, to identify the major components of the spa when manufactured. The configuration sheet and the installation instructions are intended to be available during installation and inspection.

Self-contained spas may be shipped completely assembled or in knockdown form.

Knockdown spas are packaged by major component in multiple cartons to aid in shipping. They consist of a completely assembled and plumbed tub and an equipment package. The skirt may be attached to the tub or it may be provided in prefabricated sections for assembly in the field. The equipment package is completely assembled, pre-wired and plumbed. Connections are made by union fittings or similar quick-disconnect plumbing that does not require tools or special materials.

All cartons used to ship a knockdown spa are marked to indicate the contents, the spa model, and the total number of required cartons.

RELATED PRODUCTS

Hydromassage bathtubs are covered under Hydromassage Bathtubs (NCHX).

Hydrotherapy equipment for professional treatment of athletes or patients is covered under Medical and Dental Equipment, Professional (KFBQ).

Factory-made assemblies of pumps, heaters, blowers, lights and controls intended for use with field-supplied hot tubs and spas are covered under Hot Tub and Spa Equipment Assemblies (WBYQ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1563, "Electric Spas, Equipment Assemblies, and Associated Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Self Contained Spa."

SWIMMING POOL AND SPA COVER OPERATORS, ELECTRIC (WDDJ)

USE AND INSTALLATION

This category covers electrically-driven cover operators intended for use with swimming pools and spas, together with controls for use with such operators. The cover operators generally consist of a motor-driven apparatus used to move the covering material. These operators are intended to be installed in accordance with Article 680 of ANSI/NFPA 70, "National Electrical Code." These products have been found suitable for both indoor and outdoor use.

RELATED PRODUCTS

Some products covered under this category may incorporate pool covers Classified under Covers for Swimming Pools and Spas (WBAH). Unless Classified as a power safety cover under WBAH, a cover provided with the operator has not been investigated as a safety cover.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2452, "Outline of Investigation for Electric Swimming Pool and Spa Cover Operators."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Swimming Pool Cover Operator," "Spa Cover Operator" or "Pool Cover Operator."

SWIMMING POOL AND SPA TRANSFORMERS (WDGV)

USE

This category covers swimming pool and spa transformers of the isolated two-winding type having a grounded metal barrier between the primary and secondary windings, and intended to supply swimming pool, spa or submersible (fountain) luminaires in accordance with Article 680 of ANSI/NFPA 70, "National Electrical Code." The primary rating is 120 V and the maximum secondary ratings are 15 V rms and 1 kVA. The transformers are provided with integral overload protection.

These products are provided with a power supply cord or have provisions for conduit connection to the branch circuit supply. Transformers not provided with a power supply cord are provided with leads or with studs or terminal pads to which Listed pressure wire connectors can be factory or field installed to accommodate field wiring. Wire binding screws or studs with cupped washers should be used for copper wire 10 AWG max.

Transformers provided with a power supply cord are intended for supplying low-voltage submersible (fountain) luminaires as indicated by marking on the transformer. They are not intended for use with a swimming pool or spa luminaires.

Unless marked otherwise, these transformers are not suitable for connection to a conduit, which extends directly to a wet-niche or no-niche luminaire.

These products have not been investigated for outdoor use, unless they are marked "For Outdoor Use" or equivalent, in which case they have been found acceptable for both outdoor and indoor use.

ADDITIONAL INFORMATION

For additional information, see Swimming Pool and Spa Equipment ([WABX](#)), Electrical Equipment for Use in Ordinary Locations ([AALZ](#)) and Plumbing and Associated Products ([AAPP](#)).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in [UL Subject 379](#), "Outline of Investigation for Transformers for Fountain, Swimming Pool, and Spa Luminaires."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory)

together with the word "LISTED," a control number, and one of the following product names: "Fountain Transformer," "Swimming Pool Transformer," "Spa Transformer" or "Fountain, Swimming Pool or Spa Transformer."

SWIMMING POOL AND SPA EQUIPMENT, MISCELLANEOUS (WDUT)

GENERAL

This category covers accessory equipment for swimming pools, hot tubs and spas, such as valves and pool cover operators.

Unless marked otherwise, these products are acceptable for both indoor and outdoor use.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 1563, "Electric Spas, Equipment Assemblies, and Associated Equipment" and UL 1081, "Swimming Pool Pumps, Filters and Chlorinators."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pool Cover Operator", "Pool Valve Actuator" or "Pool Freeze Protector," or other appropriate product name as shown in the individual Listings.

SUCTION FITTINGS FOR SWIMMING POOLS, WADING POOLS, SPAS AND HOT TUBS (WEBS)

USE AND INSTALLATION

This category covers suction fittings intended for use in swimming pools, wading pools, in-ground spas, hot tubs, and similar installations.

These fittings have been investigated for resistance to hair, body, finger and limb entrapment.

Suction fittings have been investigated for both indoor and outdoor use. They are intended to be installed following the instructions that are packaged with each fitting.

RATINGS

Each suction fitting is marked with a waterflow rate in gallons per minute. This rate must equal or exceed the maximum flow rate of the pump(s) used in the water circulating system.

PRODUCT MARKINGS

These fittings are marked with the statement "For Single or Multiple Drain Use", "For Single Drain Use" or "For Multiple Drain Use Only," and the installation position: "Wall Only", "Floor Only" or "Wall or Floor."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/ASME A112.19.8-2007, "Suction Fittings for Use in Swimming Pools, Wading Pools, Spas, and Hot Tubs."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Swimming Pool Suction Fitting" (or "Sw Pool Sctn Ftn").

Wire & Cable Marking Guide

January 2009

Wire and Cable
Marking Guide

Copyright © 2009, Underwriters Laboratories Inc.®
68-012009

Each year millions of feet of wire and cable are installed in all types of buildings and for use in many different environmental conditions. Because of the choices available, it is important to know which wiring systems are suitable for a specific situation. It is also important to be able to properly identify these systems. Markings on or associated with the product, the UL Listing, Classification, or Verification information, and requirements in the current edition of the National Electrical Code® all convey the information needed to ensure a compliant installation. This publication explains markings found on Underwriters Laboratories Inc. Listed, Classified, or Verified wire and cable. Appendices B and C also contain the Listing, Classification, or Verification information for the product categories involved. UL Online Certifications Directory Listings, Classifications, and Verifications are updated daily. To confirm the current status of any UL record, please consult UL's Online Certifications Directory at www.ul.com.

Although they may be broadly worded, required or optional product markings (and their locations) are specific to the product with which they are associated. This document is intended to be used in determining the suitability of a particular UL Listed, Classified, or Verified wiring product that complies with all the applicable UL requirements, in a particular application.

To confirm the current status of any UL Marking Guide, please consult the Regulators page of the UL Web Site at <http://www.ul.com/regulators/index.html>.

Your comments or suggestions are welcome and appreciated. They should be directed to:

Susan L. Stene
Principal Engineer - Wire & Cable

INTRODUCTION

This guide is intended to assist installers, contractors, and authorities having jurisdiction in determining the suitability of UL Listed, Classified, or Verified wire and cable for use in a specific installation. Toward this goal, the guide:

1. Clarifies the means used to identify UL Listed, Classified, or Verified wire and cable (see the sections titled "Identification of Listed Products", "Identification of Classified Products," "Identification of Verified Products").
2. Provides an explanation of the ratings and intended uses of UL Listed, Classified, or Verified wire and cable (see Appendix A for designations).
3. Focuses on the information contained in UL Listed, Classified, or Verified wire and cable product markings (what the markings mean, where they may be located, etc.).

This guide does not address wire and cable evaluated only for suitability as factory-installed component wiring in other Listed equipment. Those products are Recognized by UL under the Component-Appliance Wiring Material (AWM) and Component-Nonshielded cable categories and are not identified with an NEC® wire Type designation.

In general, Component Wire or Cable is not evaluated for field installation unless it is included as a part of a complete, Listed product or system. For example, data processing equipment Listed under the Information Technology Equipment Including Electrical Business Equipment (NWGQ) category will use external interconnect cables, such as AWM Style 2464, only if the AWM has been evaluated and described in the Listing for the particular piece of equipment. The limitations on the installation of the Listed end-use product or system also apply to the wiring. Some interconnect cables may have connectors assembled on one or both ends as a computer-interconnection assembly. When these assemblies use Recognized cable and are sent to a building site separately, instead of being supplied with the equipment, these cable assemblies may be identified as Listed Computer Interconnection Cable Assemblies (DVPJ). Similarly, for communication equipment, Listed Communication Cable Assemblies (DUNH) may be used. AWM ratings and conditions of acceptability are shown on a tag affixed to the reel or carton. Some ratings may appear on the surface of the wire or cable.

The UL label is required for Listed, Classified, and Verified wire and cable products and can be applied in various manners. It can be applied to a coil, reel, flange, or box. This label is the only means used to indicate that the product is covered under UL testing (Listing, Classification, or Verification) and UL Follow-Up Service. The UL symbol or letters "UL" on the wire/cable itself is only a supplemental method of identifying UL coverage and should not be considered primary evidence of UL coverage. UL's Guide Information (see Appendices B-D) will indicate if the UL symbol or letters on the product itself is required. The required engineering markings, which appear on the product itself, are only intended to provide information related to the product's ratings or testing scope.

This guide should be particularly useful for those who:

1. Have a working knowledge of the current edition of the National Electrical Code® (NEC®) and how locally applicable electrical codes relate to the NEC®.

2. Are already familiar with the requirements of the electrical installation under consideration.
3. Can identify the cable as a particular type.

This guide is intended to supplement the Guide information for the appropriate wire and cable category in UL's Electrical Construction Equipment Directory (green book), UL's General Information for Electrical Equipment Directory (white book), and the NEC®. The Guide information for each of the applicable categories of Wire and Cable is included in Appendix B (Listing), Appendix C (Classification), and Appendix D (Verification).

HOW TO USE THIS GUIDE

The wire and cable types covered in this guide have been divided into three tables as follows:

Table 1 — Building Wires and Cables, including some industrial cables

Table 2 — Low Voltage Cables, Flexible Cords, and Fixture Wires

Table 3 — Special Purpose Wire and Cable

In each table, wire and cable types are identified by the name of the category under which they appear in UL's Electrical Construction Equipment Directory. Most wire and cable types have the same category designation in the NEC® as they do in UL's Electrical Construction Equipment Directory.

Definitions of the column headings and codes used in each column are provided in the section titled "Explanations and Notes for Marking Tables." Table entries consist of:

Table Entry	Indicates
Yes	The wire or cable is always evaluated for the use specified by the particular column. These uses are explained in the section titled "Explanations and Notes for Marking Tables."
— (dash)	The wire or cable is not evaluated for the indicated use, either as a requirement or as an option.
Numbers	A specific rating. For example, 250 in the column headed by "Temperature (°C) Dry" indicates a 250°C temperature rating for dry locations.
Numbers in parentheses e.g., (3), (21)	Specific notes detailing a rating and/or associated marking. The explanations of the notes can be found in "Explanations and Notes for Marking Tables," following the tables.

IDENTIFICATION OF LISTED PRODUCTS

The UL Mark may have various information around it as authorized by Underwriters Laboratories Inc.

		
For use in the USA.	For use in Canada.	For use in both the USA and Canada.

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated above) together with the word “LISTED,” a serial number, and the product or category name.

A product bearing the UL Mark for Canada is Listed to Canadian Standards for that specific product. A product bearing the combined Canada/U.S. Mark is Listed to both UL’s (U.S.) Standards and Canadian Standards for that specific product.

For wire and cable products, the complete Listing Mark is located on a tag attached to the reel or smallest unit container. Two types of UL symbols — “UL” in a circle or “UL” in parentheses — may be found on the wire or cable itself. These UL symbols may also be preceded by the letter “C”, indicating certification only for Canada, or preceded by a “C” and followed by “US”, indicating certification for both the US and Canada. The product markings are intended to provide information only, and the complete Listing Mark is the only proof that a particular unit of wire or cable is actually Listed.

To provide consistent control and marking, and to address counterfeiting in emerging and other markets, effective July 1, 2009 a hologram label will be required globally on all Listed Flexible Cords and Cables.

IDENTIFICATION OF CLASSIFIED PRODUCTS

With UL’s Classification Service, UL determines that a manufacturer has demonstrated the ability to produce a product that complies with its requirements for the purpose of classification or evaluation regarding one or more of the following: (1) specific risks only, such as casualty, fire or shock; (2) performance under specified conditions; (3) regulatory codes; (4) other standards, including international and regional standards; or (5) other conditions UL may consider desirable. UL conducts a Follow-Up Service as an audit of the means the manufacturer uses to determine continued compliance of the product with UL’s requirements. The UL Classification Marking may appear in various forms as authorized. The Classification Marking includes: (1) the symbol of Underwriters Laboratories Inc. – ; (2) the word “CLASSIFIED”; (3) a product identity and a statement to indicate the extent of UL’s evaluation of the product such as “AS TO (nature of hazard) ONLY,” or a rating or classification as specified in the general information pertaining to the product category, or designation and title of standard published by other organization, or identification of specified product; and (4) a control number assigned by UL.

IDENTIFICATION OF VERIFIED PRODUCTS

The UL Verification Mark is used to identify products evaluated under UL's Performance Verification Services. Some examples are products tested under the UL Performance Verification program for cable, Levels XP Structured Cabling Program, Proprietary Structured Cabling Program, ISO/IEC 11801, TIE/EIA 568B, Telcordia, and NEMA.

The presence of this mark provides assurance to end-users, IT managers, LAN system designers, and the regulatory community that products have been evaluated for transmission performance, in order to meet the unique needs of the telecommunications industry community.

There are two formats to the Verification Mark (label) that appear on products: Listing and Verification (As shown in Illustration A below) and Verified-Only (As shown in Illustration B below).

Illustration A

Illustration B

Listed cable tested under the UL Performance Verification Program for cable in accordance to TIA/EIA 568B have the label marking "Listed Communications Cable" also "Verified to UL Performance Category Program," on the tag, reel or smallest unit container, as shown in Illustration A. Cable Verified to another transmission performance specification, (NEMA WC63, 63.1, 66, ISO 11801, Telcordia, etc.), have the label marking "Listed Communications, Cable" also "Verified in Accordance with [Specification name and/or number]" on the tag, reel or smallest unit container. In addition, surface marking on these products would be as follows:

- 1) For performance Category Cable: "Verified (UL) Category 3, 4, 5, 5E, 6 or 6A [including latest draft number if applicable]."

- 2) For performance Category Patch Cable: “Verified (UL) Category 3, 4, 5, 5E,6 or 6A [including latest draft number if applicable] Patch; Cable” for stranded conductor cables.
- 3) 3) For all other Performance Verified Cable: “Verified in Accordance with [Specification name and/or number]”

Cabling products that are Verified Only (Non-UL Listed) will use the label as shown in Illustration B. The Verification Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under this Verification and Follow- Up Service. The Verification Mark for these products includes the UL symbol together with the word “VERIFIED,” a control number, the product name “Data Transmission Cable”, and the Specification name and/or number. In addition to the marking on the tag, reel, or smallest unit container, cables that have been Verified by UL in accordance with the signal transmission characteristics, and have not been Listed by UL as Communications Cable, Power-Limited Circuit Cable, or other UL Listed Cable, are surface marked with the statement “Verified by Underwriters Laboratories Inc. in accordance with [Specification name(s) and/or number(s)] Only” in the surface print legend. The UL symbol [either the UL in a circle symbol or “(UL)”] is not used in place of the wording “Underwriters Laboratories Inc.” in the statement.

Cabling products tested under the Levels XP Structured Cabling Program and the Proprietary Structured Cabling Program are field assembled cabling and connectivity products. The Type R UL Verification Mark (label) is not directly applied to structured cabling products. The complete Verification Mark (illustrated below) may appear on a Bill of Lading, a Bulk Shipment Certificate, or on UL’s Certificate or Conformity Assessment.

In these cases, the Mark must be reproduced in its entirety and clearly associated with the structured cabling product that was investigated by UL.

GENERAL CHARACTERISTICS

Markings

The requirements for the exact text and location of the markings, and the method of identification, vary among the different types of wire and cable. Wherever possible, the product is surface

marked with information necessary for proper installation. When surface marking is not possible — or for other considerations — all or a portion of the marking may be located on a tag, reel or the smallest unit container as permitted by the requirements of each product category. Whenever possible, the rating or characteristic is plainly indicated. Other methods — for example, colored tracers under the jacket or insulation — may be used to identify a certain characteristic, such as temperature rating for some fixture wires. To completely determine the suitability of a particular wiring system, review of the product itself, tag markings and carton markings may be necessary.

Some wire and cable may be marked with multiple Type designations. These products have been evaluated for uses of all Type designations marked.

All markings on or associated with wire and cable, as well as the Listing information of the appropriate category (see Appendix B), should be consulted to determine all ratings and limitations for proper installation in accordance with requirements of the NEC®.

UL evaluates wiring products with respect to the marked ratings and uses indicated by the Type designation associated with the UL Mark. Wiring products are not evaluated with respect to marked ratings and uses associated with other certification organizations.

Conductor Material

Compact stranded copper conductors are identified by “compact” or “cmpct,” otherwise wire and cable with bare or coated copper conductor material is not marked with stranding identification.

If the conductor material is either aluminum or copper-clad aluminum, the product, tag or carton markings (depending on the product category) identify the conductor material. These markings will appear as “AL,” “ALUMINUM,” “AL (CUCLAD),” “ALUMINUM (COPPER-CLAD),” “CU-CLAD AL” or “COPPER-CLAD ALUMINUM.”

For some wire and cable, other metals may be used as conductor material. The associated markings for that wire and cable are explained under the heading “OTHER.”

Flammability

UL investigates wiring products with respect to their intended locations and uses as permitted by the NEC®. Flammability or resistance to spread or propagation of fire is one of the considerations that enters into the overall investigation of wire and cable. For instance, products that are inherently permitted by the NEC® to be installed in cable trays or that are marked for such use are investigated for fire conditions that could exist in a cable tray.

Similarly, cables covered for use in accordance with Articles 725, 760, 770, 800, 820, and 830 of the NEC® are investigated with respect to their application: plenum, riser, general use or restricted residential use. Suffixes to the Type designation identify the use as defined in the appropriate NEC® articles:

- P: Plenum
- R: Riser
- No Suffix, -G: General purpose
- X: Limited residential use

Some wire and cable may also have a suffix “-LS” or "ST1" which means that the entire construction complies with the requirements for flame retardant, limited smoke wiring materials as evaluated per UL 1685.

EXPLANATIONS AND NOTES FOR MARKING TABLES

The column headings of Tables 1, 2 and 3 identify:

WIRE AND CABLE CATEGORY/TYPE

Lists each wire, cable and flexible cord category as it appears in UL's Electrical Construction Equipment Directory. Generally, the category, type or both are on the product.

NEC® ARTICLE

Indicates the primary NEC® Article that references the category/type. Not marked on the product.

CATEGORY CODE

Indicates the UL Guide Designation or Category Code as it appears in UL's White Book (Electrical Construction Equipment Directory) and UL's Online Certifications Directory. Not marked on the product.

UL MARK ON PRODUCT

Indicates whether the UL Mark ("UL" in a circle) is required (R), optional (O) or prohibited (P) on the product. See the section titled "UL Listing Mark."

TEMPERATURE (°C) DRY AND TEMPERATURE (°C) WET

These two columns indicate temperature rating for the wire and cable when used in dry locations or when exposed to water or moisture such as in wet and damp locations. Numbers in parentheses indicate the following:

- (1) Wire evaluated for use at 90°C dry and wet is marked with the suffix "-2" after the Type designation.
- (2) Cable is to be used at the ampacity for 60°C conductors in accordance with NEC®, Table 310-16.
- (3) Cords evaluated for water resistance have a "W" in the Type designation, i.e. Type SJTW. The terms "water resistant" or "water resistant 60°C" may also be marked in addition to the "W" designation.
- (4) The wire or cable has been investigated for the temperature rating marked on the product, tag, reel or smallest unit container.

- (5) Types MV-90 and MV-105 are evaluated for use in wet or dry locations at 90°C and 105°C, respectively. Type MV- 90 DRY is only evaluated for use in dry locations at 90°C.
- (6) Cable evaluated for wet-location use is marked “WET-LOCATIONS CABLE” or “WET-LOCS CABLE.” Cable containing conductors evaluated for wet-location use may be marked, but such marking is not required.
- (7) 250°C for special applications in locations where environmental conditions require operation at above 90°C temperature. Temperatures of fittings are limited to 85°C in dry locations and 60°C in wet locations.
- (8) Wire or cable evaluated for wet-location use is marked “60°C WET” or “75°C WET.”
- (9) Temperature rating may be indicated on the product by colored marker threads located under either the insulation or separator as in the following table:

Table	Rating (°C)	Color
RFH-2, FFH-2	75	Green
TFN, TFFN RFHH-2, RFHH-3	90	Red
XF, XFF, SFF-1, SFF-2, PFF, PGFF, PAFF, PTFF, ZF, ZFF	150	Orange
SF-1, SF-2, PF, PGF, ZHF, KF-1, KF-2, KFF-1, KFF-2	200	Black
PAF, PTF	250	Two black

- (10) The cable is marked with one of the following temperature ratings or codes; when no code is indicated, the product is marked with the rating.

Rating	Code
60°C dry 60°C wet	BC-1W1
75°C dry 60°C wet	BC-2W1
75°C dry 75°C wet	BC-2W2
80°C dry 60°C wet	BC-3W1
80°C dry 75°C wet	BC-3W2
90°C dry 60°C wet	BC-4W1
90°C dry 75°C wet	BC-4W2
105°C dry 60°C wet	BC-5W1
105°C dry 75°C wet	BC-5W2
105°C (dry only)	
125°C (dry only)	
200°C (dry only)	

- (11) Welding cable rated 600V is investigated for use in 75°C dry or wet locations.
- (12) 90°C dry and damp location. 150°C dry locations for special applications in locations where environmental conditions require maximum conductor operating temperatures above 90°C.

- (13) 200°C in dry locations for special applications.
- (14) The temperature rating of the cable is the rating marked on the cable or implied by the conductor type in the cable.
- (15) Indicates minimum temperature rating. Suitable for use at higher temperatures if marked on the cable or cord. The higher temperatures (above 60°C) only apply to dry applications.
- (16) May be rated 600 volts when employing 45-mil insulation.
- (17) Cable evaluated for wet location use is marked "wet" or "wet location."
- (18) Cable evaluated for wet location use is marked "90C Wet or Dry".
- (19) Note not used.

VOLTAGE (V)

Indicates voltage rating. If the rating is not marked on the product, the wire or cable has been evaluated for the rating entered in the table. If marked higher than the rating in the table, it is rated as marked. Notes in the tables indicate the following:

- (20) The voltage rating (kV) is one of the following, as marked: 5, 8, 15, 25, 28 or 35.
- (21) 600V or 2kV. Type MC cable containing Type MV conductors has the voltage rating of the conductors. Type MV cable in Type MC cable armor is surface or tape marked "Type MV Type MC" and it has a Type MV cable Listing Mark.
- (22) Type designation indicates suitability for use in accordance with the appropriate NEC® Article, with respect to voltage and power limitations.
- (23) Note not used.
- (24) Rating is indicated by number in the Type designations as follows:

Suffix	Rating (V)
-1	300
-2	600

- (25) The wire or cable may be evaluated for various voltage ratings. The rating is marked on the product, a tag attached to the reel or smallest unit container.
- (26) Voltage rating is indicated on the product by a suffix after the Type designation as follows:

Suffix	Rating (kV)
-5	5
-10	10
-15	15

(27) Some Mineral-Insulated cable may be rated 300V for use in Class 1 remote control and signaling circuits not exceeding 300V.

(28), (29) Notes not used.

OUTDOOR USE

“Yes” indicates that the wire or cable has been evaluated for direct exposure to outdoor conditions. Generally, there is no marking indicating outdoor use coverage. Notes in the tables indicate the following:

(30) A product evaluated for outdoor use has a “W” in its Type designation, e.g. “SJTW.” For a cord evaluated and marked for recreational vehicle or mobile home use, outdoor use always applies and the marking “W” is optional.

(31) Type UF and UF-B cables evaluated for installation above-ground are marked “SUNLIGHT RESISTANT.”

(32) Cable evaluated for outdoor use is marked "outdoor" or "outdoor use".

(33) Cable evaluated for outdoor use is marked “SUNLIGHT RESISTANT” or “SUN. RES.” plus “60°C WET” or “75°C WET.”

(34) Type CMX cable marked “Outdoor” is suitable for installation outdoors on dwellings.

SUNLIGHT RESISTANCE

“Yes” indicates that the outer nonmetallic covering of the product has been evaluated for direct exposure to ultraviolet (UV) radiation from the sun. This coverage is not generally marked on the product. Cables with an overall metallic covering are always considered suitable for exposure to sunlight. The use limitations and associated markings are specified in the tables by the following:

(35) A product evaluated for sunlight resistance is marked “SUNLIGHT RESISTANT”, “SUN. RES.”, or “SR.”

(36), (37), (38), (39) Notes not used.

CABLE TRAY USE

“Yes” indicates that the cable has been evaluated for use in cable trays in accordance with NEC® Articles 310, 318 and other applicable Articles. Generally, this coverage is not marked on the product. Notes in the tables indicate the following:

(40) When evaluated for use in cable trays, the product is marked “for cable tray use,” “for CT use” or “for use in cable trays.”

(41) For trays dedicated to welding cable only, per NEC® Article 630, Part E. Generally not marked on the product.

(42), (43), (44) Notes not used.

OIL RESISTANCE

“Yes” indicates that the product has been investigated for use in locations exposed to mineral oil at a temperature of 60°C or less. Generally, this coverage is not marked on the product. If the product has been investigated for oil resistance at higher than 60°C temperatures, it is rated as marked.

(45) A product evaluated for 60°C oil resistance is marked “OIL RESISTANT I”, “OIL RES I”, “OIL RESISTANT”, or “PR1.” A product evaluated for 75°C oil resistance is marked “OIL RESISTANT II”, “OIL RES II”, or “PR2.”

GASOLINE RESISTANCE

“Yes” indicates that the product has been evaluated for use in locations exposed to liquid gasoline, gasoline vapors and vapors from similar light petroleum solvents. Generally, this coverage is not marked on the product. Notes in the tables indicate the following:

(46) A product evaluated for 60°C oil resistance and for gasoline resistance is marked “GASOLINE AND OIL RESISTANT I”, or “GR1.” Similarly, for 75°C oil and for gasoline resistance, the product is marked “GASOLINE AND OIL RESISTANT II” or “GR2.”

(47) When evaluated for gasoline resistance only, the insulated conductors are marked “GASOLINE RESISTANT.” If this marking appears on the outer covering of the cable, “GASOLINE RESISTANT” is followed by “CDRS,” “CONDS” or “CONDUCTORS.”

(48), (49) Notes not used.

DIRECT BURIAL

“Yes” indicates that the wire or cable has been evaluated for direct burial in the earth. Generally not marked on the product. Notes in the tables indicate the following:

(50) When evaluated for direct burial use, the product is marked “FOR DIRECT BURIAL,” “DIRECT BURIAL,” “DIR BUR” or “DIR BURIAL.”

SUBMERSIBLE PUMP USE

“Yes” indicates that the wire or cable has been evaluated for use in wiring of pumps and/or submersible pumps. Product name identifies the use. Notes in the tables indicate the following:

(51) When evaluated, the product is marked “PUMP CABLE” or “SUBMERSIBLE PUMP CABLE.”

(52), (53), (54) Notes not used.

OTHER

Uses, exposures, and constructional features not otherwise covered in the tables are referenced in this column through the following notes. If not otherwise specified, the product has not been evaluated for any other condition unless marked on the product.

(55) Nickel or nickel-based alloy may be used with the product. Marking not required.

(56) Product is marked with the ampacity: “____ amp” or “____ A.”

(57) Optical Fibers. When these are present, the product is marked “Contains optical-fiber member(s)” or “OF” after the wire or cable Type designation.

(58) Gas/Vapor Blocked. When evaluated for gas/vapor blocking, the product is marked with “Gas/Vapor Blocked,” the minimum length required to attain the blocking, and the designation of the hazardous location for which the wire or cable is intended, such as “Class _____, Group _____.”

(59) The overall jacket on Types ITC, TC and PLTC is a “gas/vapor tight continuous sheath” as discussed in Sections 501-5(d) and 501-5(e) of the NEC®.

