

Introducing the

CP 1000

The Industry's First Cordless,
HANDHELD WIRE PULLER

Another Great New Product Idea From

**Electrical
Product
Innovation**

THE SAFER, FASTER AND EFFICIENT TOOL FOR PULLING BRANCH CIRCUIT, FEEDER WIRES AND DATA CABLES.

Today, 80% of all project wire being pulled is branch circuit wire. Until now, all of this time consuming work has been done by hand in a slow and tedious fashion.

The new CP1000 takes the work out of pulling wire. With its patented technology and easy to use design, it puts over 1000 pounds of torque pulling power into the hands of the technician.

Designed for use with most 18V cordless drills, the CP1000 can be carried conveniently throughout the job location without the need for 120 V power.

Flexible and Easy to Use on a Wide Range of Job Site Applications

Because of the design and tool features, many tasks that required two people can now be completed with one, saving time and labor expense.

The CP1000 is flexible. Wire gauge from 22 to 1/0 depending on length and difficulty of the pull, can be fed using the patented pulley design. And, with the provided attachments it can be used for wire pulls in the following locations:

- Electrical Junction Boxes
- Switchgear
- Underground and Overhead Conduits
- Sub Panels
- Gutters
- Light Poles

Plus, you can easily use the CP1000 for pulling multiple branch and data circuits or small feeder wire circuits, including Cat 5, telephone, security and other low voltage applications.

Immediate Return on Investment

The CP1000 delivers benefits that translate right to the bottom line. Technicians can complete their pulls 30 - 40% faster than the manual method. Now two man pulls can be conducted by one person, saving you time and money!

With over 30,000 construction workers seeking medical help for on-the-job injuries each year, the CP1000 delivers benefits that impact worker safety and health including:

- Reduction in neck and back pulling strain
- Elimination of repetitive shoulder motion
- Reduction of hand strain and injuries such as carpal tunnel

The CP1000 begins paying you back immediately the day you put it into use.

The CP 1000

The CP1000 measures only 24" long when fully extended. When collapsed it easily fits into a tool bag. The heavy-duty drill chuck and handle lock attachment provide a sturdy base of operation. Wires up to 1/0 gauge can be pulled using the device.

Attachments easily break down for storage in a tool box or bag.

Puller handle is designed for ergonomic convenience and tool control.

ABOUT ELECTRICAL PRODUCT INNOVATION

Electrical Product Innovation Company exists to create new product solutions for electrical contractors, electricians and the general trade.

With a combined 65 years experience in all forms of construction, the team at EPI builds product solutions that improve workplace safety, project efficiency, and improve overall out-put quality.

EPI proudly produces all their materials in the United States with American made parts and local labor sources.
