How it works

It's simple. When your power goes out, your generator automatically powers on. A generator system consists of a generator and transfer switch. The generator sits outside of your home - just like a central air conditioner. The transfer switch is located next to the main breaker box, and in some cases replaces it entirely.

FPL Home Services, License EC 13009228, is a subsidiary of FPL Home and an unregulated indirect subsidiary of Florida Power & Light Company (FPL). Generator installation and maintenance services are offered, administered, and backed by FPL Home Services, and not FPL Home or FPL, 6001 Village Blvd., West Palm Beach, FL, 33407.