(60) Copper-clad steel conductor may be used with product. Marking not required.

(61) Each pair of thermocouple-extension wires is marked with the nominal AWG size and one of three designations —“THCPLXTN,” “For thermocouple-extension use only” or “Thermocouple-extension wire only,” — plus an identification(s) from either of the following columns for the combination(s) of thermocouple-extension conductor metals used:

Type	Designation Combination of Metals
JX	Iron/Constantan
KX	Chromel/Alumel

TX	Copper/Constantan
EX	Chromel/Constantan
SX, RX	Copper/Alloy
BX	Copper/Copper
NX	Nickel-Chromium-Silicon/Nickel-Silicon-Magnesium
GX	Tungsten/Tungsten-26% Rhenium
CX	Tungsten-5% Rhenium/Tungsten-25% Rhenium
DX	Tungsten-3% Rhenium/Tungsten-25% Rhenium

Only cables containing thermocouple-extension wire may have the markings on the cable instead of having each pair marked.

(62) Recreational Vehicle or Mobile Home Use. When evaluated for this use, the product is marked "For Mobile Home or Recreational Vehicle Use: _____ Amperes."

(63) Low Leakage Current Rating. When evaluated for use as low leakage-current cord in a cord set or power-supply cord for earth-grounded, direct-patient, contact medical and dental equipment, the cable is marked "Max leakage/10 ft. at _____ V: _____ μ A to green and _____ μ A thru jacket."

(64) Various conductor materials may be used. The metal type is marked on the tag attached to the reel or smallest unit container.

(65) Insulated conductors evaluated for a 600V rating are marked "Power Leg" on the insulation surface.

(66) Conductive Thermoplastic Shield or Jacket. Jacket or thermoplastic shield is conductive when the product is marked "Conductive PVC shield" or "Black material is conductive."

(67) Flexing and Constant-Flexing Services. When evaluated for flexing services, the product is marked "Flexing" or "Class K." When evaluated for constant-flexing services, the product is marked "Constant flexing," "Class M" or "Class K."

(68) Listed cables that are additionally marked "Verified UL Category 2, 3, 4, 5 or 5E or 6" comply with the UL Data Transmission Performance Category Marking Program. "CAT" may be substituted for "Category." Listed cables that are additionally marked "Verified in Accordance With (Specification: Name and/or number)" comply with the requirements of a referenced transmission performance specification. For example, "Verified (UL) Category 6 or 7 NEMA WC-66."

Category 1 — Category 1 cable performance is intended for basic communications and power-limited circuit cable. There are no performance criteria for cable at this level. The word "Verified" is not to be used in association with Category 1.

Category 2 — Category 2 cable performance requirements are similar to those for Type 3 cable (multi-pair communications cable) of the IBM Cabling System Technical Interface Specification (GA27-3773-1).

Category 3 — Category 3 data cable complies with the transmission requirements in the Telecommunications Industry Association/Electronic Industries Association (TIA/EIA) 568B Commercial Building Telecommunications Category Standard.

Category 4 — Category 4 cable complies with the requirements in the Telecommunications Industry Association/Electronic Industries Association (TIA/EIA) 568B Commercial Building Telecommunications Category Standard.

Category 5 — Category 5 cable complies with the requirements in the Telecommunications Industry Association/Electronic Industries Association (TIA/EIA) 568B Commercial Building Telecommunications Category Standard.

Category 5E — Category 5E cable complies with the requirements in the Telecommunication Industry Association/Electronics Industries Association (TIA/EIA) 568B Commercial Building Telecommunications Category Standard Addendum No. 5.

Category 6 — Category 6 cable complies with the requirements in the Telecommunication Industry Association/Electronics Industries Association (TIE/EIA) 568B Commercial Building Telecommunications Category Standard TIA/EIA 568B.2-1.

Category 6A — Category 6A cable complies with the requirements in the Telecommunication Industry Association/Electronics Industries Association (TIE/EIA) 568B Commercial Building Telecommunications Category Standard TIA/EIA 568B.2-10.

(69) Classified in accordance with International Municipal Signal Association, Inc. (IMSA) specifications. Intended for use in underground conduit or as an aerial cable only. Not evaluated for use as a substitute for cables or wiring systems covered in the NEC®.

(70) "OO" indicates oil resistant insulation and jacket. "O" indicates oil resistant jacket only.

(71) Cable suitable for use as described in NEC Sections 336.10(7), 725.61(D)(4), or 727.4(6) is surface marked with the suffix "- ER" (formerly "Open Wiring") directly following the Type letters.

(72) Cables marked "Integral Sleeve" have been evaluated for equivalence to a GTO cable with a sleeve installed over it as required in some electric signs.

(73) MI Cables with outer nonmetallic jackets are:

- (1) not suitable for use in ducts, plenums, or other spaces used for environmental air and are so marked.
- (2) marked "not suitable for use on or in buildings" if they have not been investigated for flame retardance. Such cables are sunlight resistant.
- (3) marked for cable tray use if they comply with the applicable flame test. These cables may be marked for sunlight resistance if applicable.

(74) Note not used.

(75) Plenum cables (those with a "P" as the last letter) may also be Listed as "Limited Combustible Cable." All marking requirements apply.

APPENDIX A

WIRE, CABLE AND CORD DESIGNATIONS

In general, the letter designations assigned to wire, flexible cord and cable in the NEC®, for identification purposes, are established according to a coding system that provides information on intended use, insulation type and insulation temperature rating. This coding system, to which there are exceptions, does not cover all NEC® designations. The coding system is as follows:

CONDUCTORS FOR GENERAL WIRING NEC® Article 310, Table 310-13

A	Asbestos (obsolete; now must be glass fiber or similar material)
B	Braid
FEP	Fluorinated ethylene propylene insulation
H	75°C (Note: Lack of "H" indicated 60°C)
HH	90°C
N	Nylon jacket
PFA	Perfluoroalkoxy insulation
R	Thermoset insulation
S	Silicone (Thermoset) insulation
T	Thermoplastic insulation
TFE	Polytetrafluoroethylene
U	Underground use
W	Moisture resistant
X	Cross-linked synthetic polymer insulation
Z	Modified ethylene tetrafluoroethylene insulation

Examples: RHW –Thermoset Insulation, 75°C Wet
 THHN –Thermoplastic Insulation, 90°C dry, nylon jacket

FLEXIBLE CORD AND CABLE NEC® Article 400, Table 400-4

C	Cotton or rayon braid
E	As first letter — Elevator cable
E	After first letter — Thermoplastic elastomer insulation
H	Heater cord
NI	“Non-Integral,” used for parallel cords such as Type NISPT-1 to denote insulated conductors and jacket are separate
O	Oil resistant. Single “O” means jacket only is oil resistant; double “O” means jacket and conductor insulation are oil resistant
P	Parallel conductor cord
S	Extra hard usage Flexible Cord
SJ	Hard usage Flexible Cord
SV	Not hard usage Flexible Cord
T	As the first letter — Tinsel cord. Single flattened No. 27 AWG conductor wound around insulating core, for very low current, highly flexible application

T	After the first letter — Thermoplastic insulation
-1, -2, -3	Insulation thickness for parallel cords, thinnest to thickest. Actual insulation thickness varies with cord type and AWG size
XTW	Parallel cord for decorative lighting strings
CXTW	Twisted pair cord or single conductor for decorative lighting strings
W	As the Last letter — Moisture and sunlight resistant
W	As the only letter — Portable Power Cable
Examples:	SJTO—Hard usage, thermoplastic, oil resistant jacket SPT-2—Parallel Cord, thermoplastic

FLEXIBLE CORD AND CABLE **NEC® Article 400, Table 400-4**

F	Fixture wire, standard stranding
FF	Fixture wire, flexible stranding
G	Glass braid
H	75°C insulation
HH	90°C insulation
K	Aromatic polyimide tape insulation
N	Nylon jacket
P	Fluorinated ethylene propylene insulation
R	Thermoset insulation
S	Silicone (Thermoset) insulation
T	Thermoplastic insulation
X	Cross-linked synthetic polymer insulation
Z	Modified tetrafluoroethylene insulation
-1, 2, 3	Insulation thickness, thinnest to thickest for some types. Actual insulation thickness varies, with insulation types and AWG size.
Examples:	SF-1—Silicone rubber fixture wire TFF—Thermoplastic, flexible stranded fixture wire

APPENDIX B

WIRE, CABLE AND CORD LISTING INFORMATION

ARMORED CABLE (AWEZ)

GENERAL

This category covers armored cable in sizes 14-1 AWG copper and 12-1 AWG aluminum or copper-clad aluminum and rated 600 V or less. Aluminum-armored cable is suitable for use in alternating current circuits only. Armored cable is for use in accordance with Article 320 of ANSI/NFPA 70, "National Electrical Code."

- ACTH** — Indicates armored cable rated 75°C employing conductors having thermoplastic insulation.
- ACTHH** — Indicates armored cable rated 90°C employing conductors having thermoplastic insulation.
- ACHH** — Indicates armored cable rated 90°C employing conductors having thermosetting insulation.

Armored cable connectors (box connectors) other than the direct bearing setscrew type are suitable for use on cable employing aluminum armor.

For conductor termination information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

PRODUCT MARKINGS

Armored cable complies with the Flame and Limited Smoke Test requirements specified in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables" and may be marked with the suffix "LS" and/or "For Use in Cable Trays."

Cable with aluminum armor is identified with the words "ALUMINUM ARMOR" on a marker tape and tag on coils.

Cable with copper-clad aluminum conductors is identified with the designation "AL (CU-CLAD)" or "Cu-Clad Al." on a tag, on the carton or reel. Cable with aluminum conductors is identified with the designation "AL" on a tag, on the carton or reel.

In addition, cable with compact-stranded copper conductors is identified with the designation "Compact Copper" or "CMPCT CU" following the conductor size and the words "Terminate with connectors identified for use with compact-stranded copper conductors" on a tag, on the carton or reel.

RELATED PRODUCTS

For fittings suitable as a grounding means, see Armored Cable Connectors (AWSX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 4, "Armored Cable."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel or the smallest unit container in which the product is packaged with or without the UL symbol on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Armored cable that contains copper or copper-clad aluminum conductors has the product name "Armored Cable"; armored cable that contains aluminum conductors has the product name "Armored Aluminum Cable." Armored cable that has aluminum armor has the product name "Aluminum Armored Cable."

BOAT CABLE (BDFX)

GENERAL

This category covers boat cable, which consists of a single insulated conductor without a jacket or two or more insulated conductors with or without an overall nonmetallic jacket, and which is suitable for use in marine pleasure crafts. Boat cable is rated 600 V or less, 60°C (122°F) or 75°C (167°F) wet, 60 to 200°C dry locations and, for cable so marked, 60°C (140°F) and lower temperatures where exposed to oil. The cable employs stranded copper conductors in a size range of 18 to 4/0 AWG inclusive for multiple-conductors, 16 to 4/0 AWG inclusive for single conductors.

Ampacities shall be in accordance with United States Coast Guard Regulations Title 33, Chapter I Parts 183.430 and 183.435 of the CFR.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Marine Products (AAMP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1426, "Electrical Cables for Boats."

Cable rated 600 V is investigated to UL 1426 . Cable rated 50 V is investigated to SAE J1127, J1128, or J378b.

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Boat Cable."

COMMUNICATIONS CABLE (DUZX)

USE AND INSTALLATION

This category covers communications cable which is a single conductor coaxial cable or a multiple conductor jacketed cable for telephone and other communications circuits for use as described in Article 800 of ANSI/NFPA 70, "National Electrical Code" (NEC).

This cable is used as wiring from a protector to a telephone or other communications equipment within a building, and for use as interconnecting wiring between parts of a communications system.

Except for special locations specifically required by the NEC, communications cable, in general, is not required to be installed in conduit or raceway.

PRODUCT MARKINGS

Communications cable is identified by marking on the surface of the jacket or on a marker tape under the jacket. This marking includes one of the following Type designations:

CM — Indicates cable intended for general use within buildings in accordance with Section 800.154 (E)(1) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables."

CMG — Indicates cable for general use within buildings in accordance with Section 800.154 (E)(1) of the NEC. The damage height of this cable does not exceed 4 ft 11 in. when tested in accordance with the CSA FT4 Vertical-Tray Flame Test in UL 1685.

CMP — Indicates cable intended for use within buildings in ducts or plenums or other spaces used for environmental air in accordance with Section 800.154 (A) of the NEC. This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 5 ft, when tested per ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

CMR — Indicates cable intended for use within buildings in vertical shafts in accordance with Section 800.154 (B) of the NEC. The flame propagation height of this cable is less than 12 ft when tested per ANSI/UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

CMUC — Indicates cable for undercarpet use in accordance with Section 800.154 (E)(6) of the NEC. This cable complies with the VW-1 Flame Test requirements in ANSI/UL 1581, "Reference Standard for Electrical Wires, Cables, and Flexible Cords."

CMX — Indicates cable intended for use within buildings (1) where the wire or cable is enclosed in raceway or noncombustible tubing, or (2) in nonconcealed spaces where the exposed length of wire or cable does not exceed 10 ft, or (3) in one- or two-family or multifamily dwellings when the cable diameter is less than 0.25 in., in accordance with Section 800.154 (E) of the NEC. Type CMX cable may be marked "Outdoor" to indicate its suitability for installation outdoors on dwellings. This cable complies with the VW-1 Flame Test requirements in ANSI/UL 1581.

Cable that contains one or more optical fiber members has the suffix "-OF" added to the above.

Cable that complies with the Limited Smoke Requirements specified in UL 1685 is surface marked with the suffix "LS."

Cable marked "Shielded" contains one or more electromagnetic shields.

Cable that complies with the requirements for "Limited Combustible" specified in ANSI/NFPA 90A, "Standard for the Installation of Air-Conditioning and Ventilating Systems," is surface marked "Limited Combustible."

Listed cable that is additionally marked "Verified (UL) Category 2, 3, 4, 5, 5E, 6 or 6A [including latest draft number if applicable]" or "Verified (UL) Category 3, 4, 5, 5E, 6 or 6A [including latest draft number if applicable] Patch Cable" for stranded conductor cable, has been investigated in accordance with the UL Data Transmission Performance Category Marking Program and is manufactured under an acceptable quality assurance system.

Listed cable that is additionally marked "Verified (UL) Category 6 or 7 NEMA WC66" has been investigated in accordance with NEMA WC66-1999, "Performance Standard for Category 6 and 7 100 Ohm Shielded and Unshielded Twisted Pair Cable." Additionally, this cable has been manufactured under an acceptable quality assurance system.

Listed cable that is additionally marked "Verified In Accordance With [Specification name and/or number]" complies with the requirements of a transmission performance specification referenced and is manufactured under an acceptable quality assurance system.

Communications wire is a single wire or unjacketed multi-conductor assembly of these wires that is intended for use in distributing frames and in cross-connect arrays in accordance with Section 800.154 (C) of the NEC. This wire or assembly is marked "cross-connect wire."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 444, "Communications Cables." In addition, the standards used to investigate cables marked "Verified in Accordance with [Specification]" include the applicable Performance Standards.

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Communications Cable."

Cable that is also Verified to the UL Data Transmission Performance Category Marking Program has the marking "Verified to UL Performance Category Program," along with the UL symbol (as illustrated in the Introduction of this Directory) on the product, or the UL Verification Mark along with the words "Performance Category Program," together with the Listing Mark information on the tag, the reel or the smallest unit container. Cable that is also Verified to another transmission performance specification has the marking "Verified in Accordance with [Specification name and/or number]," along with the UL symbol (as illustrated in the Introduction of this Directory) on the product, or the UL Verification Mark along with the applicable Specification name and/or

number together with the Listing Mark information on the tag, the reel or the smallest unit container.

COMMUNICATIONS CABLE ASSEMBLIES AND CONNECTORS VERIFIED IN ACCORDANCE WITH NATIONAL OR INTERNATIONAL SPECIFICATIONS (DVBH)

GENERAL

This category covers communications cable assemblies and connectors whose signal transmission, environmental and/or mechanical performance characteristics have been investigated to one or more of the applicable U.S. national standards, published international standards, regional standards, miscellaneous standards, or regulations of other organizations, as indicated in the individual Verifications.

A communications cable assembly covered under this category consists of a metallic cord or cable with a connector or other terminating means at one or both ends.

Examples of cable assemblies and connectors are: modular-type jacks and plugs, quick-connect terminal assemblies, telephone line and extension cords, cross-connect terminal blocks, patch/equipment cords and connector blocks.

PRODUCT MARKINGS

Where the performance specification has the provision to investigate communications cable assemblies and connectors to different levels of performance, such as in ANSI/TIA/EIA-568-B.2, "Commercial Building Telecommunications Cabling Standard - Part 2: Balanced Twisted Pair Cabling Components," the product, the attached tag or the smallest unit container in which the product is packaged is marked with an appropriate performance level designation, such as the "Category" number designation 3, 4, 5, 5e, 6 or 6A to indicate the requirements in the standard to which the cable was investigated.

RELATED PRODUCTS

Listed communications cable assemblies and connectors are covered under Communications Circuit Accessories (DUXR).

Listed communications cable and communications cable whose signal transmission, environmental and/or mechanical performance characteristics have been verified by UL, which is a single-conductor coaxial cable or a multiple-conductor jacketed cable for telephone and other communications circuits for use as described in Article 800 of ANSI/NFPA 70, "National Electrical Code," is covered under Communications Cable (DUZX).

Optical fiber cable assemblies and connector products whose signal transmission, environmental and/or mechanical performance characteristics have been verified by UL are covered under Optical Fiber Cable Assemblies and Connectors Verified in Accordance with National or International Specifications (QBFN).

Listed optical fiber cable assemblies and connector products are covered under Optical Fiber Cable Assemblies and Connectors (QBFA).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

Examples of performance specifications used to investigate products (Category 3, 4, 5, 5e, 6 or 6A) in this category are contained in ANSI/TIA/EIA-568-B.2, "Commercial Building Telecommunications Cabling Standard - Part 2: Balanced Twisted Pair Cabling Components."

Other performance specifications, applicable to communications cable assemblies and connectors, may also be used by UL in Verification investigations.

UL MARK

The Verification Mark of Underwriters Laboratories Inc. on the product or on the attached tag or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Verification and Follow-Up Service. The Verification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "VERIFIED," a control number, the product name "Communications Cable Assembly" or "Communications Connector," the Specification name(s) and/or number(s), and the date of the Specification(s).

For communications cable assemblies and connectors that are also Listed under Communications Cable Accessories (DUXR), the marking includes the appropriate Listing Mark and either the text "Also Verified [Specification name(s) and/or number(s)]," or the UL Verification Mark together with the Specification name(s) and/or number(s) and the date of the Specification(s).

DATA TRANSMISSION CABLE VERIFIED IN ACCORDANCE WITH NATIONAL OR INTERNATIONAL SPECIFICATIONS (DVBI)

GENERAL

This category covers data transmission cable whose signal transmission characteristics have been determined to be in accordance with one of the specifications shown below or other national or international data transmission performance specifications. This cable has not been investigated for use in accordance with ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS AND MARKINGS

This cable is marked as noted below to indicate compliance to the referenced specification. The UL symbol (either the "UL in a circle symbol" or "(UL)") is not used in place of "Underwriters Laboratories Inc." in the statement.

Cable investigated to TIA/EIA-568B, "Commercial Building Telecommunications Cabling," is marked, "Verified by Underwriters Laboratories Inc. in Accordance with Category 3, 5E, 6 or 6A TIA/EIA-568B [including latest draft number, if applicable] Only," or, for stranded conductor cable, "Verified by Underwriters Laboratories Inc. in Accordance with Category 3, 5E, 6 or 6A Patch Cable TIA/EIA-568B [including latest draft number, if applicable] Only."

Cable investigated to ISO/IEC 11801, "Information Technology - Generic Cabling for Customer Premises," is marked, "Verified by Underwriters Laboratories Inc. in Accordance with Category 5 or 6 ISO/IEC 11801 Only."

Cable investigated to NEMA WC 66-1999, "Performance Standard for Category 6 and 7 100 Ohm Shielded and Unshielded Twisted Pair Cables," is marked, "Verified by Underwriters Laboratories Inc. in Accordance with Category 6 or 7 NEMA WC 66 Only."

Cable investigated for conformance to other data transmission performance specifications (based upon industry needs) is marked, "Verified by Underwriters Laboratories Inc. in Accordance with [Specification name and/or number]."

UL MARK

The UL symbol with the word "VERIFIED" on the product and the Verification Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Verification and Follow-Up Service. The Verification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "VERIFIED," a control number, the product name "Data Transmission Cable" and the Specification name and/or number.

In addition to the marking on the tag, reel or smallest unit container, cables that have been Verified by UL in accordance with the signal transmission characteristics and have not been Listed by UL as Communications Cable, Power-Limited Circuit Cable or other UL Listed Cable, are marked with the statement "Verified by Underwriters Laboratories Inc. in accordance with [Specification name(s) and/or number(s)] Only" in the surface print legend. The UL symbol [either the UL in a circle symbol or "(UL)"] is not used in place of the wording "Underwriters Laboratories Inc." in the statement.

COMMUNITY ANTENNA TELEVISION CABLE (DVCS)

USE AND INSTALLATION

This category covers community antenna television cable for use in accordance with Article 820 of ANSI/NFPA 70, "National Electrical Code" (NEC).

PRODUCT MARKINGS

Community antenna television cable is identified by marking on the surface of the jacket or on a marker tape under the jacket. This marking includes one of the following Type designations:

CATVP — Indicates cable intended for use within buildings in ducts or plenums or other spaces used for environmental air in accordance with Section 820.179(A) of the NEC. This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame-spread distance of 5 ft when tested per ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

CATVR — Indicates cable intended for use within buildings in vertical shafts in accordance with Section 820.179(B) of the NEC. The flame propagation height of this cable is less than 12 ft when tested per ANSI/UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

CATV — Indicates cable intended for general use within buildings in accordance with Section 820.179(C) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in ANSI/UL 1581, "Reference Standard for Electrical Wires, Cables, and Flexible Cords."

CATVX — Indicates cable intended for limited use within buildings (1) where the cables are enclosed in raceway or noncombustible tubing, or (2) in nonconcealed spaces where the exposed length of cable does not exceed 10 ft, or (3) installed in one- or two-family or multifamily dwellings when the cable diameter is less than 0.375 in. in accordance with Section 820.179(D) of the NEC. This cable complies with the VW-1 Flame Test requirements in ANSI/UL 1581. Cable marked "sunlight resistant" or "sun res" may be exposed to the direct rays of the sun.

Cable marked "-30C," "-40C," "-50C," "-60C" or "-70C" complies with a cold bend test conducted at that temperature.

Cable marked "direct burial," "for direct burial" or "dir bur" has been investigated and found suitable for direct burial in the earth.

Cable that complies with the requirements for "Limited Combustible" specified in ANSI/NFPA 90A, "Standard for the Installation of Air-Conditioning and Ventilating Systems," is surface marked "Limited Combustible."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1655, "Community Antenna Television Cables."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Community Antenna Television Cable."

DATA PROCESSING CABLE (EMRB)

GENERAL

This category covers Type DP data processing cable for use in computer rooms and under the raised floors of computer rooms in accordance with Article 645 of ANSI/NFPA 70, "National Electrical Code". The cable consists of one or more insulated conductors that are covered with a nonmetallic jacket. The cable may contain grounding conductors and/or optical fiber members.

PRODUCT MARKINGS

Data processing cable is identified by marking on the jacket or on a marker tape under the jacket. This marking includes one of the following Type designations:

DP-1 — Indicates cable rated 600 V in conductor sizes 18 AWG to 1000 kcmil copper or 12 AWG to 1000 kcmil aluminum or copper-clad aluminum. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in UL 1581, "Reference Standard for Electrical Wires, Cables, and Flexible Cords."

DP-1P — Indicates cable rated 600 V in conductor sizes 18 AWG to 1000 kcmil copper or 12 AWG to 1000 kcmil aluminum or copper-clad aluminum. This cable meets the requirements of NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

DP-2 — Indicates cable rated 300 V in conductor sizes 24 to 8 AWG copper or 12 to 8 AWG aluminum or copper-clad aluminum. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in UL 1581.

DP-2P — Indicates cable rated 300 V in conductor sizes 24 to 8 AWG copper or 12 to 8 AWG aluminum or copper-clad aluminum. This cable meets the requirements of NFPA 262.

DP-3 — Indicates cable with no voltage rating in conductor sizes 30 to 10 AWG copper for general use and copper-clad steel for use in coaxial conductors. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in UL 1581.

DP-3P — Indicates cable with no voltage rating in conductor sizes 30 to 10 AWG copper for general use and copper-clad steel for use in coaxial conductors. This cable meets the requirements of NFPA 262.

Type DP-3 and Type DP-3P cable is for use in circuits having maximum available ac voltage of 30 V, dc voltage of 60 V, peak voltage of 42.2 V, VA of 100 and current of 8 A or in circuits designated DP-3 in UL 60950, "Information Technology Equipment."

Cable with aluminum conductors is surface printed "AL."

Cable with copper-clad aluminum conductors is surface printed "AL (CU-CLAD)" or "Cu-Clad."

Type DP-1, DP-2 and DP-3 cable that complies with the Limited Smoke Test requirements specified in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," is surfaced marked with the suffix "-LS."

The temperature rating of the cable is 60°C unless otherwise marked on the cable.

Cable containing optical fiber members is identified with the suffix "OF."

Type DP-1, DP-2 and DP-3 cable which has a damage height that does not exceed 4 ft. 11 in. when tested in accordance with the FT-4 Vertical-Tray Flame Test in UL 1581 may have the additional marking "FT-4" on the surface.

For conductor termination information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1690, "Data Processing Cable."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory)

together with the word "LISTED," a control number, and the product name "Data Processing Cable, Type DP."

ELECTRIC VEHICLE CABLE (FFSO)

GENERAL

This category covers electric vehicle cable constructed as described in, and Listed for use in accordance with Article 400 of ANSI/NFPA 70, "National Electrical Code." Electric vehicle cable consists of two or more insulated conductors, with or without grounding conductors, with an overall jacket. The insulation and jacket are both thermoset on Types EVJ and EV, thermoplastic elastomer (TPE) on Types EVJE and EVE, and thermoplastic (PVC) on Types EVJT and EVT.

The cable is used to supply power, signal, and control to electric vehicles during the charging process. It is rated 60 to 105°C (140 to 221°F) dry; 60°C (140°F), 75°C (167°F), or 90°C (194°F) wet; 60°C (140°F) where exposed to oil, and for use where exposed to the direct rays of the sun. For cable so marked, a gasoline immersion rating is also assigned. The term "wet" indicates that the cable is acceptable for immersion in water. Electric vehicle cable employs flexible stranded copper conductors in a size range of 18 AWG to 500 kcmil.

Type EVJ — Rated 300 V, contains two to five 18-12 AWG thermoset-insulated circuit conductors, and may employ one or more insulated grounding conductors. The cable may contain hybrid data, signal, communications, and/or optical fiber cable in any AWG size .

Type EVJE — Rated 300 V, same as Type EVJ except that the cable employs thermoplastic elastomer-insulated conductors and jacket.

Type EVJT — Rated 300 V, same as Type EVJ except that the cable employs thermoplastic (PVC) insulated conductors.

Type EV — Rated 600 V, contains two or more 18 AWG to 500 kcmil thermoset-insulated circuit conductors, and may employ one or more insulated grounding conductors. The cable may contain hybrid data, signal, communications, and/or optical fiber cable in any AWG size .

Type EVE — Rated 600 V, same as Type EV except that the cable employs thermoplastic elastomer-insulated conductors.

Type EVT — Rated 600 V, same as Type EV except that the cable employs thermoplastic (PVC) .

ADDITIONAL INFORMATION

For additional information, see Electric Vehicle Systems (FFQM) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 62, "Flexible Cord and Fixture Wire," and ANSI/UL 1581, "Reference Standard for Electrical Wires, Cables, and Flexible Cords."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only

method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Vehicle Cable."

FC CABLE (GQKT)

USE AND INSTALLATION

This category covers Type FC cable which is an assembly of three or four parallel 10 AWG special stranded copper wires formed integrally with an insulating material web. Type FC cable is intended for installation in accordance with Article 322 of ANSI/NFPA 70, "National Electrical Code."

The cable is marked with the size of the maximum branch circuit to which it may be connected, the cable type designation, manufacturer's identification, maximum working voltage, conductor size and temperature rating.

Type FC cable is not intended to be installed outdoors or in wet or damp locations unless identified for use in wet locations.

A marking accompanying the cable on a tag or reel indicates the special metal raceways and specific FC cable fittings with which the cable is intended to be used. Installation instructions are supplied by the manufacturer for the use of the general contractor, erector, electrical contractor, inspector and others concerned with the installation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations ([AALZ](#)).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "FC Cable."

NONPOWER-LIMITED FIRE ALARM CABLE (HNHT)

USE AND INSTALLATION

This category covers nonpower-limited fire alarm cable for use in nonpower-limited circuits in accordance with Section 760.30 of ANSI/NFPA 70, "National Electrical Code" (NEC).

Unless a higher temperature rating is marked on the cable, nonpower-limited fire alarm cable is intended for use where the operating temperature does not exceed 60°C. The marked voltage rating is 150 V.

PRODUCT MARKINGS

Nonpower-limited fire alarm cable is identified by a marking on the surface of the jacket or on a marker tape under the jacket. This marking includes one of the following Type designations:

NPLF — Indicates cable intended for use within buildings in accordance with Section 760.30(B)(4) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in ANSI/UL 1581, "Reference Standard for Electrical Wires, Cables, and Flexible Cords."

NPLFR — Indicates cable intended for use within buildings in vertical shafts in accordance with Section 760.30(B)(3) of the NEC. The flame propagation height of this cable is less than 12 ft when tested per ANSI/UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

NPLFP — Indicates cable intended for use within buildings in other spaces used for environmental air in accordance with Section 760.30(B)(2) of the NEC. This cable exhibits a maximum peak optical density of 0.50, a maximum average optical density of 0.15, and a maximum flame spread distance of 5.0 ft when tested per ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

Cable that complies with the requirements for "Limited Combustible" specified in NFPA 90A, "Installation of Air Conditioning and Ventilating Systems," is surface marked "Limited Combustible."

Cable marked "sunlight resistant" or "sun res" may be exposed to the direct rays of the sun.

Cable marked "-30C," "-40C," "-50C," "-60C" or "-70C" complies with a cold bend test conducted at that temperature.

Cable marked "wet" or "wet location" is suitable for use in wet locations.

Cable marked "direct burial", "for direct burial" or "dir bur" is suitable for direct burial in the earth.

Cable marked "CI (max voltage ____)" is suitable for use as circuit integrity cable at the maximum voltage to ground indicated, in accordance with Section 760.31(F) of the NEC.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1425, "Cables for Non-Power-Limited Fire-Alarm Circuits."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonpower-limited Fire Alarm Cable."

POWER-LIMITED FIRE ALARM CABLE (HNIR)

USE AND INSTALLATION

This category covers power-limited fire alarm cable intended for use in power-limited circuits in accordance with Article 760 of ANSI/NFPA 70, "National Electrical Code" (NEC).

Unless a higher temperature rating is marked on the cable, power-limited fire alarm cable is intended for use where operating temperature does not exceed 60°C. The voltage rating is 300 V but is not marked.

PRODUCT MARKINGS

Power-limited fire alarm cable is identified by a marking on the surface of the jacket or on a marker tape under the jacket. This marking includes one of the following Type designations:

FPL — Indicates cable intended for use within buildings in accordance with Section 760.61(C) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in ANSI/UL 1581, "Reference Standard for Electrical Wires, Cables, and Flexible Cords."

FPLP — Indicates cable intended for use within buildings in ducts or plenums or other spaces used for environmental air in accordance with Section 760.61(A) of the NEC. This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 5 ft when tested per ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

FPLR — Indicates cable intended for use within buildings in vertical shafts in accordance with Section 760.61(B) of the NEC. The flame propagation height of this cable is less than 12 ft when tested per ANSI/UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

Power-limited Fire Alarm Cable — Indicates cable suitable for use within buildings (1) where the cable is enclosed in a raceway, or (2) in nonconcealed spaces where the exposed length of cable does not exceed 10 ft, in accordance with Sections 760.61(C)(2) and (3) of the NEC. This cable complies with the VW-1 Flame Test requirements in ANSI/UL 1581.

Listed Type FPLP cable that is additionally marked "Also Classified NYC CERT Fire Alarm Cable" has been evaluated in accordance with the requirements of the Fire Alarm Code of the Department of Buildings of the City of New York.

Cable that complies with the requirements for "Limited Combustible" specified in ANSI/NFPA 90A, "Installation of Air Conditioning and Ventilating Systems," is surface marked "Limited Combustible."

Cable marked "direct burial," "for direct burial" or "dir bur" has been investigated and found suitable for direct burial in the earth.

Cable marked "sunlight resistant" or "sun res" may be exposed to the direct rays of the sun.

Cable marked "CI (max voltage ____)" is suitable for use as circuit integrity cable at the maximum voltage to ground indicated, in accordance with Section 760.71(G) of the NEC.

Cable marked "wet" or "wet location" is suitable for use in wet locations.

Cable marked "-30C," "-40C," "-50C," "-60C" or "-70C" complies with a cold bend test conducted at that temperature.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations ([AALZ](#)).

REQUIREMENTS

The basic standard used to investigate products in this category is [ANSI/UL 1424](#), "Cables for Power-Limited Fire-Alarm Circuits."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power-limited Fire Alarm Cable."

In addition, the Listing Mark for cable also Classified for use in accordance with the requirements of the Fire Alarm Code of the Department of Buildings of the City of New York includes the statement "Also Classified for Use as Fire Alarm Cable in New York City."

FLAT CONDUCTOR CABLE, TYPE FCC (IKKT)

GENERAL

This category covers flat conductor cable, Type FCC, which is an assembly of three or more solid, flat, parallel, insulated copper conductors. The cable is intended for installation in accordance with Article 324 of ANSI/NFPA 70, "National Electrical Code." The cable is marked for use with specific fittings [see Flat Conductor Cable Fittings ([IKMW](#))] to make up a particular flat conductor cable, Type FCC, wiring system.

The cable is marked on both sides with the manufacturer's identification, wire size in AWG, Type FCC, 300 V, temperature rating and ampacity. Type FCC cable always has one conductor identified as the grounding conductor and one conductor identified as the grounded conductor. The identification means shall be printing or striping the conductor green (grounding) or white (grounded).

Installation instructions are supplied by the manufacturer for use by the general contractor, erector, electrical contractor, electrical inspector and others concerned with the installation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations ([AALZ](#)).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flat Conductor Cable, Type FCC."

FLEXIBLE STAGE AND LIGHTING POWER CABLE (ILPH)

USE AND INSTALLATION

This category covers flexible stage and lighting power cable constructed for use in accordance with Article 400 of ANSI/NFPA 70, "National Electrical Code" (NEC). Flexible stage and lighting cable consists of either a single insulated conductor or two or more insulated conductors, with or without fully insulated equipment grounding conductors, with an overall jacket.

RATINGS

The cable is rated 600 V, 60°C, 75°C, 90°C or 105°C. The cable is intended for use at ampacities in accordance with Table 400.5(B) of the NEC. Cable rated 105°C has the same ampacities assigned to 90°C rated cable in Table 400.5(B) and is so marked.

Flexible stage and lighting power cable employs flexible stranded copper conductors in a size range of 8 AWG to 250 kcmil and is designated as Type SC (thermoset insulation and jacket), Type SCT (thermoplastic insulation and jacket) and Type SCE (thermoplastic elastomer insulation and jacket).

PRODUCT MARKINGS

Cable marked "Oil Resistant 60C" is suitable for exposure to oil at 60°C. Cable marked "Oil Resistant 75C" is suitable for exposure to oil at 75°C.

Cable marked "water resistant" is suitable for immersion in water.

This cable may be marked "-40C." If so marked, the cable complies with a bend test (not a suppleness test) at -40°C. Cable marked "-50C," "-60C" or "-70C" complies with a bend test (not a suppleness test) at -50°C, -60°C or -70°C, as applicable .

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations ([AALZ](#)).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in [Subject 1680](#), "Outline of Investigation for Stage and Lighting Cables."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flexible Stage and Lighting Power Cable."

HOISTWAY CABLE (MSZR)

GENERAL

This category covers hoistway cable which is a single and multiple conductor cable for use in raceways in accordance with Article 620 of ANSI/NFPA 70, "National Electrical Code." Insulated conductors are 20 to 14 AWG inclusive. Multiple-conductor cable consists of insulated conductors cabled together with a suitable binder or sheath. The cable is rated 300 V or 600 V. The

temperature rating, if so marked, is 90°C, otherwise it is 60°C. All cable complies with a vertical flame test.

PRODUCT MARKINGS

Hoistway cable is identified by the words "Hoistway Cable" printed on each insulated conductor and on the sheath, if provided.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 62, "Flexible Cord and Fixture Wire."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Hoistway Cable."

INSTRUMENTATION TRAY CABLE (NYTT)

GENERAL

This category covers Type ITC instrumentation tray cable for use only in industrial establishments in accordance with Article 727 of ANSI/NFPA 70, "National Electrical Code" (NEC). The cable consists of two or more insulated copper or thermocouple alloy conductors enclosed within a nonmetallic jacket. The cable may have a metal sheath or armor over the nonmetallic jacket, and may contain grounding conductors and/or optical fiber members.

The cable is rated 300 V and is intended for use on circuits rated 150 V or less and 5 A or less. The cable is Listed in conductor sizes 22 to 12 AWG. Conductor sizes within a cable may be mixed.

Regarding cable seals outlined in Article 501 of the NEC, Type ITC cable has a sheath considered to be gas/vapor tight but the cable has not been investigated for inability to transmit gases through its core.

PRODUCT MARKINGS

The cable identification "TYPE ITC" and other markings are visible on the surface of the nonmetallic jacket.

Cable with thermocouple alloy conductors is intended for thermocouple extension use only and is so marked or has the marking "THCPL EXTN."

The temperature rating of the cable is 60°C unless otherwise marked on the cable.

Cable containing optical fiber members is identified with the suffix "OF."

Cable investigated in accordance with the Limited Smoke Test requirements specified in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," is marked with the suffix "-LS."

Cable investigated for direct burial in the earth is marked "DIRECT BURIAL" (or "DIR BUR").

Cable permitted to be used between cable trays and utilization equipment in accordance with Section 727.4(6) of the NEC is surface marked with the supplementary letters "-ER" (formerly marked "Open Wiring").

Cable marked "Wet" or "Wet Location" is suitable for use in wet locations.

Cable for use in hazardous (classified) locations, Class I, Division 1, Groups A, B, C and D, and Class I, Zone 1, Groups IIA, IIB and IIC in accordance with the NEC is marked "Type ITC-HL."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations ([AALZ](#)).

REQUIREMENTS

The basic standard used to investigate products in this category is [ANSI/UL 2250](#), "Instrumentation Tray Cable."

The basic standard used to investigate cable marked "Type ITC-HL" is [ANSI/UL 2225](#) "Cables and Cable Fittings for Use in Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Instrumentation Tray Cable" or "Type ITC."

See Cable for Use in Hazardous Locations (PJPP) for Listing Mark requirements for "Type ITC-HL".

IRRIGATION CABLE (OFFY)

GENERAL

This category covers irrigation cable for use with electrically driven or controlled irrigation machines in accordance with Article 675 of ANSI/NFPA 70, "National Electrical Code."

Irrigation cable used to interconnect enclosures on the structure of an irrigation machine is an assembly of stranded, insulated conductors with nonhygroscopic fillers in a core of moisture and flame resistant, nonmetallic material overlaid with a metallic covering and jacketed with a moisture, corrosion and sunlight-resistant nonmetallic material. Irrigation cable is suitable for direct burial in the earth and may, optionally, be so marked.

This cable may consist of a composite of power, control and grounding conductors in sizes 18 AWG and larger, stranded copper, and is rated 75°C and 600 V.

RELATED PRODUCTS

Fittings for use with this cable are covered under Outlet Bushings and Fittings ([QCRV](#)).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations ([AALZ](#)).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in Subject 1263, "Outline of Investigation for Irrigation Cables."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel, or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Irrigation Cables."

LIMITED COMBUSTIBLE CABLE (OWKZ)

GENERAL

This category covers electrical and optical fiber cable that meets the limited combustible and smoke developed requirements for cable in ceiling cavity and raised floor plenums in accordance with NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating Systems." This cable also meets the requirements for cable used in ducts, plenums and other spaces used for environmental air in accordance with Articles 725, 760, 770, 800, 820 and 830 of ANSI/NFPA 70, "National Electrical Code".

This cable has a maximum Potential Heat value of 3500 Btu/lb when tested in accordance with NFPA 259, "Standard Test Method for Potential Heat of Building Materials." This cable has a maximum smoke developed index of 50 and a maximum flame spread index of 25 when tested in accordance with UL 723 (NFPA 255), "Test for Surface Burning Characteristics of Building Materials" before and after exposure to elevated temperature and humidity. The cable also meets the requirements for plenum cable in one or more of the following product categories:

- Power-limited Circuit Cable (QPTZ) - Types CL2P or CL3P
- Communications Cable (DUZX) - Type CMP
- Power-limited Fire Alarm Cable (HNIR) - Type FPLP
- Nonpower-limited Fire Alarm Cable (HNHT) - Type NPLFP
- Optical Fiber Cable (QAYK) - Types OFNP or OFCP
- Community Antenna Television Cable (DVCS) - Type CATVP
- Network-powered Broadband Communications Cable (PWIP) - Type BLP

PRODUCT MARKINGS

This cable is identified by the marking "Limited Combustible FHC 25/50" on the surface of the jacket or on a marker tape under the jacket. This marking is immediately followed by one of the Type designations shown above. The cable also has the required markings including optional markings as indicated in the product categories referenced above. This cable may also be Verified for transmission performance if authorized in the product categories referenced above, and will bear the appropriate performance verification marking.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in Subject 2424, "Outline of Investigation for Cable Marked 'Limited Combustible.'"

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Limited Combustible Cable."

Cable which is also Verified to the UL Data Transmission Performance Category Marking Program has the marking "Verified to UL Performance Category Program," or the UL Verification Mark along with the words "Performance Category Program" together with the Listing Mark information on the tag, the reel, or the smallest unit container. Cable which is also Verified to another transmission performance specification has the marking "Verified in Accordance with [Specification name and/or number]" or the UL Verification Mark along with the applicable Specification name and/or number together with the Listing Mark information on the tag, the reel, or the smallest unit container.

MARINA AND BOATYARD CABLE (PDYQ)

USE

This category covers cable intended for use as flexible branch circuit and feeder wiring in marinas and boatyards in accordance with Article 555 of ANSI/NFPA 70, "National Electrical Code."

The cable is rated 600 V, 75°C and is suitable for exposure to sunlight, fresh water, salt water, gasoline, diesel fuel and lubricating oil.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Marine Products (AAMP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 83, "Thermoplastic Insulated Wire."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Marina and Boatyard Cable."

MEDIUM-VOLTAGE CABLE (PITY)

GENERAL

This category covers medium-voltage cable rated 2400 to 35,000 V intended for use and installation in accordance with Article 328 of ANSI/NFPA 70, "National Electrical Code" (NEC).

The cable is single or multiconductor, aluminum or copper, with solid extruded dielectric insulation and may have an extruded jacket, metallic covering or combination of both over the single conductors or over the assembled conductors in a multiconductor power cable.

All insulated conductors rated higher than 2400 V have electrostatic shielding. Cable rated 2400 V is nonshielded.

Non-shielded cable is intended for use where conditions of maintenance and supervision ensure that only competent individuals service and have access to the installation.

PRODUCT MARKINGS

Shielded cable is marked "MV-90" or "MV-105" and is suitable for use in wet or dry locations at 90 or 105°C.

Non-shielded cable is marked either "MV-90" indicating suitability for use in wet or dry locations at 90°C maximum, or "MV-90 Dry Locations Only" indicating suitability for use only in dry locations at 90°C maximum.

Cable marked "Oil Resistant I" or "Oil Resistant II" is suitable for exposure to mineral oil at 60°C or 75°C, respectively.

Cable marked "Sunlight Resistant" may be exposed to the direct rays of the sun.

Cable intended for installation in cable trays in accordance with Article 392 of the NEC is marked "For Use in Cable Trays" (or "For CT Use").

Cable with aluminum conductors is marked with the word "Aluminum" (or "AL").

The cable is marked with the conductor size, voltage rating and insulation level (100% or 133%).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations ([AALZ](#)).

REQUIREMENTS

The basic standard used to investigate products in this category is [ANSI/UL 1072](#), "Medium-Voltage Power Cables."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Medium-Voltage Cable."

METAL-CLAD CABLE (PJAZ)

GENERAL

This category covers Type MC metal-clad cable. The cable is rated for use up to 2000 V, and Listed in sizes 18 AWG through 2000 kcmil for copper, 12 AWG through 2000 kcmil for aluminum or copper-clad aluminum, and employs thermoset or thermoplastic insulated conductors. It is

intended for installation in accordance with Article 330 of ANSI/NFPA 70, "National Electrical Code" (NEC).

The cable consists of one or more insulated circuit conductors, a grounding path (grounding conductor, metal sheath, or combination thereof) as described below, one or more optional optical fiber members, and an overall metal sheath. The metal sheath is an interlocked metal tape, a corrugated metal tube, or a smooth metal tube. The metal sheath of single-conductor cable is nonferrous. A nonmetallic jacket may be provided under and/or over the metal sheath. Cable with metal armor, rated 2400 to 35,000 V is covered under Medium-voltage Power Cable (PITY) and is marked "Type MV or MC."

Cable with interlocked armor that has been determined to be suitable for use as a grounding means has interlocked aluminum armor in direct contact with a single, full-sized, bare aluminum grounding/bonding conductor. This cable is marked to indicate that the armor/grounding conductor combination is suitable for ground. The equipment grounding conductor required within all other cable with interlocked armor may be insulated or bare, may be sectioned, and is located in the cable core but not in contact with the armor. Any additional grounding conductors of either design have green insulation. One insulated grounding conductor may be unmarked, one other may have only a yellow stripe and the balance have surface markings that indicate they are additional equipment grounding conductors or isolated grounding conductors.

The sheath of the smooth or corrugated tube Type MC cable or a combination of the sheath and a supplemental bare or unstriped green insulated conductor is suitable for use as the ground path required for equipment grounding. The supplemental grounding conductor may be sectioned. When sectioned, all sections are identical. Each additional green insulated grounding conductor has either a yellow stripe or a surface marking or both to indicate that it is an additional equipment or isolated grounding conductor. Additional grounding conductors, however marked, are not smaller than the required grounding conductor.

PRODUCT MARKINGS

Information regarding temperature rating, voltage rating, cable and conductor Type and AWG size is shown either on a marker tape under the armor or on the surface of a nonmetallic jacket, if used.

Copper-clad aluminum conductors are surface printed "AL (CU-CLAD)" or "Cu-clad Al." Aluminum conductors are surface printed "AL."

Cable employing compact-stranded copper conductors is so identified directly following the conductor size, wherever it appears (surface, tag, carton or reel), by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors."

For termination information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

Cable suitable for use in cable trays, direct sunlight or direct burial application is so marked. Cable marked for direct burial is also considered acceptable for encasement in concrete.

Cable marked "Oil Resistant I" or "Oil Res I" is suitable for exposure to mineral oil at 60°C. Cable suitable for exposure to mineral oil at 75°C is marked "Oil Resistant II" or "Oil Res II."

Cable containing one or more optical fiber members is marked "MC-OF."

Cable with a nonmetallic outer jacket that complies with the Limited Smoke Test requirements specified in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," and all unjacketed metal-clad cable may be marked with the suffix "-LS."

Cable with an interlocked armor that is intended as a ground path is marked "armor is grounding path component," and is provided with installation instructions.

Cable intended for use in hazardous (classified) locations, Class I, Division 1, Groups A, B, C and D; Class II, Division 1, Groups E, F and G; Class I, Zone 1, Groups IIA, IIB and IIC in accordance with the NEC, is marked "MC-HL."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1569, "Metal-Clad Cables."

Cable marked "MC-HL" has been additionally investigated to ANSI/UL 2225, "Cables and Cable Fittings for Use in Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Metal-clad cable that contains copper or copper-clad aluminum conductors has the product name "Metal-clad Cable"; metal-clad cable that contains aluminum conductors has the product name "Metal-clad Aluminum Cable."

See Cable for Use in Hazardous Locations (PJPP) for Listing Mark requirements for cable marked "MC-HL."

METAL-CLAD CABLE FOR USE IN HAZARDOUS LOCATIONS (PJPP)

GENERAL

This category covers Type MC-HL metal-clad cable and Type ITC-HL instrumentation tray cable for use in Class I and II hazardous (classified) locations.

Type MC-HL cable is rated up to 35,000 V, and Listed in sizes 18 AWG through 2000 kcmil for copper, 12 AWG through 2000 kcmil for aluminum, or copper-clad aluminum, and employs thermoset- or thermoplastic-insulated conductors. It is intended for installation in accordance with Articles 330, 501 502 and 505 of ANSI/NFPA 70, "National Electrical Code" (NEC). Cable containing conductors rated 2 kV may be used in circuits operating at 2 kV, nominal or less, in accordance with Articles 600 and 490 of the NEC. Cable containing conductors rated 5,000 to 35,000 V is intended for installation and use in accordance with Articles 328, 501, 502 and 505 of the NEC.

Type MC-HL cable consists of two or more insulated conductors, one or more grounding conductors, and an overall gas/vapor tight continuous corrugated metallic sheath. A nonmetallic jacket is provided over the metal sheath.

The equipment grounding conductor required within Type MC-HL cable may be insulated or bare and may be sectioned. Any additional grounding conductors have green insulation.

Type ITC-HL cable is rated for use on circuits up to 150 V and 5 A. The conductors are size 22 AWG through 12 AWG copper or thermocouple alloy with thermoset or thermoplastic insulation. The cable is intended for installation in accordance with Articles, 501, 502, 505 and 727 of the NEC.

Type ITC-HL cable consists of two or more insulated conductors, with an overall gas-/vapor-tight continuous corrugated metallic sheath and with nonmetallic jackets both under and over the metal sheath. An equipment-grounding conductor may be provided within a Type ITC-HL cable and may be insulated or bare.

PRODUCT MARKINGS

Information regarding temperature rating, voltage rating, cable and conductor Type and AWG size is shown on the surface of a nonmetallic jacket. The cable is marked as described in Metal-clad Cable (PJAZ) or Instrumentation Tray Cable (NYTT), except the suffix "-HL" follows "MC" or "ITC."

RELATED PRODUCTS

See Cable Fittings for Use in Hazardous Locations (CYMX) and Cable Fittings for Use in Class I, Zone 0, 1 and 2 Hazardous Locations (CYMJ).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1569, "Metal-Clad Cables," ANSI/UL 2250, "Instrumentation Tray Cable," and UL 2225, "Metal-Clad Cables and Cable-Sealing Fittings for Use in Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Metal-clad cable that contains copper or copper-clad aluminum conductors has the product name "Metal-clad Cable for Use in Hazardous Locations"; metal-clad cable that contains aluminum conductors has the product name "Metal-clad Aluminum Cable for Use in Hazardous Locations" or "Instrumentation Tray Cable for Use in Hazardous Locations."

MINERAL INSULATED METAL-SHEATHED CABLE (PPKV)

GENERAL

This category covers Type MI mineral insulated metal-sheathed cable which consists of one or more solid copper conductors insulated with highly compressed magnesium oxide and enclosed in a continuous copper or alloy steel sheath, with or without a nonmetallic jacket. It is intended for use in accordance with Article 332 of NFPA 70, "National Electrical Code." Cable rated 600 V is labeled in sizes 16 AWG to 500 kcmil single conductor, 16 to 4 AWG two and three conductor, 16 to 6 AWG four conductor, and 16 to 10 AWG seven conductor constructions. Cable rated 300 V is labeled in two, three, four and seven conductor, sizes 18 to 16 AWG, for use on signaling circuits.

The copper sheath is suitable as an equipment grounding conductor. For cable with alloy steel outer sheath one of the conductors is to be used for equipment grounding.

Nonmetallic jackets or coatings have not been investigated for resistance to corrosion.

PRODUCT MARKINGS

Information regarding voltage rating, cable Type, and conductor size is shown either on a tag affixed to the reel or carton, or on the surface of the metal sheath. If a nonmetallic jacket is used, the information is printed on the surface of the jacket.

Cable with nonmetallic jackets has the following marking on a tag affixed to the reel or carton: "Not suitable for use in Ducts, Plenums or Other Spaces used for environmental air."

Cable with nonmetallic jackets marked "Not suitable for use on or in buildings" has not been investigated for fire retardance but are sunlight resistant.

Cable with nonmetallic jackets that has been investigated for use in cable trays is surface marked "CT Use" or " Cable Tray Use" and may additionally be marked "sunlight Resistant " if applicable.

RELATED PRODUCTS

Terminations especially investigated for use with this cable are covered under Mineral Insulated Cable Fittings (PPYT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. affixed to the reel supporting the cable or tag attached to the cable is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name " Mineral Insulated Metal-Sheathed Cable."

NETWORK-POWERED BROADBAND COMMUNICATIONS CABLE (PWIP)

USE

This category covers network-powered broadband communications cable, which is a jacketed single-conductor coaxial cable or a multiple-conductor jacketed cable, consisting of a combination of coaxial members, insulated conductors and/or optic fiber members. The cable is intended for use in low-power and medium-power circuits in accordance with Article 830 of ANSI/NFPA 70,

"National Electrical Code" (NEC). All Types, with the exception of Types BLU and BMU, have been investigated for use where exposed to the direct rays of the sun.

PRODUCT MARKINGS

Network-powered broadband communications cable is identified by markings on the surface of the jacket or on a marker tape under the jacket. This marking includes one of the following Type designations:

BMU — Indicates medium-power cable intended for outdoor underground use in accordance with Section 830.151(C) of the NEC.

BM — Indicates medium-power cable intended for general use within buildings in accordance with Section 830.151(C) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test described in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," or as an alternative, the damage height of this cable does not exceed 4 ft 11 in. when tested in accordance with the CSA FT4 Vertical-Tray Flame Test also described in UL 1685.

BMR — Indicates medium-power cable intended for use within buildings in vertical shafts in accordance with Section 830.151(B) of the NEC. The flame propagation height of this cable is less than 12 ft when tested in accordance with ANSI/UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

BLP — Indicates low-power cable intended for use in ducts or plenums or other spaces used for environmental air in accordance with Section 830.154(B) of the NEC. This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame-propagation distance of 5 ft, when tested in accordance with ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

BLR — Indicates low-power cable intended for use within buildings in vertical shafts in accordance with Section 830.154(C) of the NEC. The flame propagation height of this cable is less than 12 ft. when tested in accordance with UL 1666.

BL — Indicates low-power cable intended for general use within buildings in accordance with Section 830.154(D) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test described in UL 1685, or as an alternative, the damage height of this cable does not exceed 4 ft. 11 in. when tested in accordance with the CSA FT4 Vertical-Tray Flame Test also described in UL 1685.

BLU — Indicates low-power cable intended for outdoor underground use in accordance with Section 830.154(D)(3) of the NEC.

BLX — Indicates low-power cable intended for limited use within buildings in accordance with Sections 830.154(D)(2), (4) and (5) of the NEC. This cable complies with the VW-1 Flame Test requirements in ANSI/UL 1581, "Reference Standard for Electrical Wires, Cables, and Flexible Cords."

Cable that contains one or more optical-fiber members has the suffix "OF" added to the above. Cable that complies with the Limited Smoke Requirements specified in UL 1685 is surface marked with the suffix "LS."

Cable marked "-30C", "-40C", "-50C", "-60C" or "-70C" complies with a cold bend test conducted at that temperature.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2261, "Outline of Investigation for Cables for Network-Powered Broadband Communications Systems."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Network-powered Broadband Communications Cable."

NONMETALLIC-SHEATHED CABLE (PWVX)

USE

This category covers Types NM-B and NMC-B nonmetallic-sheathed cable, rated 600 V, intended for use in accordance with Article 334 of ANSI/NFPA 70, "National Electrical Code" (NEC), and Listed in copper sizes 14 to 2 AWG inclusive and aluminum or copper-clad aluminum sizes 12 to 2 AWG inclusive.

This cable contains conductors rated 90°C; however, the ampacities of the cable are those of 60°C conductors as specified in Article 334 and Table 310.16 of the NEC.

PRODUCT MARKINGS

Cable with copper-clad aluminum conductors is surface marked "AL (CU-CLAD)" or "Cu-clad Al," and cable with aluminum conductors is surface marked "AL."

Wire and cable employing compact-stranded copper conductors is so identified directly following the conductor size, wherever it appears (surface, tag, carton or reel), by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors."

Cable suitable for use in cable trays is appropriately marked. Cable marked for cable tray use may also have a supplementary sunlight resistant marking.

Cable that complies with the Limited Smoke Test requirements specified in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," is surface marked with the suffix "LS."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 719, "Nonmetallic-Sheathed Cables."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Nonmetallic-sheathed cable that contains copper or copper-clad aluminum conductors has the product name "Nonmetallic-sheathed Cable"; nonmetallic-sheathed cable that contains aluminum conductors has the product name "Nonmetallic-sheathed Aluminum Cable."

OPTICAL FIBER CABLE (QAYK)

USE AND INSTALLATION

This category covers optical fiber cable which is a jacketed cable for use within buildings in accordance with Article 770 of ANSI/NFPA 70, "National Electrical Code" (NEC). Where optical fiber is installed in a laser system, the system shall comply with the ANSI Z136 laser system safety standards.

PRODUCT MARKINGS

Optical fiber cable is identified by a marking on the surface of the jacket or on a marker tape under the jacket. This marking includes one of the following Type designations:

OFC — Indicates cable containing noncurrent-carrying conductive members such as metallic strength members and metallic vapor barriers for use in accordance with Section 770.154(C) of the NEC. This cable does not spread fire to the top of the tray when tested as described under UL Flame Exposure (smoke measurements are not applicable) in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables."

OFN — This cable is the same as Type OFC except it contains no metallic members and no other electrical conductive materials.

OFCG — Indicates cable containing noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers, for use in accordance with Section 770.154(C) of the NEC. The damage height of this cable does not exceed 4 ft 11 in. when tested as described under FT4/IEEE 1202, "Type of Flame Exposure" (smoke measurements are not applicable) in UL 1685.

OFNG — This cable is the same as Type OFCG except it contains no metallic members and no other electrically conductive materials.

OFCR — Indicates cable containing noncurrent-carrying conductive members such as metallic strength members and metallic vapor barriers for use in vertical runs in a shaft in accordance with Section 770.154(B) of the NEC. The flame propagation height of this cable is less than 12 ft when tested per ANSI/UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

OFNR — This cable is the same as Type OFCR except it contains no metallic members and no other electrically conductive materials.

OFCP — Indicates cable containing noncurrent-carrying conductive members such as metallic strength members and metallic vapor barriers for use in ducts or plenums or other spaces used for environmental air in accordance with Section 770.154(A) of the NEC. This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 5 ft when tested per ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

OFNP — This cable is the same as Type OFCP except it contains no metallic members and no other electrically conductive materials.

Cable that complies with the requirements for "Limited Combustible" specified in ANSI/NFPA 90A, "Standard for the Installation of Air-Conditioning and Ventilating Systems," is surface marked "Limited Combustible."

Cable that complies with the Limited Smoke Requirements specified in UL 1685 is surface marked with the suffix "LS."

Cable marked "sunlight resistant" or "sun res" may be exposed to the direct rays of the sun.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations ([AALZ](#)).

REQUIREMENTS

The basic standard used to investigate products in this category is [ANSI/UL 1651](#), "Optical Fiber Cable".

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Optical Fiber Cable."

Cable also verified to a performance specification under Optical Fiber Cable Verified in Accordance with National or International Specifications ([QAZI](#)) has the marking "Also Verified [Specification name and/or number]" together with the Listing Mark information on the tag, reel or smallest unit container.

OPTICAL FIBER CABLE, FIELD ASSEMBLED (QAZD)

USE AND INSTALLATION

This category covers field-assembled optical fiber cable, which is an on-site assembly of one or more optical fiber units and an optical fiber jacket. Field-assembled optical fiber cable is intended for installation in buildings in accordance with Article 770 of ANSI/NFPA 70, "National Electrical Code" (NEC). The optical fiber jacket is installed in a manner similar to conduit or raceway. Once the jacket is installed, the optical fiber units are inserted into the jacket, completing the assembly. Laser systems in which optical fiber is installed comply with the following Laser Institute of America safety standards:

ANSI/LIA Z136.1, "Safe Use of Lasers"

ANSI/LIA Z136.2, "Safe Use of Optical Fiber Communication Systems Utilizing Laser Diode and LED Sources"

ANSI/LIA Z136.3, "Safe Use of Lasers in Health Care Facilities"

ANSI/LIA Z136.4, "Recommended Practice for Laser Safety Measurements for Hazard Evaluation"

ANSI/LIA Z136.5, "Safe Use of Lasers in Educational Institutions"

ANSI/LIA Z136.6, "Safe Use of Lasers Outdoors"

PRODUCT MARKINGS

Optical fiber cable is identified by a marking on the surface of the jacket . This marking includes the Listee's name and catalog designation and one of the following Type designations:

OFC — Indicates cable containing noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers, for use in accordance with Section 770.154(C) of the NEC. This cable does not spread fire to the top of the tray when tested as described under UL Flame Exposure (smoke measurements are not applicable) in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables."

OFN — This cable is the same as Type OFC except it contains no metallic members and no other electrical conductive materials.

OFNG — Indicates cable containing noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers, for use in accordance with Section 770.154(C) of the NEC. The damage height of this cable does not exceed 4 ft 11 in. when tested as described under FT4/IEEE 1202, "Type of Flame Exposure" (smoke measurements are not applicable) in UL 1685.

OFNG — This cable is the same as Type OFCG except it contains no metallic members and no other electrically conductive materials.

OFNR — Indicates cable containing noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers, for use in vertical runs in a shaft in accordance with Section 770.154(B) of the NEC. The flame propagation height of this cable is less than 12 ft when tested per ANSI/UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

OFNR — This cable is the same as Type OFCR except it contains no metallic members and no other electrically conductive materials.

OFNCP — Indicates cable containing noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers, for use in ducts or plenums or other spaces used for environmental air in accordance with Section 770.154(A) of the NEC. This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 5 ft when tested per ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

OFNP — This cable is the same as Type OFCP except it contains no metallic members and no other electrically conductive materials.

Cable marked "Sunlight Resistant" (or "Sun Res") may be exposed to the direct rays of the sun. The marking on the attached tag, coil, reel or smallest unit container in which the optical fiber jacket is packaged includes the following: "For Use Only with Optical Fiber Units, Cat. No.____, manufactured by [company name]."

The marking on the attached tag, coil, reel or smallest unit container in which the optical fiber units are packaged includes the following: "[Company name] Optical Fiber Unit, For Use Only With Optical Fiber Jacket Cat. No. _____, manufactured by [company name]."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations ([AALZ](#)).

REQUIREMENTS

The basic standard used to investigate products in this category is [ANSI/UL 1651](#), "Optical Fiber Cable."

UL MARK

The UL symbol on the optical fiber jacket and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel or smallest unit container in which the optical fiber jacket is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Field Assembled Optical Fiber Cable."

PORTABLE POWER CABLE (QPMU)\

GENERAL

This category covers portable power cable constructed and Listed for use in accordance with Article 400 of ANSI/NFPA 70, "National Electrical Code" (NEC). Portable power cable consists of either a single insulated conductor or two or more insulated conductors, with or without grounding conductors, with an overall fiber reinforced jacket. The insulation and jacket are thermoset on Types G, G-GC and W, and thermoplastic elastomer on Type PPE.

This cable is used to supply power to mobile equipment and machinery and is rated 2000 V, 90°C (194°F) dry, and 60°C (140°F) where exposed to oil. For cable so marked, ratings of 60°C (140°F), 75°C (167°F), or 90°C (194°F) "wet" are also assigned. The term "wet" indicates that the cable is acceptable for immersion in water. Cable that has been investigated for use where exposed to the direct rays of the sun is marked "Sunlight Resistant" or "Sun Res."

Portable power cable employs flexible stranded copper conductors in a size range of 12 AWG to 500 kcmil, except for single conductor Type W and single conductor Type PPE which employs flexible stranded copper conductors in sizes 12 AWG to 1000 kcmil. Ampacities for portable power cable can be found in Table 400.5(B) of the NEC.

Type G — Contains 2 - 6 circuit conductors and a grounding conductor. The grounding conductor is either bare or covered with a green-colored braid or tape, and may either be a single conductor or be sectioned into two or more parts.

Type G-GC — Same as Type G except that the cable also contains one, 10 AWG or larger, yellow insulated conductor which is used as a ground check.

Type W — Contains 1 - 6 circuit conductors and may or may not contain a grounding conductor. If included, the grounding conductor is fully insulated.

Type PPE — Contains 1 - 6 circuit conductors and may or may not contain a grounding conductor. If included, the grounding conductor is fully insulated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations ([AALZ](#)).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in [UL Subject 1650](#), "Outline of Investigation for Portable Power Cable."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Power Cable."

POWER AND CONTROL TRAY CABLE (QPOR)

GENERAL

This category covers Type TC power and control tray cable intended for use in accordance with Article 336 of ANSI/NFPA 70, "National Electrical Code" (NEC). The cable consists of one or more pairs of thermocouple extension wires or two or more insulated conductors, with or without one or more grounding conductors, with or without one or more optical fiber members and covered with a nonmetallic jacket. A single grounding conductor may be insulated or bare and may be sectioned. Any additional grounding conductor is fully insulated and has a distinctive surface marking. The cable is rated 600 or 2000 V.

The cable is Listed in conductor sizes 18 AWG to 1000 kcmil copper or 12 AWG to 1000 kcmil aluminum or copper-clad aluminum. Conductor sizes within a cable may be mixed. Thermocouple extension conductors are Listed in sizes 24 to 12 AWG.

PRODUCT MARKINGS

Cable with copper-clad aluminum conductors is surfaced printed "AL (CU-CLAD)" or "Cu-clad Al."
Cable with aluminum conductors is surface printed "AL."

Cable employing compact-stranded copper conductors is so identified directly following the conductor size, wherever it appears (surface, tag, carton or reel), by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors." For termination information, see Electrical Equipment for Use in Ordinary Locations ([AALZ](#)).

If the type designation of the conductors is marked on the outside surface of the cable, the temperature rating of the cable corresponds to the rating of the individual conductors. When this marking does not appear, the temperature rating of the cable is 60°C unless otherwise marked on the surface of the cable.

Cable investigated for use where exposed to direct rays of the sun is marked "sunlight resistant."

Cable investigated for direct burial in the earth is so identified.

Cable suitable for use between cable trays and utilization equipment in accordance with NEC 336.10(7) is surface marked with the suffix "-ER."

Cable consisting of thermocouple extension wires is surface marked "THCPL EXTN," "For thermocouple extension use only" or "Thermocouple extension wire only."

Cable surface marked "Oil Resistant I" or "Oil Res I" is suitable for exposure to mineral oil at 60°C. Cable suitable for exposure to mineral oil at 75°C is surface marked "Oil Resistant II" or "Oil Res II."

Cable that complies with the Limited Smoke Test requirements specified in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," is surface marked with the suffix "-LS."

Cable containing optical fiber members is identified with the suffix "-OF."

Regarding cable seals outlined in Article 501 of the NEC, Type TC cable has a sheath which is considered to be gas/vapor tight but the cable has not been investigated for transmission of gases or vapors through its core.

RELATED PRODUCTS

Connectors and fittings for use with this cable are covered under Power and Control Tray Cable Connectors (QPOZ), Outlet Bushings and Fittings (QCRV), Nonmetallic-sheathed Cable Connectors (PXJV) and Service Entrance Cable Fittings (TYZX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1277, "Electrical Power and Control Tray Cables with Optional Optical-Fiber Members."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Power and control tray cable that contains copper or copper-clad aluminum conductors has the product name "Power and Control Tray Cable Type TC"; power and control tray cable that contains aluminum conductors has the product name "Aluminum Power and Control Tray Cable Type TC."

POWER-LIMITED CIRCUIT CABLE (QPTZ)

USE

This category covers power-limited circuit cable intended for use in Class 2 or Class 3 circuits as described in Article 725 of ANSI/NFPA 70, "National Electrical Code" (NEC).

PRODUCT MARKINGS

Cable with a nonmetallic jacket is identified by a marking on the surface of the jacket or on a marker tape under the jacket. Cable with an outer metal sheath is identified by a marker tape under the armor. This marking includes one of the following Type designations:

CL2P or CL3P — Indicates cable intended for use in Class 2 or Class 3 circuits within buildings in ducts or plenums or other spaces used for environmental air in accordance with Section 725.61(A) of the NEC. This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 5 ft when tested per ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

CL2R or CL3R — Indicates cable intended for use in Class 2 or Class 3 circuits within buildings in vertical shafts in accordance with Section 725.61(B) of the NEC. The flame propagation height of this cable is less than 12 ft when tested per ANSI/UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

CL2 or CL3 — Indicates cable intended for general use in Class 2 or Class 3 circuits within buildings in accordance with Section 725.61(E) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in ANSI/UL 1581, "Reference Standard for Electrical Wires, Cables, and Flexible Cords."

CL2X or CL3X — Indicates cable intended for use in Class 2 or Class 3 circuits within buildings (1) where the cable is enclosed in raceway or noncombustible tubing, or (2) in nonconcealed spaces where the exposed length of cable does not exceed 10 ft, or (3) in one- or two-family or multifamily dwellings when the cable diameter is less than 0.25 in., in accordance with Section 725.61(E) of the NEC. This cable complies with the VW-1 Flame Test requirements in ANSI/UL 1581.

PLTC — Indicates cable for use in Class 3 circuits within buildings that is suitable for use in cable trays, in accordance with Sections 725.61(C) and (D) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in ANSI/UL 1581.

Cable marked "direct burial," "for direct burial" or "dir bur" has been investigated and found suitable for direct burial in the earth.

Cable marked "sunlight resistant" or "sun res" may be exposed to the direct rays of the sun.

Cable marked "wet" or "wet location" is suitable for use in wet locations.

Cable marked "-30C," "-40C," "-50C," "-60C" or "-70C" complies with a cold bend test conducted at that temperature.

Cable that complies with the requirements for " Limited Combustible" specified in NFPA 90A, "Installation of Air Conditioning and Ventilating Systems," are surface marked "Limited Combustible."

Type PLTC cable permitted to be exposed between cable trays and utilization equipment in accordance with Section 725.61(D)(4) of the NEC is surface marked with the supplementary letters "-ER" (formerly marked " open wiring") .

Cable marked "-CI (max voltage ____)" is suitable for use as circuit integrity cable at the maximum voltage to ground indicated, in accordance with Section 725.82(F) of the NEC.
Listed cable which is additionally marked "In Accordance With [Specification name and/or number]" complies with the requirements of the transmission performance specification referenced and is manufactured under an acceptable quality assurance system.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 13, " Power-Limited Circuit Cables."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED, " a control number, and the product name "Power-limited Circuit Cable."

Cable verified to another transmission performance specification has the Marking "Verified In Accordance With [Specification name and/or number]" together with the Listing Mark information on the tag, reel or smallest unit container.

SERVICE ENTRANCE CABLE (TYLZ)

GENERAL

This category covers service-entrance cable designated Type SE and Type USE for use in accordance with Article 338 of ANSI/NFPA 70, "National Electrical Code" (NEC).
Service-entrance cable, rated 600 V, is Listed in sizes 14 AWG and larger for copper, and 12 AWG and larger for aluminum or copper-clad aluminum.

The cable is designated as follows:

Type SE — Indicates cable for aboveground installation. Both the individual insulated conductors and the outer jacket or finish of Type SE are suitable for use where exposed to sun. Type SE cable contains Type RHW, RHW-2, XHHW, XHHW-2, THWN or THWN-2 conductors.

Types USE and USE-2 — Indicates cable for underground installation including direct burial in the earth. Cable in sizes 4/0 AWG and smaller and having all conductors insulated is suitable for all of the underground uses for which Type UF cable is permitted by the NEC. Multiconductor

Type USE cable contains conductors with insulation equivalent to RHW or XHHW. Multiconductor Type USE-2 contains insulation equivalent to RHW-2 or XHHW-2 and is rated 90°C wet or dry. Single- and multiconductor Types USE and USE-2 are not suitable for use in premises or aboveground except to terminate at the service equipment or metering equipment. Both the insulation and the outer covering, when used, on single- and multiconductor Types USE and USE-2, are suitable for use where exposed to sun.

Submersible Water Pump Cable — Indicates a multiconductor cable in which 2, 3 or 4 single-conductor Type USE or USE-2 cables are provided in a flat or twisted assembly. The cable is Listed in sizes 14 AWG to 4/0 AWG inclusive, copper, and 12 AWG to 4/0 AWG inclusive, aluminum or copper-clad aluminum. The cable is tag marked "For use within the well casing for wiring deep-well water pumps where the cable is not subject to repetitive handling caused by frequent servicing of the pump units." The insulation may also be surface marked "Pump Cable." The cable may be directly buried in the earth in conjunction with this use.

For termination information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

Based upon tests which have been made involving the maximum heating that can be produced, an uninsulated conductor employed in a service cable assembly is considered to have the same current-carrying capacity as the insulated conductors even though it may be smaller in size.

PRODUCT MARKINGS

The Type designation of the conductors may be marked on the surface of the cable. When used, this marking indicates that the temperature rating for the cable corresponds to the temperature rating of the conductors. When this marking does not appear, the temperature rating of the cable is 75°C.

Cable acceptable for installation in cable trays is so marked.

Cable may employ copper, aluminum, or copper-clad aluminum conductors. Cable with copper-clad aluminum conductors is surface printed "AL (CU-CLAD)" or "Cu-Clad Al." Cable with aluminum conductors is surface printed "AL."

Cable employing compact-stranded copper conductors is so identified directly following the conductor size, wherever it appears (surface, tag, carton or reel) by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 854, "Service-Entrance Cables."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service.

The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Service-entrance cable that contains copper or copper-clad aluminum conductor(s) has the product name "Service-Entrance Cable"; service-entrance cable that contains aluminum conductors has the product name "Aluminum Service-Entrance Cable."

SHIPBOARD CABLE, MARINE (UBVZ)

USE AND INSTALLATION

This category covers cable for installation and use aboard marine vessels, fixed and floating offshore petroleum facilities and mobile offshore drilling units (MODUs) in accordance with Section 111.60 of the United States Coast Guard Electrical Engineering Regulations, Sub Chapter J (Title 46 CFR, Parts 110 to 113 inclusive). This cable has not been investigated for use in accordance with ANSI/NFPA 70, "National Electrical Code."

The cable covered under this category is distribution cable rated 600 V, 1 kV, 2 kV or 5 kV, 5-35 kV shielded, control cable rated 600 V, 1 kV, and signal and instrumentation cable rated 300 V.

PRODUCT MARKINGS

Cable is surface marked with temperature and voltage rating and the cable Type designation. Cable surface marked with a low temperature rating complies with low temperature bending and low temperature impact tests.

Cable surface marked "FT4" complies with the requirements of the CSA FT4 Flame Test.

Cable that has a continuous corrugated aluminum armor is identified by the marking "CWCMC" in addition to the cable Type designation.

ADDITIONAL INFORMATION

For additional information, see Marine Products (AAMP) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1309, "Marine Shipboard Cable".

Listed cable that is additionally marked "ALSO CLASSIFIED IN ACCORDANCE WITH IEEE 1580-2001", complies with the construction and performance requirements of that international standard.

Listed cable that is additionally marked "ALSO CLASSIFIED IN ACCORDANCE WITH IEEE 45-1998", complies with the construction and performance requirements of that international standard.

Listed cable that is additionally marked "ALSO CLASSIFIED IN ACCORDANCE WITH IEC 60092 Part No. [specify appropriate Part No.]" complies with the construction and performance requirements of that international standard.

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service.

The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Marine Shipboard Cable."

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated in accordance with IEEE 1580-2001, IEEE 45-1998, or IEC 60092 Part No. 350, 353, 354, 373, 374, 375 and/or 376. The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and "ALSO CLASSIFIED IN ACCORDANCE WITH [Specification name and number]."

UNDERGROUND FEEDER AND BRANCH CIRCUIT CABLE (YDUX)

GENERAL

This category covers underground feeder and branch circuit cable, rated 600 V, in sizes 14 to 4/0 AWG inclusive, copper, and 12 to 4/0 AWG inclusive, aluminum or copper-clad aluminum, for single and multiple conductor cables. It is designated as Type UF cable and is intended for use in accordance with Article 340 of ANSI/NFPA 70, "National Electrical Code" (NEC).

Some multi-conductor cable is surface marked with the suffix "B" immediately following the type letters to indicate the usage of conductors employing 90°C rated insulation.

Such cable may also be installed as Nonmetallic-sheathed Cable, per Section 340.10(4) of the NEC. The ampacities of Type UF cable, with or without the suffix "B," are those of 60°C rated conductors as specified in the latest edition of the NEC.

Submersible Water Pump Cable — Indicates multi-conductor cable in which 2, 3 or 4 single-conductor Type UF cables are provided in a flat or twisted assembly. The cable is Listed in sizes from 14 AWG to 4/0 AWG inclusive, copper, and from 12 AWG to 4/0 AWG inclusive, aluminum or copper-clad aluminum. The cable is tag marked "For use within the well casing for wiring deep well water pumps where the cable is not subject to repetitive handling caused by frequent servicing of the pump units." The insulation may also be surface marked "Pump Cable." The cable may be directly buried in the earth in conjunction with this use.

This cable may employ copper, aluminum, or copper-clad aluminum conductors. Cable with copper-clad aluminum conductors is surface printed "AL (CU-CLAD)" or "Cu-Clad Al." Cable with aluminum conductors is surface printed "AL."

Cable employing compact-stranded copper conductors is so identified directly following the conductor size wherever it appears (surface, tag, carton or reel) by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors." For conductor termination information, see Electrical Equipment for Use in Ordinary Locations ([AALZ](#)).

This cable may be terminated at boxes and other enclosures by using nonmetallic-sheathed cable connectors [see Nonmetallic-sheathed Cable Connectors ([PXJV](#))].

Cable suitable for exposure to direct rays of the sun is indicated by tag marking and marking on the surface of the cable with the designation "Sunlight Resistant."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations ([AALZ](#)).

REQUIREMENTS

The basic standard used to investigate products in this category is [UL 493](#), "Thermoplastic-Insulated Underground Feeder and Branch-Circuit Cables."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Underground feeder cable that contains copper or copper-clad aluminum conductors has the product name "Underground Feeder Cable"; underground feeder cable that contains aluminum conductors has the product name "Aluminum Underground

BUS DROP CABLE (ZIMX)

GENERAL

This category covers multiple-conductor bus drop cable as described in Sec. 368.56(B) of ANSI/NFPA 70, "National Electrical Code" (NEC), and intended for use in accordance with Article 368 and other applicable parts of the NEC. The cable consists of three or four Type TW, THW, THHN and THWN, or XHHW, RHW and RHH conductors cabled together with a grounding conductor with an overall jacket. The cable is rated 600 V, 60, 75, 90 or 105°C.

PRODUCT MARKINGS

Cable marked "Oil Resistant 60C" is suitable for exposure to oil at 60°C. Cable marked "Oil Resistant 75C" is suitable for exposure to oil at 75°C.

Cable marked "Water Resistant" is suitable for immersion in water.

Cable marked "Outdoor" is suitable for installation outdoors.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations ([AALZ](#)).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in [UL Subject 509](#), "Outline of Investigation for Bus Drop Cable."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Bus Drop Cable."

FESTOON CABLE (ZIPF)

GENERAL

This category covers single- and multiple-conductor festoon cable intended for use and installation in accordance with Article 610 of ANSI/NFPA 70, "National Electrical Code." The cable consists of one or more insulated conductors cabled together with an overall jacket. The cable is rated 600 V, 60, 75, 90 or 105°C.

PRODUCT MARKINGS

Cable marked "Oil Resistant 60C" is suitable for exposure to oil at 60°C. Cable marked "Oil Resistant 75C" is suitable for exposure to oil at 75°C.

Cable marked "Outdoor" or "Outdoor Use" is suitable for installation outdoors.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations ([AALZ](#)).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in [UL Subject 2273](#), "Outline of Investigation for Festoon Cables."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Festoon Cable."

FIXTURE WIRE (ZIPR)

GENERAL

This category covers fixture wire for use in accordance with Article 402 of ANSI/NFPA 70, "National Electrical Code."

All conductors are copper; however, fixture wire having a temperature rating higher than 90°C may employ nickel.

Thermoplastic compounds tend to stiffen at temperatures below -10°C (14°F) and care should be taken in handling at such temperatures.

Gasoline-resistant wire has been tested at 23°C when immersed in gasoline. It is considered inherently resistant to gasoline vapors within the limits of the temperature rating of the wire type.

Gasoline-resistant TFN or TFFN — Indicates a TFN and TFFN conductor with a jacket of extruded nylon suitable for exposure to mineral oil, and to liquid gasoline and gasoline vapors at ordinary ambient temperature. It is identified by tag marking and by printing on the insulation or nylon jacket with the designation "Type TFN (TFFN) Gasoline and Oil Resistant I" if suitable for exposure to mineral oil at 60°C, or "Type TFN (TFFN) Gasoline and Oil Resistant II" if suitable for exposure to mineral oil at 75°C.

Wire that complies with a special Vertical Flame Test is marked "VW-1."

Fixture wire is designated as follows:

60°C maximum operating temperature	Thermoplastic-insulated wire: 600 V, 18-16 AWG: Types TF, TFF
75°C maximum operating temperature	Thermoset-insulated, heat-resistant wire: 600 V, 18-16 AWG: Types RFH-2, FFH-2
90°C maximum operating temperature	Thermoplastic-insulated wire: 600 V, 18-16 AWG: Types TFN, TFFN
	Thermoset-insulated, heat-resistant wire: 600 V, 18-16 AWG: Types RFHH-2, RFHH-3
150°C maximum operating temperature	Silicone rubber-insulated wire: 300 V, 18 AWG: Type SFF-1 600 V, 18-14 AWG: Type SFF-2
	Fluorinated ethylene propylene-insulated wire: 600 V, 18-14 AWG: Types PFF, PGFF
	Polytetrafluoroethylene-insulated wire: 600 V, 18-14 AWG: Type PTFF
	Cross-linked polyolefin-insulated wire: 300 V, 18-10 AWG: Types XF, XFF
	Ethylene tetrafluoroethylene-insulated wire: 600 V, 18-14 AWG: Types ZF, ZFF
200°C maximum operating temperature	Silicone rubber-insulated wire: 300 V, 18 AWG: Type SF-1 600 V, 18-14 AWG: Type SF-2
	Fluorinated ethylene propylene-insulated wire: 600 V, 18-14 AWG: Types PF, PGF
	Aromatic polyimide tape insulated wire: 300 V, 18-10 AWG: Types KF-1, KFF-1 600 V, 18-10 AWG: Types KF-2, KFF-2
	Ethylene tetrafluoroethylene-insulated wire: 600 V, 18-14 AWG: Type ZHF
250°C maximum operating temperature	Polytetrafluoroethylene-insulated wire: 600 V, 18-14 AWG: Type PTF

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations ([AALZ](#)).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 66, "Fixture Wire."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fixture Wire."

FLEXIBLE CORD (ZJCZ)

GENERAL

This category covers flexible cord constructed and Listed for use in accordance with Article 400 of ANSI/NFPA 70, "National Electrical Code" (NEC). All conductors are stranded copper.

Voltage Ratings

"Clock Cord" is rated 125 V.

Types C (14-10 AWG), PD (14-10 AWG), S, SO, SOO, SOW, SOOW, ST, STO, STOO, STW, STOW, STOOW, SE, SEO, SEOO, SEW, SEOW and SEOOW are rated 600 V.

Types C (18-16 AWG), PD (18-16 AWG) and all other types are rated 300 V.

Conductor Sizes

The conductor size ranges are as specified in the NEC with the following exceptions:

Types XTW, 20-18 AWG; CXTW, 22-18 AWG; "Clock Cord," 20 AWG; and "Shaver Cord," 27 and 20 AWG.

Temperature Ratings

Types C, PD, SP-1, SP-2, SP-3, NISP-1, NISP-2, SRD, E, EN, ETP, ETT, TPT, TS, TST and "Shaver Cord" are rated 60°C.

Type SRDT is rated 60 or 90°C.

Types XTW and CXTW are rated 105°C.

Types SPE-1, SPE-2, SPE-3, SVE, SVEO, SVEOO, SJE, SJEO, SJEOO, SJEW, SJEOW, SJEOOW, SE, SEO, SEOO, SEW, SEOW, SEOOW, HPD, HPN, HSJ, HSJO, HSJOO, HS, HSO and HSOO are rated 90 or 105°C.

"Clock Cord" is rated 60 or 105°C.

All other cord types are rated 60, 75, 90 or 105°C. Cord having a temperature rating higher than 60°C has the rating printed on the outer surface of the cord. If the cord is rated 60°C, no temperature rating appears.

Cord Types or Characteristics Not Covered by the NEC

Types NISP-1, NISP-2, NISPT-1, NISPT-2, NISPE-1 and NISPE-2 are parallel constructions, similar to SPT-1, etc., except that the conductors are individually insulated, laid parallel, with a non-integral, overall jacket.

Type XTW is a parallel assembly of two conductors intended for use in decorative lighting equipment.

Type CXTW is a single conductor or twisted assembly of two conductors intended for use in decorative lighting equipment.

"Clock Cord," which has no Type designation, is similar to Type XTW except for conductor size.

"Shaver Cord," which has no Type designation, is similar to Type TPT except for the conductor configuration.

PRODUCT MARKINGS

"For Mobile Home Use," "For Recreational Vehicle Use" or "For Mobile Home and Recreational Vehicle Use," followed by current rating in amps, indicates suitability for use in mobile homes or recreational vehicles.

"W" indicates suitability for use outdoors and for immersion in water. The low-temperature rating for this cord is -40°C unless otherwise marked on the cord with optional ratings of -50, -60 or -70°C. The low-temperature ratings are determined by means of a bend test (not a suppleness test) at the given temperature. The cord may be additionally marked "Water Resistant" and/or "Outdoor."

"VW-1" indicates that the cord complies with a Vertical Flame Test. Cord that has been investigated for leakage currents between the circuit conductor and the grounding conductor, and between the circuit conductor and the outer surface of the jacket, may have the values so marked on the cable jacket.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations ([AALZ](#)).

REQUIREMENTS

The basic standard used to investigate products in this category is [ANSI/UL 62](#), "Flexible Cord and Fixture Wire."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flexible Cord."

GAS-TUBE-SIGN CABLE (ZJQX)

USE AND INSTALLATION

This category covers gas-tube-sign cable Listed as single conductor Type GTO-5 (5000 V), GTO-10 (10,000 V) or GTO-15 (15,000 V), in sizes 18-10 AWG copper. This cable is intended for use

with gas-tube systems for signs, outline lighting, and interior lighting in accordance with ANSI/NFPA 70, "National Electrical Code," and UL 48, "Electric Signs."

PRODUCT MARKINGS

Cable that complies with the requirements for GTO cable employing an integral sleeve is surface marked "Integral Sleeve."

ADDITIONAL INFORMATION

For conductor terminal information and additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 814, "Gas-Tube-Sign Cable."

GTO cable identified and marked "Integral Sleeve" used in enclosure assemblies with other neon sign components has also been investigated to ANSI/UL 879, "Electric Sign Components."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," and the product name "Gas-Tube-Sign Cable."

MACHINE-TOOL WIRE (ZKHZ)

GENERAL

This category covers machine-tool wire and cable, which is all-thermoplastic Type MTW 600 V wire and cable for use as specified in ANSI/NFPA 70, "National Electrical Code," and NFPA 79, "Electrical Standard for Industrial Machinery." The finished wire or cable is flame retardant and suitable for use at 90°C (194°F) and lower temperatures in dry locations, and at 60°C (140°F) and lower temperatures where exposed to moisture, oil or coolants, that is, to cutting oils and the like.

The single-conductor constructions are:

- Construction A — All PVC-insulated
- Construction B — PVC-insulated with a nylon jacket

Both constructions are labeled in sizes 22 AWG to 1000 kcmil inclusive, stranded copper. The multiple-conductor constructions consist of assemblies of these single-conductor constructions enclosed by a PVC jacket.

Single- and multiple-conductor wire and cable employing 16-10 AWG conductors having the stranding for flexing service are surface marked "flexing" or "Class K." This marking is optional for smaller conductors intended for flexing service.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1063, "Machine-Tool Wires and Cables."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Machine Tool Wire."

PHOTOVOLTAIC WIRE (ZKLA)

GENERAL

This category covers single-conductor, insulated and integrally or non-integrally jacketed, sunlight resistant, photovoltaic wire rated 90°C wet or dry, 600 V, intended for interconnection wiring of grounded and ungrounded photovoltaic power systems as described in Section 690.31(A) and other applicable parts of ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 4703, "Outline of Investigation for Photovoltaic Wire."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Photovoltaic Wire."

Telephone Service Drop Wire (ZKSG)

USE

This category covers single-pair and multiple-pair telephone drop wire intended for use as overhead conductors that extend telephone circuits (1) from the last utility pole or other outdoor support to the protector(s) within the building or other structure served, and (2) between buildings or other structures on the premises served. This wire is intended for use in accordance with Article 800 of ANSI/NFPA 70, "National Electrical Code."

PRODUCT MARKINGS

The wire is marked with the Listee's name, trade name or file number.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 523, "Outline of Investigation for Telephone Service Drop Wire."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Telephone Service Drop Wire."

PROCESSED WIRE (ZKLU)

GENERAL

This category covers Listed wire, flexible cord and cable, and Classified cable that has been subjected to processing subsequent to Labeling and identified as either processed wire or processed wire - respooled.

Listed wire, flexible cord and cable identified as "Listed Processed Wire" has been cut into certain lengths from which the insulation may be stripped from one or both ends. The stripped ends may be soldered or tinned and may have simple terminals of the eyelet, ring, open spade or quick-connect type attached by crimping, soldering or welding.

These lengths may be packaged for further processing. Single lengths of Listed processed wire and cable may be paralleled with other insulated wire and cable and may be held together by an open binder.

Products identified as "Listed Processed Wire - Respooled" are single, continuous lengths of Listed wire, flexible cord or cable cut from a longer length and coiled or placed on a spool or reel.

Products identified as "Classified Processed Wire" are Classified cable that has been cut into certain lengths from which the insulation may be stripped from one or both ends. These lengths may be packaged for further processing. Single lengths of Classified processed wire may be paralleled with other insulated cable and may be held together by an open binder.

Products identified as "Classified Processed Wire - Respooled" are single, continuous lengths of Classified cable cut from a long length and coiled or placed on a spool or reel.

The tag markings from the wire spooler reel (e.g., voltage, temperature, insulation thickness, usage) are provided on the processed wire tag attached to the product.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations ([AALZ](#)).

REQUIREMENTS

The basic standards used to investigate products in this category are [UL 62](#), "Flexible Cord and Fixture Wire," [UL 66](#), "Fixture Wire," [UL 83](#), "Thermoplastic-Insulated Wires and Cables," or [UL 44](#), "Thermoset-Insulated Wires and Cables," and [UL 486A-486B](#), "Wire Connectors," or [UL 486C](#), "Splicing Wire Connectors."

UL MARK

The Listing or Classification Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing or Classification and Follow-Up Service. The Listing or Classification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED" or "CLASSIFIED" respectively, a control number, and the product name "Processed Wire" or "Processed Wire - Respooled."

Wire, Heat Resistant, for Ovens (ZNNA) USE

This category covers single- and multiple-conductor wire intended for use in dry locations in infrared ovens and similar other high-temperature applications. The wire is rated 300 or 600 V, and 105, 150, 200, 250, 350 or 450°C.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2563, "Outline of Investigation for Heat Resistant Wire."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Heat-resistant Wire."

RECREATIONAL VEHICLE CABLE, LOW VOLTAGE (ZKRU)

GENERAL

This category covers single-conductor, multi-conductor parallel and jacketed flat, parallel or round multiple-conductor recreational vehicle cable rated 90°C or higher, intended for use in low-voltage circuits as described in Article 551 and other applicable parts of ANSI/NFPA 70, "National Electrical Code."

PRODUCT MARKINGS

Cable marked "Oil Resistant 60C" is suitable for exposure to oil at 60°C. Cable marked "Oil Resistant 75C" is suitable for exposure to oil at 75°C.

Cable marked "Outdoor" or "Outdoor Use" is suitable for installation outdoors.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations ([AALZ](#)).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in [UL Subject 2276](#), "Outline of Investigation for Recreational Vehicle Cable."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Recreational Vehicle Cable."

THERMOSET-INSULATED WIRE (ZKST)

GENERAL

This category covers thermoset-insulated wire and cable (tabulated below) which is flame retardant and rated 600 V, except for Types RHH, RHW and RHW-2 which may be rated 2000 V. The voltage rating is marked on the outer surface of the wire or cable.

PRODUCT MARKINGS

RHW — Indicates a single conductor having a thermoset insulation, with or without a nonmetallic covering, rated 75°C dry, 75°C wet.

RHW-2 — Indicates a single conductor with the same description as Type RHW, except that it is rated 90°C dry, 90°C wet.

RHH — Indicates a single conductor with the same description as Type RHW, except that it is rated 90°C dry only.

XHH — Indicates a single conductor having a cross-linked synthetic polymer insulation with no overall covering provided, rated 90°C dry.

XHHW — Indicates a single conductor with the same description as Type XHH, except that it is rated 90°C dry, 75°C wet.

XHHW-2 — Indicates a single conductor with the same description as Type XHH, except that it is rated 90°C dry, 90°C wet.

SA — Indicates a single conductor having thermosetting silicone rubber insulation and a nonmetallic covering rated 90°C dry, general use, 200°C dry, special applications.

SIS — Indicates a single conductor having thermosetting insulation with no overall covering provided rated 90°C dry, for switchboard wiring only.

D — Used as a suffix indicating a twin wire having two insulated conductors laid parallel under an outer nonmetallic covering.

M — Used as a suffix indicating a cable having two or more insulated single conductors twisted together under an outer nonmetallic covering.

This wire, in sizes mentioned below, may employ copper, aluminum, or copper-clad aluminum conductors. Wire with copper-clad aluminum conductors is surface printed "Cu-Clad Al" or "AL (CU-CLAD)." Wire with aluminum conductors is surface printed "AL."

In addition to the required AWG or kcmil size, the metric equivalent may be marked on the wire, e.g. "6 AWG (13.3 MM2)" or "13.3 MM2 (6 AWG)."

Types RHH, RHW, RHW-2, XHH, XHHW, XHHW-2 and SA are Listed in sizes 14 AWG through 2000 kcmil copper, and 12 AWG through 2000 kcmil aluminum or copper-clad aluminum. Type SIS is Listed in sizes 14 through 4/0 AWG copper, and 12 through 4/0 AWG aluminum or copper-clad aluminum.

Wire and cable employing compact-stranded copper conductors is so identified directly following the conductor size wherever it appears (surface, tag, carton or reel) by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors."

Wire bearing multiple type designations is suitable for the temperature associated with each use. For example, a wire marked "RHH or RHW" is suitable for 90°C in dry locations, and 75°C in wet locations.

Wire marked "gasoline resistant" has been tested at 23°C when immersed in gasoline. Wire marked "Oil Resistant I" and "Oil Resistant II" has been tested for immersion in mineral oil at 60°C and 75°C, respectively.

Wire and cable marked "Cable Tray Use" complies with a Vertical-Tray Flame Test. Wire and cable marked "Sunlight Resistant" complies with an artificial weathering test. The "Cable Tray Use" marking, with or without the "Sunlight Resistant" marking, pertains to single conductor sizes 4 through 1 AWG for grounding conductors only, single conductor sizes 1/0 AWG and larger, and all sizes of multiconductor Types RHH, RHW, RHW-2, XHH, XHHW and XHHW-2. Wire Types RHW, RHW-2, XHHW and XHHW-2 intended to be installed on a messenger may be marked "Sunlight Resistant" in all sizes.

Wire marked "VW-1" complies with a Vertical Flame Test; all others comply with a Horizontal Flame Test.

Wire that complies with the Limited Smoke Test requirements specified in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," is surface marked with the suffix "-LS."

Wire and cable marked "-40 C" complies with a cold impact test conducted at that temperature. This does not necessarily mean that the cable can be easily installed at that temperature. Different installation conditions and configurations require that care be taken when installing cable at low temperatures.

Submersible Water Pump Cable — Indicates multiconductor cable in which two, three or four Type RHW, RHW-2, XHHW or XHHW-2 conductors are provided in a flat or twisted assembly. The cable is Listed in sizes from 14 AWG through 500 kcmil copper, and from 12 AWG through 500 kcmil aluminum or copper-clad aluminum. The cable is tag marked "For use within the well casing for wiring deep well water pumps where the cable is not subject to repetitive handling caused by frequent servicing of the pump units." The surface of the wire may also be marked "Pump Cable." The cable has not been evaluated for direct burial in the earth unless the single conductors carry an additional "Type USE" or "Type USE-2" marking.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 44, "Thermoset-insulated Wires and Cables."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Thermoset-insulated wire that contains copper or copper-clad aluminum conductors has the product name "Insulated Wire"; thermoset-insulated wire that contains aluminum conductors has the product name "Insulated Aluminum Wire."

THERMOPLASTIC-INSULATED WIRE (ZLGR)

USE

This category covers thermoplastic-insulated wire for use in accordance with Article 310 of ANSI/NFPA 70, "National Electrical Code."

PRODUCT TYPES

Thermoplastic-insulated wire is rated 600 V and is designated as follows:

TW — Indicates a single conductor having flame-retardant, moisture-resistant thermoplastic insulation. The wire is rated 60°C wet or dry.

THHN — Indicates a single conductor having flame-retardant and heat-resistant thermoplastic insulation with a jacket of extruded nylon or equivalent material. The wire is rated 90°C dry only.

THW — Indicates a single conductor having flame-retardant, moisture- and heat-resistant thermoplastic insulation. The wire is rated 75°C wet or dry.

THW-2 — Same as THW except that the wire is rated 90°C wet or dry.

THHW — Indicates a single conductor having flame-retardant, moisture- and heat-resistant thermoplastic insulation. The wire is rated 90°C dry and 75°C wet.

THWN — Indicates a single conductor having flame-retardant, moisture- and heat-resistant thermoplastic insulation with a jacket of extruded nylon or equivalent material. The wire is rated 75°C wet or dry. THWN wire suitable for exposure to mineral oil and to liquid gasoline and gasoline vapors at ordinary ambient temperature is marked "Gasoline and Oil Resistant I" if suitable for exposure to mineral oil at 60°C, or "Gasoline and Oil Resistant II" if the compound is suitable for exposure to mineral oil at 75°C. Gasoline resistant wire has been tested at 23°C when immersed in gasoline. It is considered inherently resistant to gasoline vapors within the limits of the temperature rating.

THWN-2 — Same as THWN except that the wire is rated 90°C wet or dry.

FEP — Indicates a single copper conductor having flame-retardant and heat-resistant thermoplastic (fluorinated ethylene propylene) insulation. Type FEP wire is suitable for use at 90°C and lower temperatures in dry locations. It is also suitable for use in dry locations at 200°C and lower temperatures for special applications.

FEPB — Indicates a single copper conductor having flame-retardant and heat-resistant thermoplastic (fluorinated ethylene propylene) insulation with a glass braid. Type FEPB wire is suitable for general use at 90°C and lower temperatures in dry locations. It is also suitable for use in dry locations at 200°C and lower temperatures for special applications.

PFA — Indicates a single copper conductor having flame-retardant and heat-resistant thermoplastic (perfluoroalkoxy) insulation. Type PFA wire is suitable for use at 90°C and lower temperatures in dry locations. It is also suitable for use in dry locations at 200°C and lower for special applications.

PFAH — Indicates a single, nickel or nickel-coated copper conductor having flame-retardant and heat-resistant thermoplastic (perfluoroalkoxy) insulation. The PFAH is suitable for use at 250°C and lower temperatures only for leads within apparatus or within raceways connected to apparatus, in dry locations only.

TFE — Indicates a single, nickel-coated copper or nickel base alloy conductor having flame-retardant and heat-resistant thermoplastic (polytetrafluoroethylene) insulation. Type TFE wire is suitable for use at 250°C and lower temperatures in dry locations as leads within apparatus or within raceways connected to apparatus or as open wiring.

Z — Indicates a single copper conductor having flame-retardant and heat-resistant thermoplastic (ethylene tetrafluoroethylene) insulation. Type Z wire is suitable for use at 90°C and lower temperatures in dry locations. It is also suitable for use in dry locations at 150°C and lower temperatures for special applications.

ZW — Indicates a single copper conductor having flame-retardant and heat-resistant thermoplastic (ethylene tetrafluoroethylene) insulation. Type ZW wire is suitable for use in dry locations at 90°C or wet locations at 75°C. It is also suitable for use in dry locations at 150°C and lower temperatures for special applications.

ZW-2 — Same as ZW except that the wire is rated 90°C wet or dry.

TBS — Indicates a single conductor switchboard wire having thermoplastic insulation and a flame-retardant nonmetallic covering. Type TBS is suitable for use at 90°C and lower temperatures in dry locations.

PRODUCT MARKINGS

Types TW, THW, THW-2, THHN, THHW, THWN, THWN-2, PFA, PFAH and Z in sizes 4 to 1 AWG for grounding conductors only and in sizes 1/0 AWG and larger for circuit and grounding conductors that are marked "Cable Tray Use" or "CT" comply with a vertical-tray cable flame test. Wire so marked may additionally be marked "Sunlight Resistant" indicating compliance with an artificial weathering test.

Types TW, THW, THW-2, THHW, THWN and THWN-2 in all sizes that are marked "Sunlight Resistant" comply with an artificial weathering test.

Wire suitable for exposure to mineral oil is marked "Oil Resistant I" for 60°C oil resistance, or "Oil Resistant II" for 75°C oil resistance, on the surface of the wire. An Oil Resistant marking, by itself, does not include resistance to gasoline or similar light petroleum solvents.

Wire that complies with a special vertical flame test is surface marked "VW-1."

Constructions in this category that comply with a flame and smoke test (as described in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables") may have the additional marking "ST1" indicating "Limited Smoke." (Note: The suffix "-LS," added to the Type letters, has also been used to indicate Limited Smoke. Effective November 15, 2004, only "ST1" may be used.)

In place of three of the markings described above, the following multinational markings may be used:

"SR" in place of "Sunlight Resistant"

"PR" in place of "Oil Resistant"

"GR" in place of "Gasoline and Oil Resistant"

Submersible Pump Cable — Indicates multiconductor cable consisting of two or three flat or two to six twisted insulated conductors with or without an overall jacket. The cable is labeled in size 14 AWG to 500 kcmil copper, and 12 AWG to 500 kcmil aluminum or copper-clad aluminum. The cable is tag marked "For Wiring Only Between Equipment Located at Water Well Heads and Motors of Installed Deep-Well Submersible Water Pumps." The insulation is surface marked "Submersible Pump Cable." The cable has not been investigated for direct burial in the earth.

Wire, in sizes mentioned below, may employ copper or aluminum, or copper-clad aluminum conductors. Wire with copper-clad aluminum conductors is surface printed "AL (CU-CLAD)" or "Cu-Clad Al." Wire with aluminum conductors is surface printed "AL."

Wire and cable employing compact-stranded copper conductors is so identified directly following the conductor size, wherever it appears (surface, tag, carton or reel), by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for product employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors."

SIZE AND CONDUCTOR INFORMATION

Types TW, THW and THW-2 are Listed in sizes 14 AWG to 2000 kcmil copper and 12 AWG to 2000 kcmil aluminum or copper-clad aluminum.

Types THHN, THWN, THWN-2 and THHW are Listed in sizes 14 AWG to 1000 kcmil copper and 12 AWG to 1000 kcmil aluminum or copper-clad aluminum.

Types TA, TBS, PFA, PFAH and Z are Listed in sizes 14 to 4/0 AWG copper and 12 to 4/0 AWG aluminum or copper-clad aluminum.

Types ZW, ZW-2, FEP and FEPB are Listed in sizes 14 to 2 AWG copper and 12 to 2 AWG aluminum or copper-clad aluminum.

ADDITIONAL INFORMATION

For conductor termination information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 83, "Thermoplastic-insulated Wires and Cables."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Thermoplastic-insulated wire that contains copper or copper-clad aluminum conductors has the product name "Insulated Wire"; thermoplastic-insulated wire that contains aluminum conductors has the product name "Insulated Aluminum Wire."

WELDING CABLE (ZMAY)

GENERAL

This category covers welding cable, which is a single-conductor cable intended for use in the secondary circuit of electric welders in accordance with Article 630, Part IV of ANSI/NFPA 70, "National Electrical Code." The conductors are flexible-stranded copper, 8 AWG through 250 kcmil, the individual strands of which are 34 through 30 AWG.

RATINGS

Welding cable is rated 60, 75 or 90°C and 100 or 600 V.

PRODUCT MARKINGS

The voltage and temperature ratings, if higher than 100 V and 60°C, respectively, are identified by printing on the surface of the insulation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1276, "Outline of Investigation for Welding Cable."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel, or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Welding Cable."

WIRE, MISCELLANEOUS (ZMHX)

GENERAL

This category covers different wire and cable products, each intended for the particular application marked on the product, tag, carton or reel. Included in this category are:

Aircraft Ground Support Cable

Battery Lead Wire

Brake Control Cable

Burglar Alarm Cable

Bus Drop Cable

Cathodic Protection Cable

Crane and Hoist Optical Fiber Cable

DLO Cable

Flexible Power Feed Cable

Golf Course Sprinkler Wire

Heat Resistant Wire

Induction Heating Cable

Inductive Detector Lead-in Cable

Insulated Grounding Conductors

Irrigation Machine Feeder Cable

Low-ohmic Distribution Cable

Litz Wire

Marine Cable

Mine Power Feeder Cable

Mineral-insulated Metal-sheathed Control Cable

Pendant Cable

PVC-jacketed, Thermoplastic Polyolefin-jacketed and Thermoplastic CPE-jacketed
Thermoset-insulated Wire

Railroad Underground Power Cable

RF Coaxial Cable

SAE Wire Types TWP, GPT, HDT, TXL, GXL and SXL

Satellite Antenna-Cable

Shore Power Cable

Slotted Coaxial Cable

Solar Panel Wire

Strobe Flash-head Cable

Submersible Pump Cable (TPE or PE insulation)

Surge Protection Cable

Telephone Central Office Power Cable

Telephone Drop Wire

Tower and Case Wire

Tracer Wire

Track Wire

Traction Power Cable

Undercarpet Data Cable

Underground Low-energy Circuit Cable

Underground Signal Cable

Vault Lacing Cable

Wireless Antenna Interface Cable

PRODUCT MARKINGS

Information regarding installation, ampacity, etc., where appropriate, is included in the marking found on the tag, reel or carton.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are:

ANSI/UL 44, "Thermoset-Insulated Wires and Cables"

ANSI/UL 62, "Flexible Cords and Cables"

ANSI/UL 66, "Fixture Wire"

ANSI/UL 83, "Thermoplastic-Insulated Wires and Cables"

ANSI/UL 493, "Thermoplastic-Insulated Underground Feeder and Branch-Circuit Cables"

ANSI/UL 854, "Service-Entrance Cables"

ANSI/UL 1072, "Medium-Voltage Power Cables"

UL 1309, "Marine Shipboard Cable"

ANSI/UL 1581, "Reference Standard for Electrical Wires, Cables, and Flexible Cords"

SAE 1128, "Surface Vehicle Standard"

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product identifier, such as "Tracer Wire." The term "Special Purpose Wire" is not used.

APPENDIX C

WIRE, CABLE AND CORD CLASSIFICATION INFORMATION

MEDIUM-VOLTAGE CABLE CLASSIFIED IN ACCORDANCE WITH UL 1072, WITH METRIC CONDUCTOR SIZES (PIVW)

GENERAL

This category covers medium-voltage cable rated 2001 to 35,000 V and in conductor sizes 10 through 500 sq mm.

The cable complies with all requirements specified in UL 1072, "Medium-Voltage Power Cables," except that metric conductor sizes are used instead of AWG sizes. The cable is for use in jurisdictions where metric conductor sizes are required or permitted.

The cable is single or multi-conductor, aluminum or copper, with solid extruded dielectric insulation. An extruded jacket, metallic covering, or combination of both may be provided over single conductors or over the assembled conductors in a multi-conductor power cable.

All insulated conductors rated 8001 V and higher have electrostatic shielding. Cable rated 2001 to 8000 V may be shielded or nonshielded.

Nonshielded cable is intended for use where conditions of maintenance and supervision ensure that only competent individuals service and have access to the installation.

PRODUCT MARKINGS

Shielded cable is marked "MV-90" or "MV-105" and is suitable for use in wet or dry locations at 90°C or 105°C.

Nonshielded cable is marked either "MV-90" indicating suitability for use in wet or dry locations at 90°C maximum, or "MV-90 Dry Locations Only."

Cable marked "oil resistant I" or "oil resistant II" is suitable for exposure to mineral oil at 60°C or 75°C, respectively.

Cable marked "sunlight resistant" may be exposed to the direct rays of the sun.

Cable intended for installation in cable trays is marked "For CT Use" or "For Use In Cable Trays."

Cable with aluminum conductors is marked with the word "Aluminum" or the letters "AL."

Cable is marked with conductor size in sq mm, voltage rating and insulation level (100 percent or 133 percent).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1072, "Medium-Voltage Power Cables."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product, the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products shall only be as illustrated below:

**MEDIUM VOLTAGE CABLE
CLASSIFIED BY UNDERWRITERS LABORATORIES INC®
IN ACCORDANCE WITH UL 1072, WITH METRIC
CONDUCTOR SIZES
Control No.**

**METAL-CLAD CABLE CLASSIFIED IN ACCORDANCE WITH UL 1569, WITH METRIC
CONDUCTOR SIZED (PJPJ)**

GENERAL

This category covers Type MC metal-clad cable. It is rated for use up to 2000 V, and Classified in sizes 1.5 through 35 sq mm copper, 4.0 through 35 sq mm aluminum or copper-clad aluminum and employs thermoset or thermoplastic insulated conductors.

The cable complies with all the requirements specified in UL 1569, "Metal-Clad Cables," except that metric conductor sizes are used instead of AWG/kcmil sizes. This cable is for use in jurisdictions where metric conductor sizes are required or permitted.

Type MC cable is of three designs (a) interlocked metal tape, (b) corrugated tube and (c) smooth tube, and all are intended for aboveground use except when marked for direct burial.

The armor of the interlocked metal tape type may or may not be used for grounding. Interlocked armor constructions that may be used as a ground path have a grounding/bonding conductor outside the cable core and in direct contact with the armor. Interlocked armor constructions that are not intended as a ground path have a grounding conductor inside the cable core and not in contact with the armor. The tube of corrugated or smooth tube Type MC Cable in combination with the equipment grounding conductor, when provided, is suitable for grounding; otherwise the tube by itself is suitable for grounding.

PRODUCT MARKINGS

Information regarding temperature rating, voltage rating, cable and conductor Type and sq mm size is shown either on a marker tape under the armor or on the surface of a nonmetallic jacket, if used.

Copper-clad aluminum conductors are surface printed "AL (CU-CLAD)" or "Cu-Clad AL."
Aluminum conductors are surface printed "AL."

Cable employing compact-stranded copper conductors is so identified directly following the conductor size, wherever it appears (surface, tag, carton or reel), by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors."

Cable suitable for use in cable trays, direct sunlight or direct burial application is so marked.

Cable marked "Oil Resistant I" or "Oil Res I" is suitable for exposure to mineral oil at 60°C. Cable suitable for exposure to mineral oil at 75°C is marked "Oil Resistant II" or "Oil Res II."

Cable with an interlocked armor that is intended as a ground path is marked "armor is grounding path component," and is provided with installation instructions.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1569, "Metal-Clad Cable."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product, the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products shall only be as illustrated below using the appropriate product name: Metal-clad cable that contains copper or copper-clad aluminum conductors has the product name "Metal-Clad Cable"; metal-clad cable that contains aluminum conductors has the product name "Metal-Clad Aluminum Cable."

**[PRODUCT NAME]
CLASSIFIED BY UNDERWRITERS LABORATORIES INC.
IN ACCORDANCE WITH UL 1569, WITH METRIC
CONDUCTOR SIZES
Control No.**

TRAFFIC SIGNAL CABLE CLASSIFIED IN ACCORDANCE WITH IMSA SPECIFICATIONS (XNTL)

GENERAL

This category covers cable investigated in accordance with International Municipal Signal Association Inc. specifications. The cable is intended for installation as aerial cable or in underground conduit as part of a traffic signal system. This cable employs a color-code scheme that permits a conductor with green insulation to be used for other than grounding purposes. This cable has not been investigated for flammability. This cable is not suitable for use as a substitute for cable or wiring systems covered in ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products is as illustrated below:

**TRAFFIC SIGNAL CABLE
CLASSIFIED BY UNDERWRITERS LABORATORIES INC.®
IN ACCORDANCE WITH IMSA SPECIFICATIONS XX-X
Control No.**

In addition, the Classification Mark may include the UL symbol.

**TRAILING CABLE
CLASSIFIED IN ACCORDANCE WITH DIN
Publication DIN VDE 0250 Part 813 (XNUA)**

GENERAL

This category covers trailing cable intended to provide power to the boom on shipyard container cranes. The cable consists of insulated conductors, ground conductors and ground check conductors twisted together with an overall jacket. The conductor stranding is intended to be in accordance with Class 5 DIN VDE 0295-1992, "Conductors of Cables, Wires and Flexible Cords for Power Installation." The cable is rated 0.6/1 kV to 20/35 kV.

This cable has not been investigated for use in accordance with ANSI/ NFPA 70, "National Electrical Code."

PRODUCT MARKINGS

Trailing cable is marked with the cable construction code followed by the manufacturer's name or other identification and year of manufacture. The cable construction code consists of:

NTM@WOU-# % \$ — trailing cable with one rubber sheath, or

NTS@WOU-# % \$ — trailing cable with two rubber sheaths,

where @ is any number of the abbreviations below that designate the structural elements contained in the cable. The abbreviations are ordered as they appear from the inside to the outside of the cable:

K — rubber cross in the core of the cable

C — conductive metal casing over the stranded cores or between the inner and outer sheath

CG — conductive nonmetallic casing over the stranded cores or between the inner and outer sheath

CE — conductive metal casing over the insulation of the outer conductors

CGE — conductive nonmetallic casing over the insulation of the outer conductors

R — round wire armoring

RL — armoring consisting of round litz wire

/3 — protective conductor uniformly distributed in the interstices

/3E — protective conductor uniformly distributed over the insulation of the outer conductor

KON — concentric protective conductor between the inner and outer sheath

ST — control cores within the cable

FM — telecommunication lines within the cable

OL — monitoring conductor within the cable,

where # is "J" for a core with a green/yellow marking and "O" is a core without a green/yellow marking,

where % is the number and size of the conductors, and

where \$ is the rated voltage.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is DIN Publication DIN VDE 0250 Part 813-1985, "Insulated Power Cables - Trailing Cable."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

TRAILING CABLE
CLASSIFIED IN ACCORDANCE WITH
DIN PUBLICATION DIN VDE 0250 PART 813
No.

UL, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. UL shall not incur any obligation or liability for any loss, expense or damages, including incidental or consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Guide Information.

PROCESSED WIRE (ZKLU)

GENERAL

This category covers Listed wire, flexible cord and cable, and Classified cable that has been subjected to processing subsequent to Labeling and identified as either processed wire or processed wire - respooled.

Listed wire, flexible cord and cable identified as "Listed Processed Wire" has been cut into certain lengths from which the insulation may be stripped from one or both ends. The stripped ends may be soldered or tinned and may have simple terminals of the eyelet, ring, open spade or quick-connect type attached by crimping, soldering or welding.

These lengths may be packaged for further processing. Single lengths of Listed processed wire and cable may be paralleled with other insulated wire and cable and may be held together by an open binder.

Products identified as "Listed Processed Wire - Respooled" are single, continuous lengths of Listed wire, flexible cord or cable cut from a longer length and coiled or placed on a spool or reel.

Products identified as "Classified Processed Wire" are Classified cable that has been cut into certain lengths from which the insulation may be stripped from one or both ends. These lengths may be packaged for further processing. Single lengths of Classified processed wire may be paralleled with other insulated cable and may be held together by an open binder.

Products identified as "Classified Processed Wire - Respooled" are single, continuous lengths of Classified cable cut from a long length and coiled or placed on a spool or reel.

The tag markings from the wire spooler reel (e.g., voltage, temperature, insulation thickness, usage) are provided on the processed wire tag attached to the product.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations ([AALZ](#)).

REQUIREMENTS

The basic standards used to investigate products in this category are [UL 62](#), "Flexible Cord and Fixture Wire," [UL 66](#), "Fixture Wire," [UL 83](#), "Thermoplastic-Insulated Wires and Cables," or [UL 44](#), "Thermoset-Insulated Wires and Cables," and [UL 486A-486B](#), "Wire Connectors," or [UL 486C](#), "Splicing Wire Connectors."

UL MARK

The Listing or Classification Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing or Classification and Follow-Up Service. The Listing or Classification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED" or "CLASSIFIED" respectively, a control number, and the product name "Processed Wire" or "Processed Wire - Respooled."

APPENDIX D

WIRE, CABLE AND CORD VERIFICATION INFORMATION

LEVELS XP STRUCTURED CABLING PROGRAM (VZZL)

GENERAL

This category covers field-assembled structured cabling systems (referred to as "Solutions") whose signal transmission characteristics have been investigated in accordance with UL's Levels XP Structured Cabling Program.

The Levels XP Program investigates how a Solution's transmission performance affects live data as it interacts with active network components. Solutions investigated for performance under the Levels XP Program have been investigated for the expanded performance properties necessary to maintain true data throughput and component interoperability.

The Levels XP Test Program requires testing of the Solution's horizontal cable, patch cords and connecting hardware, as well as passive channel, active channel and expanded active channel testing.

ADDITIONAL INFORMATION

For additional information, see Structured Cabling Programs (VZYY) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is the UL Levels XP Specification.

Components used in the Solution are also required to be UL Listed for Safety and UL Verified for Performance in accordance with the Standards shown below:

Safety		
Component	Standard	Guide
Cable	<u>ANSI/UL 444</u> , "Communications Cables"	<u>DUZX</u>
Connecting Hardware	<u>ANSI/UL 1863</u> , "Communications-Circuit Accessories"	<u>DUXR</u>
Patch Cords	<u>ANSI/UL 1863</u>	<u>DUXR</u>

Performance Verification

Component	Standard	Guide
Category 5e Cable	ANSI/TIA/EIA-568-B.2, "Commercial Building Telecommunications Cabling Standard Part 2: Balanced Twisted-Pair Cabling Components Revision of ANSI/TIA/EIA-568-A"	<u>DUXX</u>
Category 6 Cable	ANSI/TIA/EIA-568-B.2-1, "Commercial Building Telecommunications Cabling Standard Part 2: Balanced Twisted Pair Cabling Components Addendum 1 - Transmission Performance Specifications for 4-Pair 100 Category 6 Cabling Addendum No. 1 to ANSI/TIA/EIA-568-B.2"	<u>DUXX</u>
Category 6A Cable	ANSI/TIA/EIA-568-B.2-10, "Transmission Performance Specification for 4-Pair 100 Ohm Augmented Category 6 Cabling - Addendum 10 to ANSI/TIA/EIA-568-B.2"	<u>DUXX</u>
Category 5e Connecting Hardware	ANSI/TIA/EIA-568-B.2	<u>DUXR</u>
Category 6 Connecting Hardware	ANSI/TIA/EIA-568-B.2-1	<u>DUXR</u>
Category 6A Connecting Hardware	ANSI/TIA/EIA-568-B.2-10	<u>DUXR</u>
Category 5e Patch Cords	ANSI/TIA/EIA-568-B.2	<u>DUXR</u>
Category 6 Patch Cords	ANSI/TIA/EIA-568-B.2-1	<u>DUXR</u>
Category 6A Patch Cords	ANSI/TIA/EIA-568-B.2-10	<u>DUXR</u>

UL MARK

The Verification Mark of Underwriters Laboratories Inc. on the Bill of Lading, the Bulk Shipment Certificate, or on UL's Certificate of Conformity Assessment is the only method provided by UL to identify products manufactured under its Verification and Follow-Up Service. The Verification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "VERIFIED," the term "Levels XP Program," a control number, and the Solution name and part number. The Verification Mark (label) is not applied directly to Solutions that have been investigated for performance under the Levels XP Program, since these products are field assembled.

PROPRIETARY STRUCTURED CABLING PROGRAMS (VZZX)

GENERAL

This category covers field-assembled structured cabling systems (referred to as "Solutions") whose signal transmission characteristics have been investigated in accordance with proprietary manufacturer network cabling standards or industry standards.

Performance Verification testing includes passive and/or active testing of the Permanent Link, Basic Link or Channel. If the performance standard specifies active testing, the investigation will review how a Solution's transmission performance affects live data as it interacts with active network components. Solutions subjected to active testing have been investigated for the performance properties necessary to maintain true data throughput and component interoperability.

ADDITIONAL INFORMATION

For additional information, see Structured Cabling Programs ([VZYY](#)) and Electrical Equipment for Use in Ordinary Locations ([AALZ](#)).

REQUIREMENTS

Components used in the Solution are also required to be UL Listed for Safety and UL Verified for Performance in accordance with the Standards shown below:

Safety

Component	Standard	Guide
Cable	ANSI/UL 444 , "Communications Cables"	DUZX
Connecting Hardware	ANSI/UL 1863 , "Communications-Circuit Accessories"	DUXR
Patch Cords	ANSI/UL 1863	DUXR

Performance Verification

Component	Standard	Guide
Category 5e Cable	ANSI/TIA/EIA-568-B.2, "Commercial Building Telecommunications"	DUZX

	Cabling Standard Part 2: Balanced Twisted-Pair Cabling Components Revision of ANSI/TIA/EIA-568-A"	
Category 6 Cable	ANSI/TIA/EIA-568-B.2-1, "Commercial Building Telecommunications Cabling Standard Part 2: Balanced Twisted Pair Cabling Components Addendum 1 - Transmission Performance Specifications for 4-Pair 100 Category 6 Cabling Addendum No. 1 to ANSI/TIA/EIA-568-B.2"	<u>DUZX</u>
Category 6A Cable	ANSI/TIA/EIA-568-B.2-10, "Transmission Performance Specification for 4-Pair 100 Ohm Augmented Category 6 Cabling - Addendum 10 to ANSI/TIA/EIA-568-B.2"	<u>DUZX</u>
Category 5e Connecting Hardware	ANSI/TIA/EIA-568-B.2	<u>DUXR</u>
Category 6 Connecting Hardware	ANSI/TIA/EIA-568-B.2-1	<u>DUXR</u>
Category 6A Connecting Hardware	ANSI/TIA/EIA-568-B.2-1	<u>DUXR</u>
Category 5e Patch Cords	ANSI/TIA/EIA-568-B.2	<u>DUXR</u>
Category 6 Patch Cords	ANSI/TIA/EIA-568-B.2-1	<u>DUXR</u>
Category 6A Patch Cords	ANSI/TIA/EIA-568-B.2-10	<u>DUXR</u>

UL MARK

The Verification Mark of Underwriters Laboratories Inc. on the Bill of Lading, the Bulk Shipment Certificate, or on UL's Certificate of Conformity Assessment is the only method provided by UL to identify products manufactured under its Verification and Follow-Up Service. The Verification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "VERIFIED," the name of the Performance Standard, a control number, and the Solution name and part number. The Verification Mark (label) is not applied directly to Solutions that have been investigated for performance under this category, since these products are field assembled.

Appendix B

UL Online Certifications Directory Quick Guide

Free of charge to all users, UL's Online Certifications Directory is an electronic, "intelligent" version of our renowned UL Product Directories. Updated daily, the Online Certifications Directory has advanced search capabilities and, for most product categories, contains more information about product Listings than is available in print.

Log on to the UL Online Certifications Directory today at www.ul.com/database to verify UL Listings and Classifications.

The following UL Online Certifications Directory Quick Guide provides tips for searching UL's Online Certifications Directory using various types of information such as company name, UL File Number, model number, etc.

Contact your local Regulatory Services Representative for further assistance with the UL Online Certifications Directory.

UL's Online Certification Directory Quick Guide

Welcome to the UL Online Certifications Directory, a faster way to access UL Certifications. You can use the UL Online Certification Directory to:

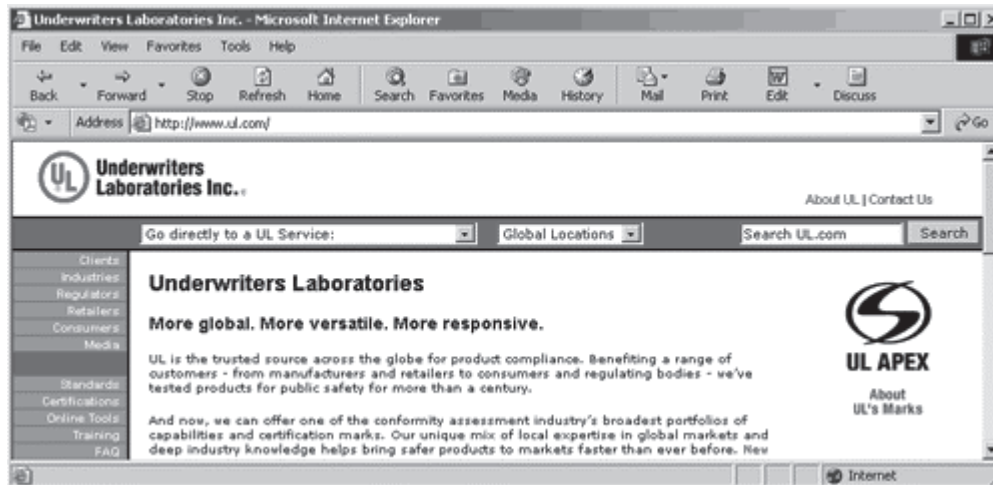

- Verify a UL Certification
- Verify a UL Certified product use
- Verify a product safety standard

Search The UL Online Certification Directory Using:

- Company name/location
- Keyword
- Standard Number
- UL File Number
- UL Category Code/Guide Information
- Fire Resistance Assemblies and Systems
- Food Safety Equipment
- Sprinkler Identification Number

To begin, log on to www.ul.com.

To access the UL Online Certifications Directory, click "Certifications" located in the red column at the left.

Search By Company Name:

To begin a search for information regarding a specific company, enter the company name and other available information in the fields provided, and then click "Search".

SPECIFIC / ADVANCED SEARCHES

Select a specific search:

LINKS OF INTEREST

Notice of Disclaimer

Search results often yield multiple “hits,” which are listed in alphabetical order by Company Name.

**ONLINE CERTIFICATIONS DIRECTORY**

[OCD Home](#) [Quick Guide](#) [Contact Us](#) [UL.com](#)

Search results

Number of hits: 110 The maximum number of hits returned is 5000.

You may choose to **Refine Your Search.**

Company Name	Category Name	Link to File
SAMPLE COMPANY NAME	Printing Materials Certified for Canada - Component	<i>Sample File</i>
SAMPLE COMPANY NAME	Printing Materials Certified for Canada - Component	<i>Sample File</i>
SAMPLE COMPANY NAME	Printing Materials Certified for Canada - Component	<i>Sample File</i>
SAMPLE COMPANY NAME	Direct Plug-in and Cord-connected Class 2 Power Units	<i>Sample File</i>
SAMPLE COMPANY NAME	Audio and Video Equipment	<i>Sample File</i>

To reduce the number of “hits,” choose “Refine Your Search.”

To refine, enter additional information in the "Keyword" field and click "Search".

The screenshot shows the UL Online Certifications Directory search interface. At the top, there is a header with the UL logo and the text "ONLINE CERTIFICATIONS DIRECTORY". To the right of the header are links: "OCD Home", "Quick Guide", "Contact Us", and "UL.com". The main search area contains several input fields: "Category Code:", "UL File Number:", "Company Name:", "U.S. State:" (with a dropdown menu labeled "Select a state"), "Country:" (with a dropdown menu labeled "Select a country"), "Region:" (with a dropdown menu labeled "Select a region"), "US Zip Code:", and "Keyword:". Below these fields is a section titled "Refine your search for Fire Resistive Hourly Ratings or Companies". This section includes a dropdown menu for "Fire Resistive Hourly Rating:" labeled "Select an Hourly Rating" and a text input field for "Company Name within Fire Resistive System, Design, or Assembly:". At the bottom of this section are two buttons: "SEARCH" and "CLEAR".

Refining using multiple pieces of information is possible by using "and", "or" and "not" statements, and wildcards as demonstrated through the "Search Tips" link or the following Tips for Effective Searches:

TIPS FOR EFFECTIVE SEARCHES

Select a search method

- Match all words - type AND between words (i.e., display and nwgg)
- Match any word - type OR between words (i.e., hair dryer or blow dryer)
- Match phrase(s) - type exact phrase (i.e., washing machine)
- Exclude a word - type NOT before word (i.e., roof panel not metal)
- Match a partial word or phrase - To replace any characters or words that you may not know, add an asterisk (*) in the middle or at the end of the characters or words in your search.

Examples

- Company Name - company*
- Keyword - submersible*

Once the number of "hits" has been reduced, click on the appropriate link in the "Link to File" column to view the company's current Certification(s) or refine further by again clicking "Refine Your Search."

The screenshot shows the UL Online Certifications Directory search results page. At the top, there is a header with the UL logo and the text "ONLINE CERTIFICATIONS DIRECTORY". To the right of the header are links: "OCD Home", "Quick Guide", "Contact Us", and "UL.com". Below the header is the text "Search results". A table displays the search results. The first row of the table shows "Number of hits: 15" and "The maximum number of hits returned is 5000." Below this is a link "You may choose to Refine Your Search." The table has three columns: "Company Name", "Category Name", and "Link to File". The first two rows of the table show "SAMPLE COMPANY NAME" in the "Company Name" column, "Printing Materials Certified for Canada - Component" in the "Category Name" column, and "Sample File" in the "Link to File" column.

Company Name	Category Name	Link to File
SAMPLE COMPANY NAME	Printing Materials Certified for Canada - Component	Sample File
SAMPLE COMPANY NAME	Printing Materials Certified for Canada - Component	Sample File

The electronic Certifications contain the same, if not more, UL Certification information than is available in the printed directory.

Search by UL Category Code:

“Category Code” allows for four search options. They are 1) UL Category Code, 2) Keyword search within Guide Information only, 3) Keyword Search within Product Category Title only, and 4) Category Code Hierarchy view.

A UL Category Code is an alphanumeric designation (GBTV, QMFZ2) assigned by UL and associated with a specific product category. To search by UL Category Code, use the drop-down menu on the main page.

To search for keywords in either the Guide Information or product category title, enter the information in the respective “Keyword search within Guide Information Only” or “Keyword search within Product Category Title only” field and click “Search.” **Note:** This “keyword” search function searches only the UL Guide Information. To search for keyword(s) throughout the entire database, use the Keyword option described in full below.

To search for the UL Guide Information for a specific category code, enter the category code in the available “Category Code” field, click the “Display Guide Information Only” box and then click “Search”.

Note: Omitting the “Display Guide Information Only” box will result in the UL Guide Information AND all current Certifications for a given category code.

GENERAL

This category covers fire door frames, fire window frames, and twenty minute type door frames or window frames without hose stream.

Fire door and fire window frames are intended for the protection of openings in walls when installed in accordance with ANSI/NFPA 80, "Standard for Fire Doors and Fire Windows" and ANSI/SDI A250.11, "Recommended Erection Instructions for Steel Frames." Installation instructions are not required to be shipped with frames that are to be installed in accordance with the above standards.

Note: Designation must be entered with hyphens (-) in the appropriate locations.	
Fire Resistive Design (D705, L502, U649, X601, etc.):	Through-Penetration Firestop System (C-AJ-0004, F-A-2040, W-J-1084, etc.):
Need a Design Number, see Numbering System for Fire Rated Assemblies	
Joint System (CG-S-0002, FF-D-1009, etc.):	Thermal Barrier System (TB-1, TB-2, TB-3, etc.):
Electrical Circuit Protective System (1, 8, 25, etc.):	Roof Deck Construction (430, NM513, etc.):
Perimeter Fire Containment Systems (CW-S-1001, CW-D-2004, etc.):	Ventilation Duct Assembly (V-1, V-2, V-3, etc.):
Protection Materials for Structural Steel - evaluated to ANSI/UL 1709, Rapid Rise Fire Test (XR001, XR325, etc.):	
SEARCH	CLEAR

Scroll down the left-hand column to the type of construction needed; then, scroll across to view the types of membrane protection. Click the appropriate link. For example, Floors & Ceilings assemblies with concrete and cellular steel floor (construction) + Exposed Grid System (protection) = all current Designs between A200-A299.

NUMBERING SYSTEM FOR FIRE RATED ASSEMBLIES									
Groups of Construction	TYPES OF PROTECTION								
	Membrane Protection						Direct Applied Protection		Unprotected
	000-099	100-199	200-299	300-399	400-499	500-599	600-699	700-899	
Floors-Ceilings: A, B* or C* Concrete and Cellular Steel Floor	Concealed Grid Sys.	(Reserved)	Exposed Grid System	(Reserved)	Metal Lath	Gypsum Board	Misc.	SFRM+	Unprotected
D, E* or F* Concrete and Steel Floor Units	Concealed Grid Sys.	(Reserved)	Exposed Grid System	Mineral and Fiber Boards	Metal Lath	Gypsum Board	Mastic and Intumescent Coatings	SFRM+	Unprotected
G, H* or I* Concrete and Steel Joists	Concealed Grid Sys.	(Reserved)	Exposed Grid System	Mineral and Fiber Boards	Metal Lath	Gypsum Board	Misc.	SFRM+	Unprotected
J or K Concrete	Concealed Grid Sys.	(Reserved)	Exposed Grid System	Mineral and Fiber Boards	Metal Lath	Gypsum Board	Misc.	SFRM+	Unprotected
L or M* Wood Joist or Combination Wood and	Concealed Grid Sys.	(Reserved)	Exposed Grid System	(Reserved)	Metal Lath	Gypsum Board	Misc.	SFRM+	Unprotected

Number of hits: 4 The maximum number of hits returned is 5000.

You may choose to [Refine Your Search](#).

Company Name	Category Name	Link to File
Design No. A202	Fire Resistance Ratings - ANSI/UL 263	BXUV.A202
Design No. A210	Fire Resistance Ratings - ANSI/UL 263	BXUV.A210
Design No. A211	Fire Resistance Ratings - ANSI/UL 263	BXUV.A211
Design No. A212	Fire Resistance Ratings - ANSI/UL 263	BXUV.A212

Model number information is not published for all product categories. If you require information about a specific model number, please contact Customer Service for further assistance.

[Search Tips](#)
[Disclaimer](#)

Click “Refine Your Search” to further narrow your results. Refine your results using hourly ratings (drop down menu) and/or a key word or phrase, such as a fixture, batts and blankets, or even a specific manufacturer’s name.

Note: Remember, “Keyword” searches benefit from using “and”, “or” and “not” statements, and wildcards.

Troubleshooting:

If the search results yield 0 hits the screen will read “Sorry, No Match Found.” Use your browser's “Back” button to return to the search page. Verify the input information, correct and click “Search”.

If the input information was correct, try using alternate wording (e.g. sheetrock vs. wallboard).

INDEX OF UL PRODUCT CATEGORIES AND INDUSTRY TERMS

This index includes all product categories sorted alphabetically. In addition, those product categories that are a sub-set of a main product category are indented under the main category to illustrate the grouping of a family of related categories. This index also includes specific product types covered within a product category and these product names are followed by the applicable product category in parentheses.

Page	Page	Page
A		
AC Fuse Draw-outs, Low Voltage (see Low-voltage AC Fuse Draw-outs (PAQT)) 256	Across-the-line Starters (see Magnetic Motor Controllers For Use In Hazardous Locations (NPKR)) 238	AFCIS, Cord (see Arc-fault Circuit Interrupters, Cord Type (AWAY)) 63
AC Modules (QHYZ) 291	Across-the-line Starters (see Motor Controllers, Manual (NLRV)) 232	AFCIS, Outlet Branch Circuit (see Arc-fault Circuit Interrupters, Outlet Branch Circuit Type (AWBZ)) 63
Access Control System Units for Use in Hazardous Locations (AATF) 53	Across-the-line Starters For Use In Hazardous Locations (see Magnetic Motor Controllers For Use In Zone Classified Hazardous Locations (NWFR)) ... 242	AFCIS, Outlet Circuit (see Arc-fault Circuit Interrupters, Outlet Circuit Type (AWCG)) 63
Access Control Systems For Use In Hazardous Locations (see Access Control System Units For Use In Hazardous Locations (AATF)) 53	Across-the-line Starters For Use In Hazardous Locations (see Manual Motor Controllers For Use In Zone Classified Hazardous Locations (NWFU)) 242	AFCIS, Portable (see Arc-fault Circuit Interrupters, Portable Type (AWDO)) 63
Accessories For Beverage Coolers or Beverage Cooler-dispensers (see Beverage Coolers And Beverage Cooler-dispensers (SFWY)) 331	Across-the-line Starters, Manual (see Manual Motor Controllers For Use In Hazardous Locations (NPXZ)) 238	Afterset Access Units (see Cellular Concrete Floor Raceway (RGYR)) 319
Accessories For Commercial Food-preparing Machines (see Food-preparing Machines, Commercial (IPST)) 175	Active Opto-electronic Protective Devices (NIPF) 226	Afterset Access Units (see Cellular Metal Floor Raceway (RHZX)) 320
Accessories For Commercial Refrigerator And/or Freezer (see Commercial Refrigerators And Freezers (SGKW)) 331	Active Opto-electronic Protective Devices Responsive to Diffuse Reflection (NIPM) 227	Afterset Inserts (see Cellular Concrete Floor Raceway (RGYR)) 319
Accessories For Commercial Walk-in Units (see Walk-in Units, Commercial (SQTU)) 337	Actuators, Electric (see Electric Actuators (XABE)) 398	Afterset Inserts (see Underfloor Raceway (RKCZ)) 322
Accessories For Compressor Units (see Condensing And Compressor Units (SGYU)) 332	Actuators For Use In Hazardous Locations (see Telemetering Equipment For Use In Hazardous Locations (WYMV)) 396	Air Cleaner Accessories, Electrostatic (see Electrostatic Air Cleaners (AGGZ)) 57
Accessories For Condensing or Compressor Units (see Condensing And Compressor Units (SGYU)) 332	Actuators For Use In Hazardous Locations (see Telemetering Equipment For Use In Zone Classified Hazardous Locations (WYMG)) 396	Air Cleaners, Electrostatic (see Electrostatic Air Cleaners (AGGZ)) 57
Accessories For Condensing Units (see Condensing And Compressor Units (SGYU)) 332	Adapter Cord Sets (see Cord Sets And Power-supply Cords (ELBZ)) 117	Air Conditioner Accessories, Central Cooling (see Heating And Cooling Equipment (LZFE)) 216
Accessories For Ducted Heat Recovery Ventilators (see Heat-recovery Ventilators, Ducted (LZTW)) 221	Adapters (see Conduit Fittings (DWTT)) 108	Air Conditioner Accessories, Special Purpose (see Heating And Cooling Equipment (LZFE)) 216
Accessories For Household Refrigerators (see Household Refrigerators (SHZZ)) 333	Adapters (see Current Taps And Adapters (EMDV)) 120	Air Conditioner Sections, Central Cooling (see Heating And Cooling Equipment (LZFE)) 216
Accessories For Ice Cream Makers (see Ice Cream Makers (SINX)) 333	Adapters (see Reinforced Thermosetting Resin Conduit (DZKT)) 112	Air Conditioner Sections, Special Purpose (see Heating And Cooling Equipment (LZFE)) 216
Accessories For Ice Makers (see Ice Makers (SJBV)) 334	Adapters For Use In Hazardous Locations (see Conduit Fittings For Use In Hazardous Locations (EBNV)) 114	Air Conditioners, Central Cooling (see Heating And Cooling Equipment (LZFE)) 216
Accessories For Packaged Terminal Air Conditioners (see Air Conditioners, Packaged Terminal (ACKZ)) 54	Adapters For Use In Hazardous Locations (see Conduit Fittings For Use In Zone Classified Hazardous Locations (EBMB)) 113	Air Conditioners for Use in Hazardous Locations (AIDR) 59
Accessories For Refrigerating Units (see Units, Refrigerating (SPYZ)) 336	Adapters, Incandescent-to-mercury Vapor (see Lampholders, Fittings (OKQR)) 251	Air Conditioners, Packaged Terminal, Replacement (see Packaged Terminal Air Conditioners, Replacement (ADAU)) 56
Accessories For Room Air Conditioners (see Air Conditioners, Room (ACOT)) 55	Adapters, Insulated (see Wire Connector Adapters (ZMOW)) 433	Air Conditioners, Room, For Use In Hazardous Locations (AINU)) 59
Accessories For Special Purpose Air Conditioners (see Air Conditioners, Special Purpose (ACVS)) 55	Adapters, Lamp (see Lamps, Self-ballasted And Lamp Adapters (OOLR)) 252	Air Conditioners, Special Purpose (see Heating And Cooling Equipment (LZFE)) 216
Accessories, Air Conditioning Equipment (ABFY) 54	Adapters, Lampholder (see Lampholders, Adapters (OLRX)) 251	Air Conditioners, Split System (see Air Conditioners, Room (ACOT)) 55
Accessories, Air Duct Mounted (ABQK) 54	Adapters, Raceway (see Underfloor Raceway Fittings (RKQX)) 322	Air Conditioners, Split Type (see Air Conditioners, Room (ACOT)) 55
Accessories, Low-voltage Power-switching Devices (PAQF) 256	Adapters, Wire Connector (see Wire Connector Adapters (ZMOW)) 433	Air Conditioners, Packaged Terminal (ACKZ) 54
Accessories, Refrigeration for Use in Hazardous Locations (SSPZ) 338	Adapters, Circuit Breaker (DHWZ) 93	Air Conditioners, Room (ACOT) 55
Accessories, Refrigeration for Use in Zone Classified Hazardous Locations (STFZ) 339	Adapters, Low-voltage AC Power-switching Devices (PAQQ) 256	Air Conditioners, Special Purpose (ACVS) . 55
Accessories, Transfer Switch (WPVQ) 388	Adapter-type Clusters (see Lampholders, Fittings (OKQR)) 251	Air Conditioning Controls (see Controls, Limit (MBPR)) 222
Accordions, Electronic (see Musical Instruments (PWHZ)) 272	Additive Pump Controllers (see Pump Controllers, Fire (QYZS)) 316	Air Conditioning Equipment (AAYZ) 54
Acid Bath Heaters (see Heaters, Industrial And Laboratory (KQLR)) 209	Advertising Displays (see Advertising Displays, Nonilluminated (AAVU)) 53	Accessories, Air Conditioning Equipment (ABFY) 54
Acorn Clamps (see Grounding And Bonding Equipment (KDER)) 194	Advertising Displays, Nonilluminated (AAVU) 53	Accessories, Air Duct Mounted (ABQK) . 54
Acoustical Materials (see Fire Resistance Ratings - ANSI/UL 263 (BXUV)) 73	AFCIS, Branch/feeder Type (see Arc-fault Circuit Interrupters, Branch/feeder Type (AVZQ)) 62	Air Conditioners, Packaged Terminal (ACKZ) 54
	AFCIS, Combination (see Arc-fault Circuit Interrupters, Combination Type (AWAH)) 62	Air Conditioners, Room (ACOT) 55
		Air Conditioners, Special Purpose (ACVS) 55
		Air Filtering Appliances (AEDX) 56

Page	Page	Page
Dehumidifiers, Refrigeration Type (AFFT) 57	Air Heaters, Movable and Wall or Ceiling Hung (KKPT) 201	Antennas, Communication (see Communication Antennas (POQQ)) 267
Electrostatic Air Cleaners (AGGZ) 57	Air Heaters, Room, Fixed and Location Dedicated (KKWS) 201	Anti-shorts (see Outlet Bushings And Fittings (QCRV)) 284
Evaporative Cooler Retrofit Pumps (AGIS) 58	Air Terminal Units, Room (see Heating And Cooling Equipment (LZFE)) 216	AOPD (see Active Opto-electronic Protective Devices (NIPF)) 226
Evaporative Coolers (AGNY) 58	Air Terminals, Lightning Protection (see Lightning Conductors, Air Terminals And Fittings (OVTZ)) 254	AOPDDR (see Active Opto-electronic Protective Devices Responsive To Diffuse Reflection (NIPM)) 227
Humidifiers (AHIV) 58	Air-cooled Power Transformers, Dry Type (see Power And General-purpose Transformers, Dry Type (XQNX)) 412	Appliance Controls (ATNZ) 60
Packaged Terminal Air Conditioners, Replacement (ADAU) 56	Air-cooled Reactors (see Transformers, General Purpose (XPTQ)) 411	Appliance Couplers (see Attachment Plugs With Switches (AYIR)) 66
Air Conditioning Equipment Accessories (see Accessories, Air Conditioning Equipment (ABFY)) 54	Aircraft Ground Support Cable (see Wire, Special Purpose (ZMHX)) 432	Appliance Outlet Center Enclosures, Commercial (see Commercial Appliance Outlet Centers (AUUZ)) 61
Air Conditioning Equipment For Use In Hazardous Locations (AHSY) 59	Air-duct-mounted Accessories (see Accessories, Air Duct Mounted (ABQK)) 54	Appliance Outlet Centers (AUJZ) 61
Air Conditioners for Use in Hazardous Locations (AIDR) 59	Air-flow Incubators (see Heaters, Industrial And Laboratory (KQLR)) 209	Commercial Appliance Outlet Centers (AUUZ) 61
Room Air Conditioners for Use In Hazardous Locations (AINU) 59	Air-sampling Equipment For Use In Hazardous Locations (see Air-sampling Equipment For Use In Hazardous Locations (ALOA)) 59	Residential Appliance Outlet Centers (AVGQ) 61
Air Filtering Appliances for Use In Hazardous Locations (AISX) 59	Air-sampling Equipment For Use In Hazardous Locations (ALOA) 59	Appliance Outlet Centers, Commercial (see Commercial Appliance Outlet Centers (AUUZ)) 61
Air Conditioning Liquid Chillers (see Heating And Cooling Equipment (LZFE)) 216	Air-sampling Pumps For Use In Hazardous Locations (see Air-sampling Equipment For Use In Hazardous Locations (ALOA)) 59	Appliance Plugs (see Attachment Plugs With Switches (AYIR)) 66
Air Conditioning Systems Equipment (see Heating And Cooling Equipment (LZFE)) 216	Alarm Switches (see Circuit Breaker Accessories (DIHS)) 93	Arc Welders (see Welding Machines (ZGLZ)) 425
Air Conditioning Systems Equipment, Central Furnaces (see Heating And Cooling Equipment (LZFE)) 216	Alarm Switches For Use In Hazardous Locations (see Extinguishing System Attachments For Use In Hazardous Locations (UGYX)) 360	Arc-fault Circuit Interrupters, Branch/feeder Type (AVZQ) 62
Air Conditioning Systems Equipment, Compressor Units (see Heating And Cooling Equipment (LZFE)) 216	Alarm Switches For Use In Hazardous Locations (see Switches, Pressure For Use In Hazardous Locations (VRBR)) 370	Arc-fault Circuit Interrupters, Combination Type (AWAH) 62
Air Conditioning Systems Equipment, Compressor-condenser Units (see Heating And Cooling Equipment (LZFE)) 216	Alarm System Units for Use in Hazardous Locations (ALSY) 59	Arc-fault Circuit Interrupters, Cord Type (AWAY) 63
Air Conditioning Systems Equipment, Compressor-evaporator Units (see Heating And Cooling Equipment (LZFE)) 216	Intrusion Detection Units for Use in Hazardous Locations (ARCX) 59	Arc-fault Circuit Interrupters, Outlet Branch Circuit Type (AWBZ) 63
Air Conditioning Systems Equipment, Cooling Portions Of Self-contained Units (see Heating And Cooling Equipment (LZFE)) 216	Alarms, Temperature (see Signal Appliances, Miscellaneous (UEHX)) 359	Arc-fault Circuit Interrupters, Outlet Circuit Type (AWCG) 63
Air Conditioning Systems Equipment, Gas Heating Portions (see Heating And Cooling Equipment (LZFE)) 216	Alkaline Fuel Cell Power Units (see Hand-held or Hand-transportable Fuel Cell Power Units And Disposable Fuel Cartridges (IRGU)) 176	Arc-fault Circuit Interrupters, Portable Type (AWDO) 63
Air Conditioning Systems Equipment, Self-contained Units (see Heating And Cooling Equipment (LZFE)) 216	Alternators for Use in Hazardous Locations (ARDK) 60	Arc-fault Circuit Interrupters (AVYI) 61
Air Coolers, Evaporative (see Evaporative Coolers (AGNY)) 58	Aluminum Armored Cable (see Armored Cable (AWEZ)) 64	Arc-fault Circuit Interrupters, Branch/feeder Type (AVZQ) 62
Air Corn Poppers (see Household Cooking Appliances (KNUR)) 206	Aluminum Power And Control Tray Cable Type TC (see Power And Control Tray Cable (QPOR)) 303	Arc-fault Circuit Interrupters, Combination Type (AWAH) 62
Air Curtains for Use in Commercial Food Service Entrances (TSXT) 351	Aluminum Underground Feeder Cable (see Underground Feeder And Branch Circuit Cable (YDUX)) 418	Arc-fault Circuit Interrupters, Cord Type (AWAY) 63
Air Dryers (see Heaters, Specialty (KSOT)) 214	Amplifier Speakers (see Musical Instruments (PWHZ)) 272	Arc-fault Circuit Interrupters, Outlet Branch Circuit Type (AWBZ) 63
Air Ducts And Protection Systems (see Fire Resistance Ratings - ANSI/UL 263 (BXUV)) 73	Amplifiers For Fire-protective Signaling Systems (see Speakers And Amplifiers For Fire-protective Signaling Systems (UUMW)) 346	Arc-fault Circuit Interrupters, Outlet Circuit Type (AWCG) 63
Air Filtering Appliances (AEDX) 56	Amusement and Gaming Machines (ASMU) 60	Arc-fault Circuit Interrupters, Portable Type (AWDO) 63
Air Filtering Appliances For Use In Hazardous Locations (AISX) 59	Analysis and Measurement Equipment (TWLR) 354	Architectural and Floating Fountains (AWEG) 64
Air Filters (see Air Filtering Appliances (AEDX)) 56	Anesthesia Equipment For Use In Hazardous Locations (see Medical Equipment For Use In Hazardous Locations (PINR)) 262	Architectural Fountains (see Architectural And Floating Fountains (AWEG)) 64
Air Filters, Electronic (see Electrostatic Air Cleaners (AGGZ)) 57	Animated Displays (see Advertising Displays, Nonilluminated (AAVU)) 53	Arc-resistant Switchgear (see Circuit Breaker Switchgear, Metal Enclosed, Over 600 Volts (DLBK)) 99
Air Heaters, Ceiling Hung (see Air Heaters, Movable And Wall or Ceiling Hung (KKPT)) 201	Antenna Discharge Units (ASWA) 60	Arc-resistant Switchgear (see Circuit Breakers And Metal-clad Switchgear Over 600 Volts (DLAH)) 98
Air Heaters, Electric For Use In Hazardous Locations (see Heaters, Air For Use In Hazardous Locations (KFVR)) 199	Antenna Equipment (see Communication Antennas (POQQ)) 267	Armored Aluminum Cable (see Armored Cable (AWEZ)) 64
Air Heaters For Use In Hazardous Locations (see Heaters, Air For Use In Hazardous Locations (KFVR)) 199		Armored Cable (AWEZ) 64
Air Heaters, Wall Hung (see Air Heaters, Movable And Wall or Ceiling Hung (KKPT)) 201		Armored Cable Connectors, Type AC (AWSX) 64
		Armored Cable Connectors, Type AC (AWSX) 64
		Armored Grounding Wire (see Grounding And Bonding Equipment (KDER)) 194
		Articulating Mirrors (see Building Components (IYMT)) 177
		Attachment Plugs (see Attachment Plugs With Switches (AYIR)) 66

INDEX OF PRODUCT CATEGORIES AND INDUSTRY TERMS

Page	Page	Page
Baby Incubators For Use In Hazardous Locations (see Medical Equipment For Use In Hazardous Locations (PINR)) 262	Bathroom Cabinets, Recessed (see Furnishings, Household And Commercial (IYQX)) 180	Binary Display Units (see Data Processing Equipment, Electronic (EMRT)) 122
Baby Resuscitators, Portable For Use In Hazardous Locations (see Medical Equipment For Use In Hazardous Locations (PINR)) 262	Bathroom Fans (see Fans, Electric (GPVW)) .. 151	Bin-level Indicators For Use In Hazardous Locations (see Switches, Miscellaneous For Use In Hazardous Locations (WTEV)) 390
Bacon Broilers (see Household Cooking Appliances (KNUR)) 206	Bathtub Units, Manufactured Home (see Manufactured Home Kitchen Cabinetry And Bathtub And Shower Units (PDLT)) .. 259	Biplexers (see Data Processing Equipment, Electronic (EMRT)) 122
Bacteriological Incubators (see Heaters, Industrial And Laboratory (KQLR)) 209	Bathtubs, Hydromassage (see Hydromassage Bathtubs (NCHX)) 225	BIPV Modules (see Building-integrated Photovoltaic Modules And Panels (QHZZ)) 292
Badge Readers (see Data Processing Equipment, Electronic (EMRT)) 122	Battery Cable, Low Voltage (see Low-voltage Battery Cable Classified In Accordance With SAE J1127 (VZSL)) 372	BIPV Modules For Use With Classified Structural Support Systems (see Building-integrated Photovoltaic Modules And Panels (QHZZ)) 292
Badge Transmitters (see Data Processing Equipment, Electronic (EMRT)) 122	Battery Chargers, Electric Vehicle (see Electric Vehicle Charging System Equipment (FFTG)) 132	BIPV Mounting Systems (see Building-integrated Photovoltaic Mounting Systems (QHZZ)) 293
Badminton Printers (see Data Processing Equipment, Electronic (EMRT)) 122	Battery Chargers for Engine-driven Emergency and Standby Power System Generators (BBHH) 69	BIPV Photovoltaic Panels (see Building-integrated Photovoltaic Modules And Panels (QHZZ)) 292
Baker Broilers (see Household Cooking Appliances (KNUR)) 206	Battery Chargers For Industrial Use (see Power Circuit And Motor-mounted Apparatus (NMTR)) 233	BIPV Roofing Products (see Building-integrated Photovoltaic Modules And Panels (QHZZ)) 292
Baking Ovens, Industrial (see Heaters, Industrial And Laboratory (KQLR)) 209	Battery Chargers For Use With Fire Pumps (see Battery Chargers For Use With Internal Combustion Engines Driving Centrifugal Fire Pumps (QWIR)) 316	Biscuit Bakers (see Household Cooking Appliances (KNUR)) 206
Ballast Accessory Photocells (see Electric Discharge Lamp Control Equipment, Specialty (FNFT)) 138	Battery Chargers for Use with Internal Combustion Engines Driving Centrifugal Fire Pumps (QWIR) 316	Blanket And Solution Warmers For Use In Hazardous Locations (see Medical Equipment For Use In Hazardous Locations (PINR)) 262
Ballast Control Modules (see Electric Discharge Lamp Control Equipment, Specialty (FNFT)) 138	Battery Lead Wire (see Wire, Special Purpose (ZMHX)) 432	Blinkers, Sign (see Sign Flashers (UYZZ)) 367
Ballast Disconnects (see Multi-pole Splicing Wire Connectors (ZMNA)) 432	Battery Packs, Electric Vehicle (see Electric Vehicle Battery Packs (FFRW)) 131	Blood Pressure Machines (see Vending Machines (YWXV)) 421
Ballast Housings For Use In Hazardous Locations (see Luminaire Fittings For Use In Hazardous Locations (IGIV)) 170	Battery Testers (see Garage Equipment (JGWW)) 190	Blower Cleaners (see Vacuum Cleaning Machines And Blower Cleaners (DMLW)) 102
Ballasts (see High-intensity-discharge Lamp Ballasts (FLCR)) 137	Battery-operated Soldering Irons (see Heaters, Specialty (KSOT)) 214	Blowers (WAGN) 374
Ballasts, Fluorescent Lamp (see Fluorescent Lamp Ballasts (FKVS)) 136	Battleships (see Outlet Bushings And Fittings (QCRV)) 284	Blowers, Hot Tub (see Blowers (WAGN)) 374
Ballasts for Use In Hazardous Locations (FOGZ) 138	Batts and Blankets (XCLR) 403	Blowers, Spa (see Blowers (WAGN)) 374
Ballasts, HID Lamp (see High-intensity-discharge Lamp Ballasts (FLCR)) 137	Beam And Post Wall Assemblies (see Sections And Units (QQXX)) 311	Boat Cable (BDFX) 69
Ballasts, Mercury Lamp (see High-intensity-discharge Lamp Ballasts (FLCR)) 137	Beams (see Fire Resistance Ratings - ANSI/UL 263 (BXUV)) 73	Boat Rides (see Vending Machines (YWXV)) 421
Ballon Vending Machines (see Vending Machines (YWXV)) 421	Bean Cookers (see Household Cooking Appliances (KNUR)) 206	Body Assemblies For Use In Hazardous Locations (see Receptacles With Plugs Interlocked With Switches For Use In Hazardous Locations (RSPX)) 325
Band Boxes (see Musical Instruments (PWHZ)) 272	Bearing Heaters (see Heaters, Industrial And Laboratory (KQLR)) 209	Body Assemblies For Use In Hazardous Locations (see Receptacles With Plugs Interlocked With Switches For Use In Zone Classified Hazardous Locations (RSZD)) 326
Band Printers (see Data Processing Equipment, Electronic (EMRT)) 122	Bed Springs (see Furnishings, Household And Commercial (IYQX)) 180	Boiler And Furnace Controls For Heating And Air Conditioning Equipment (see Controls, Limit (MBPR)) 222
Bank Equipment (BALT) 69	Beds, Nonpatient Care, Motor Operated (see Motorized Furnishings (IYNG)) 179	Boiler Assemblies (KVFT) 215
Banking Machines (see Data Processing Equipment, Electronic (EMRT)) 122	Bells For Use In Hazardous Locations (see Audible-signal Appliances For Use In Hazardous Locations (UGKZ)) 359	Boiler Assemblies, Field Erected (see Field-erected Boiler Assemblies (KVQE)) 215
Bar Hangers (see Outlet Bushings And Fittings (QCRV)) 284	Bells For Use In Hazardous Locations (see Audible-signal Appliances For Use In Zone Classified Hazardous Locations (UXVF)) 364	Boiler Assemblies, Gas Fired, Field Erected (see Field-erected Boiler Assemblies (KVQE)) 215
Barbecue Grills (see Household Cooking Appliances (KNUR)) 206	Bench-top Incubators (see Heaters, Specialty (KSOT)) 214	Boiler Assemblies, Gas-oil Fired, Field Erected (see Field-erected Boiler Assemblies (KVQE)) 215
Barber Chairs (see Personal Grooming Appliances, Commercial (QGRT)) 290	Benchtop Rework Systems (see Heaters, Industrial And Laboratory (KQLR)) 209	Boiler Assemblies, Oil Fired, Field Erected (see Field-erected Boiler Assemblies (KVQE)) 215
Barriers And Barrier Units For Use In Hazardous Locations (see Process Control Equipment For Use In Hazardous Locations (QUZW)) 314	Beverage Cooler-dispensers (see Beverage Coolers And Beverage Cooler-dispensers (SFWY)) 331	Boilers, Electric (see Heaters, Industrial And Laboratory (KQLR)) 209
Barriers And Barrier Units For Use In Hazardous Locations (see Process Control Equipment For Use In Zone Classified Hazardous Locations (QVAJ)) 314	Beverage Coolers and Beverage Cooler-dispensers (SFWY) 331	Boilers, Electric (BDJS) 70
Barster, Trimmer, Stacker/accessories (see Data Processing Equipment, Electronic (EMRT)) 122	Beverage Dispensers (see Household Cooking Appliances (KNUR)) 206	Bolted-pressure Contact Switches (see Fused Power-circuit Devices (IYSR)) 180
Base Stations (see Data Processing Equipment, Electronic (EMRT)) 122	Beverage Fountains (see Furnishings, Household And Commercial (IYQX)) 180	Bonding Equipment (see Grounding And Bonding Equipment (KDER)) 194
Baseboard Heater Accessories (KLQZ) 202	Beverage Vending Machines, Cup Type (see Vending Machines, Refrigerated (SQMX)) .. 336	Bonding Equipment, Communication (see Grounding And Bonding Equipment,
Baseboard Heaters (KLDR) 201	Beverage-dispensing Equipment, Manual (see Food- And Beverage-dispensing Equipment, Manual (TSXL)) 351	
Basic Processing Units (see Data Processing Equipment, Electronic (EMRT)) 122		
Bat Wings (see Conduit And Cable Hardware (DWMU)) 108		

INDEX OF PRODUCT CATEGORIES AND INDUSTRY TERMS

Page	Page	Page
Cable, Armored (see Armored Cable (AWEZ)) 64	International Specifications (DVBI)) 106	Cable, Metal Clad (see Metal-clad Cable Classified In Accordance With IEC Publications (PJHY)) 264
Cable, Armored Aluminum (see Armored Cable (AWEZ)) 64	Cable, Electric Vehicle (see Electric Vehicle Cable (FFSO)) 131	Cable, Metal Clad (see Metal-clad Cable Classified In Accordance With UL 1569, With Metric Conductor Sizes (PJPJ)) 264
Cable Assemblies and Fittings for Industrial Control and Signal Distribution (CYJV) 88	Cable, FC (see FC Cable (GQKT)) 152	Cable, Metal Clad For Use In Hazardous Locations (see Cable For Use In Hazardous Locations (PJPP)) 265
Cable Assemblies, Communication (see Communication Cable Assemblies (DUNH)) 104	Cable Feeds (see FC Cable Fittings (GQRS)) .. 153	Cable, Metal-clad Aluminum (see Metal-clad Cable (PJAZ)) 263
Cable Assemblies, Computer Interconnection (see Computer Interconnection Cable Assemblies (DVPJ)) 107	Cable, Festoon (see Festoon Cable (ZIPF)) 426	Cable, Metal-clad Aluminum (see Metal-clad Cable Classified In Accordance With UL 1569, With Metric Conductor Sizes (PJPJ)) 264
Cable Assemblies For Industrial Control And Signal Distribution (see Cable Assemblies And Fittings For Industrial Control And Signal Distribution (CYJV)) 88	Cable, Fire Alarm, Nonpower Limited (see Nonpower-limited Fire Alarm Cable (HNHT)) 154	Cable, Metal-clad Aluminum For Use In Hazardous Locations (see Cable For Use In Hazardous Locations (PJPP)) 265
Cable Assemblies, Irrigation (see Irrigation Cable Assemblies (OFJZ)) 249	Cable, Fire Alarm, Power Limited (see Power-limited Fire Alarm Cable (HNIR)) .. 154	Cable, Mineral Insulated, Metal Sheathed (see Mineral-insulated Metal-sheathed Cable (PPKV)) 268
Cable Assemblies, Mineral Insulated For Use In Hazardous Locations (see Mineral-insulated Cable Assemblies For Use In Hazardous Locations (POWD)) 267	Cable, Fire Resistive (see Fire-resistive Cable (FHJR)) 134	Cable, Motor Supply, Flexible (see Flexible Motor Supply Cable (ZJFH)) 428
Cable Assemblies, Optical Fiber (see Optical Fiber Cable Assemblies And Connectors (QBFA)) 281	Cable Fittings, FC (see FC Cable Fittings (GQRS)) 153	Cable, Nonmetallic Sheathed (see Nonmetallic-sheathed Cable (PWVX)) 274
Cable Assemblies, Optical Fiber (see Optical Fiber Cable Assemblies And Connectors Verified In Accordance With National or International Specifications (QBFN)) 281	Cable Fittings, Flat Conductor (see Flat Conductor Cable Fittings (IKMW)) 172	Cable, Nonmetallic-sheathed Aluminum (see Nonmetallic-sheathed Cable (PWVX)) 274
Cable Assembly Fittings For Industrial Control And Signal Distribution (see Cable Assemblies And Fittings For Industrial Control And Signal Distribution (CYJV)) 88	Cable Fittings for Use in Zone Classified Hazardous Locations (CYMJ) 88	Cable, Optical Fiber (see Optical Fiber Cable (QAYK)) 277
Cable, Battery, Low Voltage (see Low-voltage Battery Cable Classified In Accordance With SAE J1127 (VZSL)) 372	Cable Fittings, Marine Shipboard, For Use In Hazardous Locations (see Marine Shipboard Cable Fittings For Use In Zone Classified Hazardous Locations (FDJR)) 130	Cable, Optical Fiber (see Optical Fiber Cable Verified In Accordance With National or International Specifications (QAZI)) 278

		Transformers, General Purpose (XPTQ) 411

Page	Page	Page
Transformers, Ignition (XPZZ) 412	Translators For Use In Hazardous Locations (see Telemetering Equipment For Use In Hazardous Locations (WYMV)) 396	Tubing, Electrical Nonmetallic (see Electrical Nonmetallic Tubing (FKHU)) 135
Transformers, Toy (XRBV) 413	Translators For Use In Hazardous Locations (see Telemetering Equipment For Use In Zone Classified Hazardous Locations (WYMG)) 396	Tubing Fittings, Electrical Metallic (see Electrical Metallic Tubing Fittings (FKAV)) 135
Transformers, Class 2 Not Wet, Class 3 Wet (see Transformers, Class 2 And Class 3 (XOKV)) 410	Transmitter And Receiver Units For Use In Hazardous Locations (see Telemetering Equipment For Use In Hazardous Locations (WYMV)) 396	Tubing Fittings, Electrical Nonmetallic (see Electrical Nonmetallic Tubing Fittings (FKKY)) 135
Transformers, Class 3 (see Transformers, Class 2 And Class 3 (XOKV)) 410	Transmitter And Receiver Units For Use In Hazardous Locations (see Telemetering Equipment For Use In Zone Classified Hazardous Locations (WYMG)) 396	Tubing Fittings, Flexible Metallic (see Fittings, Flexible Metallic Tubing (ILNR)) ... 173
Transformers, Cold Cathode (see Cold Cathode Transformers And Power Supplies (DUEC)) 103	Transmitters And Receivers For Use In Hazardous Locations (see Process Control Equipment For Use In Hazardous Locations (QUZW)) 314	Tubing, Flexible Metallic (see Flexible Metallic Tubing (ILJW)) 173
Transformers For Use in Hazardous Locations (XPAF) 413	Transmitters And Receivers For Use In Hazardous Locations (see Process Control Equipment For Use In Zone Classified Hazardous Locations (QVAJ)) 314	Tubing Saws (see Garage Equipment (JGWV)) 190
Transformers, Distribution, Liquid-filled Type, Over 600 Volts for Use in Hazardous Locations (XPLP) 414	Trash Compactors (see Commercial Trash Compactors (XUUC)) 416	Tubs (see Cabinets And Cutout Boxes (CYIV)) 87
Transformers, General Purpose for Use in Hazardous Locations (XPJF) 413	Trash Compactors (see Household Trash Compactors (XUUM)) 416	Tubs (see Panelboards (QEUY)) 288
Transformers, Fountain (see Swimming Pool And Spa Transformers (WDGV)) 378	Trash Compactors (XUTS) 416	Tune-up Testers (see Garage Equipment (JGWV)) 190
Transformers, Fountain, Swimming Pool or Spa (see Swimming Pool And Spa Transformers (WDGV)) 378	Travel Carbon Monoxide Alarms (see Carbon Monoxide Alarms, Single And Multiple Station (CZHF)) 90	Tungsten Halogen Lamps (see Lamps, Tungsten Halogen (OOO)) 253
Transformers, Hobby (see Transformers, Toy (XRBV)) 413	Travel Smoke Alarms (see Single- And Multiple-station Smoke Alarms (UTGT)) ... 344	Tungsten Lamp Dimmers (see Transformers, Dimmer (XOYT)) 410
Transformers, Ignition, Interchangeable (see Transformers, Ignition (XPZZ)) 412	Tray Cable Connectors (see Power And Control Tray Cable Connectors (QPOZ)) ... 304	Tunnel-drilling Guidance Systems for Use in Hazardous Locations (YDUE) 418
Transformers, Ignition, Noninterchangeable (see Transformers, Ignition (XPZZ)) 412	Tray Cable, Instrumentation (see Instrumentation Tray Cable (NYTT)) 246	TV Stands, Health Care Facility (see Television/video Equipment For Use In Health Care Facilities (KFCV)) 198
Transformers, Industrial Control (see Transformers, General Purpose (XPTQ)) 411	Tray Cable, Instrumentation For Use In Hazardous Locations (see Cable For Use In Hazardous Locations (PJPP)) 265	TV Stands, Hospital (see Television/video Equipment For Use In Health Care Facilities (KFCV)) 198
Transformers, Industrial Control For Use In Hazardous Locations (see Transformers, General Purpose For Use In Hazardous Locations (XPJF)) 413	Tray Cable, Power And Control (see Power And Control Tray Cable (QPOR)) 303	TVs, Health Care Facility (see Television/video Equipment For Use In Health Care Facilities (KFCV)) 198
Transformers, Neon (see Neon Transformers And Power Supplies (PWIK)) 273	Tray Cable, Wind Turbine (see Wind Turbine Tray Cable (ZGZN)) 426	TVs, Hospital (see Television/video Equipment For Use In Health Care Facilities (KFCV)) 198
Transformers, Power, Dry Type (see Power And General-purpose Transformers, Dry Type (XQNX)) 412	Trench Header Duct And Associated Fittings (see Cellular Metal Floor Raceway Fittings (RINV)) 320	TVSSs (see Transient Voltage Surge Suppressors (XUHT)) 414
Transformers, Spa (see Swimming Pool And Spa Transformers (WDGV)) 378	Trench Header Ducts And Associated Fittings (see Cellular Concrete Floor Raceway Fittings (RHLZ)) 319	Tweezers (see Personal Grooming Appliances, Household (QGRW)) 290
Transformers, Swimming Pool (see Swimming Pool And Spa Transformers (WDGV)) 378	Trip Devices Classified for Use in Low- voltage AC Power Circuit Breakers (PAYK) 258	Two-fers (see Receptacles, Stage Type (RUFRR)) 328
Transformers, Class 2 and Class 3 (XOKV) 410	Trivets (see Household Cooking Appliances (KNUR)) 206	Two-hole (see Conduit And Cable Hardware (DWMU)) 108
Transformers, Dimmer (XOYT) 410	Troffers (see Fluorescent Recessed Luminaires (IEVV)) 157	Two-hole Straps (see Conduit And Cable Hardware (DWMU)) 108
Transformers, Distribution, Dry Type, Over 600 Volts (XPFS) 411	Troughs (see Wireway, Auxiliary Gutters And Associated Fittings (ZOYX)) 437	Type DP Cable (see Data Processing Cable (EMRB)) 122
Transformers, Distribution, Liquid-filled Type, Over 600 Volts (XPLH) 411	Trouser Pressers (see Flatirons And Garment-finishing Appliances (IKOZ)) 172	Type EX Industrial Trucks For Use In Hazardous Locations (see Trucks, Industrial, Type EX For Use In Hazardous Locations (XXGV)) 417
Transformers, Distribution, Liquid-filled Type, Over 600 Volts for Use in Hazardous Locations (XPLP) 414	Trucks, Industrial (XVHZ) 417	Type I Secondary Containment Coated Underground Tanks (see Underground Flammable Liquid Tanks (EGHX)) 115
Transformers, General Purpose (XPTQ) 411	Storage Batteries, Trucks, Electric (XXHW) 417	Type I Secondary Containment Composite Underground Tanks (see Underground Flammable Liquid Tanks (EGHX)) 115
Transformers, General Purpose for Use in Hazardous Locations (XPJF) 413	Trucks, Industrial for Use in Hazardous Locations (XVHY) 417	Type I Secondary Containment Nonmetallic Underground Tanks (see Underground Flammable Liquid Tanks (EGHX)) 115
Transformers, Ignition (XPZZ) 412	Storage Batteries, Truck, Electric for Use in Hazardous Locations (XXIY) 417	Type I Secondary Containment Underground Tanks (see Underground Flammable Liquid Tanks (EGHX)) 115
Transformers, Toy (XRBV) 413	Trucks, Industrial, Type EX for Use in Hazardous Locations (XXGV) 417	Type II Secondary Containment Coated Underground Tanks (see Underground Flammable Liquid Tanks (EGHX)) 115
Transient Voltage Surge Suppressor/panelboard Extension Modules Classified for Use with Specified Equipment (XUPD) 415	Tubing and Hose, Electrically Conductive, Relating to Hazardous Locations (YDGG) .. 418	Type II Secondary Containment Composite Underground Tanks (see Underground Flammable Liquid Tanks (EGHX)) 115
Transient Voltage Surge Suppressors (XUHT) 414	Tubing, Electrical Metallic (see Electrical Metallic Tubing (FJMX)) 134	Type II Secondary Containment Nonmetallic Underground Tanks (see Underground Flammable Liquid Tanks (EGHX)) 115
Transit Application Equipment and Systems (XUPY) 416		Type II Secondary Containment Underground Tanks (see Underground Flammable Liquid Tanks (EGHX)) 115
Power Rectifiers (XUSP) 416		
Switches, Isolating (XUTE) 416		
Transit System Isolating Switches (see Switches, Isolating (XUTE)) 416		
Transit System Sectionalizing Switches (see Switches, Isolating (XUTE)) 416		
Transition Ducts, Clothes Dryer (see Clothes Dryer Transition Ducts (KMIK)) 203		
Transition Fittings, Surface Raceway (see Surface Raceway Transition Fittings Classified For Use With Specified Products (RKBA)) 322		

INDEX OF PRODUCT CATEGORIES AND INDUSTRY TERMS

Page	Page	Page
Valve Positioners For Use In Hazardous Locations (see Process Control Equipment For Use In Zone Classified Hazardous Locations (QVAJ)) 314	Ventilators, Heat Recovery, Ducted (see Heat-recovery Ventilators, Ducted (LZTW)) 221	Vivarium Heaters (see Heaters, Specialty (KSOT)) 214
Valve Refacers (see Garage Equipment (JGWV)) 190	Ventilators, Heat Recovery, Nonducted (see Heat-recovery Ventilators, Nonducted (LZUU)) 222	Voltage Testers (see Electrical And Electronic Measuring And Testing Equipment (FHCW)) 133
Valve-position Signal Attachments For Use In Hazardous Locations (see Extinguishing System Attachments For Use In Hazardous Locations (UGYX)) 360	Ventilators, Power (ZACT) 422	Volt-ohm-milliammeters (see Electrical And Electronic Measuring And Testing Equipment (FHCW)) 133
Valves, Deluge For Use In Hazardous Locations (see Special System Water Control Valves For Use In Hazardous Locations (VQWV)) 369	Ventilators, Power, For Restaurant Exhaust Appliances (see Power Ventilators For Restaurant Exhaust Appliances (YZHW)) ... 422	Vulcanizers (see Garage Equipment (JGWV)) 190
Valves, Electric for Use in Hazardous Locations (YTSX) 420	Ventilators, Power for Use in Hazardous Locations (ZANE) 422	W
Valves, General Purpose, Electric For Use In Hazardous Locations (see Valves, Electric For Use In Hazardous Locations (YTSX)) ... 420	Ventilators, Water Driven For Use In Hazardous Locations (see Water-driven Ventilators For Use In Hazardous Locations (NCGV)) 225	Waffle Irons (see Household Cooking Appliances (KNUR)) 206
Valves, Safety, Electric For Use In Hazardous Locations (see Valves, Electric For Use In Hazardous Locations (YTSX)) ... 420	VFDS (see Power Conversion Equipment (NMMS)) 233	Walk-in Units, Commercial (SQTV) 337
Valves, Water Control For Use In Hazardous Locations (see Special System Water Control Valves For Use In Hazardous Locations (VQWV)) 369	Vibration Switches For Use In Hazardous Locations (see Switches, Miscellaneous For Use In Hazardous Locations (WTEV)) 390	Walk-in Panels (see Door Panel Assemblies (FDIT)) 129
Valve-type Surge Arresters, Secondary (see Surge Arresters (OWHX)) 254	Vibrator-motors, Industrial, For Use In Hazardous Locations (see Electrical Industrial Vibrators For Use In Hazardous Locations (ZBRX)) 423	Walk-up Counters (see Bank Equipment (BALT)) 69
Valve-type Surge Arresters, Secondary (see Surge Arresters Classified For Use In Specified Equipment (OWIW)) 255	Vibrators, Electric, Industrial For Use In Hazardous Locations (see Electrical Industrial Vibrators For Use In Hazardous Locations (ZBRX)) 423	Walk-up Windows (see Bank Equipment (BALT)) 69
Vanity Tables, Illuminated (see Furnishings, Household And Commercial (IYQX)) 180	Vibrators, Industrial For Use In Hazardous Locations (see Electrical Industrial Vibrators For Use In Hazardous Locations (ZBRX)) 423	Wall And Partition Assemblies (see Fire Resistance Ratings - ANSI/UL 263 (BXUV)) 73
Vapor Detectors For Use In Hazardous Locations (see Gas And Vapor Detection Equipment Classified For Use In Hazardous Locations (JTPD)) 192	Video and Audio Equipment, Professional (ZCXY) 423	Wall Assemblies (see Fire Resistance Ratings - ANSI/UL 263 (BXUV)) 73
Vapor Detectors For Use In Hazardous Locations (see Gas And Vapor Detection Equipment Classified For Use In Zone Classified Hazardous Locations (JLVV)) 191	Video Apparatus (see Audio/video Apparatus (AZSQ)) 67	Wall Box Dimmers (see Dimmers, General Use Switch (EOYX)) 124
Vapor Detectors For Use In Hazardous Locations (see Gas And Vapor Detection Equipment Listed For Use In Hazardous Locations (JTPX)) 192	Video Apparatus Accessories (see Audio/video Apparatus (AZSQ)) 67	Wall Elbows (see Cellular Concrete Floor Raceway Fittings (RHLZ)) 319
Vapor Recovery Retrofit Assemblies (see Retrofit Assemblies (ERKQ)) 126	Video Display Mounts (see Motorized Furnishings (IYNG)) 179	Wall Opening Protective Materials (QCSN) 285
Variable Frequency Drives (see Power Conversion Equipment (NMMS)) 233	Video Equipment (see Audio And Video Equipment (AZUJ)) 68	Wall Opening Protective Materials (CLIV) 86
Variable Speed Drives (see Power Conversion Equipment (NMMS)) 233	Video Equipment (see Audio And Video Equipment Classified For Use In Specified Equipment (AZVG)) 68	Wall- or Ceiling-hung Heaters (see Air Heaters, Movable And Wall or Ceiling Hung (KKPT)) 201
Vault Doors, Motor Operated (see Bank Equipment (BALT)) 69	Video Equipment (see Audio And Video Equipment Classified For Use In Specified Equipment (AZVG)) 68	Wall Packs (see High-intensity-discharge Surface-mounted Luminaires (IEXT)) 158
Vault Lacing Cable (see Wire, Special Purpose (ZMHX)) 432	Video Equipment Accessories (see Audio/video Apparatus (AZSQ)) 67	Wall-hung Air Heaters (see Air Heaters, Movable And Wall or Ceiling Hung (KKPT)) 201
Vaults, Underground (see Boxes, Enclosures, Handholes And Vaults, Underground, Utility Specification (BGHL)) 70	Video Equipment Accessories (see Audio/video Apparatus (AZSQ)) 67	Wall-hung Heaters (see Air Heaters, Movable And Wall or Ceiling Hung (KKPT)) 201
Vehicle Diagnostic And Test Systems (see Garage Equipment (JGWV)) 190	Video Games (see Vending Machines (YWXY)) 421	Wallpaper Steamers (see Heaters, Specialty (KSOT)) 214
Vending Machines (YWXY) 421	Video Products (see Audio And Video Equipment (AZUJ)) 68	Wallpaper Strippers (see Heaters, Specialty (KSOT)) 214
Vending Machines, Beverage, Cup Type (see Vending Machines, Refrigerated (SQMX)) .. 336	Video Products (see Audio/video Apparatus (AZSQ)) 67	Warewashing Equipment, Commercial (see Commercial Warewashing Equipment (TSXV)) 352
Vending Machines for Food and Beverages (TSA) 352	Video Systems (see Audio And Video Equipment (AZUJ)) 68	Warm And Dry Racks (see Heaters, Specialty (KSOT)) 214
Vending Machines, Refrigerated (SQMX) 336	Video Systems (see Audio And Video Apparatus (AZSQ)) 67	Warmer Systems (see Household Cooking Appliances (KNUR)) 206
Ventilating Equipment for Commercial Cooking Appliances (YXLT) 421	Viscometers for Use in Hazardous Locations (ZCFV) 423	Warmers For Use In Hazardous Locations (see Heaters, Miscellaneous For Use In Hazardous Locations (KGWX)) 200
Exhaust Hoods with Exhaust Dampers (YXZR) 421	Visual Auto-teller Systems (see Bank Equipment (BALT)) 69	Warming Cabinets (see Heaters, Industrial And Laboratory (KQLR)) 209
Power Ventilators for Restaurant Exhaust Appliances (YZHW) 422	Visual Signaling Appliance Subassemblies For Use In Hazardous Locations (see Visual-signal Appliances For Use In Hazardous Locations (UJTK)) 363	Warming Cabinets For Use In Hazardous Locations (see Medical Equipment For Use In Hazardous Locations (PINR)) 262
Ventilating Unit Sections (see Heating And Cooling Equipment (LZFE)) 216	Visual-signal Appliances (UEES) 359	Warming Plates (see Household Cooking Appliances (KNUR)) 206
Ventilating Units (see Heating And Cooling Equipment (LZFE)) 216	Visual-signal Appliances for Use in Hazardous Locations (UJTK) 363	Warming Plates, Laboratory (see Heaters, Industrial And Laboratory (KQLR)) 209
	Visual-signal Appliances for Use in Zone Classified Hazardous Locations (UXVU) 364	Warming Trays (see Household Cooking Appliances (KNUR)) 206
	Visual-signal Appliance Accessories (see Visual-signal Appliances (UEES)) 359	Wash Stations (see Furnishings, Household And Commercial (IYQX)) 180
		Washers (sealing Gaskets) (see Outlet Bushings And Fittings (QCRV)) 284
		Washer-sterilizers For Use In Hazardous Locations (see Medical Equipment For Use In Hazardous Locations (PINR)) 262
		Washing Machines, Commercial Spray-type for Pots, Pans and Utensils (TSYF) 353

Page	Page	Page
Waste Disposers (ZDHR) 424	Water-flow Indicators For Use In Hazardous Locations (see Extinguishing System Attachments For Use In Hazardous Locations (UGYX)) 360	Wind Turbine Tray Cable (ZGZN) 426
Waste Disposers, Pulper Type (ZDIB) 424	Water-jacketed Incubators (see Heaters, Industrial And Laboratory (KQLR)) 209	Wind Turbine Utility Interactive Inverters (see Static Inverters And Converters For Use In Independent Power Systems (QIKH)) 295
Waste Disposers, Replacement Type, Household (ZDIF) 424	Water-level Signal Attachments For Use In Hazardous Locations (see Extinguishing System Attachments For Use In Hazardous Locations (UGYX)) 360	Window Operators (see Door, Drapery, Gate, Louver, And Window Operators And Systems (FDDR)) 128
Waste Disposers, Sink Mounted (ZDII) 424	Water-supply Valve Position Signals For Use In Hazardous Locations (see Extinguishing System Attachments For Use In Hazardous Locations (UGYX)) 360	Winkers, Sign (see Sign Flashers (UYZZ)) 367
Waste Disposers, Pulper Type (ZDIB) 424	Wats Boxes (see Telephone Appliances And Equipment (WYQQ)) 395	Wire (ZGZX) 426
Waste Disposers, Replacement Type, Household (ZDIF) 424	Watt-hour Meters (see Energy Usage Monitoring Systems (FTRZ)) 145	Bus Drop Cable (ZIMX) 426
Waste Disposers, Sink Mounted (ZDII) 424	Wave Analyzers (see Electrical And Electronic Measuring And Testing Equipment (FHCW)) 133	Festoon Cable (ZIPP) 426
Water Baths (see Heaters, Industrial And Laboratory (KQLR)) 209	Wave Machines (see Decorative Furnishings (INYNA)) 178	Fixture Wire (ZIPR) 427
Water Bucket Heaters (see Heaters, Specialty (KSOT)) 214	Weather Heads (see Outlet Bushings And Fittings (QCRV)) 284	Flexible Cord (ZJCZ) 427
Water Collection Systems (see Heaters, Industrial And Laboratory (KQLR)) 209	Weather Heads (see Service-entrance Cable Fittings (TYZX)) 356	Flexible Motor Supply Cable (ZJFH) 428
Water Control Valves For Use In Hazardous Locations (see Special System Water Control Valves For Use In Hazardous Locations (VQWV)) 369	Welding Cable (ZMAY) 431	Gas-tube-sign Cable (ZJQX) 428
Water Coolers (SRAV) 337	Welding Machine Accessories (ZGPU) 425	Machine-tool Wire (ZKHZ) 428
Water Coolers, Drinking (see Drinking Water Coolers (SRJX)) 337	Welding Machines (ZGLZ) 425	Pendant Cable (ZKKA) 428
Water Coolers for Use in Hazardous Locations (SUFT) 338	Welding Machine Accessories (ZGPU) 425	Photovoltaic Wire (ZKLA) 429
Water Distillers (see Heaters, Industrial And Laboratory (KQLR)) 209	Wet-location Wire Connectors (see Sealed Wire Connector Systems (ZMWQ)) 436	Processed Wire (ZKLU) 429
Water Distillers (see Heaters, Specialty (KSOT)) 214	Wet-location Wire Nuts (see Sealed Wire Connector Systems (ZMWQ)) 436	Recreational Vehicle Cable, Low Voltage (ZKRU) 429
Water Feed Controls (see Controls, Limit (MBPR)) 222	Wet-niche Submersible Luminaires (see Submersible Luminaires (IFEV)) 166	Telephone Service Drop Wire (ZKSG) 429
Water Heater Accessories, Heat Pump (see Heating And Cooling Equipment (LZFE)) 216	Wet-niche Underwater Luminaires For Swimming Pools (see Luminaires And Forming Shells (WBDT)) 374	Thermoplastic-insulated Wire (ZLGR) 430
Water Heater Sections, Heat Pump (see Heating And Cooling Equipment (LZFE)) 216	Wet-pipe Sprinkler System Attachments For Use In Hazardous Locations (see Extinguishing System Attachments For Use In Hazardous Locations (UGYX)) 360	Thermoset-insulated Wire (ZKST) 430
Water Heaters (KSAV) 212	Wet-pipe Sprinkler System Attachments For Use In Hazardous Locations (see Extinguishing System Attachments For Use In Hazardous Locations (UGYX)) 360	Underground Low-energy Circuit Cable (ZLIA) 431
Water Heaters (see Miscellaneous Water Heaters (KSGR)) 213	Wheel Alignment (see Garage Equipment (JGWV)) 190	Welding Cable (ZMAY) 431
Water Heaters, Booster (see Commercial Storage Tank And Booster Water Heaters (KSBZ)) 212	Wheelchair Lifts and Stairway Chairlifts (ZGUW) 425	Wire, Special Purpose (ZMHX) 432
Water Heaters, Commercial, Storage Tank (see Commercial Storage Tank And Booster Water Heaters (KSBZ)) 212	Whips (see Wiring Assemblies (QQYZ)) 311	Wire Connector Adapters (ZMOW) 433
Water Heaters, Heat Pump (see Heating And Cooling Equipment (LZFE)) 216	Whirlpool Tubs (see Hydromassage Bathtubs (NCHX)) 225	Wire Connectors (see Wire Connectors And Soldering Lugs (ZMVV)) 434
Water Heaters, Household, Storage Tank (see Household Water Heaters, Storage Tank (KSDT)) 213	Whistles (see Audible-signal Appliances, General Signal (UCST)) 358	Wire Connectors (see Wire Connectors And Soldering Lugs Classified In Accordance With IEC Publications (ZNKD)) 436
Water Heaters, Immersion (see Immersion Water Heaters (KSFX)) 213	Wig And Brush Dryers (see Personal Grooming Appliances, Commercial (QGRT)) 290	Wire Connectors (ZMKQ) 432
Water Heaters, Instantaneous (see Miscellaneous Water Heaters (KSGR)) 213	Wind Turbine Blades (see Wind Turbine Generating System Subassemblies (ZGZJ)) 425	Crimp Tools Classified For Use with Specified Wire Connectors (ZMLS) 432
Water Heaters, Miscellaneous (see Miscellaneous Water Heaters (KSGR)) 213	Wind Turbine Generating System Subassemblies (ZGZJ) 425	Multi-pole Splicing Wire Connectors (ZMNA) 432
Water Heaters, Hot Water Supply Boilers and Heat Recovery Equipment (TSYO) 353	Wind Turbine Generating Systems (ZGXW) 425	Sealed Wire Connector Systems (ZMWQ) 436
Water Heaters, Space Heating (KSDR) 213	Wind Turbine Generating System Subassemblies (ZGZJ) 425	Wire Connector Adapters (ZMOW) 433
Water Incubators (see Heaters, Industrial And Laboratory (KQLR)) 209	Wind Turbine Tray Cable (ZGZN) 426	Wire Connectors and Soldering Lugs (ZMVV) 434
Water Stills, Electric (see Heaters, Industrial And Laboratory (KQLR)) 209	Wind Turbine Generators (see Wind Turbine Generating System Subassemblies (ZGZJ)) 425	Wire Connectors and Soldering Lugs (ZMVV) 434
Water Treatment Equipment (WDL) 379	Wind Turbine Multimode Inverters (see Static Inverters And Converters For Use In Independent Power Systems (QIKH)) 295	Wire Connectors and Soldering Lugs Classified In Accordance with IEC Publications (ZNKD) 436
Water Vending Machines (see Vending Machines (YWXV)) 421	Wind Turbine Stand-alone Inverters (see Static Inverters And Converters For Use In Independent Power Systems (QIKH)) 295	Wire Connectors, Direct Burial (see Sealed Wire Connector Systems (ZMWQ)) 436
Waterbed Heaters (see Heaters, Waterbed (KSHU)) 214		Wire Connectors, Multi-pole Splicing (see Multi-pole Splicing Wire Connectors (ZMNA)) 432
Water-circulating Pumps (see Pumps, Electrically Operated, Liquid (REUZ)) 318		Wire Connectors, Underground (see Sealed Wire Connector Systems (ZMWQ)) 436
Water-cooling Tower Accessories, Mechanical Draft (see Heating And Cooling Equipment (LZFE)) 216		Wire Connectors, Wet Location (see Sealed Wire Connector Systems (ZMWQ)) 436
Water-cooling Towers, Mechanical Draft (see Heating And Cooling Equipment (LZFE)) 216		Wire, Cotton Covered (see Fixture Wire (ZIPR)) 427
Water-driven Ventilators for Use in Hazardous Locations (NCGV) 225		Wire, Drop, Telephone Service (see Telephone Service Drop Wire (ZKSG)) 429

	Page		Page		Page
Wire Nuts (see Wire Connectors And Soldering Lugs (ZMVV))	434	Wireway (see Wireway, Auxiliary Gutters And Associated Fittings (ZOYX))	437	Work Stations (see Office Furnishing Accessories Classified For Use With Specified Equipment (QAXE))	276
Wire Nuts, Direct Burial (see Sealed Wire Connector Systems (ZMWQ))	436	Wireway, Auxiliary Gutters and Associated Fittings (ZOYX)	437	Work Surfaces (see Office Furnishing Accessories Classified For Use With Specified Equipment (QAXE))	276
Wire Nuts, Underground (see Sealed Wire Connector Systems (ZMWQ))	436	Wireway, Raised Floor (see Raised-floor Wireway (RQFW))	323	Work Tables, Food Service (see Custom-built Food Service Equipment (KNNS))	205
Wire Nuts, Wet Location (see Sealed Wire Connector Systems (ZMWQ))	436	Wiring Assemblies (QQYZ)	311		
Wire, Photovoltaic (see Photovoltaic Wire (ZKLA))	429	Wiring Assembly Kits (see Wiring Assemblies (QQYZ))	311		
Wire, Processed (see Processed Wire (ZKLU))	429	Wiring Devices, Cord Connected, Outdoor, Seasonal Use (see Outdoor Seasonal-use Cord-connected Wiring Devices (ELEI))	118		
Wire, Processed, Respooled (see Processed Wire (ZKLU))	429	Wiring Systems, Manufactured (see Manufactured Wiring Systems (QQVX))	310		
Wire, Silicone Rubber-covered (see Fixture Wire (ZIPR))	427	Wood Stud Walls (see Fire Resistance Ratings - ANSI/UL 263 (BXUV))	73		
Wire, Thermoplastic-insulated (see Thermoplastic-insulated Wire (ZLGR))	430	Wood-burning or Stencil-burning Tools (see Heaters, Specialty (KSOT))	214		
Wire, Thermoset-insulated (see Thermoset-insulated Wire (ZKST))	430	Wood-burning/leather-burning Pencils (see Heaters, Specialty (KSOT))	214		
Wire Ties (see Positioning Devices (ZODZ)) ..	437	Woodworking Equipment, Semi-automatic (see Semiautomatic Woodworking Equipment (XKHS))	407		
Wire, Special Purpose (ZMHX)	432	Work Light Accessories (see Portable Work Lights (QPCJ))	302		
Wired Cabinets (ZNXR)	436	Work Lights, Portable (see Portable Work Lights (QPCJ))	302		
Wireless Antenna Interface Cable (see Wire, Special Purpose (ZMHX))	432				
Wireless Telephones (see Telephone Appliances And Equipment (WYQQ))	395				
Wire-pulling Compounds (ZOKZ)	437				

X

Z

Zip Cord (see Flexible Cord (ZJCZ))	427
Zip Ties (see Positioning Devices (ZODZ))	437

Take the journey of discovery with other professionals

If you support safety through code-compliance and established standards, you need to belong to the only association that fulfills the interests of electrical inspectors.

IAEI membership gives you access to:

Association leadership and International networking

IAEI leaders are always available to you. Members in 30 countries reach out to share technical information and code comparisons.

Career training and Seminar events

IAEI provides many code-based seminars each year, all of which offer CEU opportunities.

Articles on latest issues and technology

IAEI News focuses on printing complete information on the newest and hottest situations in the electrical industry.

User-friendly website

IAEI.org is updated from the members' viewpoint and focuses on helping them maximize their careers.

The cost of membership is less than 30¢ a day —a small price in today's competitive market.

Join now at: www.iaei.org

And share unexpected values

What would it be worth to you to have...

- an archive of articles that saved you from re-doing an installation?
- products in front of users, approvers and code writers at the same time?
- your name and phone number in the truck with the contractor?
- immediate access to local gatherings of users and approvers, without having to do the research yourself?
- free code information just by making a phone call?
- instant access to an archive of electrical codes?
- a guide to help you find information quickly?

*Our basic focus is achieving electrical safety
through bringing all professionals together.*

MEMBERSHIP APPLICATION

For Inspector Member/Associate Member

Services from IAEI for you and your organization include all this and more:

- **IAEI News magazine subscription**
- **Educational Opportunities**
- **Networking**
- **Career Advancement**
- **Great Discount Savings**

Annual Membership Dues \$102

PLEASE PRINT

Name - Last	First	M.I.	Chapter, where you live or work, if known			
Title			(Division, where appropriate)			
E-mail Address						
Employer			For Office Use Only	Section No.	Ch. No.	Div. No.
Address of Applicant			If previous member, give last membership number			
City		State or Province	Zip or Postal Code	and last year of membership		
Endorsed by			Endorser's Membership Number			
Applicant's Signature			(Area Code) Telephone Number

<input type="checkbox"/> MasterCard <input type="checkbox"/> Visa <input type="checkbox"/> Amex <input type="checkbox"/> Discover					Exp. Date	

☐ Inspector \$102 ☐ Associate \$102

☐ **Inspector Members MUST sign below:**

I, _____, meet the qualifications for inspector member type as described below.

Inspector members must regularly make electrical inspections for preventing injury to persons or damage to property on behalf of a governmental agency, insurance agency, rating bureau, recognized testing laboratory or electric light and power company.

Contact the IAEI Customer Service Department for information on our special membership categories - Section, National, and International Member; Sustaining Member (Bronze, Silver, Gold, or Platinum); and Inspection Agency Member.

Email addresses and telephone numbers are not required but are requested to facilitate IAEI's communicating with members and conducting IAEI/member business.

Mail to: IAEI, P. O. Box 830848 Richardson, TX 75083-0848 For information call: (972) 235-1455 (8-5 CT)
